

Acerca de este libro

Esta es una copia digital de un libro que, durante generaciones, se ha conservado en las estanterías de una biblioteca, hasta que Google ha decidido escanearlo como parte de un proyecto que pretende que sea posible descubrir en línea libros de todo el mundo.

Ha sobrevivido tantos años como para que los derechos de autor hayan expirado y el libro pase a ser de dominio público. El que un libro sea de dominio público significa que nunca ha estado protegido por derechos de autor, o bien que el período legal de estos derechos ya ha expirado. Es posible que una misma obra sea de dominio público en unos países y, sin embargo, no lo sea en otros. Los libros de dominio público son nuestras puertas hacia el pasado, suponen un patrimonio histórico, cultural y de conocimientos que, a menudo, resulta difícil de descubrir.

Todas las anotaciones, marcas y otras señales en los márgenes que estén presentes en el volumen original aparecerán también en este archivo como testimonio del largo viaje que el libro ha recorrido desde el editor hasta la biblioteca y, finalmente, hasta usted.

Normas de uso

Google se enorgullece de poder colaborar con distintas bibliotecas para digitalizar los materiales de dominio público a fin de hacerlos accesibles a todo el mundo. Los libros de dominio público son patrimonio de todos, nosotros somos sus humildes guardianes. No obstante, se trata de un trabajo caro. Por este motivo, y para poder ofrecer este recurso, hemos tomado medidas para evitar que se produzca un abuso por parte de terceros con fines comerciales, y hemos incluido restricciones técnicas sobre las solicitudes automatizadas.

Asimismo, le pedimos que:

- + *Haga un uso exclusivamente no comercial de estos archivos* Hemos diseñado la Búsqueda de libros de Google para el uso de particulares; como tal, le pedimos que utilice estos archivos con fines personales, y no comerciales.
- + *No envíe solicitudes automatizadas* Por favor, no envíe solicitudes automatizadas de ningún tipo al sistema de Google. Si está llevando a cabo una investigación sobre traducción automática, reconocimiento óptico de caracteres u otros campos para los que resulte útil disfrutar de acceso a una gran cantidad de texto, por favor, envíenos un mensaje. Fomentamos el uso de materiales de dominio público con estos propósitos y seguro que podremos ayudarle.
- + *Conserve la atribución* La filigrana de Google que verá en todos los archivos es fundamental para informar a los usuarios sobre este proyecto y ayudarles a encontrar materiales adicionales en la Búsqueda de libros de Google. Por favor, no la elimine.
- + *Manténgase siempre dentro de la legalidad* Sea cual sea el uso que haga de estos materiales, recuerde que es responsable de asegurarse de que todo lo que hace es legal. No dé por sentado que, por el hecho de que una obra se considere de dominio público para los usuarios de los Estados Unidos, lo será también para los usuarios de otros países. La legislación sobre derechos de autor varía de un país a otro, y no podemos facilitar información sobre si está permitido un uso específico de algún libro. Por favor, no suponga que la aparición de un libro en nuestro programa significa que se puede utilizar de igual manera en todo el mundo. La responsabilidad ante la infracción de los derechos de autor puede ser muy grave.

Acerca de la Búsqueda de libros de Google

El objetivo de Google consiste en organizar información procedente de todo el mundo y hacerla accesible y útil de forma universal. El programa de Búsqueda de libros de Google ayuda a los lectores a descubrir los libros de todo el mundo a la vez que ayuda a autores y editores a llegar a nuevas audiencias. Podrá realizar búsquedas en el texto completo de este libro en la web, en la página <http://books.google.com>

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Foreword

To function effectively, and to keep faith with our founding principles, the government and the citizens of this country must work together in partnership.

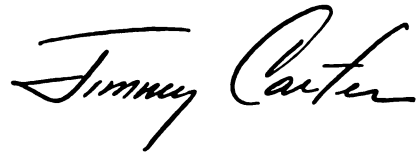

One of the purposes of these Presidential papers is to record that partnership—to set down the requests and responses, concerns and hopes of a President and a people.

The partnership is vividly demonstrated by the fact that between the accounts of Presidential words and action during the latter half of 1979 are transcribed the voices of dozens of Americans—teachers and farmers, shopowners and factory workers—who have spoken with me in town halls, schools, churches, and synagogues across the country.

The 6-month period covered by this volume saw a number of significant developments for our country—the submission to the Senate of the SALT II treaty, the Tokyo economic summit, the domestic discussions at Camp David, our steady progress towards national energy security, the establishment of a new Department of Education, and the uniting of the American people behind our responses to crises in Iran and Afghanistan.

Throughout these months, the American people and their government have met the tests of change in keeping with our commitment to the ideals that have guided this Nation since its creation.

The record of that partnership in these papers represents the achievement of many. It is open to all, and I encourage all to read it. For democracy, more than other systems of government, depends upon an open and honest interchange of facts and feelings between leaders and citizens.

A handwritten signature in black ink, reading "Jimmy Carter". The signature is written in a cursive, flowing style with a large, prominent "J" and "C".

Preface

This book contains the papers and speeches of the 39th President of the United States which were issued by the White House Press Office during the period June 23–December 31, 1979. The material has been compiled and published by the Office of the Federal Register, National Archives and Records Service, General Services Administration.

The material is presented in chronological order within each week, and the dates shown in the headings are the dates of the documents or events. In instances when the release date differs from the date of the document itself, that fact is shown in the textnote. Every effort has been made to ensure accuracy. Tape recordings are used to protect against errors in transcription of Presidential remarks, and signed documents are checked against the original to verify the correct printing. Textnotes, footnotes, and cross references have been provided by the editors for purposes of identification or clarity. Speeches were delivered in Washington, D.C., and other documents released there, unless indicated. All times noted are local times.

The index covers both Books I and II of the 1979 volume. In addition to the usual subject-matter entries in the index, the material has been classified in categories reflecting the type of Presidential activity or document. For example, a reader interested in the President's speeches will find them listed in the index under "Addresses and Remarks."

The Public Papers series was begun in 1957 in response to a recommendation of the National Historical Publications Commission. An extensive compilation of messages and papers of the Presidents covering the period 1789 to 1897 was assembled by James D. Richardson and published under congressional authority between 1896 and 1899. Since then, various private compilations have been issued, but there was no uniform publication comparable to the Congressional Record or the United States Supreme Court Reports. Many Presidential papers could be found only in the form of mimeographed White House releases or as reported in the press. The Commission therefore recommended the establishment of an official series in which Presidential writings, addresses, and remarks of a public nature could be made available.

The Commission's recommendation was incorporated in regulations of the Administrative Committee of the Federal Register, issued under section 6 of the Federal Register Act (44 U.S.C. 1506), which may be found in Title 1, Part 10, of the Code of Federal Regulations.

Preface

A companion publication to the Public Papers series, the Weekly Compilation of Presidential Documents, was begun in 1965 to provide a broader range of Presidential materials on a more timely basis to meet the needs of the contemporary reader. Beginning with the administration of Jimmy Carter, the Public Papers series expanded its coverage to include all material as printed in the Weekly Compilation. That coverage provides a listing of the President's daily schedule and meetings, when announced, and other items of general interest issued by the White House Press Office. Also included are lists of the President's nominations submitted to the Senate, materials released by the Press Office which are not printed full-text in the book, and acts approved by the President. This information is compiled on a weekly basis and appears at the end of each week's coverage.

Volumes covering the administrations of Presidents Hoover, Truman, Eisenhower, Kennedy, Johnson, Nixon, and Ford are also available.

This series is under the direction of John E. Byrne, Director, Office of the Federal Register, and is produced by the Presidential Documents Division, Robert E. Lewis, Director. Editors of this book were Katherine A. Mellody, Kenneth R. Payne, Wilma P. Greene, and Brenda A. Robeson. The index was prepared by Brian L. Hermes and D. Michael Smith.

White House liaison was provided by Patricia Y. Barrio, Deputy Press Secretary. The frontispiece and photographs used in the portfolio were supplied by the White House Photo Office.

The typography and design of the volume were developed by the United States Government Printing Office under the direction of Samuel L. Saylor, Acting Public Printer.

Interview With the President

*Question-and-Answer Session With Members
of the Japanese Press. June 20, 1979*

TOKYO SUMMIT MEETING

Q. Mr. President, it has been widely assumed that energy will be one of the key issues in the Tokyo summit. I wonder if you would delineate for us what is it you would like to accomplish in the coming Tokyo summit? What is it you think is significant in this particular summit as compared to the past four previous summits?

THE PRESIDENT. This will be the first opportunity that the major Western nations' leaders will have to address the energy question as a top item on the agenda. In the past, we have dealt primarily with macroeconomic matters. Obviously, some of them still prevail. Inflation, unemployment, enhanced trade are of importance to our country and will be discussed. But energy will be the major topic.

We have done a great deal of preparatory work among the nations who will be represented in Tokyo. I will spend a day or two with Prime Minister Ohira before the other leaders arrive in Japan. We will

be sharing our ideas in preparation for the summit.

Obviously, some of the considerations will be a continuation of our past discussions. We have committed ourselves, a major consuming nation, to reduce our imports of oil by 2 million barrels per day by the end of 1979, compared to projected use. We will discuss means to implement this commitment and also to extend the conservation effort through 1980 and subsequent years.

Additionally, we will explore new ways to increase the production and use of nonfossil fuel supplies of energy. Coal, nuclear power, solar power will all be discussed quite thoroughly. We are, obviously, interested in safety and the preservation of the quality of our environment.

A special consideration which I would like to explore with Prime Minister Ohira and others is the international sharing of responsibility for technological developments, liquefaction, gasification of coal, the use of renewable energy sources, and direct use of sunlight, and how to assure that nuclear power is both safe and efficient.

These are the kind of issues we will be exploring in energy among ourselves. The

last point is we will try to provide a common approach to the OPEC nations and others who export energy, oil, so that there will be an assured, stable supply of oil and natural gas on the international market, and so that there will be a stable and predictable price for energy.

These are some of the considerations we will explore, both bilaterally and among the entire group at the summit.

MEETINGS WITH PRIME MINISTER OHIRA

Q. Mr. President, you are going to meet Mr. Ohira twice within a month or so. What do you expect to accomplish by this meeting vis-a-vis your Japanese relationship?

THE PRESIDENT. The most important thought in my mind is a tremendous amount of commonality between Japan and the United States. We have the same basic goals: to preserve peace in the Asian region, to enhance exchange of goods and people and ideas, to provide a greater security for the people in our country, Japan, and in other Asian nations.

We share a common interest in commerce, scientific development, technological advances, international trade, the reduction of protections—barriers to trade, stable and a sound international monetary system, tourism. We explore common ideas of education and culture. So, the overriding consideration is how much we share, both now and in the future.

The second point is that we have a few problems between us, because we are highly developed, technological nations. We have very aggressive outlooks on life, great confidence about the future, hard-working people, innovative. We, therefore, on occasion, compete with one another. We have developed a very beneficial habit of discussing our problems quickly—with-

out timidity or restraint—and openly, so that the people of both countries can know what the difficulties are and what progress is being made.

Quite often, the focus of publicity is on these few differences and how we struggle to resolve them without delay and without embarrassment. What we forget is how relatively insignificant these differences are, compared to the great area of cooperation and mutual advantage.

I was pleased at the result of my discussions in this room with Prime Minister Ohira in May. I found him to be a sound and experienced and enlightened leader, and a warm and forthcoming, friendly leader. And I felt the progress that we made to alleviate some of our trade differences was very beneficial and encouraging. We will continue with that progress.

I have no doubt that we will both have a more fruitful experience with the economic summit because of our meetings on a bilateral basis before the economic summit begins.

U.S.-JAPANESE TRADE

Q. In his recent speech in Washington, former Governor John Connally accused Japan of still closing its market to certain American products, particularly citrus, beef, and grain. Specifically, he stated, and I quote, "If I were President of the United States, I would say to the Prime Minister, 'Unless you are prepared to take American goods and services, you better tell your people they better be ready to sit on the docks of Yokohama in their own Toyotas watching their own televisions.' " My question, first, is how do you respond to Mr. Connally's statement, and also, thus far, to what extent do you feel the issue of trade imbalance between the U.S. and Japan have been alleviated or resolved?

THE PRESIDENT. In the first place, I would not respond to Mr. Connally's statement. [Laughter] This is a free country, and we have freedom of speech, as is the case in Japan. I would like to point out Mr. Connally holds no public office, and perhaps when you analyze his statement, you will see why he holds no public office. [Laughter] But he has a right to speak.

We would point out with gratification the progress that has been made in the so-called Tokyo Round of economic discussions. Just this week, I have submitted to the Congress legislation to implement the Multilateral Trade Negotiation results, and my prediction is the Congress will approve these legislative proposals without delay. This will help to lower protectionist trends that were of concern to us, and I think the downward trend in protectionism will extend several years in the future.

We do import a great quantity of Japanese goods, more than we export to Japan. There have been several voluntary agreements reached to lessen this disparity. We are pleased with the progress that has been made. We would like to see more opportunity for us to sell American goods in Japan, not only finished goods, where we are highly competitive with the Japanese producers, but also coal, timber, citrus, grapes, other things that we have to export.

I might point out the proposal that involves American citrus, since you raise that issue, only amounts to 2 or 3 percent as much as Japan produces in citrus. And the months that we would like to have a chance to sell more citrus are during June, July, and August, for instance, when Japan citrus production is at its lowest point.

So, when we can have an open market for our goods without damaging the farm

economy or the economic economy of Japan, we would certainly like to increase our sales to Japan. But we have explored those possibilities with a common respect, and we have made good progress.

ASIAN SECURITY ISSUES

Q. Mr. President, partly because of the growing threat from the North, the Japanese attitude toward security matters has changed so much that Japan can now cooperate with the U.S. even in the security field. Can you tell us your views on the role Japan should play in the security field? Is it more desirable for the United States that Japan's role be confined to the defense of Japan herself, or should Japan, along with the United States, play a regional security role to maintain peace and stability in Asia?

THE PRESIDENT. It is obvious that both the United States and Japan want to see peace and stability in Asia. Our own military involvement in Asia will not be decreased. We want to do our share in assuring the security of our own people and the people of Japan and our other allies and also enhancing peace for all who live in the Western Pacific area.

We are very proud of our alliance with Japan, carefully formed voluntarily by the leaders of both nations. We have been pleased at the commitment of Japan to provide for its own defense. The level of defense expenditures by Japan is a decision for the Japanese people to make, not for us to try to influence. We respect this independent decisionmaking process, and we have complete confidence that Japan and its Government will make wise decisions.

So, we share common goals, we work together in harmony, we respect the independent decision rights of one another, and we are very pleased with the present arrangement and the future prospect.

KOREA

Q. Mr. President, let me ask two questions about our neighboring country Korea. First of all, the CIA has just completed the reevaluation of North Korean military forces, and, based on the result of the reevaluation, I wonder what you are going to do with the South Korean troop withdrawal plan? The second question is, while you are in Korea, are you going to see some opposition party leaders in Korea, including Kim Dae-jung?

THE PRESIDENT. We have been concerned about the new estimates of North Korean military strength, which are higher than we had previously supposed. I will be discussing this matter with President Park and also with our own military commanders in South Korea. Whatever decision I make about the level of American forces, I will keep the commitment that I originally made, that is, not to do anything to disturb the military balance or to create instability on the Korean peninsula.

My custom has been on all my foreign visits to meet with opposition leaders. And while I am in South Korea, my intention is to meet with the opposition leaders there, both those that are actually involved directly in politics and those that might be outside the political realm, both religious leaders and others. So, I do plan to continue this process while I am in South Korea.

My own hope is there might be fruitful meetings directly between the leaders of South Korea and North Korea in the near future, either with or without an American presence during those meetings. I think this is the ultimate solution to the present divisions of the people of Korea. But in any case, we will do our part to maintain stability there, the se-

curity of our allies, and to let the world know we resolutely will maintain our responsibilities.

SOVIET MILITARY BUILDUP IN THE FAR EAST

Q. Mr. President, as my colleague mentioned earlier, there is growing concern in Japan about the Soviet major buildup in the Far East, the possible deployment of the Soviet military carrier *Minsk*, and Soviet military activity in Vietnam. How do you assess this Soviet military buildup in this region, and how do you react to this situation?

THE PRESIDENT. We have no fear of Soviet military presence there. We are concerned about a buildup whenever we consider it to be excessive beyond what is required for Soviet security. I discussed the South Vietnamese question with President Brezhnev this week, and particularly the Soviet presence there, both ships and airplanes. He assured me personally that there would be no establishment of Soviet bases in South Vietnam and that the present ship and plane use of the ports and airports is of a routine nature.

We will maintain American military presence in the Western Pacific, adequate to protect American interests and to protect the interest of our allies. I think in our alliances—with South Korea, with Japan, with New Zealand, with Australia, new leases on Philippine bases, our growing friendship with the ASEAN group, the honoring of their independence, the normalization of relations with the People's Republic of China, plus the new SALT agreement with the Soviet Union and the prospect for better relations between ourselves and the Soviet Union brought about by the summit conference this past weekend—all of those factors combined lead

me to expect increased stability in the Far East.

I think we have made great progress since the Vietnam war. And our whole thrust has been to ensure peace, to respect the individual rights of people in the Far East, to do what we can to decrease tension, to eliminate combat with respect to the national borders, and to ensure that those people who live there have the right to self-determination.

We have been concerned about the invasion of Kampuchea by the South Vietnamese; they have continued presence there with large military forces. And we are especially concerned about the plight of the refugees who are now being forced out of Vietnam in increasing numbers. These are issues that we will be discussing with the Japanese leaders and with the other leaders on my visit to Japan.

JAPANESE DEFENSE EXPENDITURES

Q. You said earlier that the level of the Japanese defense expenditures should be decided upon by the Japanese themselves, but I would like to pursue this question by putting it into a more American perspective. In your view, Mr. President, will Japan be able to fulfill the defense goals, as expected by the United States, to have a more equitable and more effective security bilateral relationship, by adhering to the policy of maintaining defensive expending to 1 percent per GNP?

THE PRESIDENT. As you know, because of the dynamic growth of Japan's national product, the actual level of expenditures within the 1-percent guideline has been increasing substantially. Japan, in my opinion, has spent its defense funds very wisely. And we have confidence that the Japanese military strength is adequate to provide for the defense of Japan.

ENERGY

Q. Mr. President, you mentioned some kind of a collective or concerted effort being made which would be discussed at the Tokyo summit meeting. Could you outline more specific approaches or specific products to cope with the energy shortage situation, corrective measures?

THE PRESIDENT. We will be sharing with Japan ideas on building design, the efficiency of automobiles, new types of machinery and the use of such machinery, other measures that can let the consumption of energy be much more efficient.

Secondly, we will explore with Japan the increased technological ability of the consumption of energy to be more efficient, safer, and more compatible with clean air and water.

Third, we will be exploring with Japan the financing and the sharing of basic research data in nuclear power; the conversion of coal to liquids and gaseous fuels; more efficient burning of combustible materials; increased use of solar energy in all its forms, including hydroelectric; the production of methanol and other materials from replenishable growing plants, animal waste; the conversion of solar energy directly into electricity, for instance; new forms of the use of geothermal power; the sharing of basic research on metals, friction. These kinds of ideas can be explored jointly by Japan and the United States and, of course, with other nations.

In some instances, these experimental efforts are quite expensive, and there is no reason, if Japan is taking the leadership role in a certain area of experimental work, for the United States to duplicate what Japan is already accomplishing. The exchange of basic research data and the sharing of the financing of pilot projects

is a very fruitful opportunity for the future.

Recently, for instance, Japan and Germany have agreed to join in with the United States in a project concerning the liquefaction and gasification of coal. We would obviously like to see Japan increase its purchase of American coal in the future, with the knowledge the coal can be burned cleanly and efficiently.

So, these are the kinds of areas where we can cooperate fully in the future.

TRADE WITH CHINA

Q. Mr. President, both the United States and Japan have expressed the willingness and intention, desire, possibly, of cooperating with the modernization program by the People's Republic of China. In so doing, however, isn't there a possibility that your country and Japan might end up competing over the Chinese market?

THE PRESIDENT. I might say that we favor the modernization program of the People's Republic of China, an attitude shared by the leaders of Japan. We see nothing threatening about this, and the turning toward Japan and toward the United States by China, we believe, is a very good recent development for stability and peace in Asia.

Obviously, there will be some competition for markets, but this is a benefit to both countries. We have the same competition with each other for markets in Canada, in Europe, in Asia. This is nothing new for us.

We are able to compete successfully in the technological field. There are some areas of science and industry where the United States is preeminent; there are

other areas where Japan is preeminent; and there is a third category of areas where we are roughly equivalent to one another in our progress and we can compete successfully. We believe there is enough market throughout the world to meet the expanding production of both Japan and the United States.

I might point out there are a few realms of economic development in China where Japan and the United States will be cooperating. But this is of benefit also to both countries, but we have no fear of this. We believe that, overall, a friendly competition for the increasing markets with China will be of benefit to both our countries. And it is obvious that the openness of China's attitude and its economic developments is better for the entire world.

INDOCHINESE REFUGEES

Q. Going back to the Indochinese refugee issue that you briefly referred to earlier, specifically, what would be your expectations concerning an increased Japanese role in this international problem?

THE PRESIDENT. All countries must play a larger role. The United States is accepting a very large number of refugees, tens of thousands of refugees. Japan has accepted very few. *[Laughter]* I think when Prime Minister Ohira was over here, the total number of refugees accepted in Japan was only three. *[Laughter]* This, however, has been combined in Japan with very generous contributions to the U.N.'s effort to alleviate the refugee problem.

We recognize Japan has a very homogeneous society; ours is quite heterogeneous. We are a nation that is comprised of refugees or immigrants. It is easier for us to accept refugees, perhaps,

than Japan. But there is no doubt in my mind Japan can do more, and there is no doubt in my mind the United States can do more.

We would like to turn this critical problem into a much more wide ranging area of responsibility among numerous nations. Malaysia, Hong Kong, Thailand have been heavily burdened with an excessive number of refugees. And I would hope the People's Republic of China and Japan, the United States, European areas, and others can do more in the future. This is one of the items that will be on the agenda for the next summit conference.

PRESIDENT'S JOGGING

Q. Mr. President, are you going to jog while you are in Japan?

THE PRESIDENT. I have a habit of jogging every day.

Q. With your wife?

THE PRESIDENT. With my wife, yes.

Q. In Tokyo?

THE PRESIDENT. Yes, that is our present plan. There are a lot of excellent runners in Japan.

PRESIDENT'S MEETINGS IN KOREA

Q. Mr. President, if in fact you might be seeing Mr. Kim Dae-jung in Korea, would you?

THE PRESIDENT. My intention is to meet with opposition leaders. I have not established a definite agenda yet, but that has been my custom.

REPORTER. Thank you.

NOTE: The interview began at 2:45 p.m. in the Cabinet Room at the White House.

As printed above, the item follows the transcript of the interview, which was released on June 23.

Korean and East Asian Issues

Questions and Answers for Publication in the Orient Press. June 21, 1979

REPUBLIC OF KOREA SECURITY

Q. Many Asians are still concerned over "gradual United States retreat from Asia," complaining that the United States is leaning more heavily toward West European defense. There are also criticisms in Korea that the United States is too restrictive in its security cooperation policy toward Korea to approve sales of coproduction of sophisticated weapons such as F-16, A-10 aircraft, submarines, and so on, while taking every measure to prevent even a possibility of South Korean production of nuclear weapons.

Mr. President, what are your guidelines for U.S. security commitments to the Republic of Korea? Furthermore, would you recommit American ground combat troops to South Korea after completion of your troop withdrawal plan, in case of another North Korean attack, as President Harry Truman did?

A. Anyone with a knowledge of U.S. history, geography, politics, and economics knows that the United States will not "retreat" from Asia. We are there. We are a major partner in the Pacific community. We are a Pacific nation. We firmly intend to remain one. Recent policy developments—normalization of relations with China, strengthening of ties with Japan, renegotiation of the Philippine base agreement, and our burgeoning economic ties with the region—all strengthen our relationship. Any discussion of our Korean security commitment occurs in the context of our strong interest as a Pacific power.

For many years, in support of our Korean commitment, we have made avail-

able weapons and other military materiel essential to Korea's defense. Within the constraints of our worldwide arms transfer policy, we intend to continue to make such equipment available. With respect to the possibility of reintroducing ground combat forces into Korea in the event of renewed conflict, the United States Government is prepared to take whatever action may be necessary to fulfill its security commitment.

U.S. POLICY TOWARDS EAST ASIA

Q. Northeast Asia appears to be in a period of change or adjustment in the balance of power, even though a delicate strategic equilibrium still exists there. The normalized relations between the United States and the People's Republic of China, Sino-Japanese friendship treaty, the Soviet naval buildup in the area, rivalry or even conflicts among the Communist nations (including Southeast Asia), and North Korea's obstinate intransigence in peace efforts are some noticeable recent events.

Mr. President, how do you assess the situation there, and what is your policy toward this critical area? Do you plan to announce any comprehensive policy statement like a "Carter Doctrine" or "Tokyo Doctrine" during your trip to Tokyo and Seoul late June?

A. Our policy toward East Asia is based on several consistent principles designed to maintain stability, further prosperity, and take account of changes occurring in the region. The basic ingredients of that policy are well known to you: American determination to remain actively involved as a Pacific power; the cornerstone alliance with Japan; our firm security commitment to the Republic of Korea; improvement of relations with the People's Republic of China; strong support for ASEAN and ANZUS; encour-

agement of trade and economic development throughout the region.

We have been responsive to change. We have normalized our relations with China, while Japan has concluded the peace and friendship treaty with Peking. We would like to see a reduction of tensions on the Korean peninsula, provided that this can be accomplished with officials of the South Korean Government as full and equal participants in the process. We are improving the quality of the 7th Fleet. At the same time, we have moved to strengthen key relationships with allies of the region. Our partnership with Japan has never been more productive. Our security commitment to Korea remains unshakable. We have concluded an agreement with the Philippines, enabling us to maintain stable access to our bases through the next decade. We have increased support for ASEAN.

Our Asian policy serves the interests of the United States and its Asian allies well. I have no plan to change it.

U.S.-R.O.K. RELATIONS

Q. Senior administration officials in their congressional testimony or public speeches stated that your trip to South Korea will mark the end of a difficult phase in the U.S.-R.O.K. relationship and "begin a new period of better mutual understanding and confidence." Mr. President, what is your perspective for the U.S.-R.O.K. relations in 1980's—political, economic, security, and so forth?

A. The outlook for the relationship between the United States and the Republic of Korea in the 1980's is excellent. The dramatic pace of Korea's economic development of the past few years shows every sign of continuing, and in the 1980's we expect Korea to be one of our most important trading partners and a major market for U.S. exports. The South will

have far outdistanced North Korea in economic growth. Similarly, we can look forward with confidence to an enhanced defense capability in South Korea. As I have said before, our security commitment will remain firm. We are hopeful that the decade ahead will bring comparable development in the political area. Specifically, we hope to see greater emphasis on the protection of political rights and more rapid development of political institutions.

GROUND TROOP WITHDRAWALS

Q. Mr. President, your Korean troop withdrawal policy has been controversial in this country up to now—illustrated by the Senate Armed Services Committee's approval of Senator Sam Nunn's subcommittee recommendation on Army active duty ceiling following its House counterpart committee's adoption of an amendment on it in mid-May.

You said in an interview on February 9 that you are holding in abeyance further troop withdrawals from South Korea until reassessment of new intelligence study of increased North Korean military strength, impact of Sino-U.S. normalization, and perspective of the North-South dialog. Mr. President, have you made your determination on this issue? If not, when do you think you would announce your decision—before, during, or after your Far East trip?

A. I have made no decision on ground troop withdrawals yet. I want to take a firsthand look at the situation, talk to President Park, and consult with Congress before making up my mind. Whatever decision is made, one thing is clear: Our commitment to the security of the Republic of Korea is unshakable. Our policy will be based on this commitment

and the maintenance of stability and peace on the Korean peninsula.

RELATIONS WITH NORTH KOREA

Q. When the U.S. table tennis team traveled to North Korea to participate in the international championship there in late April, it was widely speculated that the United States might try another "Ping-pong diplomacy." I understand that North Korean leaders have sent feelers to Washington through various ways for bilateral talks on trade and cultural relations with the United States, and you have stated many times that the United States wants to open relations with all the countries with which she does not have now.

Mr. President, may I ask you to specify your policy toward the North Koreans? Do you have any proposal or plan for solving the perennial Korean question, other than four-power conference among the United States, China, North and South Korea, and cross-recognition of Seoul and Pyongyang by major powers?

A. Let me state our policy toward North Korea quite simply. We are prepared to participate in discussions with North Korean officials aimed at reducing tensions on the Korean peninsula, but only if officials of the South Korean Government are full and equal participants. We have also said that to promote an atmosphere conducive to the reduction of tensions, the United States Government is prepared to improve our relations officially and unofficially with North Korea, provided that there are parallel improvements by the Soviet Union or China in relations with South Korea. We are not hostile toward North Korea. However, we are not going to take unilateral steps which are unreciprocated by North Korea's major allies, nor allow ourselves to become manipulated in a manner

which ignores the rights and sovereignty of our ally, the Republic of Korea. We recognize that solution of the problems on the Korean peninsula can only be resolved through the direct involvement of the Governments of both North and South Korea.

U.S.-SOVIET TALKS

Q. Mr. President, you have met with your Soviet counterpart, Leonid Brezhnev, June 15–18 in Vienna. Arms control is one of your foreign policy objectives. Will you discuss with the Soviet leader on the Korean question in the context of “control of transfer of conventional weapons” and of “better communications” with the Soviets for regional stability?

A. There are no discussions of Korean arms transfers with Soviet representatives in Vienna.

HUMAN RIGHTS

Q. Another major foreign policy objective of your administration is enhancement of human rights at home and abroad. Mr. President, do you plan or expect to see some Korean political dissidents during your trip to Seoul—either at a church service or at a reception?

A. The schedule for my visit to Korea is not yet fully fixed. However, in addition to the important consultations between our two Governments, I look forward to meeting with other elements of Korean society. This will include opportunities for discussion with elected political leaders, including the opposition, and with leading churchmen. However, my worship at church is a personal matter and will not be an occasion for political meetings.

NOTE: The written questions were submitted to the President by So-Whan Hyon of the Orient Press. The answers were given to him by the President on June 21. The texts of the questions and answers were released on June 23.

The President's Trip to Japan and the Republic of Korea

*Remarks on Departure From the White House.
June 23, 1979*

I leave in a few minutes for an economic summit meeting that can affect the daily life of every American citizen. Oil shortages and oil prices threaten the very strength of our own economy and also the fabric of our society. This will be the major economic item on our agenda when I arrive in Japan. Concerted action by all the industrialized nations—there will be seven of us leaders there—is absolutely crucial to solve the energy problems facing the American people today. This is a primary reason for my trip. We must act now to bring these global energy problems under control.

This is not just an American challenge. The long gas lines, the shortages of diesel fuel, the concern about heating homes, the mounting frustration over fuel supplies that we see here in America are symptoms of a global energy shortage. Our planet is simply not producing enough oil to meet rising demands.

We now are consuming about 2 million barrels of oil per day more than is being produced. And as I know many of you realize, since last December the price of OPEC oil has increased more than 35 percent. The challenge to the industrialized democracies is very clear. We must not be set one against another in a desperate competition to buy every barrel of scarce oil regardless of its price. Together, we must import less. Together, we must produce more. Together, we must reduce our dependence on a handful of oil producing and exporting countries.

At Tokyo I will call on our allies to join with the United States to meet our targets for reducing oil imports in 1979 and to reduce our imports even more in 1980. Also,

we will work together to stop the unnecessary and unacceptable competitive bidding against one another over the oil prices that we pay. And we will marshal the vast resources, engineering, technological, scientific resources of our industrialized nations to produce more domestic energy, such as coal, solar energy, and synthetic fuels.

To meet these goals, of course, here at home, the Congress must act now to pass the windfall profits tax and to establish the national energy security fund to help us have the means to develop alternatives to foreign oil.

While I work with our allies on these energy problems on a global basis, Vice President Mondale will monitor the situation here at home, will keep me informed about what is happening, and will act, as necessary, to minimize adverse effects of shortages in the United States.

Whatever our successes might be in Japan, there should be no illusions, no false expectations, by the people of our country or other nations. Gas lines and fuel shortages will not disappear any time soon.

This is a difficult time for our Nation. All of us must make some painful adjustments in our daily lives. What we cannot afford is to give in to a mood of panic or desperation or, worse, to the idea that each of us is somehow pitted against our neighbor in a desperate scramble for scarce energy supplies.

Three times in this century we've overcome challenges far more serious than this one, with two long World Wars and with a massive depression that actually rocked the world's economy.

Now, as in the past, we can overcome the challenge of the energy crisis if we in this country are united as a people, if each of us will do our part as a citizen and as a neighbor, and with full confi-

dence in the greatness of the United States. Now, as in the past, after this time of testing and trial, we can emerge an even stronger, an even more prosperous nation for having met this test together. That is the spirit which I will take to Tokyo.

Thank you very much for coming out to see me off.

NOTE: The President spoke at 12:47 p.m. on the South Lawn of the White House.

On the same day, the White House made available a list of the principal members of the official parties accompanying the President. Mrs. Carter and Amy, Secretary of State and Mrs. Cyrus R. Vance, Secretary of the Treasury W. Michael Blumenthal, Assistant to the President for National Security Affairs Zbigniew Brzezinski, and Senator and Mrs. Spark M. Matsunaga accompanied the President to Japan and the Republic of Korea. Additional members of the party to Japan were Ambassador and Mrs. Mike Mansfield and Secretary of Energy James R. Schlesinger. Ambassador and Mrs. William Gleysteen and Secretary of Defense and Mrs. Harold Brown accompanied the President to the Republic of Korea.

Treaty on the Limitation of Strategic Offensive Arms

Message to the Senate Transmitting the Treaty and Related Documents.
June 22, 1979

To the Senate of the United States:

I transmit herewith, for the advice and consent of the Senate to ratification, the Treaty on the Limitation of Strategic Offensive Arms, known as SALT II, including the Protocol thereto, both signed in Vienna, Austria, on June 18, 1979.

I transmit also, for the information of the Senate, the Report of the Secretary of State with respect to the Treaty, together with the following related documents:

1. a series of Agreed Statements and Common Understandings concerning the

obligations of the Parties under particular articles of the Treaty;

2. a Memorandum of Understanding that will establish an agreed data base by categories of strategic offensive arms along with associated statements of current data;

3. a Joint Statement of Principles and Basic Guidelines on the Limitation of Strategic Arms concerning the next phase of negotiation on this subject; and

4. a Soviet statement on the Backfire bomber, together with a U.S. response.

For thirty years the United States has pursued a fundamentally bi-partisan foreign policy towards the Soviet Union, with the objectives of deterring aggression by maintaining strategic forces second to none, creating a pattern and tradition of negotiation to settle differences, building a strong framework of allies, and stabilizing the globe by halting the uncontrolled growth and spread of nuclear weapons.

SALT II strengthens each of these objectives. The seven years of negotiations, under three administrations representing both political parties, were carried out in closer consultation with Congress and under greater public scrutiny than any other arms limitation treaty. SALT II is truly a national accomplishment.

It is my best judgment and firm belief that these patiently negotiated agreements further the long-standing goals for our nation's security. They improve our strategic situation and allow for further improvements in the future. They reaffirm our leadership of the world in the cause of nuclear arms control. They allow us to negotiate for peace from strength in SALT III.

Like SALT I, the Test Ban Treaty, and the Non-Proliferation Treaty, SALT II is another important step forward toward our basic goal of a secure America at peace in a stable world.

I pledge the full cooperation of my

Administration in helping to explain the principles and details of the agreements.

Therefore, I request with a sense of special urgency the advice and consent of the U.S. Senate to ratification of the SALT II Treaty.

JIMMY CARTER

The White House,
June 22, 1979.

NOTE: The message of transmittal was announced by the White House Press Office on June 25.

The texts of the treaty and the related documents are printed on page 1051 of this volume.

United States Ambassador to Trinidad and Tobago

Nomination of Irving G. Cheslaw.
June 25, 1979

The President today announced that he will nominate Irving G. Cheslaw, of Los Angeles, Calif., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Trinidad and Tobago. He would replace Richard Fox, resigned. Cheslaw is Chief of the Senior Officer Division at the State Department's Bureau of Personnel.

He was born December 5, 1921, in Los Angeles. He received an A.B. from the University of California at Los Angeles in 1942 and an M.A. (1947) and Ph. D. (1952) from Columbia University. He served in the U.S. Army from 1942 to 1946.

Cheslaw was a lecturer in history and political science at Columbia University from 1949 to 1951. From 1951 to 1954, he was a historian at the Defense Department. From 1953 to 1959, he was a lecturer in political science at George Washington University, and from 1954 to 1956, he was also senior research analyst at the University of Pittsburgh.

Cheslaw joined the State Department as an intelligence research specialist in 1956, and was then posted in Port of Spain, Kingston, and Dublin. From 1966 to 1970, he served as supervisory foreign affairs officer, then supervisory international relations officer, at the State Department.

In 1970-71 Cheslaw attended the senior seminar in foreign policy at the Foreign Service Institute. From 1971 to 1974, he was Deputy Chief of Mission in Kuala Lumpur, and from 1972 to 1976, he was Deputy Chief of Mission in Dacca. He has been Chief of the Senior Officer Division since 1977.

Equal Employment Opportunity Commission

Nomination of Leroy D. Clark To Be General Counsel. June 25, 1979

The President today announced that he will nominate Leroy D. Clark, of New York City, to be General Counsel of the Equal Employment Opportunity Commission for a 4-year term. He would replace Abner Sibal, who has resigned.

Clark is a professor of law at New York University School of Law, and an arbitrator with the American Arbitration Association and the Federal Mediation and Conciliation Service.

He was born April 27, 1934, in New York City. He received a B.A. from City College of New York in 1956 and an LL.B. from Columbia University School of Law in 1961.

From 1961 to 1962, Clark was staff counsel with the State of New York Attorney General's Office. From 1962 to 1968, he was assistant counsel with the NAACP Legal Defense and Education Fund. He has been a professor at N.Y.U.

since 1968 and has been an arbitrator since 1974.

Clark is a member of the National Conference of Black Lawyers and the advisory council of the Association for Union Democracy. He was on the commission on juvenile justice standards of the Institute for Judicial Administration and the American Bar Association.

National Museum Services Board

Nomination of Emily Rauh Pulitzer To Be a Member. June 25, 1979

The President today announced that he will nominate Emily Rauh Pulitzer, of St. Louis, Mo., to be a member of the National Museum Services Board for a 5-year term.

Pulitzer, 45, was curator of the St. Louis Art Museum from 1964 to 1973. She has also been associated with the Fogg Art Museum at Harvard University and with the Cincinnati Art Museum. She is active in professional activities in art and is the author of numerous articles and exhibition catalogs.

Department of Health, Education, and Welfare

Nomination of Susanna B. McBee To Be an Assistant Secretary. June 25, 1979

The President today announced that he will nominate Susanna B. McBee, of Los Angeles, Calif., to be an Assistant Secretary of Health, Education, and Welfare. She would replace Eileen Shanahan, who has resigned, and her area of responsibility would be public affairs. McBee is currently a consultant at HEW and was pre-

viously a national staff writer for the Washington Post.

She was born March 28, 1935, in Santa Fe, N. Mex. She received an A.B. in journalism from the University of Southern California in 1956 and an M.A. in political science from the University of Chicago in 1962.

McBee was with the Washington Post from 1957 to 1965, as a copy aide for a year, then as a staff reporter covering general news, education, and civil rights. From 1965 to 1969, she was a Washington correspondent for Life magazine.

From 1970 to 1972, McBee was Washington editor for McCall's magazine. She returned to the Washington Post in 1973 as a national staff writer on urban affairs and Justice Department coverage. From 1974 to 1977, she was assistant national editor at the Post. She was a national staff writer covering urban affairs and Federal-State-local relations from 1977 until she joined HEW earlier this year.

Negotiations on Combatting Terrorism

Nomination of Anthony C. E. Quinton for the Rank of Ambassador While Representing the United States. June 25, 1979

The President today announced that he will nominate Anthony C. E. Quinton, of Seattle, Wash., for the rank of Ambassador, which would pertain when he is representing the United States at negotiations dealing with combatting terrorism.

Quinton, 45, has been Director of the State Department's Office for Combatting Terrorism since 1978. He has been a Foreign Service officer since 1959.

Bill Stewart

Telegram to the American Broadcasting Company for Use at a Memorial Service for the News Correspondent. June 28, 1979

The murder of ABC correspondent Bill Stewart in Nicaragua is a tragedy for his family, his friends, and for freedom-loving people everywhere.

Bill Stewart was a dedicated and courageous journalist. At the time of his death, he was attempting to perform the highest duty of the American press: to inform the public on the important issues of the day.

As nations become increasingly interdependent, our ability to solve our common problems, our very ability to survive and our hope of peace depends to a large degree upon our knowledge of conditions and events around the world. It is important that our journalists, as well as those of other countries, be allowed to cover world events without undue restraint.

When journalists are intimidated, the search for truth is intimidated.

On behalf of all Americans, Rosalynn and I extend our heartfelt condolences to Bill Stewart's wife, his family and friends.

JIMMY CARTER

NOTE: The text of the telegram was made available by the White House on June 29, the date of the memorial service, which was held in New York City.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White

House Press Office and not included elsewhere in this issue.

June 23

The President met at the White House with Zbigniew Brzezinski, Assistant to the President for National Security Affairs, before departing for Japan and the Republic of Korea.

The President declared a major disaster for the State of New Mexico as a result of severe storms, snowmelt runoff, and flooding, beginning on or about May 2, which caused extensive public and private property damage.

June 28

The White House announced that the President has decided to cancel a planned vacation in Hawaii following his visit to the Republic of Korea and will return to Washington for congressional and staff meetings on the increasingly serious domestic and international energy situation.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted June 25, 1979

IRVING G. CHESLAW, of California, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Trinidad and Tobago.

On Friday, June 29, the President was in Japan. Releases and announcements issued during his visit to Japan and the Republic of Korea will be printed next week.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, July 6, 1979

Elmendorf Air Force Base, Alaska

Remarks at a Reception. June 23, 1979

I really thank you for coming out this afternoon to meet me. I told Bob Strauss that I was going to stop, the first stop on the way to Tokyo, in Alaska to see my friends, and he said, "Well, that won't take long." [*Laughter*]

I think if anybody in the last 2½ years has thought about Alaska and studied about Alaska, it has been your President. There are two maps in the world with which I have become thoroughly familiar. One is in the Sinai, and I think you know which one the other is. [*Laughter*]

This is a State of unbelievable beauty, as you know, and it's a State where the conflicts of the world peculiarly are focused.

I go from Washington to Tokyo to meet with the leaders of France, Germany, Italy, Great Britain, Japan, Canada to talk about the most burning issue of our time, and that is energy, development of the quality of life, rapid change, whether or not people can govern themselves in a time of crisis and change that sometimes escapes us, a time of division,

a time of argument, a time of debate, a time of soul-searching, a time of patriotism, and in our country, a time of greatness.

I've just come back from concluding an agreement with the Soviet Union. It's not the first wonderful agreement we've worked out with Russia, as you well know. [*Laughter*] But the times press on us. And I think Alaska, our most beautiful State, is also a State where the youth and the vigor and the dynamism and the strength of our Nation is most vividly demonstrated.

I recognize acutely, being a politician who hungers after the friendship and the approbation of Americans, how deeply disturbed you all have been on one side or the other about the Alaska lands legislation and the frustration that you feel in this relatively remote State from Washington that the decisions are made by those who don't know you well enough and who are too far away to hear your voice clearly.

You're not the first people in this Nation who've felt that way. I come from the South, as you know, and there have been decisions made in Washington with which we had violent disagreement. Once

to the fact that we have reached
the point where we must now
take the matter. The President
and I are here and I think the
importance of our visit can be
understood.

I am sure that you will find it
interesting to know that we have
been here since 1975. The President
and I have been here on all personal
and official visits and I think that when I
return to the United States, our country
will be a more united and
stronger one.

I am sure that you will find it
interesting to know that we have
been here since 1975. The President
and I have been here on all personal
and official visits and I think that when I
return to the United States, our country
will be a more united and
stronger one.

I am sure that you will find it
interesting to know that we have
been here since 1975. The President
and I have been here on all personal
and official visits and I think that when I
return to the United States, our country
will be a more united and
stronger one.

I am very proud to be President of this
country and I am very proud to be in a
house that is as great as all with your beauty
and your strength, your confidence and
your power. You are typical of the pioneer
spirit of the United States, and it's an honor for
me to be here with you.

And now, if you don't mind, Rosalynn
and I would like to meet every one of you
personally, if you would come by and let
us know your name.

And thank you all. Thank you very
much.

The President spoke at 1:50 p.m. at
the Officers' Club. Following the reception, the
President left for Japan.

On his arrival in Tokyo, the President went
to the residence of the U.S. Ambassador to
Japan, where he stayed during his visit to
Japan.

THE WHITE HOUSE

Washington, D.C.
August 10, 1975

THE PRESIDENT
AND THE VICE PRESIDENT
TO THE PRESIDENT OF THE
UNITED STATES OF AMERICA
AND THE VICE PRESIDENT

It is a great pleasure to
meet you and to meet
the members of the
President of the United States
of Japan. I would like to
meet you.

Mr. President, the war
has ended and you have
and my wife when we visit
States. Just now we will
our memory. I wish to
now to express our
to you.

I wish to take this opportunity
to express my deep respect for
President Carter, who is a
responsibilities in leading
the United States of America
difficult age, which is full of

There is a strong bond between
countries together. In fact,
other example of a relationship
any two countries in the world
are so different in culture
and are so far apart geographically
are enjoying an interchange of
great scope and substance.
Ambassador Mansfield aptly
this is precisely because the
is based on the essential similarity
way we see the world, of the
goals we pursue, and of the
they reflect.

The ties between Japan and
the United States serve to enhance the
Japan and the United States.

and at the same time serve the benefit in both our countries. At the same time, the close tie between our two countries enable our two countries to discharge their responsibilities and their interests for the benefit of peace and stability in the international community. It is in this sense that I feel that our two countries are today called upon to make further efforts to deepen and strengthen the relationship of mutual trust and understanding between our two countries.

Mr. President, I am convinced that your visit to Japan this time will serve to strengthen this valuable tie of trust and understanding between our two countries, and will thus contribute greatly to peace and stability of the Asian region.

On the 26th and 29th of this month, Mr. President, you will be representing the United States at the economic summit which will take place here in Tokyo. In this economic summit, all the participating countries share the common goal of working together to stand up to the new challenges to the world economy. I am hopeful that thanks to the wisdom and leadership of President Carter, this economic summit will prove to be a very successful meeting.

Ladies and gentlemen, let us join in a toast to the great contribution President Carter has made in world affairs since his assumption of office, to further development and prosperity of the United States of America under his wise and able leadership, and to the continued health and happiness of President and Mrs. Carter.

THE PRESIDENT. *Mr. Prime Minister, distinguished Japanese guests and friends:*

I'm delighted to be in your country and to enjoy the special hospitality and friendship for which the Japanese people are known throughout the world.

During our discussions in Washington in July, Prime Minister Ohira and I became not only partners, but also we became friends and mutual students. In addition, in reading the voluminous briefing books prepared for us by our staffs, we had many occasions to read each other's autobiographies. His was much better than mine. [Laughter]

I realize that we were both farmers and that we both came from the southern part of our country. I have developed a special interest that being from the southern part of one's country is not incompatible with great statesmanship. [Laughter]

I come here for our bilateral discussions in a spirit of good will and friendship, bringing to the people of Japan the best wishes of the people of my country.

I agree with Prime Minister Ohira that in the history of the relationship among nations, I doubt that there has ever been two countries so different in history, in culture, in traditions, in geography and language, but still bound so closely together in a spirit of productivity with a far-reaching commitment to common goals, common ideals, and personal friendships.

Yours is one of the most ancient of nations, ours is relatively new. Yours is one of the most homogeneous people, so closely bound together that you can almost communicate with one another without even speaking. Ours is a nation of immigrants, of refugees extremely different one from another, coming from all nations on Earth with different languages, different heritage, different backgrounds, different interests, but still bound together in one nation, deriving strength because we have a common goal and a common purpose.

Yet, our two countries, so different, are bound together with a common be-

the basic decisions are made, modifications can then be accomplished. We can accommodate one another. The tensions tend to alleviate, and I think the harmony of our Nation can be restored again.

I look forward to coming back to Alaska. The first time I came here was exactly 4 years ago in June of 1975. I'm grateful to have a chance to meet you all personally, and I hope and I pray that when I go to Tokyo to represent our country, that I can make you proud of me and again proud of our country.

Last weekend in Vienna, in our negotiations with the Soviet Union, I negotiated from a position of political strength and military strength. We are the strongest nation on Earth.

This weekend I will be negotiating with the other leaders from a position of economic strength and cohesion, brought about by an allegiance to a nation which is, again, the greatest and the strongest on Earth.

I'm very proud to be President of this country, and I'm very proud to be in a State that inspires us all with your beauty and your dynamism, your confidence and your youth. You're typical of the pioneer spirit of our Nation, and it's an honor for me to be here with you.

And now, if you don't mind, Rosalynn and I would like to meet every one of you personally, if you would come by and let us shake your hand.

God bless you all. Thank you very much.

NOTE: The President spoke at 1:50 p.m. at the Officers' Club. Following the reception, the President left for Japan.

On his arrival in Tokyo, the President went to the residence of the U.S. Ambassador to Japan, where he stayed during his visit to Japan.

Tokyo, Japan

Toasts at a Luncheon Hosted by Prime Minister Masayoshi Ohira.
June 25, 1979

THE PRIME MINISTER. *Mr. President, Mr. Secretary of State, Mr. Secretary of the Treasury, Mr. Secretary of Energy, Your Excellencies, and distinguished guests:*

It is indeed a very great pleasure for us all to have with us today President Carter and the members of the President's party. On behalf of the Government and people of Japan, I would like to extend our sincere welcome.

Mr. President, the warm welcome and courtesies which you have extended to me and my wife when we visited the United States last month will forever remain in our memory. I wish to take this opportunity to express again our heartfelt thanks to you.

I wish to take this opportunity to express my deep respect and gratitude to President Carter, who is discharging his responsibilities in leading his great country, the United States of America, in this difficult age, which is full with problems.

There is a strong bond that ties our two countries together. In fact, there is no other example of a relationship between any two countries in world history which are so different in culture and tradition and are so far apart geographically but are enjoying an interchange of such a great scope and substance. I believe, as Ambassador Mansfield aptly described it, this is precisely because the relationship is based on the essential similarity of the way we see the world, of the political goals we pursue, and of the basic values they reflect.

The ties between Japan and the United States serve to enhance the honor of Japan and the United States respectively,

and at the same time serve the benefits of both our countries. At the same time, this close tie between our two countries enable our two countries to discharge their responsibilities and roles respectively for the benefit of peace and stability of the international community. It is in this sense that I feel that our two countries are today called upon to make further efforts to deepen and strengthen the relationship of mutual trust and understanding between our two countries.

Mr. President, I am convinced that your visit to Japan this time will serve to strengthen this valuable tie of trust and understanding between our two countries, and will thus contribute greatly to peace and stability of the Asian region.

On the 28th and 29th of this month, Mr. President, you will be representing the United States at the economic summit which will take place here in Tokyo. In this economic summit, all the participating countries share the common goal of working together to stand up to the new challenges to the world economy. I am hopeful that thanks to the wisdom and leadership of President Carter, this economic summit will prove to be a very successful meeting.

Ladies and gentlemen, let us join in a toast to the great contribution President Carter has made in world affairs since his assumption of office, to further development and prosperity of the United States of America under his wise and able leadership, and to the continued health and happiness of President and Mrs. Carter.

THE PRESIDENT. *Mr. Prime Minister, distinguished Japanese guests and friends:*

I'm delighted to be in your country and to enjoy the special hospitality and friendship for which the Japanese people are known throughout the world.

During our discussions in Washington in May, Prime Minister Ohira and I became not only partners, but also we became friends and mutual students. In addition to reading the voluminous briefing books prepared for us by our staffs we also were required to read each other's autobiography. His was much better than mine. *[Laughter]*

I learned that we were both farmers and that we both came from the southern part of our country. I have developed a special theory that being from the southern part of one's country is not incompatible with great statesmanship. *[Laughter]*

I come here for our bilateral discussions in a spirit of good will and friendship, bringing to the people of Japan the best wishes of the people of my country.

I agree with Prime Minister Ohira that in the history of the relationship among nations, I doubt that there has ever been two countries so different in history, in culture, in traditions, in geography and language, but still bound so closely together in a spirit of productivity with a far-reaching commitment to common goals, common ideals, and personal friendships.

Yours is one of the most ancient of nations, ours is relatively new. Yours is one of the most homogeneous people, so closely bound together that you can almost communicate with one another without even speaking. Ours is a nation of immigrants, of refugees extremely different one from another, coming from all nations on Earth with different languages, different heritage, different backgrounds, different interests, but still bound together in one nation, deriving strength because we have a common goal and a common purpose.

Yet, our two countries, so different, are bound together with a common be-

lief in freedom, a common belief in democracy, respect for the individuality of human beings, a reverence for freedom of speech, open debate, for truth, for the exercise of exploration of ideas without constraint, for freedom of the press, and for an open political process. We both believe that the greatest source of energy and creativity is the initiative in individuality derived from this personal freedom. We both believe in world peace. We both believe in the control of nuclear and other weapons.

Our relationship today is more than just one between two governments. It's a relationship almost like members of one extended family. More than 1 million American and Japanese citizens visit back and forth each year between countries. We meet in corporate boardrooms, in government councils, in factories, in concert halls, in scientific laboratories, in universities, on farmlands, on the sports fields, and many other ways. More Members of your Diet and our Congress visit each other to learn and to share ideas than between any other two congressional bodies on Earth.

We have much to learn from you. We admire your vigor, your thirst for knowledge, your sense of self-discipline, your commitment to hard work. We respect the stability of your family bonds, the worth of your community unity, the Japanese grace and delicacy, the sense of harmony and beauty that you've preserved down through the ages, and your own special achievement in balancing this reverence for the past with the utilization in an effective way of the opportunities of the present and the future.

These personal characteristics have permitted you to build Japan, your nation, into a great world power. Our relationship permits both our people to derive great benefits, one from another. Annual

trade between our countries is more than \$40 billion, more than the gross national product of 134 other nations in the world.

In closing, let me point out that we cannot rest on our achievements. Your great Admiral Togo, in 1904, said, "After victory, tighten the straps of your helmet."

With success comes differences. We both want equal advantages from this great mutual trade. It's a great tribute to Japan that you will be the host of what might very well be the most important economic summit conference ever held.

In addition, as a regional leader, you recognize, along with us, that Asia is the fastest growing economic region in the world, a region of rapid change, and we are certainly moving into a new era in the life of our shared Pacific community.

The United States is a Pacific nation in history, geography, and interest, and the partnership between the United States and Japan is the cornerstone of our own foreign policy in this region of the world. Together I am sure that you and we can be a force for hope, stability, prosperity, and peace in which all the world's people can share.

I would like to propose a toast to the health of Prime Minister Ohira and Mrs. Ohira, to the deep friendship and mutual respect and affection which exists between the people of Japan and the United States, and to the bright future which we share together.

NOTE: The exchange began at 1:55 p.m. at the Prime Minister's residence.

Prior to the luncheon, the President and Prime Minister Ohira and members of their delegations met at the residence.

Earlier in the day, the President was officially welcomed to Japan by Emperor Hirohito at Akasaka Palace. Following the ceremonies, the President and the Emperor went to the Imperial Palace to meet with members of the imperial family.

The Prime Minister spoke in Japanese, and his remarks were translated by an interpreter.

Tokyo, Japan

White House Statement on the Consultative Group on US-Japan Economic Relations.
June 25, 1979

President Carter and Prime Minister Ohira agreed today to create a Consultative Group on US-Japan Economic Relations, announcing selection of Robert S. Ingersoll and Nobuhiko Ushiba as Co-Chairmen.

The decision follows agreement at the May 2 summit in Washington to establish a small group of distinguished persons drawn from private life who will submit recommendations to the President and the Prime Minister concerning actions that will help maintain a healthy bilateral economic relationship between the United States and Japan.

Mr. Ingersoll and Mr. Ushiba will recommend to the President and the Prime Minister the names of other people to serve in the Group.

Mr. Ingersoll, a 1937 graduate of Yale University, was formerly Ambassador to Japan (1972-73), Assistant Secretary of State for East Asian and Pacific Affairs (1974), and Deputy Secretary of State (1974-76). At the time of his Ambassadorial appointment he was chairman of the board and chief executive officer of the Borg-Warner Corp. in Chicago, where he had spent the previous 33 of his total of 35 years in industry. Chairman of the Japan Society since September 1978, Mr. Ingersoll has been a member of many international business committees and councils, including the Advisory Council on US-Japan Economic Relations and the Emergency Committee for American Trade. He is also deputy chairman of the board of trustees of the University of Chicago.

Mr. Ushiba, a graduate of the Faculty of Law of Tokyo Imperial University,

entered the Foreign Service in 1932. He has served in various capacities abroad and in Tokyo, including Ambassador to Canada (1961-64), Vice Minister of Foreign Affairs (1967-70), and Ambassador to the United States (1970-73). Mr. Ushiba was named State Minister for External Economic Relations in November 1977. He has served as Ambassador for the Multilateral Trade Negotiations since December 1978.

NOTE: The statement was released in Tokyo, Japan.

Tokyo, Japan

Toast at the State Dinner. June 25, 1979

Your Majesty, you do my country and the American people great honor by receiving me, my wife, and my party to this beautiful room. There is a strong sense of history here: the history of your ancestors as Emperors of Japan stretching back to the very beginning of the nation; the history of Japan's development as a nation with great world influence, that began with the reign of your grandfather; and, the history of relations between Japan and the United States, reaching back to the visit of Commodore Perry in 1853.

We are proud to be part of this great flow of history, to build on the exchange of visits begun in 1974 by President Ford and continued during Your Majesty's memorable trip to the United States in 1975.

The American people still remember fondly the warmth and the friendship of your visit with us. The past century and a quarter has seen the relationship between our two countries and between the peoples grow to be as busy and as close as between any two nations on Earth. Together we have developed a combination

of unmatched productivity and economic strength and a strong, shared devotion to the ideals of freedom, democracy, and the betterment of mankind.

Our relationship has seen times of great trouble and tragedy. But the close partnership we have forged in the last generation, in the Pacific region and around the world, amply justifies the common vision of the Japanese and Americans who saw in the 19th century that the future of our two nations would inevitably be linked.

Our achievements together over the years—in trade, in education, in science, in culture, in sports, in the cause of peace and friendship among nations—are a triumph of determination and hard work.

Your grandfather expressed that spirit eloquently in one of his poems. He said: “Even up a mountain peak which seems to reach the skies, we dare to say for him whose will is set on climbing it, there is a way.”

We have much to learn from you. You’ve succeeded in preserving the best of your own traditions while harnessing the opportunities offered by change. You’ve maintained a sense of community bonds, the closeness of families, a special grace and civility and gentleness in your relations with each other despite the noise and the pressures of an industrial society. You’ve preserved the special Japanese ability to create and discover delicate beauty and harmony in every aspect of life, from the simplest, most natural things, to great architectural structures.

At the same time, you’ve grown to be an economic super power. You’ve harnessed the ingenuity and the creativity and energy of your people to gain the fruits of industry, technology, productivity, vigorous trade, prosperity, and growth.

Most important to Americans, you’ve achieved all of this in one of the most

open, democratic, free societies on Earth. You’ve found a harmony between the dignity and worth of each individual human being and the responsibilities of shared effort and common purposes that a democracy demands.

We live in a world of rapid, sometimes bewildering change. People in many nations are struggling to preserve the values of their cultures and their traditions while they meet the complex challenges of development and growth. Japan offers a model of hope from which all nations can learn.

Your Majesty, I understand that at the beginning of each year you plant a tiny rice seedling as a symbol of your hope that your people will enjoy a bountiful future. I am a farmer. I know about the hard work, the attention, the care that successful crops require. I share your faith that working together, both our peoples can enjoy a more hopeful, more prosperous future, and that together with our allies and our friends who meet with us this week, we can do much to spread the blessings of prosperity and peace to disadvantaged peoples around the world.

During the next few days, leaders of great nations will represent the industrial democracies at the economic summit. It would be easy to focus only on the magnitude of the challenges we face in energy, in our own economies, in helping to meet the needs of the developing nations, in working together to build a more secure and a peaceful world. But I also think about the tremendous resources of our seven nations; the resources of our economies, the strongest, most vital, most dynamic in the world; the resources of our farmland and agricultural systems, the most productive on this Earth; our achievements in technology and science, in which we are unequalled; and the re-

sources of our centers of learning and education and research, which attract students from almost every land. Most of all, I think of the resources of the spirit of the more than one-half billion free people in the major industrial democracies. I think of the strength of the ideals of freedom and individual dignity that our nations embody, ideals that still exert an almost magnetic attraction to disadvantaged people all over the Earth.

I have no doubt that together we have the resources, the skill, and the dedication to assure that people everywhere can be adequately fed; that our factories and farms and homes can draw on abundant, secure sources of energy; that the prosperity so many of us have enjoyed can be shared by others for whom life is little more than the struggle to survive from day to day. I'm confident that together we can build a world in which all peoples can live in peace.

Drawing upon the strength and the flow of history uniting our two nations, we shall together reach the goal that Your Majesty set in a poem you wrote for the new year nearly 40 years ago, and you said then:

"We pray for the time to come
When East, West and all
Making friends with one another
Will share in a prosperous future."

Your Majesty, with this goal in mind, I offer a toast to the health and well-being of Your Imperial Majesty, your family, the great people of Japan, and the harmony and friendship which binds us all together.

NOTE: The President spoke at 9:02 p.m. in the Bright Abundance Hall at the Imperial Palace in response to a toast by Emperor Hirohito.

Earlier in the afternoon, the President visited the Meiji Shrine and the nearby Iris Gardens.

Tokyo, Japan

Informal Exchange With Reporters.
June 26, 1979

Q. While we are waiting, can you tell us anything about how the talks are going?

THE PRESIDENT. They couldn't be better. Most of our serious difficulties were discussed and basically resolved back in May, when Prime Minister Ohira came to the United States, and then when Ambassador Strauss came here. So, we have been planning for the summit, talking about energy, refugees, and discussing international matters that are of mutual interest to us.

Q. Mr. President, do you feel you have made any progress on the refugee issue?

THE PRESIDENT. Yes, I think so. What we want to do, obviously, is to get the entire world to participate in the acceptance of the refugees and the financing of the very expensive programs, and also to get the world to induce the Vietnamese to change their policy, to cut down on the large numbers who are having to leave Vietnam. But the more nations who become interested and who join in the effort makes it possible to solve both these problems—to stop the problem at the source, and also to accommodate those who have already left.

Q. Mr. President, did Prime Minister Ohira give any indication what Japan can do?

THE PRESIDENT. I think it is better to let him speak for Japan.

Q. Did you have any discussions on U.S.-Soviet relations?

THE PRESIDENT. Yes. I gave the Japanese leaders a report on the Vienna conference, on the elements of SALT II, some of the prospects for the future. This was part of the discussion today.

Q. Did they indicate to you any con-

cern over U.S. presence in North Asia or in Asian countries?

THE PRESIDENT. Not concern. I think our intentions and their desires are compatible.

Q. They are not concerned about our maintaining our presence here?

THE PRESIDENT. As I say, I think our intentions and desires are compatible.

Q. Mr. President, is there anything more that the United States can do about the refugees?

THE PRESIDENT. Well, of all the refugees who leave Southeast Asia now, we are taking about 70 percent of them. We have already committed to take 7,000 per year. We have already accepted—I mean, a month. And we have already taken about 200,000. What we want now is to increase what we are doing, but to get many other nations to join in with us.

Q. Do you think you will discuss this at the summit meeting?

THE PRESIDENT. Yes.

Q. Do you think there will be some specific proposal to come out of the summit meeting?

THE PRESIDENT. Yes.

Q. Can you give us any indication what that might be?

THE PRESIDENT. No, I can't speak for anybody except ourselves.

Q. But you will have specific proposals to put forward at the summit?

THE PRESIDENT. Yes.

Q. Mr. President, will you make any direct approach to Hanoi on this?

THE PRESIDENT. That is a continuing effort.

NOTE: The exchange began at approximately 1:30 p.m. outside the U.S. Ambassador's residence. As printed above, the item follows the press release.

Following his remarks, the President went inside to meet with former Japanese Prime Minister Takeo Fukuda.

Earlier in the day, the President and Prime Minister Ohira and members of their delegations met at Yoshida Villa in the town of Oiso.

Tokyo, Japan

Remarks at a Reception With Members of the Japanese Diet. June 26, 1979

Speaker Nadao, President Yasui, distinguished Members of the Japanese Diet, other guests:

It's a great honor for me and my wife to be here with you.

First of all, let me thank those among you who were here 4 years ago when I visited in May of 1975, who welcomed me when I was beginning my own campaign for President of the United States. At that time you gave me a much better welcome than I was getting in my own country. [Laughter]

As I stated yesterday, no other two legislative bodies in the world exchange more visits than do the Members of the Diet of Japan and the Members of the Congress of the United States. It is very reassuring and gratifying to me as President of our country to know that two great democracies are bound together through our people, through the heads of state, and through the great democratically elected congresses.

This strength, derived from friendship and close consultation, permits our countries to bear the burdens of responsibility and the great, wonderful opportunities of a better life in the future. My conversations with your Prime Minister and other officials today in Oiso, at what can be known in our country as a shrine of peace, were very productive and typical of the frank discussions which have bound our nations together through years of trial and years of achievement.

The economic achievements of Japan and the beneficent political influence of Japan throughout the world are a legitimate source of admiration for all other people. This great achievement of yours, which has aroused admiration, is closely

bound with the friendship and the quiet gentleness which makes visiting here in your beautiful country such a pleasure for us.

Tomorrow I will go to Shimoda, where the interrelationship between our countries began, and my wife will then visit Kyoto, the more ancient capital of your beautiful country. This will give us an additional opportunity to let the people of Japan know how dearly we cherish the friendship which binds us together, providing a sense of strength as we deal with bilateral questions, as we improve the quality of life and the peace and stability of the Pacific region, as we favorably impress upon other nations the influence of our two countries throughout the world.

On behalf of 220 million Americans, I want to say to you Members of the great Diet of Japan, thank you for this partnership, thank you from the bottom of our heart for your friendship.

To the great people of Japan, to the friendship that binds us together, to peace throughout the world.

NOTE: The President spoke at 5:40 p.m. at the residence of Hirokichi Nadao, Speaker of the House of Representatives. In his opening remarks, he also referred to Ken Yasui, Speaker of the House of Councillors.

Following the reception, the President went to the National Theater for a Kabuki performance.

Shimoda, Japan

Remarks and a Question-and-Answer Session at a Town Meeting. June 27, 1979

THE PRESIDENT. Thank you very much, Mr. Mayor and distinguished citizens of Shimoda. My wife and I and my daughter, Amy, have been touched by the warmth of your welcome.

I have already had the honor of an audience with your Emperor, and I have

had very productive meetings with your Prime Minister Ohira, but I especially wanted to come to this historic city.

Shimoda is where our friendship first took root and flowered. A century and a quarter ago when our relationship began, Japan was a feudal society on the verge of social revolution. The United States was edging toward a war between the States over the issue of slavery. Neither of us has devised a perfect political system since then, but we share a fundamental belief in freedom and in democracy.

As free people, we share common challenges as well. None is more important today than the energy crisis. Our planet is not producing enough oil to meet all our demands. The industrialized nations like the United States and Japan must face this challenge together, rather than competing with one another for every available barrel of oil regardless of price.

Energy is the principal subject of the summit meeting your country is hosting this week for the leaders of the major industrialized nations. Together we must restrain and reduce our imports. Together we must reduce waste and conserve our precious energy supplies. Together we must find ways to explore and to develop alternate energy supplies and new technologies of solar power and synthetic fuels.

This is a great opportunity as well as a challenge. Each of us must make painful adjustments in our society and some sacrifices in our daily lives. No one ever promised us that freedom would be easy or that democracy can be preserved without effort or without sacrifice.

All nations can learn from the example of the Japanese people in grappling with the complex challenges of development and of change. You've built your nation into an economic super power, but you've preserved the grace and the humanity and the beauty of Japanese society.

Your Emperor made a wise statement to leaders in a poem he wrote in 1966. He said, "Would that the wise voice of the man in the street spoke daily to guide us in the performance of our duties."

I have learned a great deal from the citizens of my country attending town meetings such as this one. In the same way, I would like to learn from your own wisdom and your own experience. I will take your questions now, with great pleasure.

VISIT TO SHIMODA

Q. I am sorry, I don't think I'm a good questioner. Mr. President, I understand you went to a *yakitori* restaurant last night.

THE PRESIDENT. Yes.

Q. I watched that on TV, and I felt you very close to us. We speak of the good intentions—at the *yakitori* restaurant, that sort of place I believe you can always get an impression of the true feelings of the people. What I would like to ask is the following: Why did you choose Shimoda for your town meeting? The friendship treaty between Japan and the United States was first concluded here in Shimoda, and there is the exchange of the instruments of ratification was conducted. Gyokusen-Ji, the place you will be visiting today; there you'll find five tombs of Americans, and I believe I can get your true thoughts here.

So, I would like to have your views on why you chose Shimoda for a town meeting.

THE PRESIDENT. Thank you very much for this excellent question.

I was here in Japan 4 years ago, before I was a famous man and when I had an opportunity to meet many people in Japan in a free and friendly way. Last night, without notice to the Japanese

security, we went to a private restaurant, the same restaurant that I visited 4 years ago, and there we found a friendship and warmth and exchange of ideas so valuable to me as one of the leaders of a great country in the world.

We wanted to have an opportunity to hear questions directly and to meet with other members of the Japanese community outside of Tokyo, and the obvious place to me was Shimoda, where the good relationship between your country and ours first began more than 100 years ago.

We felt that in Shimoda there was a good historical base for interest in the United States, and that perhaps more than the average Japanese community, you've studied about our own Nation and you would have questions to ask, and you would not be fearful to ask frank and freely what questions actually concerned you.

So, because of the historical relationship many years between us and because we hope that you'll ask very frank and free questions was the reason that I decided to come to Shimoda. The friendship between our two countries is very important to me, and I look forward to having questions now from a group who are very interested in our country and who, I think, would be representative of interested Japanese throughout your great country.

ATHLETICS

Q. What sorts of games did you play when you were small? And looking at the games children nowadays play in the United States, how would you compare the games; and what are your thoughts?

THE PRESIDENT. When I was a child, I played baseball, which Japanese play extremely well, as demonstrated by your great Mr. Oh, whom I met day before yesterday. I also played basketball. I lived

on a farm. I liked to fish and to wander in the woods and streams.

I think the Americans have still maintained this great interest in sports. This morning, quite early, my wife and Amy and I were in swimming about 6 o'clock, and we run every day to stay in good physical condition.

My own belief is that the modern-day American young person is a better athlete than they were when I was a child. The standard of sports is higher, the competition is greater. And I think one of the new sports that has come to our country is soccer or international football. This is a very popular sport now in our country. It was hardly known when I was a child.

I think one of the greatest things that people can do in Japan or the United States is to stay in good physical condition by participating in competitive sports. And I'm glad even at the ancient age of almost 55, I'm still able to participate in athletics and sports.

FAMILY LIFE

Q. I'm a housewife and therefore don't really know much about difficult problems. I would like to ask a question about households.

I have three daughters. When they were small, my husband didn't look after them too well. Now that they have grown up—and the one in the middle is 11 years old, the same as Amy—and these daughters, after supper, they would add to the very warm atmosphere at home. We have very good rapport. And my husband seems to be very happy being surrounded by three daughters all the time.

I read in some article, I understand President Carter said that one of the most important women for you is Amy. I'm sure Amy will be getting married some years from now. Then I wonder if you'll

feel you want to keep Amy close to you—[laughter]—will not want her to go away to someone else. How do you feel?

THE PRESIDENT. You were much more fortunate than I much earlier. My first three children were boys, and my wife and I were married 21 years before Amy came along. She's very close to us and we would like to keep her at home, of course. However, I think in a few more years, I hope at least 7 or 8 more years, I hope that Amy will find a good young man and get married and move away. We would obviously like for her to visit us often after she does so.

We have a very close family. We now have three grandchildren, two grandsons and a baby granddaughter who was born just a few months ago. So, I think the closeness of families is very important in the lives of every person.

One of the great things that Americans admire about Japanese is the very close-knit family and community relationships you enjoy in spite of a very great technological change that you've accommodated in your own lives. We have many things to learn from you, and I think that's one of the most admirable characteristics that we admire about the Japanese society, your strong families.

ROLE OF JAPANESE YOUTH

Q. Mr. President, I'm a student at—[inaudible]—Senior High School. I'm very happy to see you. I've been looking forward to talking with you today. This is a marvelous opportunity. I want to ask you many questions, but as time is limited, I will ask you only one. However, before the question: I read your book, "Why Not the Best?", and I was very much impressed by it. Here I have your books. I brought them through very tight

guard at the entrance, so please give me your signature later.

I know you, like us, try to do your best, and so do I. I think we, the young people, must always try to do our best, like you. So, the question, Mr. President: What do you most expect young Japanese people to do for world peace? Please give me your frank opinion.

THE PRESIDENT. Thank you very much.

I might say, first of all, that your English is perfect, and I want to congratulate you already on doing such a superb job. You've obviously done your best in your study of our language. One of the things that you could do in the future is to be a professional interpreter at the United Nations. [*Laughter*]

It's very important for young people of this age to learn about other people and learn about other nations on Earth. There is a genuine worldwide hunger, in my opinion, for friendship, for understanding, and for peace.

One of the responsibilities of the leaders of nations like my own and like yours is to search for better degrees of understanding. Not much more than a week ago, I was in Vienna, Austria, meeting with President Brezhnev and other leaders of the Soviet Union to search for ways to control nuclear weapons and to have peace and friendship between the Soviet Union and the United States.

Beginning tomorrow, I will be meeting with leaders from Japan, from Canada, Great Britain, from Germany, France, Italy, and from the European Community, searching for ways for us to have better understanding. It's a mistake, however, for young people like you or for average citizens like those who live in Shimoda to leave this responsibility only to elected leaders. It's very important for you to study and to learn about others and to encourage your own lead-

ers to explore not for war, but for peace, not for subjugation of citizens, but for freedom. And the very wonderful democracy that you enjoy gives us a chance to learn about others in an unrestricted way. A free press is also very important.

I hope sometimes you can come to the United States to visit us. If you come while I'm still President, we would love to have you come to the White House to see my family personally.

Also, I would like to—[*applause*]—

Q. Thank you very much, Mr. President.

THE PRESIDENT. If you will bring your books up here, I will be glad to sign them when I get through, okay?

PRESIDENT'S CHILDHOOD

Q. President Carter, when you were a child, what sort of strongest reminiscence do you have? What do you recall the most of your childhood?

THE PRESIDENT. I think the strongest memory I have is the closeness of my family. I lived on a farm, and we had a lifestyle much more similar to what it was 2,000 years ago than what it is today. We worked in the fields together, and we traveled very little. I always knew that my mother and father were near, and we were very closely bound together. We had very little contact with the outside world. Later, of course, with the modern technological age, with television, telephones, with travel by all people, the family structure became much less close together. And I would say that's the most vivid memory of my youth.

Also, I lived in the fields and on the farm, in the woods, along the streams. And when I'm now in the White House in Washington, my greatest hunger is to be alone, away from security, away from the press, and to be in the fields and the woods again. Maybe after I am no longer

President, I'll have this chance, but we want to keep a strong family in any circumstances.

SOUTHEAST ASIAN REFUGEES

Q. Let me ask you a rather serious question. With the slogan of rectifying the united society after Vietnam war and the Watergate, you came to the White House as the first President from the South after the Civil War. What I was most interested was that you have advocated human rights on the diplomatic front and also zero [base] budget for domestic budget. You've also sent letters to Sakharov in the Soviet Union, and you have also seriously worked for the Agreement of Helsinki. At the same time, you have with unfailing belief of democracy been working vis-a-vis Nicaragua and Zimbabwe-Rhodesia, and I would like to express my full respect to you.

Now, today we are faced with energy and other important problems. As the leader of the democratic world on questions of assistance to less developed countries, on questions of Vietnamese refugees, I hope you will play an even greater role. And I wonder if I could have some of your views on these questions.

THE PRESIDENT. The people of Japan and the people of the United States enjoy great privileges of freedom and democracy which others do not enjoy. My own belief is that we should take a bold stand in encouraging the basic human rights of freedom and liberty and proper attention to the worth of each individual human being no matter how powerful or weak, no matter how rich or poor, no matter how influential or well recognized they might be. I have tried to let the United States be one of the leading lights of the enhancement of human rights throughout the world.

I have already met twice with Prime Minister Ohira and other leaders of Japan to explore ways to alleviate the present intense problem of the tens of thousands of refugees who are coming out of Vietnam because of oppressive policies of the Vietnam Government.

Of all the refugees who now leave Asia, the United States receives about 70 percent of them, and we also provide very heavily financial resources for the United Nations and for others who attempt to deal with this increasing problem. Japan has been very generous in financial contributions, but because of the homogeneous nature of your own society, Japan has not yet decided to receive very many of the Vietnam refugees.

With the other Western democratic leaders, this will be the number two item on the agenda, along with energy the most important thing we will discuss. I hope that the United Nations will very quickly arouse interest among all 150 nations on Earth to receive a large number or a small number of the refugees and that all of us might focus our criticism or influence on Vietnam to relieve this growing problem at its source.

I think the humane treatment of these refugees is a major responsibility for me as President. We have been taking about 7,000 per month. We have already received 220,000 of the refugees from Vietnam and Southeast Asia. We are prepared to take even more, and I will be joining in with Prime Minister Ohira and others to make this a worldwide effort to alleviate this very serious human problem.

Thank you for your very good question.

PRESIDENT'S EDUCATION

Q. My name is Matsaki Imati. I'm a ninth grader. When you were in junior high school, I wonder if you've ever been scolded by your teacher, and what sort of

memory do you have and what sort of dream did you have in those days?

THE PRESIDENT. I have not only been scolded by my teacher, I have been severely punished by my teacher with a paddle, which did not hurt me permanently. Perhaps one of the reasons that I ultimately became President was because my teachers were very strict and encouraged me to abide by the rules of the school and also inspired me to study harder.

I think the primary goal that I had in mind when I was a ninth grader was to be a student at the United States Naval Academy and to be a naval officer. My own family has been in the United States for more than 300 years, and neither my father nor his father nor any of his ancestors had ever finished high school and gone to college. And I felt that because of the Government opportunity at the military school, the Naval Academy, that I would have a chance for the first time to get a college education and also to serve in the U.S. Navy.

I did finally go to the Naval Academy, was in the Navy for 11 years, was a submarine officer, then resigned to go into public service, eventually, and became President. So, I think the ambition to get a better education was my major one as a ninth grader.

I received scolding and punishment when I was not a good young boy. I don't think the scolding and the punishment and the discipline hurt me at all.

U.S.-JAPANESE RELATIONS

Q. Mr. President, in this city where Commodore Perry and Harris, who opened up the friendly relations between the two countries, you visited this town on account of that historic background. At the same time in this city of Shimoda,

at that time those two distinguished American citizens, Perry and Harris, we learned what was happening in the world from these two distinguished Americans. And as a result, we decided to open our country and conclude relations, friendship with the United States, even during the ban put on by the then Bakufu Shogunate.

Do you know of this particular incident?

THE PRESIDENT. Yes, I've studied this when I was a student, and in preparation for coming to Shimoda, I have studied even more.

Q. So, today you are visiting Gyokusen-Ji Temple at the entrance of that. We always think about those two distinguished American citizens, as well as Shoin Yoshida, who also made a great contribution to the opening of our country at that particular time.

If circumstances permit, I hope you will slow down your car and pay respects to the great Shoin Yoshida. If you are kind enough to do that, Dr. Yoshida and other distinguished ancestors of ours will feel very happy thinking about the even closer relations we enjoy with the Americans, I think they will enjoy beneath their graveyard.

I sincerely hope that you do that and pay respect to those great ancestors as well.

THE PRESIDENT. Thank you. The point you've made is very good. It would be a mistake for Americans to forget about the reception given to the American officials, Perry and Harris, by the people of Japan. We recognize how difficult this was 120 years or more ago, and I want to express my thanks on behalf of the American people for the friendship and hospitality and openness that was offered to the world by Japan at that time, under the most difficult circumstances. And you're

absolutely right, it's not equitable to honor Perry and Harris and to forget about Mr. Yoshida and other Japanese leaders who made the great progress between our two nations possible.

Thank you for this reminder. It's very well that you have done so.

EDUCATION

Q. Welcome, Mr. President. My uncle of my husband visited the U.S. when he was 17, and he still lives in Chicago. He's now 84. Three years ago, that particular uncle visited Japan, and at that time he mentioned that the new President is Mr. Carter, and I am very, very happy that I personally am able to see you like we do now.

At this moment, we have two children, one kindergarten pupil, the other going to primary school. In your household, President Carter, what kind of practices and hope do you express for educating and training your children, including Amy?

THE PRESIDENT. My children and Amy have always attended the public schools, both when I was in Plains, Georgia, the little town where we grew up; when I was Governor of Georgia, living in Atlanta, the capital city of that State; and now in Washington, D.C., while I'm being President.

In addition to the regular classroom opportunities, Amy goes to a class at the local university for specialized training, and she also studies violin under the great leadership of a Japanese master. We have enjoyed yesterday, for instance, a violin class that Amy attended with several other Japanese children.

I think in addition to that, we provide Amy with an opportunity to travel. She's here with us this morning, and she learns about other countries and other people

because of my own experiences. I might point out very quickly that a father or mother does not have to be President of the United States to provide young children with an opportunity to learn more about the world.

She also learns, of course, from television, and from the reading which she does every day. Most of the time when you see Amy, except when she's very active, she'll have a book in her hand and reading on her own initiative. And I think this combination of schoolwork, family travel, in the home reading, and broadening one's life through violin or piano lessons is all a very good combination for education.

Thank you very much for letting me tell about my favorite daughter.

RACE RELATIONS

Q. One year from last, we received a student from the State of New York and had him stay in my house. So, I feel very intimate with the Americans.

A few days ago, a well-known actor, John Wayne, passed away. According to what I've heard, he is one of the representatives of great Americans. What he didn't like, according to the newspaper, was the colored people. You have well-developed democracy in your society. Still, currently, many people, including the educated people, may have some misunderstanding about the color of the people. In some regions of your country, even the overt form of segregation is practiced, as I was told. What do you think about such practices?

If, Mr. President, if you are not married—suppose you are not married and suppose you fall in love with a colored girl, what would you do? Would you marry her without any resistance?

THE PRESIDENT. Thank you very much.

There has been a time in our country when there was a great official and unofficial discrimination against black people and others, other people of color. Even 25 years ago, this was prevalent in the southern part of the United States, where I lived. This was something inherited from the early years of our Nation, when slavery was part of our societal structure and was approved by the laws of our Nation.

It was very difficult for us to make this change. But it was one of the most wonderful changes that has taken place in our own Nation, and I hope that what we have accomplished in the United States in the last 25 years will be an inspiration to others where racial discrimination is still practiced. I can't say that this attitude has been completely removed from the hearts of our people, but we have made great progress.

As far as intermarriages are concerned, I've never been in love with any other woman except my wife. But I would hope that in the true spirit of equality and in an absence of racial prejudice, that I would not let the color of a woman's skin interfere with my love for her if I felt that way—and marriage, of course, would be part of that relationship if the circumstances should permit.

I hope my wife will forgive my answering the question this way. It is a hypothetical question, Rosalynn, and I have no intention to leave you for another woman.

Q. Thank you very much, Mr. President. I like the U.S. more because of your answer.

THE PRESIDENT. I might add that we still have our problems, and we don't claim to be a perfect society. You have a very homogeneous society in Japan with very little differences among races. Our country is a nation of people who come from every country on Earth. Ours is a

nation of immigrants. Ours is a nation of refugees. We have hundreds and hundreds of different languages spoken in our country, but we are bound together with a common purpose under a democratic structure of government based on human freedom. And it makes it difficult for us in some ways, but I think it gives strength to our Nation, because this diversity of background and heritage and language and interest and history can be melded together in such a good way as it presently is in our Nation.

We are not perfect. But we are making progress.

U.S. AGRICULTURE

Q. I am 78 years old. Mr. President, it is indeed a great honor beyond any expectation to have this opportunity of meeting you and exchange views with you. I will carry that to my posterity, and I certainly welcome Mrs. Carter, as well as your daughter. It is a great honor for citizens of Shimoda to receive you. This will clearly tell us the great benefit of the free and democratic society.

I would like to ask, Mr. President, as one—I'm talking about you—who was brought up in the farms, what do you produce in your farm at the present time?

THE PRESIDENT. My State produces more peanuts than any other two States in the Nation, and on my own farm, this is the number one crop. We also produce on our farms, cotton, corn, swine, cattle. In the past, we've produced poultry—chickens—and we produce all kinds of feed grains, some oats, wheat, barley, and rye.

We have pine forests. We produce timber on our land. It's fairly typical of a farm for my own State of Georgia. We have about 60 inches of rain each year.

almost two meters of rain each year. We do some irrigating, and near my farm, but not on my farm, are produced other crops like vegetables and tobacco, but most of the crops produced on my farm are very large fields and the crops that I have enumerated to you.

I might point out that we are very proud of the sale of American farm products to Japan. I forgot to mention that we also produce soybeans on our farm. As a matter of fact, there are more acres of land in the United States which produce food for the Japanese than there is land in Japan which produces food for Japanese. So, we are very proud of an opportunity to sell you our farm products, and it gives a great opportunity for trade back and forth between our nations.

Thank you very much for letting me talk about my favorite subject of farming.

FAMILY LIFE

Q. Welcome, Mr. President, to the city of Shimoda. I am the mother of a first grader, as well as a year-and-a-half girl. This is a very friendly atmosphere. I really enjoy talking to you, Mr. President.

I would like to ask you, sir, for a young mother like me, who has responsibility for the next generation, as a mother—you are a father, of course, Mr. President—but for a mother, what do you expect us mothers to do for the next generation? That is my question, Mr. President.

THE PRESIDENT. In a day of women's liberation, it's getting more difficult to distinguish between the responsibilities of women and men. My wife gives me advice on matters of a broad range. She shares the responsibilities with me, both for my business affairs and also political affairs, and so she and I have an equal partnership which I think is very typical of American life.

My own impression in being here in Shimoda and listening to the questions thus far is of the intense interest of this community and Japanese people in general in the family and the growth of children and the cohesion of the family structure. I think to provide support for a husband, to share his burdens and responsibilities and achievements, to keep a stable family group, to accommodate the varied interests and characteristics of children, to give them a better life and a better opportunity than we ourselves had when we were growing up, to try to acquaint them with the outside world and the principles of a good life—those are things which are obvious to me as a father. I'm sure they're obvious to you as a mother.

But ultimately, a nation's strength rests very heavily on the strength of individual families and individual communities. That's the root of our progress and the root of the stability of life which lets us accommodate and overcome serious problems and obstacles. That's one of the reasons Japan has made such great progress; that's one of the reasons that you are one of the greatest nations on Earth, the strong family.

U.S. TRADE WITH JAPAN

Q. It is indeed a great honor to be able to see you, Mr. President.

I am with a farming family; I'm 25 years old, producing the Japanese tangerine, oranges.

In Japan, at this moment, we have the import agriculture products such as oranges. As a result of the development of the agricultural products import, we tangerine producers are having hard times because of the import of oranges and other agricultural products from the U.S. So, in this connection, I would like to have your thinking about this.

And on top of that, if I get unemployed, can I be employed on your farm in the U.S.? What would be the wages? Will that be enough to support myself, my wife, and my children? I will be happy to be employed by you with that wage, Mr. President.

THE PRESIDENT. First of all, let me say that we are very careful in our export policies toward Japan to have a minimum disruption of the market for your own products.

We actually sell to Japan very little citrus products, including oranges and tangerines, grapefruit, lemons. You have a total production of 3½ million tons of citrus products within Japan itself.

The present target which has been negotiated between Japan and the United States says that by 1983 the American citrus sales to Japan would be not much more than 2 percent of the total that you produce here in your own country. And we are trying to focus the sale of American citrus to Japan during the months when your own production is least, I believe, in June, July, and August.

So, we have to have some markets for our products in Japan in order to purchase the tremendous amount of products that we buy from your factories. But in negotiating these agreements, we try to keep the disruption of your products very minimally. I think the amount of citrus that is being sold or will be sold in Japan from the United States has been greatly exaggerated.

I don't operate my farm now. When I became President, I wanted to break away from any direct relationship with business. So, I rent my farm to others for a fixed amount per year. My own belief is that you will be much more prosperous in Japan growing superb tangerines than you would to come to my very poor farm in Georgia and to produce peanuts.

LIONS CLUBS

Q. Mr. President, I'm a charter member of the Shimoda Lions Club. I overheard that you are one of the members of the Lions Club. Since you have assumed your office, have you been there regularly, attending the club meetings, or are there other activities that you engage in?

In Japan, there is a saying, namely, that if you do it once, you will do it twice. So, I hope that you will win your election next year and come back to Shimoda very much.

THE PRESIDENT. Thank you very much. I'll remember your good wishes very carefully and with gratitude.

My father was a charter member of the Plains Lions Club. When I resigned from the Navy, I became a member the first week I was home. I later became Tail Twister, president of our club, zone chairman, deputy district governor, ultimately a district governor of the Lions Clubs in District 18-C, and chairman of all the Lions Clubs in Georgia, about 200 of them. But the Lions Club meant a great deal to me, and it gave me a chance to learn about public service without holding public office.

I do not attend the Lions Club now because of the duties of President and because I represent also Kiwanians and Rotarians and others as well as Lions. But when I return to Plains after serving as President, I intend to be again an active member of the Plains Lions Club.

PRESIDENT'S CHILDHOOD

Q. Mr. President, I am a pupil, a sixth grader, and I am 11 years old, as is Miss Amy.

Mr. President, you are a great man today, but what kind of a child were you when you were growing up?

THE PRESIDENT. It's hard for me to answer that question.

I was mischievous. My parents had to exert very good discipline on me, particularly my father. I had to work very hard, but not any harder than the other members of my family. I played with neighbors, although living on an isolated farm, we didn't have very many neighbors then. Most of my neighbors were black children, who were my only friends when I was a little child. I went to school about 2½ miles away in a tiny town called Plains, which has a total population of about 650 people then and now. Plains has not grown in the last 50 years.

I had a good life as a child and was very close to my mother, father, and my brothers and sisters. I might say I had great opportunities to improve myself, as do you, and I was, I would say, a typical child with problems and achievements—some good, some bad. And I turned out to be President, because in our country, as in yours, there is no limit on what an individual human being can be, because our Government gives us freedom and because in our society, each person has equal opportunity, and we look upon every person as a very valuable part of the Nation.

So, that's one of the great things about being in a democracy, in a free nation like you enjoy and that I enjoy, that no matter what your background or how poor you might be at the beginning of your life, you can still have a chance to be a very influential person, either in politics or out of it. And no matter what your life might amount to at the end, it can still be a full and gratifying life.

Thank you for letting me describe in a fumbling way my life as a child. It's been a long time ago. It's hard for me to remember all about it.

Q. President Carter, I am sure you respected your father. What sort of man was he? When you were a small child, what sort of thing did your father use to tell you?

THE PRESIDENT. Until I was 13 years old, I was the only son in the family, and my father and I were very close. We worked in the same field, we hunted together, fished together, walked in the woods together, went on short trips together.

My father was a very stern father in that when he spoke, I jumped. I didn't disobey him. When I was an unruly child or when I hurt my sisters or did something improper, my father would punish me for it.

My father was a hard-working man, very honest. He died in 1953. My mother, who is 81 years old this year, is still living, and she was also a great influence in my family. My mother was a registered nurse, and my father was a farmer. But both my parents were very important factors in my life and guided me, I think, in a proper way.

I might say, I won't have time to take another question, I don't believe, but I would like to close by making these comments.

This has been an exciting experience for me. I feel a warmth of friendship and good will from you that's typical of the attitude of Japanese people toward Americans. And it's very exciting for me as President of a great country to have that sense of our partnership and our common views toward the basic elements of human life.

We occupy positions of leadership in the world, and we have a great responsibility on us—not only Presidents but fathers and mothers, those who grow tangerines, those who go to school to learn about how we can be a credit to our coun-

try in our own individual lives and our own individual achievements.

Although many things change in a modern world with jet airplanes and television, the most important things do not change—love in a family, honesty, friendship among people, a desire for peace, a respect for one another, the beauty of nature, the reaching for a better life for children than parents had—those kinds of things never change. And I'm very glad to be part of Shimoda today and to have your questions covering such a wide range of interest.

I hope that through television, the people of Japan will see that what started here 125 years ago as the first little tiny seed of friendship between our two countries has now grown into an enormous tree of very wonderful friendship that can be an inspiration to our own people and an inspiration to peace-loving and freedom-loving people around the world.

I'm very proud and thankful to be with you, and I thank you for a chance to let me hear from you and to let you hear my voice as a leader of a great nation visiting the people of another great nation.

And now I would like to make a presentation to your community, and I'd like for the mayor and other officials to come to the stage, if they will.

While I'm here at the microphone, I would like to say that this is a plaque—I wrote some words very carefully on the plane coming over to Japan, and they've now been inscribed on this plaque—and I hope it will remind you of my visit with you. And now I'd like to go over and unveil the plaque, which you might keep in your own community.

I might read it. It says, "Here in Shimoda, friendship between the Japanese and the American people first took root and flowered. We have built together a lasting friendship based on trust and un-

derstanding. Our partnership offers hope that all peoples will one day learn to live together in brotherhood, prosperity and peace." And it's signed Jimmy Carter.

Thank you very much.

MAYOR AOKI. We have just received this message commemorating the President's visit to Shimoda, and also this is a replica that shall be kept in our minds forever. And I would like to thank you from the bottom of my heart, Mr. President.

I would also like to take this opportunity to say a few words of thanks.

Commodore Perry led the flagship fleet and surprised the citizens of Shimoda. Thanks to that, the doors to Japan were opened and the foundation for modern Japan was established.

President Jimmy Carter of the United States of America has led the fleet of Mrs. Carter and Amy, your most loved child, to come to Shimoda. On the 27th of June 1979, a new bridge of friendship starts in this small town of Shimoda, and in front of us, President Carter stands with us, sharing the same feeling and breathing the same air with us.

The United States of America and Japan have come so close together, so friendly, and we have established such great mutual understanding, and I would like to thank you for this wonderful town meeting. The great honor bestowed on us today will be handed down for posterity forever.

Mr. President, Mrs. Carter, and Amy, let us meet each other again once more in Shimoda.

NOTE: The President spoke at 11 a.m. in the Shimoda Middle School gymnasium, following an introduction by Mayor Yoshio Aoki. The participants in the town meeting spoke in Japanese, and their remarks were translated by an interpreter.

Following his tour of Gyokusen-Ji Temple, the President returned to Tokyo.

Tokyo, Japan

White House Statement on Meetings With Prime Minister Joe Clark of Canada and Prime Minister Margaret Thatcher of the United Kingdom. June 27, 1979

The President met with Prime Minister Joe Clark of Canada from 5:45 p.m. until about 6:15 p.m. Also in the meeting were Secretary of State Vance and Foreign Minister Flora MacDonald.

At 6:15 p.m., British Prime Minister Margaret Thatcher and Foreign Minister Lord Carrington joined the meeting.

Prime Minister Clark and Foreign Minister MacDonald departed at 7:15 p.m. and the President and Secretary Vance continued to meet with Prime Minister Thatcher and Lord Carrington until 7:30 p.m.

The bilateral discussions focused on bilateral matters. In the three-way meeting the focus was on the summit agenda—energy, refugees, and economic issues.

NOTE: The statement was released in Tokyo, Japan.

Tokyo, Japan

Remarks and a Question-and-Answer Session With Reporters on the OPEC Oil Price Increase. June 29, 1979

THE PRESIDENT. The OPEC nations have just increased their price again by an extraordinary amount. The cumulative effect of these increases has been a 60-percent increase in the price of oil since last December. This causes an economic watershed for the United States and also for the rest of the world. There is no one on Earth who will fail to suffer from these extraordinary increases in oil prices.

So far, we in the United States have failed to prepare ourselves for these actions by OPEC. Between 1973 and 1977, the United States took no action to deal with the inevitable increases in oil prices and the inevitable decreases in the supply of oil.

In 1977 I proposed to the Congress a comprehensive energy plan. Until this moment, the Congress has passed no legislation concerning oil. It is absolutely imperative that Congress act without delay to pass the windfall profits tax and to establish the energy security fund.

I have decided to cut short my own visit to foreign countries to go back home, arriving late Sunday, to encourage the Congress to act more expeditiously on the legislation I've already described and also to pass legislation authorizing the production of synthetic fuels and other energy supplies to make our country more self-sufficient, more immune from the damaging effect of outside decisions from OPEC and others.

In addition, I'll be meeting with my own advisers to see what other action can be taken within the next few months to protect our country from future actions such as these I've just described.

Domestic energy supplies must be increased. Oil, gas, coal, synthetic fuels, liquefied and gasified coal supplies, solar energy—these actions must be taken, and without further delay. We must invest literally billions of dollars in these technological advancements, and the money is available to us with the windfall profits tax and the establishment of the energy security fund.

It's been estimated that by the end of 1980, the OPEC price increases in the last 6 months will cost our Nation at least 2 percent in increased inflation and at least a 2-percent decrease in the rate of

growth of the economy of the United States.

Our country is able to be self-sufficient. We have the technological ability, we have the finances, we have the natural resources. It's imperative that we act expeditiously. It's imperative that we cooperate with one another. It's necessary for us to be determined, bold, aggressive, and also that we are creative and that the Americans harness the tremendous resources of our country in the most effective and efficient and cooperative fashion.

There is no other threat to our life in America so important as these economic threats that not only weaken our Nation's structure but also endanger our own security in the future. My belief is that now the American people are aroused and the Congress is aroused enough to act without delay. This will be my major purpose when I return to the United States in just a few days.

Thank you very much.

Q. Mr. President, is there any economic or other type of retaliatory action we and our partners could take directly against OPEC?

THE PRESIDENT. The most important single thing that can be done on a multinational basis is what has been under consideration here in Tokyo for the last 2 days. My prediction is that the major Western allies, those who are assembled here for the economic summit, will act aggressively and without precedent to cut down on our imports and our dependence on OPEC oil. This will have a major stabilizing effect. So, with multilateral approach here in eliminating waste, cutting down on imports, investing jointly to produce new supplies of energy based on new technologies—that will be a major step on a multinational basis. But I think the major responsibility is on us to act within the United States.

Q. Mr. President, have you been in

touch with other leaders since the price increase has been announced to see what their reaction is?

THE PRESIDENT. Yes. I discussed this announcement with the other leaders last night. We had a good indication of what it would be, and I think that I can say that they all share my deep concern about the economic consequences of it. But there are two phases that must be addressed: One is the multinational phase, where we work together on technology and to cut down demand for OPEC oil; and the second and obviously the most direct responsibility is for the United States to act on its own. We must do both.

Q. Mr. President, do you think there will be any effect on the dollar—immediate effect on the dollar or any kind of shifting away by the oil companies to other countries?

THE PRESIDENT. My belief is that the prospective OPEC price increase has already been assimilated by the international monetary markets. If we act boldly and aggressively here in Tokyo, which I believe we will do today, that should help to stabilize the dollar.

Q. What will the consequences be of continued congressional inaction on energy?

THE PRESIDENT. The same consequences that we've already suffered. The Congress has not acted for the last 2 years on any legislation that affects oil. I've just gotten a report from the Vice President a few minutes ago that the House finally passed the windfall profits tax. It must now go to the Senate. But for the last 2 years, the Congress has passed no legislation concerning oil. The windfall profits tax, when passed, the establishment of the energy security fund will give us a substantial reservoir of financing for the creation of synthetic fuels, the movement on solar energy, the liquefaction and gasi-

fication of coal, and other actions that can make us more energy self-sufficient.

Q. Is there anything immediate you can do to reduce the gas lines in the United States?

THE PRESIDENT. My information is that in the next few weeks—hopefully sooner—there will be an increase in supply of gasoline to the affected areas. The oil companies and the Department of Energy—and I talked to the Vice President this morning—all agree that the percentage of gasoline being allotted in the affected areas will be increased to about 97 percent¹ of what it was last year, a much better supply than we have experienced the last couple of weeks.

Thank you very much.

NOTE: The President spoke at 7:27 a.m. outside the U.S. Ambassador's residence.

Following his remarks, the President left for the French Embassy for breakfast with French President Valéry Giscard d'Estaing, British Prime Minister Margaret Thatcher, and German Chancellor Helmut Schmidt.

Earlier at a meeting in Geneva, Switzerland, members of the Organization of Petroleum Exporting Countries set a price ceiling for petroleum of \$23.50 per barrel.

Tokyo Economic Summit Conference

Remarks and a Question-and-Answer Session With Reporters. June 29, 1979

THE PRESIDENT. Well, first of all, let me make an opening comment, and then you can ask questions. I'll be brief.

First of all, the Japanese did a superb job, under very difficult circumstances, in putting together arrangements for my state visit and also for a very important conference. Secondly, I thought the results of the economic summit conference were superb. They equaled our highest expectations, and we accomplished several important goals.

First of all—and this was the most controversial all the way through—specific, tangible, individual nations' quotas or goals or imports for 1979, 1980, and extending through 1985. The individual European quotas will be assigned to those countries at the next European Community meeting in Dublin this fall, and then

¹On the same day, the White House Press Secretary issued the following notice to the press.

For your information on the President's statement and questions and answers this morning—

After reviewing the briefing material provided to the President, it appears that it is more accurate to speak of an increase to a range of 95 percent to 97 percent of last year's supply of gasoline, rather than the 97 percent figure which the President used.

You should note, however, that the President is committed as a primary goal to take the necessary steps to prevent a shortage of home heating oil. It could become necessary to reduce the amount of gasoline being produced this summer to avoid running out of oil to heat our homes this winter.

To make sure there is no misunderstanding, the President also asks that I relay to you this comment:

"Even if we reach the 97 percent figure, there is no guarantee that gasoline lines will end without significant conservation efforts. We will still have a substantial shortfall compared to projected demand, and the amount of gasoline available to the average motorist will be reduced by the necessity of providing priorities to such essential users as ambulances and fire-fighting vehicles."

For your additional information, to reach the 95 percent to 97 percent figure, it will be necessary for oil companies to draw down their crude stocks by about 20 million barrels, as we have asked them to do. It will also be necessary for crude oil imports to continue to average 6.2 million barrels per day or better, which is consistent with import levels over the past 3 weeks and with our IEA pledge to reduce consumption by 5 percent compared to projected demand.

the European Community will be responsible for monitoring those goals. The cumulative total will not exceed their 1978 import levels.

We, the Canadians, and the Japanese also adopted goals. Our 1985 goal for imports will not exceed the lower of either 1977 or 1979, no more than 8.5 million barrels per day.

The second thing that we did was to commit ourselves individually and jointly to pursue, with the full resources of our nations, the development of alternative forms of energy.

The third thing we did about energy was to issue, for the first time, a very significant comment about the OPEC nations' recent actions. I won't go into that now. My guess is that that will be the most newsworthy item. It's the first time that the other nations of the world have expressed ourselves clearly and forcefully about the unwarranted increases in oil prices levied against the rest of the world by the OPEC countries. The fact that seven industrialized nations have agreed on the text jointly, I think, is significant.

We also aroused, I think, a great deal of interest in the refugee question. We called upon Vietnam to restrain the outflow of refugees and to minimize its impact on the people concerned, particularly the refugees themselves. We have agreed to double our own monthly quota of refugees coming from Vietnam. The Japanese have agreed to double the percentage of financing for the United Nations High Commissioner's fund on refugees.

There were other elements in the communique that will be issued when we get back to the New Otani Hotel, but those were the most significant items. Perhaps you would have a followup question.

Q. It sounds like you won your point—

THE PRESIDENT. Yes.

Q. —in terms of the ceilings and the

freeze, that they took the American plan. Is that basically it?

THE PRESIDENT. They did, and we were gratified at this.

Q. Was there a fight about it?

THE PRESIDENT. Well, there was a constant debate. I think the problem was that the European Community had decided collectively at Strasbourg not to deviate from the collective target. This was a much less restrictive target, because they could absorb the increased production from the North Sea and not be limited to individual countries' goals. They had a difficulty in departing from the Strasbourg agreement.

Q. How did you convince them?

THE PRESIDENT. Well, we felt very deeply about it. And I think that the longer we discussed these issues, the more they saw that the outcome of the conference would be disappointing if it was expressed in generalities and if the particular nation-by-nation quotas were not very specific and stringent. There was a general feeling, the longer we were here—I think sharpened by the very high increase in OPEC prices—that we have a serious worldwide problem. And we were ready for the first time to take action that we have never been willing to take before.

Q. When were you able to turn the corner on that, Mr. President, in terms of getting the agreement and clearing that item?

THE PRESIDENT. Well, there was an amendment offered a half an hour before we left to go back to a collective European quota—[laughter]—between 1980 and 1985. But this amendment, supported by three other people there, was finally—

Q. So it went down to the last half hour.

THE PRESIDENT. Yes, to the last half hour.

Q. Who offered the amendment?

Q. Margaret Thatcher?

THE PRESIDENT. I think I would rather not comment on who offered which amendment.

Q. Do you have a few choice words for Giscard?

THE PRESIDENT. No. We got along well.

Q. Got along well? [*Laughter*]

Q. Did you discuss the remarks that he made in the interview in Newsweek? ¹

THE PRESIDENT. I pointed out the great amount of attention that I have paid to the energy conservation effort in the United States since I've been in office, yes.

Q. What do you think that this will do to the American gas lines?

THE PRESIDENT. I don't think we can expect any immediate alleviation of the energy problem in the United States on a collective basis. We have not addressed the energy problem adequately in the past. The Congress has not been willing to pass a single line of legislation about oil, in spite of 2 years of importunities and requests. And this lack of action over a number of years has caught up with us. We have a limited amount of oil to distribute. And we can try to have an equitable allocation of oil between tractor fuel and diesel fuel for trucks and home heating oil and gasoline for motorists, but there is no easy answer to it. It's just going to take time.

But in my opinion, the deep commitment to restrain imports, the deep commitment to go to new forms of energy—synthetic fuels, the liquefaction and gas-

ification of oil [coal], oil derived from oil shale, tar sands in Canada, an increased use of coal, a commitment to solar energy—we'll do this in an accelerating way because of the newly aroused concern and commitment on the part of American people and the Congress. And this will be enhanced because it will be a multinational effort as well.

Q. Mr. President, do you have any plans to go back and discuss this on television in the United States or try to summarize this in any way?

THE PRESIDENT. I haven't discussed with Jody and Jerry yet exactly what and when. I think it would be better to let me reserve the answer to that question for a little bit later.

Q. Mr. President, can you tell us in any more detail how you persuaded, in particular, the Germans, because we know they came into the summit with a different attitude?

THE PRESIDENT. I think Henry Owen can give you that information at the general briefing this afternoon.

Q. But you've said that 8.5 will be the limit through 1985 from this point on?

THE PRESIDENT. That's correct.

Q. And the OPEC statement, which you think will be striking in its effect—

THE PRESIDENT. I think you'll see it is. In the past, it's been a difficult thing for an individual nation, highly vulnerable to the interruption of oil supplies, to make any sort of critical comment about OPEC action. You've observed that yourself. But the fact that Japan and Italy, for instance, who have practically no energy sources of their own, combined with France and Germany, Great Britain, Canada, and us—to make this strong statement, I think, is a very significant

¹ In the interview, printed in the Newsweek issue of July 2, 1979, President Giscard d'Estaing criticized U.S. energy conservation efforts, as well as several aspects of U.S. foreign policy.

move. What the OPEC nations have done with their 60-percent increase in prices in the last 6 months has obviously had a disconcerting effect on the very strong industrialized nations. In some cases, it's had an almost devastating effect on the developing nations of the world.

One of the things that we considered in our private sessions, for instance, was that some countries now spend 100 percent of all their external earned income just to buy oil. And other countries, reasonably strong, like Brazil, that in 1973 were spending 10 percent of its earned income on oil, now spend 40 percent of its earned income on oil.

This is a potential catastrophe for the developing nations of the world, in spite of the fact that all of the industrialized countries are increasing our aid to the most severely impacted countries.

Q. Mr. President, before we came to the summit, we were told that any sort of a public confrontation with the OPEC countries would drive the moderate producers straight into the camp of the price hawks, if you will. Is it a situation now that they're going to do it anyway? They're going to have these price increases so the industrial countries have to get on the record with a strong response?

THE PRESIDENT. All of us recognize that Saudi Arabia, the Emirates, and maybe one or two others have been a moderating factor, but the final action of OPEC is what we have to address. And obviously, some of the more demanding members of OPEC would have had much higher prices than they have imposed. But I think that looking at the statement on OPEC from an historical point of view, it's a very significant and unprecedented action.

Q. Was there a lot of debate about the wisdom of doing it——

THE PRESIDENT. No.

Q. ——or did the sentiment for it grow sharply with the decision taken in Geneva?

THE PRESIDENT. The decision started out with a great deal of reluctance and timidity on the part of some, but after the actions were taken by OPEC and announced, and after reading their communique, there was a unanimous belief that we should have a strong statement.

Q. Which is to say, today?

THE PRESIDENT. Which is to say, today. And we instructed the Foreign Ministers, during the lunch hour, to prepare the statement. It was strengthened somewhat in the afternoon session, not weakened by anyone.

Q. Is it a statement, or does it call for any action?

THE PRESIDENT. It's a part of the communique, expressing our concern, deep concern about the unwarranted and damaging action of the OPEC countries in raising their prices.

Q. Mr. President, is there any room in all this for a dialog in the future with OPEC, with a meeting of some sort?

THE PRESIDENT. Well, the OPEC communique pretty well prohibits a dialog on the basis that we had contemplated. That was one of the attitudes of theirs which caused us some concern. But we're all obviously willing to have a dialog with the OPEC countries to see how the quantity of oil, the price of oil, and the consumption of oil can be stabilized. And this is something that we hope will develop in the future.

I think I need to go.

REPORTER. Thank you.

NOTE: The President spoke at 4:55 p.m. at the U.S. Ambassador's residence.

Tokyo Economic Summit Conference

Remarks to Reporters at the Conclusion of the Conference. June 29, 1979

PRIME MINISTER OHIRA. Now, then, I would like to open the joint press conference.

To this summit there have gathered a great number of members of the press from Japan and from outside Japan, and for showing your interest in what goes on in the summit, I would like to express our appreciation. Because of security considerations, we may have caused you many inconveniences, but I hope you understand this.

Our conference during the past 2 days has been extremely useful, but in order for the fruit of our discussions to be appreciated in various parts of the world, much depends on you members of the press. I would be grateful for your cooperation.

I am going to shortly ask various heads of state and government to speak, but as the host, I would first like to give my overall evaluation.

In this summit we have welcomed three new members, of whom one is the first woman Prime Minister to the summit and the other is the youngest Prime Minister. The two new Prime Ministers have contributed much to the success of the conference with their charm and wisdom. The third new member is somewhat older, me, and I would refrain from making any comment.

Although nearly half of the members in this summit are new, I believe our summit has been able to create an extremely close human relation on the basis of the spirit of mutual support of the summit, which I believe is an important product of our endeavor.

This summit has been held as it was at the time when the attention of the world is focused on the oil problem. In order to respond to the situation, it has been said that our summit will be a failure unless bold and concrete measures are agreed upon.

Shortly the communique will be distributed to you, but from the viewpoint of both immediate measures and medium- and long-term points of view, I believe we have been able to reach concrete consensus that can respond to meet the expectations of the world.

As the Prime Minister of Japan, to give the specific goal of our effort to the year 1985 has taken considerable amount of courage, but recognizing the fact that we all live in a global community faced with the oil anxiety, and recognizing the need for placing our economy on a stable basis well into the future, I felt it was necessary for us to agree to that statement.

In areas other than oil, we have discussed questions such as inflation and employment, showing strong interest in protecting industrial democracies, from long-term and fundamental points of view. Although industrialized economies find ourselves in respective economic difficulties, the summit leaders have shown strong interest in the relationship with the developing nations. I have found this very encouraging. The old economies of the world are in the same boat. By sharing the new sense of responsibility and new sense of partnership, I would like to see the constructive relationship and cooperation be developed further.

Further, in the present summit, following up on what was taken up in the last summit in Bonn, we adopted a statement on air hijacking, which I will now read.

"All the heads of state and government"—excuse me, I take it back; I have the wrong text in front of me. [*Laughter*]

This is concerning the statement. At the request of heads of state and government who participated in the summit, I, in my capacity of chairman of the meeting, am pleased to make the following statement which concerns the declaration of air hijacking issued in Bonn in July 1978. I now read the statement.

"The heads of state and government express their pleasure with the broad support expressed by other states for the declaration on hijacking made at the Bonn Summit in July 1978.

"They noted that procedures for the prompt implementation of the declaration have been agreed upon and that to date enforcement measures under the declaration have not been necessary.

"They also noted with satisfaction the widespread adherence to the conventions dealing with unlawful interference with international civil aviation. Extensive support for these conventions and the Bonn declaration on hijacking reflects the acceptance by the international community as a whole of the principles expressed therein."

That is the statement.

Also, in the present summit, we have adopted a special statement on the question of refugees from Indochina,¹ which is

another major fruit. Japan itself feels we must make our utmost contribution to the solution of this problem, and I would like to see that the statement be transmitted to other various countries and various international organizations and invite their further participation in international efforts on this question.

This has been an unprecedentedly important international event, but this Tokyo summit has now come to its safe and successful conclusion, and next year we have unanimously agreed to meet again in Italy. We look forward to our reunion in Italy.

And I would like to take this opportunity to express our heartfelt appreciation to all the people, both within and without Japan, who have supported this meeting. Because we have taken unexpected, unprecedentedly elaborate security measures in connection with the convening of this summit—and I know we have dealt in-conveniences with many people, but because of their cooperation we have been able to successfully carry this conference. I thank all of these people concerned.

Thank you very much.

¹[Issued on June 28 by the seven nations meeting at the Tokyo Economic Summit.]

STATEMENT ON INDOCHINESE REFUGEE CRISIS

The plight of refugees from Vietnam, Laos and Cambodia poses a humanitarian problem of historic proportions and constitutes a threat to the peace and stability of Southeast Asia. Given the tragedy and suffering which are taking place, the problem calls for an immediate and major response.

The Heads of State and Government call on Vietnam and other countries of Indochina to take urgent and effective measures so that the present human hardship and suffering are eliminated. They confirm the great importance they attach to the immediate cessation of the disorderly outflow of refugees without prejudice

to the principles of free emigration and family reunification.

The governments represented will, as part of an international effort, significantly increase their contribution to Indochinese refugee relief and resettlement by making more funds available and by admitting more people, while taking into account the existing social and economic circumstances in each of their countries.

The Heads of State and Government request the Secretary-General of the United Nations to convene a conference as soon as possible with a view to attaining concrete and positive results. They extend full support to this objective and are ready to participate constructively in such a conference.

The Heads of State and Government call on all nations to join in addressing this pressing problem.

PRESIDENT GISCARD D'ESTAING. Ladies and gentlemen, I think that we can say that the Tokyo summit has indeed achieved the aims that had been set. The leaders of the major industrialized nations, also the major consumers of oil, have done what might have been expected of them.

Faced by difficult situations, they have demonstrated their sense of responsibility and their courage—and I am speaking, of course, of my partners—by agreeing to enter into specific commitments after discussions that at times were difficult. But it must be recognized the subject and the situation are both difficult, too.

For the first time since the onset of the energy crisis 6 years ago, we agreed to adopt a joint attitude, a common attitude on three essential points. And indeed, what was expected of us? A commitment on limits of imported oil, a massive effort to develop alternative energy sources, and, lastly, an effort to eliminate practices conducive to excessively high prices on the oil markets.

Now we have agreed to limit quantities of oil that are imported, in the short term, in 1979 and in 1980, and also in the medium term, 1985. We jointly agreed on quantified targets, country by country. As far as the European Community is concerned, these targets, of course, comply with the targets and aims defined in Strasbourg.

Secondly, efforts to develop alternative energy sources. First of all, those that are available—coal and nuclear generated electricity, and a very substantial program for the technological development of new energy sources. Lastly, eliminating practices that have led to speculative increases in prices on some markets.

So, I think that it can be said that our countries have taken the decisions that they were able to take. But we know that

this is only one part of the problem, because we do not hold the key to the energy problem among ourselves alone. And I hope that our sense of responsibility will be met by an equal sense of responsibility by those who also hold part of the key to the problem. And as Acting President of the Council of the European Economic Community, I would like to emphasize the role that has been played by the Community.

First of all, by arriving at an agreement in Strasbourg last week among the nine members of the Community, which was part of our preparations for the Tokyo meeting, and then by arriving at an agreement among the seven of us here, that this, of course, presupposed that our partners were prepared, ready, and willing to collaborate, that is to say, Japan, the United States, and Canada.

Now, there remains a great deal for us to do, it cannot be denied, in order to define the paths to be followed by the world economy. Growth that at the same time is energy saving, growth that is perhaps more steady, less spectacular. We are going to have to work a lot; we are going to have to invent a lot; we are going to have to improvise; we are going to have to change a number of the habits that grew up when times were easier. But we have tackled the problems in an orderly fashion and standing together. And this is what our Tokyo agreement means to us.

And I would like to add, with your permission, Mr. Chairman, three comments. Firstly, I would like to express our concern with regard to the situation of non-oil-producing, developing countries. Their situation is very much more difficult, very much more painful, very often, than ours. And this is why in discussions over the past 2 days, we have sought to bear their situation in mind, and we must

ensure that the approaches that are adopted do take account of their particular difficulties.

I would like to emphasize the importance we attach to the statement adopted, the declaration we have adopted on refugees from Indochina, and certainly France will maintain its efforts to support and welcome in the refugees of Indochina.

And then, Mr. Chairman, we would like to thank you for your hospitality in Tokyo, worthy of the reputation of the Japanese for hospitality, and we would like to thank you for the important contribution you made to the success of our conference.

I would also like to ask you to express our thanks to His Majesty the Emperor of Japan for the welcome he extended to us yesterday evening.

Thank you, Mr. Chairman.

PRESIDENT CARTER. First of all, I would like to add my word of thanks to Prime Minister Ohira, to the officials of Japan, to His Majesty the Emperor, to the people of Japan who have made this conference possible, and who have also welcomed us for an official state visit.

In my own opinion, this economic summit conference might be proven in history to have a historic meaning for most of the people on Earth. We are in trouble as we approach increasing shortages of energy and rapidly increasing prices for energy. But we have decided individually and collectively not to despair, but to take action which will be meaningful and which might very well encourage others to emulate the decisions that we ourselves have made.

We recognize the seriousness of the energy question. And we have decided to act as individual nations and also as a group of nations to try to resolve this

difficulty with minimum adverse effect on the people whom we represent.

One of the most difficult decisions for us, which we finally did make, was to adopt individual national goals for limiting imports of oil for 1979, 1980, and all the way through until 1985. These goals are not expressed in generalities. They will be expressed in specific terms. They are quite substantive commitments, tangible and restrictive.

In addition, we committed ourselves individually and collectively to the rapid development of alternate supplies of energy, to increase our own production of oil and gas when we have it available, to increase the production and use of coal, taking care to protect the quality of the environment, to emphasize synthetic fuel development, oil to be derived from shale, tar sands, solar power, nuclear power with a special emphasis on safety—these types of commitments have been thoroughly discussed and will be binding upon us in the future.

We also address a difficult problem of marketing procedures, so that after the price of oil is established at the source, there will be a minimum unnecessary increase in the price of oil during the marketing and delivery process.

I think for the first time publicly a group of responsible leaders representing industrial countries have spoken out forcefully and expressed our concern about the recent action of the OPEC nations. Just quoting a few words from the communique which I think are significant—"We deplore the decisions taken by the recent OPEC Conference"—we refer to the unwarranted rises in oil prices and point out the serious economic and social consequences of these decisions. We emphasize that this will result in a worldwide inflation, less growth, more unemployment, will endanger the sta-

bility of the economic system of the world, and particularly emphasized, as the President of France has already said, the adverse impact on the developing nations of the world, who don't share the wealth that some of us have.

The refugee question was discussed with attention and concern and compassion for those who are suffering. We have collectively called on Vietnam and others who create the source of the refugee problem to try to help in dealing with it in a humane and effective way. And we have all discussed what we might do as individual nations to alleviate this problem.

Our country has accepted 220,000 refugees from Southeast Asia. We are taking in now about 7,000 per month. I have committed my Nation yesterday to double this rate and to accept 14,000 refugees per month.

We have also, I think in almost every debate—quite different from my own previous experience in conferences—moved toward the boldest position, the most constructive position, the most specific position, and the most tangible position. We've not yielded to compromise by going into generalities.

I think when you read the communique, you'll discover that what I have said is accurate. In my opinion, because of these reasons and others, I consider this summit conference to have been very successful.

PRIME MINISTER OHIRA. Thank you, President Carter.

CHANCELLOR SCHMIDT. Mr. Chairman, I would first of all like to thank you for your hospitality, the hospitality that has been extended to us, and for your chairmanship of this fifth economic summit. I would like to say that our chairman, Prime Minister Ohira, has contributed significantly to the success of our conference.

I would also, like the speakers before me, like to express my warm thanks for the hospitality of the Japanese people as a whole and particularly for the hospitality of His Majesty the Emperor. And to that, I might add that I would like to thank you for the effective and very courteous work of the security forces.

As far as the substance of our work is concerned, we have arrived at compromises among ourselves. We have found common denominators, and the basis of the energy policy of our countries for the years ahead has been laid down jointly. However, I would also like to say that it is very pleasing, very satisfying to me to find in our communique a number of the positions that the Government of the Federal Republic of Germany has been advancing both within Germany and abroad for some years.

The readiness to compromise is essential to a successful economic summit, and this is demonstrated by the fact that we Europeans—this is true also for my country, the Federal Republic of Germany—that we have successfully sought to arrive at common positions. This has not always been easy for the four member countries of the European Community represented here. President Giscard d'Estaing has already made this point for the Federal Republic of Germany, for France, for Italy, and for the United Kingdom. We have to follow up the decisions that were taken by the European Council a week ago in Strasbourg.

And we have jointly agreed to limit our oil imports through to 1985. Here we have ensured that we have not prejudiced the interest of those partners of the European Community who were not with us yesterday and today. But we have based ourselves on the decisions taken at the Strasbourg meeting.

These limitations upon our oil imports, which have been decided through to 1985, will, as President Carter has just said, mean that our economies, indeed, our societies as a whole, will have to undergo far-reaching changes, and that means far-reaching efforts.

It is quite clear to us, and we hope that it will be quite clear to all our citizens, that after the Tokyo agreement, we are then going to have to proceed more rapidly to achieving our oil targets than we had imagined even quite recently. We are compelled to do this by the new unjustified price increases adopted by OPEC. The communique that we publish today clearly indicates the joint general approach to energy problems and the economy generally.

And the Federal Republic of Germany has, since 1973, been following a clear energy policy, and today's decisions do not require us in any way to change that. But we are going to have to substantially step up our efforts in the Federal Republic, and there fine words are going to be of little use to us. And in my country, we are going to continue to stick to the basic outlines of our energy policy, the one we have been following for some years. That is a policy which aims at oil substitution in various ways, stepping up the domestic production of coal. Thirdly, a policy aimed at extending the necessary extension of the generation of electricity from nuclear sources. Fourth, a greatly strengthened research and technological policy aimed at making energy savings and at opening up new energy sources.

These goals have been ours for many years, but now we are going to have to tackle them with increased energy, and we are going to have to step up our efforts at achieving them. But the most important impetus can't come from the state; it must come from the citizens, from

industry to save energy, to be economical in the use of energy, not just because energy is increasingly expensive but also because energy is going to be increasingly rare, there is going to be an increasing shortage of energy throughout the world.

I would also clearly like to say to President Giscard d'Estaing, nobody must be misled if we, the industrial countries, manage to limit our use of energy, our consumption of energy, into thinking that the several countries who are aiming at development, development to which we contribute, who have increasing energy requirements, and for which we feel a certain political and moral responsibility, that must not be thought that if we save energy, if we can substitute for oil other energy sources—we must not be misled into thinking that we are thinking only of ourselves and our needs, but also the very difficult circumstances in which the developing countries find themselves.

And, indeed, in this connection, I would like to warn everybody against thinking that increased energy costs, increased energy difficulties can be avoided, and that one can indeed genuinely derive benefits from these enhanced, increased energy costs.

I think that we must all jointly tackle the problems posed. I think that we must approach the situation in sober fashion, that it would be unwise to be carried away. We must, in our industrial life, in our economic life, in our political life, and indeed in our private activities, maintain a sober, clear attitude, for our nations, for our people, for our economies, for governments, and for parliaments.

All of this means that we are going to have to work very much harder, and we are going to have to make very considerable efforts to embody in practice the outcome of the Tokyo agreement.

As far as my own country, the Federal

Republic of Germany, is concerned, I shall, at the beginning of next week, make a statement before the German parliament, before the Bundestag, in which I will explain the conclusions that we must draw in order to embody in practice what has been recognized and decided in Tokyo. This is an aim we set ourselves, and I am fully convinced that we are going to be able to overcome the problem.

Thank you very much.

PRIME MINISTER ANDREOTTI. I wish to associate myself with the words of thanks which have been spoken to the Japanese Government and the Imperial Court, and to the Government.

I was here 15 years ago for the Olympic Games, and I was able to see that more problems are produced for the police by the heads of states rather than so many thousands of athletes.

President Giscard and the others who have spoken before me have told you of the results achieved in these 2 days. I would confine myself to two comments of a political nature.

Every year we meet to study our problems of growth, of the struggle against unemployment, the fight against inflation, but every year increasingly I see that all our discussions develop not within the limited interests of the seven countries which come together, but within a framework of a far more general character. And it is most important that the energy policy should have been the subject of concrete agreements between we European countries, between the United States and Canada, and also with Japan.

We had some doubts as to whether we should succeed in this, and these doubts have been dissipated. But as Chancellor Schmidt has said, we have always borne in mind all the time throughout these 2 days the need for a consensus policy. And in embarking in a discussion with the oil-

producing countries—but here this is not only a question of the countries where oil is produced but with enormous international interests which often regulate the market, and in the communique, you will find a clear expression of our intention better to appreciate and assess this complicated oil market. But our concern is for those countries who are the poorest and who feel more than us the consequences of decisions to raise the price both of oil and other essential commodities.

This year, too, in the communique, emphasis was placed on a policy in favor of developing countries, expressing a wish which I think has political value that all the countries, even those which are differently governed than ours, should cooperate in this broad design for development for humanity as a whole.

Our peoples must be accustomed, become accustomed not only to look at those who are better off than us but those who are worse off than us, and I know that this is not something which is easy to do. It isn't the popular thing to do, but it is the spirit which I think moves and animates our annual meetings. And I think that this should be brought out, and recognition should be made of those who are cooperating in this annual opportunity to study together problems which are old problems and problems which are arising.

Finally, may I thank all of the heads of state and the heads of government who have agreed to accept the invitation to travel in May 1980 to Venice for the new meeting of the summit.

Let us express the hope that there will not be moments of crisis that we shall have to face and that, on the other hand, we can resume in a spirit of greater tranquility a discussion of the global developments. And I hope that you journalists, that to you journalists, we should be able

in Venice to give you the help and the hospitality which I think is extremely important, because if that is lacking, even the positive results of the conference are not made known adequately.

Thank you.

PRIME MINISTER OHIRA. Thank you very much, Prime Minister Andreotti.

PRIME MINISTER THATCHER. Prime Minister, friends of the press, my colleagues have already given you the bare bones of the communique and some of the details as well and have set out the course which this historic summit took. I, of course, endorse everything they've said, and I thought therefore it would be best if I tried just to step back and look at this summit meeting in slightly wider perspective.

I think first if we look at this summit meeting as one of the fourth quarter of this century, we see how very different the problems are from those which we encountered in the third quarter of this century. Then we were trying to restore the economy of the free world to try to harness everything that it can do to give a higher standard of living to our people and to try to see that we got as much growth as it was possible to get. Perhaps the country where we're meeting is an excellent example of how successful the free economy could be and of how much growth could be obtained and how much growth the free world had during those years of the third quarter of this century.

Because of its very success, we now come into new problems. Part of its very success gives us a problem over the consumption of oil. It will also give us a problem over the shortage of some other commodities. And so, in this quarter of the century—and this summit is an example of it—we really are facing very different problems. No longer can we assume automatically that growth will go on if

we order our economies properly. All of a sudden we've been brought face to face with these shortages and the problems that they will mean for all of us for the standard of living for our own peoples and for the possibility of rising standard of living for those in countries less fortunate than ourselves. And really this summit was an example of how to tackle the problems of the moment, and today the problem is energy, but it won't only be today. It'll be the same problem for a number of years.

And so, we tackled it in two ways. First, to try to deal with the immediate problem, very ironic in a way that we were meeting the very day that OPEC announced its price increases. So, we had an immediate problem to tackle, and we did tackle it in the way that my colleagues have announced, by trying to set specific targets, not only for this year but for future years, to demonstrate to those suppliers that we are determined to cut down demand and limit it as far as we can and make the best, most economical use of energy.

But secondly, we're determined not to be so reliant on that source of energy, because we know that twice in this very decade, the free world has shown how vulnerable it is to the increase in the price of oil, and we know how damaging that can be to our countries.

So, my first point is, looking at it in historical perspective, we recognize that the problems we face now are very different from those we faced in the third quarter of the century, and we have demonstrated our will to meet the problems of the day and to tackle them in the way my colleagues have described.

And my second point is this: Among us, there are three producer oil countries, and there are four who are consumer countries. You might think that our in-

terests are different. They're not. What this particular conference has demonstrated is that our interests are very similar indeed. I represent Great Britain, a comparatively new producer country. But my interests as a citizen of Great Britain are just exactly the same as those of our colleagues represented here, because if oil takes too large a slice of the world's income, it will affect us all.

It will affect us in many ways. We, like Japan, have to export to live. If other countries have to pay so much for their oil, they haven't enough left to import the goods which we wish to export, and the same problem affects the developing countries. So, we're affected in that way.

We're affected in another way, that any action taken by a group of nations which severely cuts the possibility of a rising standard of living introduces an element of political instability into the world, and that, too, affects us all.

And then, perhaps in a different way we all recognize that though we are facing economic problems from shortage of energy and the rising price of oil, twice in this decade those economic problems have been caused by political problems. And we must also, if we're to solve our economic problems, look to solving them by way of a solution to the political problems of the world as well.

But the second point is that although we were three producer countries, our interests were just the same as those of all of the seven countries represented here and the rest of the Community, equally represented for the President of the Community and the President of the Commission.

The third point, the third general theme I wish to make is this: We met here under those very, very difficult circumstances. And the reason for seven countries meeting under these circum-

stances is this: that we believe we can give a clear lead; that if we make the right decisions, we can have some effect on the future course of the world and some effect on the destiny of our peoples.

That meant that we really had to get down to business in a very certain way. We had to reach, as President Carter and President Giscard have said, specific targets, give clear general directions of what governments can do and what governments can't. I believe that that has been achieved.

We also made one further point: The last time we had an oil crisis, we tried somehow to accommodate, some of us, the increase in oil price by printing money. If we do that again, we shall have much, much worse inflation, and we shall finish up with even worse problems than we encountered before. So, in that community you will find resolution that we accept for the time being that if we have to pay a lot more for oil, this means that we have, in fact, a reduction in our genuine income in terms of what it will buy for the future.

Nevertheless, perhaps because we're leaders, it didn't depress us. It means that we have to tackle the problems of growth in another way. And the only way you can ever tackle the problems of growth is to face the situation realistically, and that we have done at this summit.

So, Mr. Chairman, my contribution is those three points. In historical perspective and facing our new problems, first; secondly, that our interests are as one—no country is an island, and I think I'm the right country to say that—no country is an island in its interests, and we are not any more than Japan is. Our interests are together. And our future prosperity and happiness and success of our people will only be achieved together and in concert with other nations, including those not represented here. And thirdly, that we did

try to give a lead in these very difficult world problems.

Finally, Mr. Chairman, may I join my colleagues in thanking the Emperor for his wonderful hospitality, in thanking you, Mr. Prime Minister, for steering us through sometimes very difficult debates to a successful and succinct communique—and I'm particularly pleased about the "succinct," as well as the "successful"—to thank also the security forces, who've made a tremendous effort, and to thank all of the administrative staff, who've attended to every meticulous detail.

We thank you for your generosity, for your kindness, and we wish you well in the future.

Thank you.

PRIME MINISTER OHIRA. Thank you.

Prime Minister Clark?

PRIME MINISTER CLARK. Thank you very much, Mr. Prime Minister. And as the Prime Minister of a nation that is a good neighbor to Japan, separated only by a little bit of ocean, I wanted to begin by expressing on behalf of the government and the people of Canada my very real congratulations to you personally and to your colleagues in government, and our very real appreciation to the people of Japan for the excellent way in which arrangements have been made for a summit that I think the world will see is an historic summit.

[*In French*] For Canada this summit was of the greatest importance, since the main issue to be discussed was energy. Canada, in fact, is privileged, since it has abundant energy resources, and it is incumbent upon us to develop them as fast as possible for our own use as well as for other countries.¹

¹ Translation provided by the Canadian Embassy in the United States.

[*In English*] My Government consequently is going to take all necessary action to achieve our own domestic goals of energy self-sufficiency for 1990. The work of this summit meeting provides a solid foundation from which we can launch this major Canadian effort.

In the immediate future, we in Canada are faced with the problem of declining oil production in our major producing province of Alberta. Until the mid-1980's, our oil production from conventional sources in that Province will decline and decline dramatically. Consequently, imports into Canada must rise.

[*At this point, the Prime Minister again spoke in French. He then translated his remarks as follows.*]

Faced with the world oil shortage and in our own economic interests, I am firmly decided to keep imports as low as possible. We shall achieve this target by accelerating our energy conservation program, replacing oil by other energy sources, and by developing as quickly as possible energy sources of nonconventional character.

In keeping with that commitment, I have pledged Canada at this summit to reduce our net oil imports in 1985 to 600,000 barrels per day, from the projected need of 650,000 barrels per day.

Now, I'm convinced, Mr. Chairman, and colleagues, that working together, the countries represented at this summit will deal effectively with the energy problems now facing us. I'm convinced that, working together, all of the people of my country in Canada will be able to achieve the goals which we have established here of moving towards energy self-sufficiency.

Now, while we have all, throughout the summit, been very concerned about the impact of the energy situation on industrialized countries of the world, I am very pleased that attention has also been paid to the special energy problems of the

Third World, and that we have also called the attention of the world to the appalling refugee situation in Southeast Asia and requested immediate action both as to the cause and to the consequences of that tragedy.

Thank you, Mr. Chairman.

PRIME MINISTER OHIRA. Thank you very much.

Lastly, but not the least, Mr. Jenkins.

PRESIDENT JENKINS. Mr. Prime Minister, ladies and gentlemen, at this stage there is little to add, and I believe that brevity will be more valued than any other quality.

Like the heads of state and government who have spoken before me, I am glad that we have been able to concentrate on the challenge of the energy crisis and agree on medium-term goals for oil imports, as well as for conservation and new development measures in the energy field.

I take satisfaction in the fact that the work done by the European Council at Strasbourg provided such a good foundation for and contribution to the results of this summit. Here in Tokyo, the industrialized nations have, I believe, put themselves in a better position to deal with the inevitable damage caused to us by scarce and expensive oil. We have done so without forgetting the still worse, indeed potentially crushing impact upon the developing countries, and we have done so in the knowledge that we must follow our words with action if they are to succeed.

I add my thanks to the Emperor, to the Prime Minister, the Government and people of Japan for the welcome they have given us.

PRIME MINISTER OHIRA. Thank you very much, President Jenkins.

Ladies and gentlemen, this closes the joint press conference.

Thank you very much for your attention.

NOTE: Prime Minister Masayoshi Ohira of Japan, chairman of the Conference, spoke at 5:35 p.m. in the Banquet Room at the New Otani Hotel. He spoke in Japanese. President Valéry Giscard d'Estaing of France, Chancellor Helmut Schmidt of the Federal Republic of Germany, and Prime Minister Giulio Andreotti of Italy also spoke in their native languages. The translations of their remarks follow the press release.

President Carter, Prime Minister Margaret Thatcher of the United Kingdom, Prime Minister Joe Clark of Canada, and Roy Jenkins, President of the Commission of the European Communities, spoke in English.

The remarks of the participants concluded 2 days of meetings, consisting of four sessions, at the Akasaka Palace. On the evening of the first day's meetings, the conference participants attended a state dinner, hosted by Emperor Hirohito, at the Imperial Palace.

Tokyo Economic Summit Conference

Declaration Issued at the Conclusion of the Conference. June 29, 1979

The Heads of State and Government of Canada, the Federal Republic of Germany, France, Italy, Japan, the United Kingdom of Great Britain and Northern Ireland, and the United States of America met in Tokyo on the 28th and 29th of June, 1979. The European Community was represented by the President of the European Council and by the President of the European Commission for discussion of matters within the Community's competence.

1. The agreements reached at the Bonn Summit helped to improve the world economy. There was higher growth in some countries, a reduction of payments imbalances, and greater currency stability.

2. But new challenges have arisen. Inflation, which was subsiding in most countries, is now regaining its momentum. Higher oil prices and oil shortage have reduced the room for maneuver in economic policy in all our countries. They will make inflation worse and curtail growth, in both the industrial and developing countries. The non-oil developing countries are among the biggest sufferers.

We are agreed on a common strategy to attack these problems. The most urgent tasks are to reduce oil consumption and to hasten the development of other energy sources.

Our countries have already taken significant actions to reduce oil consumption. We will intensify these efforts.

The European Community has decided to restrict 1979 oil consumption to 500 million tons (10 million barrels a day) and to maintain Community oil imports between 1980 and 1985 at an annual level not higher than in 1978. The Community is monitoring this commitment and France, Germany, Italy and the United Kingdom have agreed to recommend to their Community partners that each member country's contribution to these annual levels will be specified. Canada, Japan, and the US will each achieve the adjusted import levels to which they are pledged in IEA for 1979, will maintain their imports in 1980 at a level not higher than these 1979 levels, and will be monitoring this.

The seven countries express their will to take as goals for a ceiling on oil imports in 1985, the following figures:

—For France, Germany, Italy*, and the United Kingdom: the 1978 figure.

—Canada whose oil production will be

declining dramatically over the period between now and 1985, will reduce its annual average rate of growth of oil consumption to 1%, with the consequent reduction of oil imports by 50,000 barrels per day by 1985. Canada's targets for imports will therefore be 0.6 million barrels per day.

—Japan adopts as a 1985 target a level not to exceed the range between 6.3 and 6.9 million barrels a day. Japan will review this target periodically and make it more precise in the light of current developments and growth projections, and do their utmost to reduce oil imports through conservation, rationalization of use and intensive development of alternative energy sources in order to move toward lower figures.

—The United States adopts as a goal for 1985 import levels not to exceed the levels either of 1977 or the adjusted target for 1979, i.e. 8.5 million barrels per day.

These 1985 goals will serve as reference to monitor both energy conservation and the development of alternative energy sources.

A high level group of representatives of our countries and of the EEC Commission, within the OECD, will review periodically the results achieved. Slight adjustments will be allowed to take account of special needs generated by growth.

In fulfilling these commitments, our guiding principle will be to obtain fair supplies of oil products for all countries, taking into account the differing patterns of supply, the efforts made to limit oil imports, the economic situation of each country, the quantities of oil available, and the potential of each country for energy conservation.

We urge other industrialized countries to set similar objectives for themselves.

We agree to take steps to bring into

*Footnote: Italy's commitment with reference to the 1978 level is accepted in the context of the overall commitment of the European Community.

the open the working of oil markets by setting up a register of international oil transactions. We will urge oil companies and oil-exporting countries to moderate spot market transactions. We will consider the feasibility of requiring that at the time of unloading crude oil cargoes, documents be presented indicating the purchase price as certified by the producer country. We will likewise seek to achieve better information on the profit situation of oil companies and on the use of the funds available to these companies.

We agree on the importance of keeping domestic oil prices at world market prices or raising them to this level as soon as possible. We will seek to minimize and finally eliminate administrative action that might put upward pressure on oil prices that result from domestic underpricing of oil and to avoid new subsidies which would have the same effect.

Our countries will not buy oil for governmental stockpiles when this would place undue pressure on prices; we will consult about the decisions that we make to this end.

3. We pledge our countries to increase as far as possible coal use, production, and trade, without damage to the environment. We will endeavor to substitute coal for oil in the industrial and electrical sectors, encourage the improvement of coal transport, maintain positive attitudes toward investment for coal projects, pledge not to interrupt coal trade under long-term contracts unless required to do so by a national emergency, and maintain, by measures which do not obstruct coal imports, those levels of domestic coal production which are desirable for reasons of energy, regional and social policy.

We need to expand alternative sources of energy, especially those which will help to prevent further pollution, particularly

increases of carbon dioxide and sulphur oxides in the atmosphere.

Without the expansion of nuclear power generating capacity in the coming decades, economic growth and higher employment will be hard to achieve. This must be done under conditions guaranteeing our people's safety. We will cooperate to this end. The International Atomic Energy Agency can play a key role in this regard.

We reaffirm the understanding reached at the Bonn Summit with respect to the reliable supply of nuclear fuel and minimizing the risk of nuclear proliferation.

New technologies in the field of energy are the key to the world's longer-term freedom from fuel crises. Large public and private resources will be required for the development and commercial application of those technologies. We will ensure that these resources are made available. An International Energy Technology Group linked to the OECD, IEA and other appropriate international organizations will be created to review the actions being taken or planned domestically by each of our countries, and to report on the need and potential for international collaboration, including financing.

We deplore the decisions taken by the recent OPEC Conference. We recognise that relative moderation was displayed by certain of the participants. But the unwarranted rises in oil prices nevertheless agreed are bound to have very serious economic and social consequences. They mean more world-wide inflation and less growth. That will lead to more unemployment, more balance of payments difficulty and will endanger stability in developing and developed countries of the world alike. We remain ready to examine with oil exporting countries how to define

supply and demand prospects on the world oil market.

4. We agree that we should continue with the policies for our economies agreed at Bonn, adjusted to reflect current circumstances. Energy shortages and high oil prices have caused a real transfer of incomes. We will try, by our domestic economic policies, to minimize the damage to our economies. But our options are limited. Attempts to compensate for the damage by matching income increases would simply add to inflation.

5. We agree that we must do more to improve the long-term productive efficiency and flexibility of our economies. The measures needed may include more stimulus for investment and for research and development; steps to make it easier for capital and labor to move from declining to new industries; regulatory policies which avoid unnecessary impediments to investment and productivity; reduced growth in some public sector current expenditures; and removal of impediments to the international flow of trade and capital.

6. The agreements reached in the Tokyo Round are an important achievement. We are committed to their early and faithful implementation. We renew our determination to fight protectionism. We want to strengthen the GATT, both to monitor the agreements reached in the MTNs and as an instrument for future policy in maintaining the open world trading system. We will welcome the full participation of as many countries as possible in these agreements and in the system as a whole.

7. We will intensify our efforts to pursue the economic policies appropriate in each of our countries to achieve durable external equilibrium. Stability in the foreign exchange market is essential for the sound development of world trade

and the global economy. This has been furthered since the Bonn Summit by two important developments—the November 1st 1978 program of the United States in conjunction with other monetary authorities, and the successful emergence of the European Monetary System. We will continue close cooperation in exchange market policies and in support of the effective discharge by the IMF of its responsibilities, particularly its surveillance role and its role in strengthening further the international monetary system.

8. Constructive North-South relations are essential to the health of the world economy. We for our part have consistently worked to bring developing countries more fully into the open world trading system and to adjust our economies to changing international circumstances. The problems we face are global. They can only be resolved through shared responsibility and partnership. But this partnership cannot depend solely on the efforts of the industrialized countries. The OPEC countries have just as important a role to play. The latest decision substantially to increase oil prices will also severely increase the problems facing developing countries without oil resources as well as the difficulties for developed countries in helping them. The decision could even have a crippling effect on some of the developing countries. In this situation, we recognize, in particular, the need for the flow of financial resources to the developing countries to increase, including private and public, bilateral and multilateral resources. A good investment climate in developing countries will help the flow of foreign investment.

We are deeply concerned about the millions of people still living in conditions of absolute poverty. We will take particu-

lar account of the poorest countries in our aid programs.

Once more we urge COMECON countries to play their part.

We will place more emphasis on cooperation with developing countries in overcoming hunger and malnutrition. We will urge multilateral organizations to help these countries to develop effective food sector strategies and to build up the storage capacity needed for strong national food reserves. Increased bilateral and multilateral aid for agricultural research will be particularly important. In these and other ways we will step up our efforts to help these countries develop their human resources, through technical cooperation adapted to local conditions.

We will also place special emphasis on helping developing countries to exploit their energy potential. We strongly support the World Bank's program for hydrocarbon exploitation and urge its expansion. We will do more to help developing countries increase the use of renewable energy; we welcome the World Bank's coordination of these efforts.

Camp Casey, Republic of Korea

Remarks at the Welcoming Ceremony.

June 30, 1979

This is an exciting time in the life of me as President of our country.

I've come here for two reasons. Basically, one is to express my deep thanks to all of you for your tremendous, courageous service to our country, and the second, in the hopes that if the Commander in Chief could come here, your messhall might eventually be completed. *[Laughter]*

I want particularly to express my thanks to those who ran with me this morning. I'm much better at competing

with you in running than I would be in boxing. *[Laughter]* I've heard from your very unbiased commanding officer that when you compete in boxing, the match never lasts more than one round, and I want to congratulate you for that as well.

The next time I come back, I'll run in combat boots and let you run in running shoes. Maybe it'll be more even. But I'll only run against those who are 55 years old. *[Laughter]*

I am very proud to stand before you as Commander in Chief, proud of our country, and proud of you, the historic combat record that you exemplify in your present service, and proud of your superb commander, General Kingston, who in my opinion represents the finest in military service.

As you know, the Signal Corps plays the closest possible role to a President. Wherever I go, either at the White House, in remote areas of the world, I must have instant communication throughout the entire world with others. I've seen the special accomplishment that you yourselves have realized under the most difficult simulated combat conditions in recent maneuvers. More battles have been won or lost because of the quality of communications than perhaps because of any other single factor. And so you represent the key to victory or defeat, and with your superb record, this would enhance our chance for victory.

I know that all of you serving so far from home miss your families. I served for 11 years in the Navy, and that was perhaps the worst part of my life—being away from home, being away from those I love. But I can assure you that those of you who serve here are never forgotten by those in our own home, in your homes, or throughout our country.

Thirty years ago, on this remote peninsula, 50,000 young Americans gave

their lives for principles in which we still believe, the principle that people should be permitted to live in peace, free of the threat of successful aggression, and the right to live in freedom.

We have since that time maintained peace, a fragile peace, not ever completely free of challenge or danger. But America is a nation that is strong. We maintain our strength, not because we love war or because we desire war, but because we are committed to peace. And we know that peace can only be maintained with strength.

As I shook hands with the fine young men this morning, they all gave a slogan that is typical, I think, not only of you but of our country as well—"Fit to Fight." I have no doubt that you are fit to fight. And I can assure you, as President, that our Nation is also fit to fight, and we will avoid combat by maintaining our strength.

We believe in certain very precious principles—equality, justice, freedom, the preservation of basic human rights, and we also believe in standing by our allies.

You represent the finest of America, and I am deeply proud to be the President and to be Commander in Chief of men and women like you.

Thank you for honoring me by this ceremony this morning. God bless every one of you. Thanks from the bottom of my heart.

Thank you.

NOTE: The President spoke at 7:10 a.m. at Robertson Memorial Field after reviewing the troops. Following his remarks, the President had breakfast in the messhall with members of the 122d Signal Battalion, and then returned to Seoul.

The President had arrived in Seoul on the evening of June 29. He was met at Kimpo International Airport by President Park Chung Hee and then went to Camp Casey, where he stayed overnight at the residence of Gen. Robert C. Kingston, Commanding General, 2d Infantry Division.

Seoul, Republic of Korea

Toasts at the State Dinner. June 30, 1979

PRESIDENT PARK. *Mr. President, Mrs. Carter, distinguished guests, ladies and gentlemen:*

This evening, we are honored to have as our guests the leader of our closest ally and the champion of world peace, President Jimmy Carter of the United States, and Mrs. Carter. It gives me a great pleasure to extend to them a heartfelt welcome on behalf of all my fellow countrymen.

I am very happy that this afternoon I had a sincere and fruitful exchange of views with President Carter on many matters of mutual interest and concern in a very friendly atmosphere.

President Carter's state visit to the Republic of Korea at this time, I believe, will provide a momentum for further strengthening the traditional bonds of friendship between our two countries and will offer encouragement to all peace-loving nations whose interests are linked to the United States policy toward Asia.

I also believe that President Carter's visit to Korea, one of the most conspicuous conflict areas of the world today, will give him a valuable opportunity to deepen his understanding of the heart of the problem in this area.

It is noteworthy that recently a series of important changes have been taking place in Asia and the Pacific. The developments include the improvement in the Sino-American relations, the Sino-Japanese relations, conflicts in Indochina, with their repercussions, and the fluid Sino-Soviet relations.

In the vortex of these changes, many Asian nations are striving harder for their national security and economic development by fortifying their spirits of self-reliance.

I note, in this connection, that the firm determination and the power of the United States to preserve peace have been playing a significant role in the developments of situation in Asia and the Pacific.

We have been following closely the subtle changes and the developments in this area. We will continue to endeavor to overcome many challenges with wisdom and steadfastness in shaping our destiny courageously.

Mr. President, it is really regrettable that the clouds of war still hang over the Korean peninsula despite our sincere efforts to deter a recurrence of war and to establish peace on the peninsula.

The North Korean Communists are implacably pursuing their military buildup in defiance of the international trend toward rapprochement and of the stark reality of the Korean situation, as well as of the long-cherished aspiration of the 50 million Koreans. The North Koreans have already constructed a number of underground invasion tunnels across the Demilitarized Zone.

In contrast, the Republic of Korea has opened wide its doors on the basis of principle of reciprocity to all nations of the world, including those who have ideologies and institutions different from ours. Furthermore, we have repeatedly proposed to North Korea to conclude a non-aggression agreement aimed at establishing peace—a most urgent task in the Korean peninsula—and to start social and economic exchanges between the South and North of Korea.

At the beginning of this year also, I called upon the North Korean side to open dialog between the responsible authorities of the South and the North at any place, at any time, and at any level, in order to prevent a recurrence of war and to cooperate to speed up the peaceful unification of our fatherland. However,

no sincere response has yet been made by North Korea.

But we shall not despair. We shall keep our doors open for dialog in our firm belief that the day of our national reunion will eventually come.

We want peace. We are making every effort to bring about peace. We will continue our peace efforts.

Over the last generation, the Republic of Korea and the United States have continued to develop a close and effective, cooperative relationship to promote our common interests with the firm conviction that the peace and stability on the Korean peninsula are essential to the maintenance of peace in Northeast Asia and are also closely related to world peace.

Mr. President, it is a common aspiration of the developing countries today that their living standards should be enhanced in order to live in peace without fear of war, to expel poverty, and to restore human dignity.

Even in the face of the threats and provocations from the North, the Republic of Korea has established a remarkable record of continued economic development and made long strides in building our national strength for self-defense and for the safeguard of peace.

I firmly believe that the achievements we have made in such a short period of time without sufficient national resources, particularly after the total destruction from the Korea war, are the fruits of the sweat and toil of all our people. This record of achievements is not only an actual proof that demonstrates the superiority of a free, open society we have defended together but also constitutes a valuable national asset.

Furthermore, as a nation with a 5,000-year history of culture and tradition, we are marching forward to build a welfare

society where social justice, humanity, and morality prevail.

We have found a democratic system which best suits our actual circumstances and which is the most effective in solving our own problems. This system upholds freedom based on law and order and assures the full creativity of the individual.

Mr. President, the relations between the Republic of Korea and the United States date back to 100 years ago. During the last three decades in particular, our two countries have developed a very close relationship. The alliance relationship between the Republic of Korea and the United States will remain the bedrock of our foreign policy.

Our friendship, which was further strengthened through the Korean war and the Vietnam war, has today grown through the promoting of trade, as well as through the expansion of exchanges and cooperation in social, scientific, cultural, and other fields.

We are well aware that the growth of our national strength which we have achieved owes to the friendly support of the Government and people of the United States.

I have a firm conviction that the growth of our national strengths will not only serve the interests of the Republic of Korea but also make constructive contributions to the peace and prosperity of Northeast Asia and the Pacific.

Our two countries, reaffirming the necessity for productive cooperation in various fields, are now entering a new era of mature partnership based on mutual respect and deepened mutual understanding.

I sincerely hope the ties of friendship and cooperation between our two countries would be steadily consolidated as a result of President Carter's state visit to the Republic of Korea and further hope

that this auspicious occasion will serve as a powerful propelling force in opening for us a glorious Pacific era in the 1980's.

Ladies and gentlemen, may I now ask you to rise and join me in a toast to the everlasting friendship and prosperity of our two countries and to the continued good health and success of our state guests, President of the United States of America and Mrs. Jimmy Carter.

Thank you.

PRESIDENT CARTER. *Mr. President, distinguished officials of the Governments of our two great nations, and distinguished guests:*

The Korean people have been famous throughout history for the kindness and graciousness with which you receive visitors and guests. This has been proven again by the warmth and the affection of your welcome for Rosalynn, for Amy, for me, and for all the American party.

I have come to Asia to demonstrate the deep interest of the United States in this vital and dynamic part of the world. The United States has been, is, and will remain a Pacific nation and a Pacific power.

I've come to Korea to seek a new and even more constructive stage in one of our Nation's oldest and most valuable strategic, political, and economic relationships.

What has impressed me most about my visit to your country is the existence side by side of a deep sense of the continuity of history with dramatic signs of rapid growth and rapid change.

The respect and reverence of the people of Korea for your history is visible in the lovely shrines, temples, and monuments throughout Seoul. Ancient Korea had a profound cultural impact on the rest of the world, as was clearly shown by the magnificent exhibition which you recently sent to the United States.

As a former naval officer, I was par-

ticularly intrigued by the statue of Admiral Yi in the center of Seoul. I'm told that the "turtle boats" of the Admiral commanded in the 16th century were the world's first ironclad naval vessels. I suspect that in his time these Korean ships were as new and revolutionary as the nuclear submarines which I helped to develop.

My visit with our combat troops last night and this morning, Mr. President, was a reminder that in our more recent history, tens of thousands of your countrymen and mine fought and died side by side to defend this country against aggression. Everyone must know that Koreans and Americans will continue to stand shoulder to shoulder to prevent aggression on this peninsula and to preserve the peace. Our military commitment to Korea's security is strong, unshakable, and enduring.

The security interests of the United States are directly involved in that commitment. The vital interests of four great powers intersect in this very region today. That is why the maintenance of peace on the Korean peninsula is so vital to the international community.

Evidence of change in Korea is all around us. You can see among the Korean people the dynamism, the creative energy and dedication that have produced Korea's economic miracle out of a nation once so badly scarred by war.

I am impressed that the benefits of prosperity are widely shared by the Korean people. I understand that the income, for instance, of the average rural family in Korea now exceeds that of its urban counterpart. That accomplishment is almost unique among developing nations and should be a source of special pride to you.

Compare your progress with that of the economy in the North. The Republic of Korea is proof that a free economy is the

clearest road to shared prosperity and a better life for all.

We also believe strongly in the United States that a free society is the key to realizing the full potential for development and growth.

There is a growing consensus among the international community about the fundamental value of human rights, individual dignity, political freedom, freedom of the press, and the rule of law. The free expression of ideas stimulates innovation and creativity. The right to participate in the political process helps to unite a country in the pursuit of common goals.

There is abundant evidence in Korea of the dramatic economic progress a capable and energetic people can achieve by working together. I believe that this achievement can be matched by similar progress through the realization of basic human aspirations in political and human rights.

Accelerating change is also the central fact of life throughout the international community in recent years—nowhere more so than in Asia, the home of one-third of the world's people today. China has turned outwards toward the United States, Japan, and the Western world in search of modern techniques and new relationships. Japan has assumed a position of new global influence. Korea, always strategically vital, has become a world economic force. The unity of the ASEAN nations is becoming a stabilizing factor throughout Southeast Asia.

Today we are entering a more mature stage in the U.S.-Korean relations. Our success will depend on whether we can take advantage of both historical continuity and dynamic change to foster progress in the areas which concern us both. Cooperation is the key.

We will cooperate to keep the Republic of Korea safe and secure. There need be no concern about this. As Korea grows stronger, the United States will do its part to preserve the military balance and to deter aggression.

We must take advantage of changes in the international environment to lower tensions between South and North and, ultimately, to bring permanent peace and reunification to the Korean peninsula.

We must work together to build a world in which the rule of law and the freedom and dignity of the individual govern all the affairs of mankind.

Finally, Mr. President, you have a saying in Korea, "Even something as light as a piece of paper can be lifted more easily together." None of the goals I've mentioned are light or easy. But I'm convinced that we can achieve them by working together in the spirit of cooperation and friendship that has united us down through the years.

Ladies and gentlemen, I ask you to rise and join me in a toast to President Park, to the great people of the Republic of Korea, and to our common efforts for cooperation, for friendship, and for peace.

This is an extraordinary occasion, and I would like to make an extraordinary request, that we jointly honor a man who has served both our countries so well. With your permission, Mr. President, I would like to ask General Vessey to join us before this group.

This is a citation to accompany the award of the Defense Distinguished Service Medal to John W. Vessey, Jr.

"General John W. Vessey, Jr., United States Army, distinguished himself by exceptionally distinguished service as a Commander-in-Chief, United Nations Command, and R.O.K.-U.S. Combined Forces Command, and as Commander, United States Forces, Korea, Eighth

United States Army, during the period November 1976 to June 1979.

"General Vessey's superb performance has been clearly evidenced by outstanding leadership and managerial skills. With a keen perception of complex and sensitive military and political relationships, he solidified elements of the Armed Forces of the Republic of Korea, United States, and representative armed forces of other allied nations into a cohesive and formidable military force.

"In doing so, he conceived and refined new objectives and operational concepts which he persuasively articulated to the highest government officials of both nations. A significant historical milestone was reached during his tenure with the birth of the R.O.K.-U.S. Combined Forces Command.

"With General Vessey as its first Commander this organization of diverse national and military backgrounds has progressed into a most effective command, which has greatly enhanced participation by Republic of Korea armed forces in directing defense operations.

"General Vessey's professionalism and concerned leadership have been important factors in guiding the development of the military forces of both nations. His performance in a position of vital national interest and sensitivity has been clearly in keeping with the highest traditions of the military profession and reflects great credit upon himself, the United States Army, and the Department of Defense."

I would like to ask General Vessey to join us on the platform.

It's with great pleasure and an honor for my country, General Vessey, that I pin this medal on your breast as a token of your superb performance for the United States of America and for the Republic of Korea.

GENERAL VESSEY. [*In Korean*] To-

night is my wife's birthday. [In English] What I said, Mr. President, was today is my wife's birthday, and thank you very much for the very special party. I don't know what I'll do next year.

I want to say it's been a singular honor for me to serve with the brave, fine Korean and American soldiers that serve to defend this country. It's been a great experience.

See, they don't trust my Korean. [Laughter] I could have said that myself.

Thank you.

NOTE: The exchange began at 9 p.m. in the Dining Hall of the Blue House, the official residence of the Korean President. President Park spoke in Korean, and his remarks were translated by an interpreter.

Earlier in the day, the President was greeted by President Park at the welcoming ceremony at Yoido Plaza. The two Presidents then motorcaded to the Blue House for bilateral discussions with their advisers in the Summit Room.

In the afternoon, President Carter went to the National Cemetery, where he placed wreaths at the Tomb of the Unknown Soldier and at the gravesite of Madame Park, the late wife of President Park. He then toured the gardens of the Chang Duk Palace.

Following the dinner, the President went to the residence of the U.S. Ambassador to Korea, where he stayed overnight.

Seoul, Republic of Korea

Joint Communiqué Issued at the Conclusion of Meetings With President Park. July 1, 1979

1. At the invitation of President Park Chung Hee, President of the United States of America and Mrs. Jimmy Carter made a state visit to the Republic of Korea from June 29 to July 1, 1979. In addition to consultations with President Park and other senior officials, and meetings with other prominent Korean leaders in Seoul, President Carter visited field in-

stallations of both the United States and Korean armed forces.

2. The two Presidents met at the Blue House on June 30 and July 1, 1979 to review United States-Korea relations and a variety of subjects of vital mutual interest in an atmosphere of cordial respect and confidence. Among those present at these meetings were Prime Minister Choi Kyu Hah, Minister of Foreign Affairs Park Tong Jin, Minister of National Defense Ro Jay Hyun, Presidential Secretary-General Kim Kae Won, and Ambassador Kim Yong Shik from the Korean side, and Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, National Security Advisor Zbigniew Brzezinski, Assistant Secretary of State Richard Holbrooke and Ambassador William H. Gleysteen from the United States side.

3. President Carter outlined the policies of his Government to seek peace and the reduction of tensions around the world, including his efforts to promote a lasting peace in the Middle East and to reach agreement with the Soviet Union on limitation of strategic weapons. President Park endorsed these peace efforts and emphasized his view that the United States should continue to demonstrate its firm leadership wherever challenges to peace occurred.

4. The two Presidents reviewed the events which have significantly altered the recent political face of Asia. Among these were the normalization of Sino-American relations and the signing of the Peace and Friendship Treaty between Tokyo and Beijing. They noted that armed conflicts in Southeast Asia and the Indochina refugee problem are creating major difficulties affecting the entire region, and agreed that there is a need to prevent the extension of these conflicts to other countries. President Carter reaffirmed that the United States as a

Pacific power is vitally engaged in Asia and the Pacific and will continue its best efforts to ensure the peace and security of the region.

5. On the Indochina refugee problem, President Carter outlined the discussions at the Tokyo Summit and steps being taken by the United States and other countries to deal with the situation. He stressed the need for all nations to make the maximum effort possible, whether by resettlement, financial contributions, or temporary shelter. President Park, noting the serious situation both in terms of individual human suffering and destabilizing impact on the directly affected nations in Southeast Asia, stated that the Government of the Republic of Korea would make an additional grant of a considerable sum to the United Nations High Commission for Refugees.

6. President Carter, referring to the basic relations between the United States and the Republic of Korea, noted the existence of strong bonds of friendship and cooperation and assured President Park that the United States will continue to support the efforts of the Government of the Republic of Korea to maintain peace and stability in Korea and sustain economic and social development. President Carter stressed the solidarity that exists between the United States and the Republic of Korea as traditional allies.

SECURITY COOPERATION

7. The two Presidents reaffirmed the importance which the United States and Korea attach to the reciprocal commitments contained in the United States-Republic of Korea Mutual Defense Treaty of 1954. They also agreed that the continued security of the Republic of Korea is pivotal to the preservation of peace and stability in the northeast Asian region.

President Park reviewed the security situation on the peninsula and the continuing threat to peace posed by the North Korean military build-up. The two Presidents agreed that US-ROK cooperation in maintaining a high degree of strength and combat readiness to deter and defend against possible aggression was an important contribution to peace and stability. They noted that the activation last November of the ROK-US Combined Forces Command had enhanced the effectiveness of the joint defense cooperation between military authorities of the two countries. President Carter reiterated the firm commitment of the United States to render prompt and effective assistance to repel armed attack against the Republic of Korea in accordance with the Mutual Defense Treaty, and affirmed that the United States nuclear umbrella provided additional security for the area.

8. President Carter expressed his appreciation for the full consultations between the two Presidents and their Defense Ministers on security issues and said that he would be consulting with U.S. congressional leaders on his return in the light of these detailed discussions. President Carter reaffirmed the deep interest of the United States in preventing any destabilization of the peninsula or region and assured President Park in connection with the question of further withdrawal of American ground combat forces from Korea that the United States will continue to maintain an American military presence in the Republic of Korea to ensure peace and security.

9. President Park reviewed the extensive and continuing efforts of the Republic of Korea to modernize and enhance its self-reliant defense capabilities and the progress achieved in the first five-year Force Improvement Plan which is nearing completion. President Carter expressed

United States agreement with the objectives of the force improvement program and reaffirmed the readiness of the United States to continue to support the successful implementation of the program. President Carter assured President Park that the United States will continue to make available for sale to Korea appropriate weapons systems and defense industry technology necessary for enhancing Korea's ability to deter or defeat aggression and for the development of appropriate defense industries in the Republic of Korea.

**REDUCTION OF TENSIONS ON THE KOREAN
PENINSULA**

10. The two Presidents agreed on the priority need to continue the search for means to reduce tensions on the Korean peninsula. President Park explained the recent efforts of the Republic of Korea government, beginning with his initiative of January 19, 1979, to resume productive dialogue with North Korean authorities. President Carter assured President Park of United States support for these efforts and expressed the hope that meetings between the responsible authorities of the South and the North of Korea would become possible.

11. In view of the importance of this issue for peace and stability on the Korean peninsula and in the region, and as a testament to the personal commitment of the two Presidents to seek honorable means to promote dialogue and reduce tensions, President Park and President Carter have decided jointly to propose the convening of a meeting of senior official representatives of the South and the North of Korea and the United States to seek means to promote dialogue and reduce tensions in the area. In order to promote this effort and to prepare for the

meeting which it is hoped can be arranged, the two Presidents have directed the Foreign Minister and the Secretary of State to communicate jointly with the Foreign Minister of North Korea in this regard in an appropriate manner.

12. The two Presidents agreed that any arrangements that would reduce tension and establish lasting peace leading ultimately to the peaceful unification of the Korean people should result from dialogue between the two responsible authorities of both the South and the North of Korea. President Park noted the consistency with which the Republic of Korea has pursued efforts at dialogue and the reduction of tensions, as exemplified in the policies which he announced on June 23, 1973.

13. President Carter stated that, if and when North Korea's principal allies are prepared to expand relationships with the Republic of Korea, the United States is prepared to take similar steps with North Korea. President Carter also noted that unilateral steps toward North Korea which are not reciprocated toward the Republic of Korea by North Korea's principal allies do not improve stability or promote peace in the area.

14. The two Presidents shared the view that the admission of both the South and the North of Korea to the United Nations as an interim measure pending their eventual unification would provide authorities of both Korean parties with broader opportunities for dialogue aimed at the resolution of their differences.

**RESPECT FOR INTERNATIONALLY
RECOGNIZED HUMAN RIGHTS**

15. The two Presidents noted the importance to all nations of respect for internationally recognized human rights. President Carter expressed the hope that the

process of political growth in the Republic of Korea would continue commensurate with the economic and social growth of the Korean nation. In this connection, President Park explained his view on this matter together with the current unique circumstances confronting the Republic of Korea.

ECONOMIC COOPERATION

16. President Carter expressed to President Park his great admiration for Korea's remarkable record of achievement in sustained economic development over the past fifteen years under his leadership in the face of various obstacles and adverse conditions, thus offering a model and an inspiration for other countries as an example of economic growth and equity. President Park acknowledged with appreciation the United States' contribution to Korea's development in the economic, scientific, and technological areas, and affirmed his intention to continue to give high priority to economic and social goals. The two Presidents shared the view that possible cooperative efforts between the two Governments should be explored to enhance assistance to third countries.

17. President Park and President Carter also reviewed the current international economic situation, and President Carter reported on the discussions at the Seven-Nation Economic Summit just completed in Tokyo. President Park expressed concern about the world energy problem in particular, and the two Presidents shared the view that there is an urgent need for concerted international efforts to arrive at a reasonable solution to the problem.

18. The two Presidents expressed satisfaction at the rapid expansion in scope of the economic relations between the Republic of Korea and the United States, and confidence that this mutually benefi-

cial trend will continue. They noted the advantages which accrue to the people of both nations when the freest possible system of trade exists, and they pledged their mutual efforts to promote and preserve an open world trading system. President Carter noted the commendably progressive import-liberalization and other measures that the Government of the Republic of Korea had recently taken with a view to developing a more balanced trade with the United States. These actions and the recent buying mission to the United States will help promote export of American products to Korea. President Park expressed his hope that the United States would continue its efforts to promote, in the MTN and elsewhere, a freer trading system, and to preserve fair access to the United States market for Korean goods. The two Presidents agreed that further efforts to expand trade and economic cooperation between their two countries will be highly beneficial to their respective peoples.

CULTURAL AND EDUCATIONAL EXCHANGES

19. Noting that their meeting had deepened understanding and cooperation on many matters of mutual interest, the two Presidents recognized that, at a time when the Republic of Korea and the United States have entered into a new era of mature partnership based on mutual respect and confidence, there remains need for further promotion of mutual understanding and exchanges between the two peoples. As evidence of their joint desire to deepen the contact and understanding between the two nations, the two Presidents agreed that cultural and educational exchanges should be expanded. The two Governments agreed to enhance these exchanges by supporting the activities of organizations such as the Korean-American Educa-

tional Commission and to establish a Korean-American Cultural Exchange Committee to be funded jointly by the two Governments. The Committee would be designed to stimulate activities in both countries aimed at further mutual understanding and to endorse mutually agreed programs of this nature. Details will be worked out through diplomatic channels.

20. President and Mrs. Carter, on behalf of themselves and all the members of their party, expressed their deepest thanks to President Park and the people of the Republic of Korea for the warmth of their reception and the courtesies extended to them during the visit.

21. President Carter cordially invited President Park to visit the United States of America, and President Park accepted the invitation with pleasure. They agreed that the visit would take place at a time of mutual convenience. Both Presidents expressed their desire to maintain close personal contact in order to preserve and further cultivate the close partnership existing between their two countries.

The President's Trip to Japan and the Republic of Korea

Remarks During a Background Briefing Given by Administration Officials for Reporters on Board Air Force One. July 1, 1979

BILATERAL RELATIONS WITH JAPAN; TOKYO ECONOMIC SUMMIT

THE PRESIDENT. The bilateral discussions with Japan were no great challenge, because they are so sound and so harmonious now that there was really no deep concern before we arrived.

I think the intense dispute that existed between us and Japan earlier in the year was basically resolved after Prime Min-

ister Ohira's visit in May, followed up by the Strauss visit to Japan. So, in my opinion, the relationships between us and Japan are very good.

The challenge at the economic summit was to try to be substantive and specific on commitments about energy, on conservation in the future, and to try to get a proper balance between individual nations' actions on alternative energy supplies, research, development, production; combined with a mechanism by which we could cooperate on very large projects. For instance, the liquefaction and gasification of coal in the United States—that'll take place in West Virginia—it's already been joined now by Japan and West Germany. So, we'll have, I think, a growing common basis there.

One of the most serious problems as far as the negotiations was concerned was the previous agreement in Strasbourg that the European nations would act in concert and not individually. And this was a very nonsubstantive commitment, because they could pool the increase in production from the North Sea and not be bound by individual commitments. And this was a subject of a very intense discussion.

Q. Can you identify for us the—you made the remark after, I think, the final session, that there were three who supported the amendment. You wouldn't identify them at that time. I don't know what kind of basis we're on, background or what, but can you identify them now? [Laughter]

ADMINISTRATION OFFICIAL.¹ I tell you what, we'll look at this after we get through, and then I'll decide whether I want to put the remarks on the record or keep it on background.

¹ White House Press Office transcripts of background briefings customarily do not identify the speakers by name.

THE PRESIDENT. A half hour before we adjourned, three of the European leaders put forward a very strong amendment proposal that the European Community go back into a pool.

Q. You still can't identify those three?

THE PRESIDENT. Well, I can tell you that Giscard d'Estaing helped me defeat that amendment.

Q. That was my next question. We heard that he stuck with you on this, so that doesn't leave anybody but Mr. Erhardt [Schmidt],² Mr. Andreotti, and Mrs. Thatcher. So, we assume that by process of elimination we've got them. [Laughter]

ADMINISTRATION OFFICIAL. There have been press reports on this matter which are, for the large part, accurate. [Laughter]

THE PRESIDENT. I'll only give you one other comment. The Federal Republic of Germany did not participate in that debate.

FOLLOWUP ACTIONS ON ENERGY

Q. Mr. President, how will all this translate in terms of what you're going to do when you go back home?

THE PRESIDENT. Well, I was going to take a few days off—[laughter]—but I'm pleased with what we've accomplished, and I would like to initiate, immediately, actions to follow up on the energy question. I'll be getting a briefing from my own staff, who have been preparing it now at my direction for the last week. I'll be getting it, as a matter of fact, tomorrow, Monday, in Washington. And then as soon as the congressional leaders come back to Washington, I'll be prepared to meet with a group of Senate and House Members who've already been designated

as a special energy task force, and a second group who have been designated as a special inflation task force.

I think it's high time that the Congress proceeded to a final legislative package with the windfall profits tax, the energy security fund, the alternate supplies of energy, as supported by Jim Wright and Moorhead, and also some expeditious way to complete major projects in our country, as proposed by the Energy Committee in the Senate under Senator Jackson.

I think this combination of actions will be very beneficial, and I want to do it without delay.

Q. Do these actions include the multinational facility, Mr. President? Will you make that announcement of a specific proposal in the next few weeks?

THE PRESIDENT. Yes, I would say within the next few weeks. We've done some background work on that already, but it's hard for me to say unilaterally what we will do collectively. That's why I'm hesitant about it.

POSSIBILITY OF RECESSION

Q. Sir, you said at the summit that the OPEC price increases are going to make it more difficult for us to realize our economic goals.

THE PRESIDENT. Yes.

Q. What is your latest assessment about the likelihood of a recession?

THE PRESIDENT. I think the OPEC decision will make a recession much more likely than it was before. We figure that by the end of 1980, this might cost us 2 or 2½ percent in our gross national product increase, and maybe 2 to 2½ percent in the inflation rate. It might cost us as many as 800,000 jobs—just the increase in OPEC prices that have taken place since last December.

² Printed in the transcript.

STANDBY GASOLINE RATIONING
AUTHORITY

Q. Will you go forward with a new gas rationing—

THE PRESIDENT. Yes, that will be part of the result of the joint study by my people, the House and Senate small ad hoc committee.

Q. On a standby basis?

THE PRESIDENT. On a standby basis.

Q. In other words, you anticipate, despite what you said earlier, going back to Congress now and trying to get standby rationing authority again?

THE PRESIDENT. The Wednesday before I left home, I think it was—the morning we had the leadership breakfast, I think it was Wednesday—Bob Byrd and Tip O'Neill and I had a private meeting before the breakfast. And we agreed to go ahead and move on these two special groups, one purpose of which would be to devise an acceptable rationing plan on a standby basis.

OPEC DECISION ON OIL PRICES

Q. It's very early; of course the summit has just ended. But have you any indication as to what might be OPEC's reaction to the collective criticism that was in the communique?

THE PRESIDENT. No. It's obvious that there has been an excessive amount of timidity on the part of the consuming nations. Both the industrialized nations, up until this week, and especially the developing nations of the world—for instance, the Republic of Korea imports almost all of its energy; it has only a tiny amount of coal and oil.

And Helmut Schmidt made a very interesting report. I won't call the name of the countries, but one major European country, one of our NATO Allies, according to Chancellor Schmidt, spends a

hundred percent of all its external earnings now on oil.

Another major ally of ours in South America, in 1973, was only spending 10 percent of their external earnings on oil; now they spend 40 percent.

Q. That's Brazil.

THE PRESIDENT. That's Brazil.

Q. The external earnings, what they earn from—

THE PRESIDENT. Their net earnings from what they export.

So, the devastating blow to the world is really most acutely felt in the developing nations, the very poor nations, who have very little cash reserves and are deeply in debt and who've seen their energy prices go up so extraordinarily high. It's obviously serious to us; it's much more than an inconvenience. But it can be devastating to a country that's so vulnerable as they.

Q. One of the things that we heard, Mr. President, about the collective criticism that the summit issued, was that in addition to the price increase the previous Thursday, the leaders of the summit were also affronted and indignant about what OPEC had had to say about the LDC's [less developed countries], or lack of what they say was our lack of aid to the LDC's. Was that correct? Was that a factor in the decision to criticize the increase?

THE PRESIDENT. Yes, I think so, because the OPEC communique was highly inaccurate and was designed, obviously, to mislead the developing countries.

Q. Was it you who brought the statement to the summit and read it to them? Someone on our side actually brought this to their attention? Or was it one of the Europeans who brought it up?

THE PRESIDENT. All of us were familiar with the communique. As a matter of fact, we discussed the communique of the OPEC nations that morning at the private breakfast with the so-called Ber-

lin group: ourselves, the Germans, the French, and the British. And I think we four then took it to the others.

Q. Sir, what do we hope to gain by talking tougher at OPEC?

THE PRESIDENT. Well, I don't see how the rest of the world can continue to sit back in a quiescent state and accept unrestrained and unwarranted increases in OPEC oil prices. I think there's no doubt that all seven of our nations agree very strongly with this deep concern. We also all agreed that the 60-percent increase in 6 months is unnecessarily high and completely unwarranted.

Q. But given all of that, given the fact that all of this is unrestrained and unwarranted, what can we do besides making strong statements?

THE PRESIDENT. I'd rather not go into that. *[Laughter]*

Q. You mean there are things we can do?

THE PRESIDENT. Well, I'd just rather not go into that.

Q. Besides going in with just—taking the oil—

THE PRESIDENT. I'll let the press speculate on what can be done. The first thing, I think, is to let all the consuming nations on Earth, both advanced, industrialized nations and those who are semideveloped, and those who are very poor and poverty stricken, realize the serious threat that already has been mounted to the world economy and what more serious threats can be mounted in the future unless there's some public, concerted statement of concern toward the OPEC nations. It's very difficult for a single nation like Japan, or like Germany, or like France, maybe like the United States, to let a lonely voice be mounted against the OPEC countries, because they can single that country out with punitive withholding of oil or some other action.

And I think we've all recognized that so far, and we've been timid. And I think the statement in Tokyo, collectively, might have some special significance in the future. We'll just have to wait and see.

ENERGY SUPPLIES AND ECONOMIC GROWTH RATE

Q. What does the 8.5 million barrels a day for U.S. mean to the Americans?

ADMINISTRATION OFFICIAL. It means that the level of imports that we experienced in 1977 and the level of imports that we're experiencing this year will be maintained as a goal. We'll have to assess our progress each year. All of us agreed to that. It'll be our goal that we will not exceed that amount of imports in 1985.

This could be accomplished by three basic means: One is to maximize production of oil in our own country; secondly, to conserve energy in all its forms; and, third, what might be considered a rational basis to develop alternative sources of energy—solar; coal; nuclear, with special attention paid to safety and environmental considerations; oil derived from tar sand, shale. These kinds of energy sources must be aggressively developed.

And I think that all of the countries assembled in Tokyo recognized that we have a special advantage in our country in having some reserves. Germany has no oil. France has no appreciable oil or coal. Germany has pretty good coal supplies. Great Britain has both coal and oil. We have coal, oil; obviously, we have tremendous resources in shale. Canada has diminishing, rapidly diminishing supplies of oil, tremendous potential in tar sands. So, each country is so different, one from another—Japan, almost completely dependent on imported energy. So, we had a very serious problem to address.

Also, our country this year ought to

have roughly a zero growth rate. Germany's will be in the neighborhood of 4 percent; Japan's even higher. And we, in the past few years, have had a very high growth rate compared to the other nations.

We had a need to accommodate that wide disparity in the characteristics of nations. I think we successfully did it. But all the nations took a very difficult stand in setting a restrictive target.

ADMINISTRATION OFFICIAL. May I interject one thing here? With regard to what we said earlier on what we will need to do to reach our goal by 1985, it seems to me that it's worth noting that had the 1977 national energy plan been passed as it was submitted, that we would now have in place programs that would guarantee that we would not only meet that goal in 1985 but that we would be significantly below it.

You can get different arguments about how many hundreds of thousands of barrels below it it would be, but there's no doubt that if that had been done in 1977, 8.5 million barrels in 1985 would be no problem.

ADMINISTRATION OFFICIAL. And I might say that we cannot meet the 1985 goal if we don't have the windfall profits tax and the energy security fund, because we won't have the capability of developing the alternative energy supplies.

POSSIBILITY OF TAX CUTS

Q. Could I go back to something that you said at the outset? You said that the OPEC price increase, the cumulative increase made the possibility of a recession a good deal stronger.

ADMINISTRATION OFFICIAL. Yes, not only for us but for all nations.

Q. In the light of that, have you begun to do any rethinking or do you plan to do

any restudying on the question of a tax cut?

ADMINISTRATION OFFICIAL. No, not anytime soon. I can't say that we'll never do that, but that's not in my immediate—

POSSIBILITY OF RECESSION

Q. You mentioned a moment ago that there would be a zero growth rate for the United States this year. That means there will be a recession?

ADMINISTRATION OFFICIAL. We don't know yet.

ADMINISTRATION OFFICIAL. We're just recalculating now, but it will certainly for the rest of the year—and in fact, the new estimates will come out in about 10 days. And we'll have the definite numbers then. But for the rest of the year, the growth rate is, I think it's going to be around zero, I can't imagine below that.

Q. That's the first time I've heard you say that.

Q. It's not recession until we have actual negatives for two quarters.

ADMINISTRATION OFFICIAL. Yes, but that's the average for the year. We will have to see how—it may well go into negative numbers. We just don't know.

ADMINISTRATION OFFICIAL. Well, I don't want to be that specific. I've got to get back and go over this with OMB and Charlie Schultze to get an exact figure. But I would say that we'll have just about a level growth rate this year, plus or minus—

Q. Is that all brought around by the OPEC increases?

ADMINISTRATION OFFICIAL. I can't say all, no. But it's obviously a very major factor.

Q. Mr. President, if I'm correct, that's the first time I've heard you use that phrase "zero growth rate." You've been talking 2½ percent, something like that.

Are you less optimistic now as a result of the——

THE PRESIDENT. [The President nods affirmatively.]³

ADMINISTRATION OFFICIAL. Mr. President, I would just interject, without the 60-percent increase from OPEC, we would not face this problem. Clearly, that problem, Mr. President, is in fact due to the 60-percent increase in oil.

ADMINISTRATION OFFICIAL. With regard for inflation, also.

U.S. BALANCE OF TRADE

THE PRESIDENT. What will the OPEC price increase cost us in balance of trade?

ADMINISTRATION OFFICIAL. We estimate now that next year the cost may be around \$70 billion; this year, \$58 billion, which compares to \$42 billion last year. So, it's a substantial increase in the bill we have to pay for imported oil.

ADMINISTRATION OFFICIAL. It's a very serious economic problem. The only thing I would hesitate to—the only thing I'd like for you not to do is to pin me down specifically to a zero growth rate. Until we see the final figures run through the computer, I won't know.

ADMINISTRATION OFFICIAL. It'll be about 10 days.

THE PRESIDENT. We'll issue that new estimate on the 15th, I think.

ENERGY AND INFLATION TASK FORCES

Q. You mentioned the inflation task force a little while ago. Is that something new?

THE PRESIDENT. Yes.

Q. And are they studying controls as one of the options at this point?

THE PRESIDENT. The inflation task force is something new.

Q. Would you like to talk a little bit about it?

THE PRESIDENT. No, I don't want to presuppose anything. I think the Congress Members would resent my saying what we collectively are going to do. The essence of it is that Bob Byrd and Tip and all recognize that we have some special problems economically, and instead of the executive branch developing a program or the Congress developing programs and just having proper consultations, that we'll work much more closely on a continuing basis with a few key people.

Before I left Washington, Bob Byrd called me on the phone and gave me the list of the Members of the Senate that he had recommended. And I understand that after I left, Tip O'Neill has submitted his list of the House Members—two lists, one for energy and one for inflation. Both Democrats and Republicans could be designated by the leaders.

Q. Do you anticipate that they will suggest mandatory controls at all?

THE PRESIDENT. I don't want to presuppose that.

Q. How would you feel if they did?

THE PRESIDENT. I would say no.

Q. Are controls one of the options that the task force will consider?

THE PRESIDENT. I'm opposed to mandatory controls.

Q. When do you expect to have a report or a recommendation?

THE PRESIDENT. This is in the embryonic stage. We've set up the mechanism, and I can't——

Q. Is it an all-congressional group—the task force?

THE PRESIDENT. If I remember right, Bob Byrd gave me about seven or eight names from the Senate. I presume Tip will do about the same on the House, and then I'll appoint members representing

³ Printed in the transcript.

my own administration. Mike ⁴ will undoubtedly serve, along with Schlesinger, maybe Stu Eizenstat, Charlie Schultze, and others—Juanita Kreps—depending on—I haven't decided on specific names, but those would be, obviously.

PRESIDENT'S SUMMARY OF TRIP

I might say, in summary, that I think the trip has been a very good one. I'm pleased with the results. We accomplished all the goals that we established for ourselves. Many of the commitments that were made still have to be carried out—in Japan, at the economic summit, and also in my visit with President Park and Korean leaders.

I think that the alleviation of tension between South Korea and North Korea, if we can accomplish this, will be of great benefit. I would like to see trade open up between South Korea and the People's Republic of China; between ourselves and North Korea on the same time basis.

I think that our genuine concern about human rights has been imparted very clearly to President Park and all the members of the Government of the Republic of Korea. My belief is that the military relationship has been much more actively clarified. We will accommodate the recent development of the buildup in North Korea adequately. We will not abandon our commitments to the Republic of Korea.

So, I think all those issues that we studied and worked on so long have been successfully concluded.

Q. Have you pretty well formed a decision in your mind on troop withdrawals?

THE PRESIDENT. A general framework, yes.

Thank you all very much.

⁴ Secretary of the Treasury Blumenthal.

REPORTER. Thank you.

NOTE: The briefing was held during the flight from the Republic of Korea to Hawaii. The President joined the group approximately midway through the briefing, and only that portion attended by the President is printed above.

Earlier in the day, the President met at the U.S. Ambassador's residence in Seoul with a group of Korean religious leaders and attended a reception with members of the National Assembly at the National Assembly building.

Prior to departure ceremonies at Kimpoo International Airport, the President went to the Blue House, where he met with President Park. President Park then accompanied the President to the airport.

Hickam Air Force Base, Hawaii

Remarks at a Reception. July 1, 1979

Aloha!

You don't know how nice it is to be home.

This is our second Sunday, July 1st. We spent the first one in Seoul, Korea, and worshiped there in a new church and then had meetings with the President and the leaders of that country, close allies of ours. And if I had to pick one place on Earth that I would rather spend my second Sunday, it would be Hawaii with you.

It was a pleasure to be welcomed by Governor Ariyoshi and his wife. I've asked him, by the way, later on this month, to go out and represent me at the new Republic of Kiribati, formerly the Gilbert Islands, on their first independence day. And, Governor, I hope you can do that for me. Thank you very much. He'll be a great representative for our country.

And Senator and Mrs. Matsunaga, Sparky Matsunaga, has been with me on this entire trip. He's been a special good will ambassador. And when I've been closed up in those rooms trying to nego-

tiate about energy and defense and human rights and other questions, he's been a special representative for the State of Hawaii and for the United States of America. And, Sparky, I want to thank you for doing such a superb job, you and your wife both.

Congressman Akaka, Congressman Heftel, thank you very much for being with me this morning. And I particularly want to say to Mr. and Mrs. Hirabara, thank you for helping me become President.

We are really coming back home. As you know, my wife and I and my first son came to live in Hawaii in December of 1948. Rosalynn got here, I think, in March or April of 1949, and we spent two of the best years of our lives here, and it's one of the places on Earth closest to our hearts.

My former pastor in Plains, Bruce Edwards, and his wife, Sandra, are here to meet us this morning, and there are many things that cause my heart to fill with gratitude to God for being so good to us and so good to our country.

I'm particularly eager to shake hands with each one of you individually and to thank you for your friendship and for your coming out to welcome us today. But I particularly wanted to say that this trip has been a good one for me personally, for me as President, and for our Nation.

We went first to Japan, a great nation, one of our closest allies, which has had literally a rebirth since the Second World War. We share many things in common. And I would guess that except for two nations that join one another physically, there is no nation, no two nations on Earth who are any closer now than we and the people of Japan.

I went to strengthen our partnership. I'm only the second United States President in history who's ever visited Japan. We had a wonderful visit with the Em-

peror, with the people there, a kind of person-to-person effort which I thought was highly successful.

We also went from Japan to Korea. I spent the first night with our troops near Seoul. This is a nation that we joined in the early 1950's when I was still in submarines in the Pacific Fleet. Fifty thousand of our American young men gave their lives in Korea for freedom, for a chance for the people of that country to live in peace and to meet the constant threat of aggression.

The troops there have a very high morale. The 2d Infantry Division has the highest reenlistment rate of any military force in the United States, anywhere in the world. And I was privileged to see them, their dedication, their courage, their heroism, their commitment to the same principles that have always made our Nation great. And I know the military means so much here in the State of Hawaii as well, where I served as a young naval officer. It reminded me again of what patriotism really means and what a great debt we owe to our military forces throughout the world, who stand for peace and who stand for freedom still.

I talked to President Park frankly about our military alliance, which is strong and which will stay strong, about our firm and permanent commitment to continue to join with them in the defense of freedom on the peninsula of Korea. I talked to him very deeply about human rights, some of my own concerns about the need for improvement in the administration of the rule of law, of personal freedom, freedom of the press, and I thought those meetings, those frank discussions, were very, very fruitful.

I would guess that the most significant part of the trip, however, was meeting with the leaders of other industrialized nations at the economic summit in Tokyo.

I won't go into detail, because this was a very difficult and very complicated negotiation. But I thought we made some historic decisions there. It may be that this meeting will go down in history as one that has affected the lives of almost every person on Earth.

We have very serious problems with energy. We decided first of all to set rigid targets on imports, to cut down on the unwarranted control of our lives by the OPEC nations. Since December, the OPEC countries have increased the price of oil an average of more than 60 percent, from \$12.50 per barrel back in December to as high as \$22 a barrel now.

We have got to take action. We can take action. Our country is strong enough to take action to make us energy independent in the future. And all of our nations bound ourselves together to cut down on imports, to remove the unwarranted increases in price resulting from the distribution system, and to commit ourselves individually and collectively to develop new sources of energy and to develop our own existing sources of energy so that we can rest with assurance that we will take care of our own energy needs in the future.

There is no other place in our country which has best exemplified this than the State of Hawaii. On the big island, Hawaii, on Kauai as well, now almost 50 percent of all the energy used comes from biomass, primarily from sugarcane. There'll be a new ocean temperature energy project that will begin in just 2 or 3 days, the first of any size anywhere, and this is another very great credit to this island.

I talked to Sparky Matsunaga the last few minutes before we landed. I would like to see the State of Hawaii become completely energy independent by the year 1990. And if all of us continue to work together with the same spirit and

dedication which we've shown so far, we have an excellent chance to do that.

You have geothermal energy, and obviously from the sugarcane wastes there can be ethanol, methanol made to take care of gasoline replacement.

So, I'm very excited about what has gone on here and what will go on. Photovoltaic cells from solar power directly are another tremendous potential source of power for Hawaii. So, you are really in the forefront of what can be done on a nationwide basis.

I'd like to just add one other thing and then I'll close.

I had planned to stay 2 or 3 days here to get some rest and to be with you, my friends. I believe, however, that the economic problems of our Nation and the energy problems of my Nation require me to go on back to Washington.

Between 1973 and 1977, we did absolutely nothing as a nation to meet the rapidly changing energy shortages and the rapidly changing energy price increases. In 1977, as you know, I presented to the Congress a comprehensive energy policy. Had it been passed expeditiously, many of our energy problems now would not exist.

The Congress has not yet passed a single piece of legislation, a single line of legislation, dealing with oil. Now with apparent energy shortages, with gas lines the Congress is beginning to move. We are moving as partners.

The windfall profits tax will establish a multibillion dollar fund, an energy security fund that will let us develop alternative sources of energy and existing sources of energy to be expanded in the years ahead, to give us a better rapid transit system, and to meet the special needs of the poor.

We also are moving toward higher technology in energy and a means by which we

can expedite the construction of projects that will give us energy more quickly. I have no doubt now that the public has been so aroused about the direct threat that we will act without delay.

I'll be meeting immediately with my staff when I return to Washington and then with groups of House and Senate leaders in the field of energy and also in the field of inflation control as soon as I return to Washington.

Our country has been blessed, as you know, by God with tremendous human resources and tremendous natural resources. There's no way for me to look at a welcoming crowd at the airfield or to look on your faces without realizing that Hawaii not only has a great natural beauty but also a great human and political beauty.

Ours is a country of immigrants. It's a country of refugees. My parents and all of yours, except the native Hawaiians, came here from other countries seeking a better life. It's the kind of spirit that has bound our Nation together in the past, and it's the kind of spirit that's given us strength.

This is the first time in history when our Nation has been substantially inconvenienced without a direct threat to our security, like during a time of war or massive depression. I think Americans can stand it. I think we can weather difficulty. I think we can meet challenges. I think we can answer questions if we live and work together as we have in the past.

It is not easy being President these days. But I feel renewed in my own commitment and strength when I know from history how great a nation we have and, looking on your faces, see what a great nation we have in the future.

Working together, we can meet any difficulty and any challenge. And with your help and with God's help, we will do it again.

Thank you for coming out to meet me this morning. I love you all. God bless you.

NOTE: The President spoke at 7:33 a.m. at the Officer's Club.

Following his remarks, the President left for Washington, D.C.

National Consumer Cooperative Bank

Nomination of 11 Members of the Board of Directors. July 2, 1979

The President today announced that he will nominate six public members and five Government members of the Board of Directors of the National Consumer Cooperative Bank. They are:

Public members

RONALD GRZYWSKI, of Chicago, president of the Illinois Neighborhood Development Corp., the bank holding company that owns the South Shore Bank, which operates a strong neighborhood reinvestment program that has been responsible for lending over \$17 million to minority-owned businesses, voluntary community organizations, social service agencies, and single and multifamily residences;

JOSEPH L. HANSKNECHT, JR., of Detroit, Mich., director of public affairs of the League Insurance Companies and of the Michigan Credit Union League, active in community development organizations;

FRANCES LEVENSON, of New York City, director of urban housing and vice president of the New York Bank for Savings; for the past 7 years, in charge of the bank's program of sponsoring, financing, and promoting low- and moderate-income housing;

REV. ALBERT JOSEPH MCKNIGHT, of Lafayette, La., president of the Southern Cooperative Development Fund, a developmental financial institution with assets over \$11 million, making loans to emerging cooperatives and community-controlled organizations in the South;

JUAN J. PATLAN, of San Antonio, Tex., executive director of the Mexican American Unity Council, active in civic groups concerned with housing, downtown redevelopment, and immigration and naturalization;

DEREK N. SHEARER, of Santa Monica, Calif., a lecturer at the UCLA Graduate School of Architecture and Urban Planning, an economist and consultant, and an expert in cooperative and community economic development.

Government members

ROGER C. ALTMAN, Assistant Secretary of the Treasury for Domestic Finance;

GENO C. BARONI, Assistant Secretary of Housing and Urban Development for Neighborhoods, Voluntary Associations, and Consumer Protection;

SAM W. BROWN, JR., Director of ACTION;

LAWRENCE CONNELL, JR., Administrator of the National Credit Union Administration;

CAROL TUCKER FOREMAN, Assistant Secretary of Agriculture for Food and Consumer Services.

The President will announce nominations for the two remaining Government members of the Board of Directors in the future.

Department of Housing and Urban Development

Nomination of Jane McGrew To Be General Counsel. July 3, 1979

The President today announced that he will nominate Jane McGrew, of Chevy Chase, Md., to be General Counsel of the Department of Housing and Urban Development. She would replace Ruth Prokop, who has been appointed Chairman of the Merit Systems Protection Board.

McGrew is a partner in the Washington law firm of Steptoe & Johnson. She was born March 16, 1947, in New York City. She received a B.A. from Swarthmore

College in 1967 and a J.D. from the University of Pennsylvania Law School in 1970.

McGrew has been with Steptoe & Johnson since 1970, and has been a partner since 1977. She is primarily involved in Federal administrative practice, legislation, and litigation in the Federal courts in such areas as employment discrimination, antitrust litigation, contract compliance, and consulting on drug control programs.

She is a member of the hearing committee of the Disciplinary Board of the District of Columbia Bar and of the Women's Legal Defense Fund. She has been a consultant to the Drug Abuse Council and has served as vice president of the Washington Council of Lawyers, Inc.

Camp David Meetings on Domestic Issues

Statements by the White House Press Secretary on the President's Activities. July 5, 1979

The President has authorized me to state that, pursuant to the agreements reached at the Tokyo summit, he intends to propose at an early date a series of strong measures to restrain United States demand for imported oil.

The President is in the process of assessing major domestic issues which he believes are important to the country and which include, but go beyond, the question of energy.

He will be consulting with a number of individuals whose judgment he respects, both in and outside of government.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

July 1

The President declared a major disaster for the State of Iowa as a result of high winds and tornadoes, beginning on or about June 28, which caused extensive public and private property damage.

July 2

The President met at the White House with:

- members of the White House Management Task Force on Energy Shortages;
- Secretary of Energy James R. Schlesinger, Secretary of the Treasury W. Michael Blumenthal, Deputy Attorney General Benjamin R. Civiletti, George C. Eads, member of the Council of Economic Advisers, James T. McIntyre, Jr., Director of the Office of Management and Budget, Ambassador at Large Henry D. Owen, Special Representative of the President for International Economic Summits, Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy, Alfred E. Kahn, Advisor to the President on Inflation, and other administration officials, to discuss energy issues.

July 3

The President met at the White House with:

- Zbigniew Brzezinski, Assistant to the President for National Security Affairs;
- members of the Economic Policy Group Steering Committee;

—Secretary Schlesinger, Secretary Blumenthal, Charles L. Schultze, Chairman of the Council of Economic Advisers, Mr. McIntyre, Ambassador Owen, Mr. Eizenstat, Mr. Kahn, Barbara Blum, Deputy Administrator, Environmental Protection Agency, James Gustave Speth, member, Council on Environmental Quality, and other administration officials, to discuss energy issues.

The President announced the appointment of Gov. George Ariyoshi of Hawaii as the President's Personal Representative to the Gilbert Islands independence celebrations, to be held July 12 in Tarawa. Mrs. Ariyoshi will accompany the Governor. Other Representatives of the President, also with the rank of Special Ambassador, are: John P. Condon, U.S. Ambassador to Fiji; Gen. Louis Wilson, former Commandant of the U.S. Marine Corps; Evelyn Colbert, Deputy Assistant Secretary of State for East Asian and Pacific Affairs; Frank M. Tejeda, member of the Texas State House of Representatives; James Alexander Hodges, president of Paragon Agency, Macon, Ga.; Allan Schaefer, a Hartford, Conn. attorney; and Lee M. Sessions, Jr., vice president of the Citizens and Southern National Bank, Atlanta, Ga.

The President left the White House for a stay at Camp David, Md.

July 6

The White House announced that the President has cancelled his trip to Louisville, Ky., scheduled for July 7 and 8. He will remain at Camp David for meetings on major domestic issues with individuals both in and outside of government. The President has asked Gov. Julian Carroll of Kentucky, chairman of the National Governors' Association, to bring a representative group of Governors to Camp David this evening for discussions prior to the

convening of the National Governors' Association meeting. The Vice President and the First Lady will substitute for the President at the Kentucky Democratic Party fundraiser on Saturday evening. The Vice President will attend a breakfast meeting of the Democratic Governors' Caucus on Sunday morning and address the full association in the afternoon.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted July 2, 1979

The following-named persons to be members of the Board of Directors of the National Consumer Cooperative Bank for terms of 3 years (new positions):

RONALD GRZYWINSKI, of Illinois
JOSEPH L. HANSKNECHT, JR., of Michigan
FRANCES LEVENSON, of New York
ALBERT JOSEPH MCKNIGHT, of Louisiana
JUAN J. PATLAN, of Texas
DEREK N. SHEARER, of California
ROGER C. ALTMAN, Assistant Secretary of the Treasury
CAROL TUCKER FOREMAN, Assistant Secretary of Agriculture
GENO CHARLES BARONI, Assistant Secretary of Housing and Urban Development
SAM W. BROWN, JR., Director of the ACTION Agency
LAWRENCE CONNELL, JR., Chairman, National Credit Union Administration Board

Submitted July 5, 1979

JANE MCGREW, of Maryland, to be General Counsel of the Department of Housing and Urban Development, vice Ruth Prokop, resigned.

JAMES M. SPROUSE, of West Virginia, to be United States Circuit Judge for the Fourth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

NOMINATIONS—Continued

Submitted July 5—Continued

MATTHEW J. PERRY, JR., of South Carolina, to be United States District Judge for the District of South Carolina, vice a new position created by P.L. 95-486, approved October 20, 1978.

CHECKLIST OF WHITE HOUSE PRESS RELEASES

The following listing contains releases of the White House Press Office which are not included in this issue.

Released June 25, 1979

Advance text: toast at the state dinner in Tokyo, Japan

Released June 30, 1979

Advance text: toast at the state dinner in Seoul, Republic of Korea

Released July 1, 1979

News conference: on the President's trip to Japan and the Republic of Korea—by Secretary of State Cyrus R. Vance

Released July 3, 1979

Announcement: creation of two special working groups under the White House Management Task Force on Energy Shortages to deal with problems of independent truckers

Announcement: nomination of James M. Sproule to be United States Circuit Judge for the Fourth Circuit

Announcement: nomination of Matthew J. Perry, Jr., to be United States District Judge for the District of South Carolina

Announcement: appointment of Gov. George Ariyoshi of Hawaii as the President's Personal Representative to the Gilbert Islands independence celebrations

ACTS APPROVED BY THE PRESIDENT

Approved June 30, 1979

S. 1317----- Public Law 96-30
An act to extend the existing antitrust exemption for oil companies that participate in the Agreement on an International Energy Program.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, July 13, 1979

Energy Emergency in Florida

Memorandum From the President.
July 6, 1979

*Memorandum for the Administrator of
the Environmental Protection Agency*

Based on a request submitted to me by the Governor of the State of Florida to extend my June 12, 1979 determination that a regional energy emergency continues to exist in the State of Florida of such severity that a temporary suspension of certain air pollution control regulations which apply to fossil-fuel fired electric generating plants under the Florida Air Quality Implementation Plan may be necessary, and that other means of responding to the energy emergency may be inadequate, I hereby extend that determination from July 5, 1979, to and including October 15, 1979. This extension is limited by the same conditions as my original determination and is expanded to include any necessary temporary suspension of sulfur dioxide as well as opacity and particulate requirements.

If, during the extension, I find that a regional energy emergency no longer exists in Florida, I will direct that this extension be rescinded, and that all suspension orders issued by the Governor be

terminated on the day of that rescission. Please continue to work with State officials to monitor carefully the residual oil supply in Florida and to inform me if the emergency should cease to exist. You will continue to retain full authority to disapprove temporary suspension of regulations in Florida and to exercise your emergency powers authority under Section 303 of the Clean Air Act, when and if necessary. It is important to keep suspensions to an absolute minimum since Section 110(f) of the Clean Air Act limits each suspension to a maximum duration of 120 days.

While my determination permits the temporary suspension of certain emission limiting requirements, it in no way permits the suspension of any national ambient primary or secondary air quality standard. Protection of these national health and welfare protective standards is consistent with Governor Graham's petition, and I commend him for his past restraint in using the authority to suspend some air pollution requirements. (This determination shall be published in the **FEDERAL REGISTER**.)

JIMMY CARTER

[Filed with the Office of the Federal Register,

NOTE: The text of the memorandum was released on July 9.

Saudi Arabian Crude Oil Production

White House Statement. July 9, 1979

The President told Members of the Senate and House at Camp David this morning that he has received a personal commitment from Crown Prince Fahd of Saudi Arabia to increase substantially crude oil production for a significant and specific period of time. Details of production plans will be announced by the Saudi Government in the near future.

The personal message to the President made clear that the Saudi decision is based on their historic friendly relationship with the United States and their commitment to be a dependable supplier of oil to the world.

The President has expressed the appreciation of the American people for this decision. He wishes to emphasize, however, that while the increased production will be helpful in the short term, it does not relieve the United States or other oil-consuming nations of the necessity for firm action to reduce significantly their dependence on imported oil.

NOTE: Deputy Press Secretary Rex Granum read the statement at 11:39 a.m. at the regular news briefing for reporters, held in the Briefing Room at the White House.

President's Council on Physical Fitness and Sports

Appointment of Abbi Fisher as a Member. July 10, 1979

The President today announced the appointment of Abbi Fisher, of South Conway, N.H., as a member of the President's Council on Physical Fitness and Sports.

Fisher, 21, is a member of the U.S.

Olympic Ski Team and won the slalom event in the 1978 World Cup. She has been skiing since the age of 3 and racing since 16. She placed second and third in the giant slalom in the 1977 World Cup season and won the slalom event in the 1977 Europa Cup.

Death of Arthur Fiedler

Statement by the President. July 10, 1979

Music lovers everywhere were saddened to learn of the death of Arthur Fiedler, who had a special place in our hearts as the courtly man who introduced millions to the infinite variety and pleasures of music.

The Fourth of July concerts he originated on the banks of the Charles River became a part of our national tradition. He gave us the best loved classics with a joyous mixture of country, jazz, and popular works. He knew how to take music seriously without taking the fun out of it, and he shared that gift with us all.

Rosalynn and I join a nation filled with the grateful recipients of that gift in sending our deepest sympathy to his wife, Ellen Bottomly Fiedler, and the rest of his family.

National Energy Supply Shortage

Proclamation 4667. July 10, 1979

By the President of the United States of America

A Proclamation

The Secretary of Energy has advised me that the continued reduction in world

crude oil production has resulted in a national energy supply shortage constituting a severe energy supply interruption as defined in Section 3(8) of the Energy Policy and Conservation Act (42 U.S.C. 6202 (8)). The Secretary based his conclusion on the fact that current and projected imports of crude oil and petroleum products, plus available stocks, are not adequate to meet normal demand and that shortages of essential fuels have begun to have a major adverse impact on the economy with the possibility of more severe impacts occurring in the future. Recent shortages of gasoline in some areas of the Nation and the current inadequate levels of heating oil stocks have underscored the seriousness of the situation and demonstrate that action must be taken now to conserve available supplies of petroleum.

On the basis of the Secretary's report, and other information available to me, I hereby find and determine, in accordance with Sections 201(b) and 3(8) of the Energy Policy and Conservation Act (42 U.S.C. 6261(b), 6202(8)), the existence of a national energy supply shortage constituting a severe energy supply interruption, which:

- (A) is of significant scope and duration and of an emergency nature;
- (B) may cause major adverse impact on national safety or the national economy; and
- (C) has resulted from an interruption in the supply of imported petroleum products.

I further find that implementation of the Emergency Building Temperature Restrictions, Energy Conservation Contingency Plan No. 2, is required by the severe energy supply interruption. This Plan was transmitted by me to the Congress on

March 1, 1979, and approved by a resolution of each House (S. Res. 122, 125 Cong. Rec. S 5135 (May 2, 1979); H. Res. 209, 125 Cong. Rec. H 3018 May 10, 1979)), which resolutions have been transmitted to me by the Secretary of the Senate and the Clerk of the House. Those resolutions were received by me on May 4 and May 15, 1979, respectively.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, by the authority vested in me by the Constitution and laws of the United States, including Section 201(b) of the Energy Policy and Conservation Act (42 U.S.C. 6261(b)), do hereby proclaim that:

SECTION 1. A severe energy supply interruption, as defined in Section 3(8) of the Energy Policy and Conservation Act (42 U.S.C. 6202(8)) currently exists with respect to the supply of imported crude oil and petroleum products.

SEC. 2. This finding shall be immediately transmitted to the Congress.

SEC. 3. The provisions of the Emergency Building Temperature Restrictions, Energy Conservation Contingency Plan No. 2 (44 FR 12911 of March 8, 1979), shall become effective as of July 16, 1979.

SEC. 4. In accordance with the provisions of the Plan, the Secretary of Energy is hereby authorized to issue regulations for the purpose of implementing the Energy Conservation Contingency Plan No. 2 and to administer the program in all respects.

IN WITNESS WHEREOF, I have hereunto set my hand this tenth day of July, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register,

National Energy Supply Shortage

*Message to the Congress on the
Implementation of Energy Conservation
Contingency Plan No. 2. July 10, 1979*

To the Congress of the United States:

Pursuant to the authority vested in me by the Energy Policy and Conservation Act, I have found and proclaimed (copy of the Proclamation is enclosed) that a severe energy supply interruption currently exists with respect to the supply of imported crude oil and petroleum products and have implemented the authority vested in me to impose emergency building temperature restrictions as set forth in Standby Energy Conservation Contingency Plan No. 2.

The Plan will become effective as of July 16, 1979. A copy of the final Department of Energy regulations which more fully explain the manner for the exercise of the Plan is enclosed.

JIMMY CARTER

The White House,
July 10, 1979.

NOTE: The Department of Energy regulations are printed in the FEDERAL REGISTER of July 5, 1979.

United States Ambassador to Papua New Guinea and the Solomon Islands

*Nomination of Harvey J. Feldman.
July 11, 1979*

The President today announced that he will nominate Harvey J. Feldman, of Miami, Fla., to be Ambassador Extraordinary and Plenipotentiary of the United States to Papua New Guinea and to the Solomon Islands. He would replace Mary S. Olmsted, who is resigning.

Feldman has been Coordinator for Taiwan Affairs at the State Department since 1977.

He was born June 25, 1931, in Brooklyn, N.Y. He received a B.A. (1951) and M.A. (1954) from the University of Chicago.

Feldman joined the Foreign Service in 1954, and served in Hong Kong, Tokyo, Nagoya, and at the State Department. He took language training at the Foreign Service Institute in 1962-63 and then in Taipei, where he also served as a political-military officer. From 1965 to 1970, he was detailed to the U.S. Information Agency in Hong Kong as publication officer, assistant information officer, then cultural affairs officer.

From 1970 to 1973, Feldman was at the State Department as a political officer, then a member of the Planning and Coordinating Staff. From 1973 to 1975, he was Counselor for Political Affairs in Taipei, and from 1975 to 1977, he was Deputy Chief of Mission in Sofia.

Steel Imports

Proclamation 4668. July 11, 1979

MODIFICATION OF TEMPORARY QUANTITATIVE LIMITATIONS ON THE IMPORTATION OF CERTAIN ARTICLES OF STAINLESS STEEL OR ALLOY TOOL STEEL

*By the President of the United States
of America*

A Proclamation

On June 12, 1979, by Proclamation 4665, I proclaimed, pursuant to the Constitution and the statutes of the United States (including section 203 of the Trade Act of 1974 (19 U.S.C. 2253) (the Trade

Act)), an extension for the period of June 14, 1979 through February 13, 1980, of the temporary quantitative limitations imposed by Proclamation 4445, as amended, on the importation into the United States of certain articles of stainless or alloy tool steel provided for in items 923.20 through 923.26, inclusive, of the Tariff Schedules of the United States (TSUS) (19 U.S.C. 1202).

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, in order to assure equitable treatment under Proclamation 4445, as amended, and acting under the authority vested in me by the Constitution and the statutes of the United States, including section 203 of the Trade Act (19 U.S.C. 2253), and in accordance with Article XIX of the General Agreement on Tariffs and Trade (GATT) (61 Stat. (pt. 5) A58; 8 UST (pt. 2) 1786) do proclaim that Subpart A, part 2 of the Appendix to the TSUS is modified as set forth in the Annex to this proclamation.

IN WITNESS WHEREOF, I have hereunto set my hand this eleventh day of July, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

ANNEX

Subpart A, part 2 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is modified—

(a) by redesignating headnote 2(d) as headnote 2(e); and

(b) by inserting the following new headnote 2(d):

“(d) Adjustments.—If the Special Representative determines that it is necessary or appropriate to assure equitable treatment in a manner consistent

with the objective of phasing-out import relief he may:

(1) Allocate or reallocate specific quota quantities to any country or instrumentality subject to restriction (either individually or by inclusion in the “other” country grouping), either on an item by item basis, or for all items; or

(2) Adjust the quota quantities between countries or instrumentalities, among or within items 923.20 through 923.26, inclusive, or among or within restraint periods, provided that any such adjustment does not affect the sum of all quota quantities for all items 923.20 through 923.26, inclusive, for the period June 14, 1979, through February 13, 1980.

Such modifications are to be effective on or after the date of their publication in the **FEDERAL REGISTER**.”

[Filed with the Office of the Federal Register, 4:27 p.m., July 11, 1979]

Department of Education

*Statement on House of Representatives
Action Approving the Legislation.
July 11, 1979*

The department of education legislation approved by the House today will streamline administration of more than 150 Federal education programs, saving tax dollars and cutting redtape. It will also permit better management of the Government's health and human service programs.

The department of education legislation is an important administration priority. It will make a single agency and a single Cabinet official responsible full-time for Federal education programs. It will ensure that programs costing \$14 bil-

lion annually receive the high-level management attention and broad public scrutiny they deserve.

I would like to thank Speaker O'Neill and others in the House leadership, Chairman Brooks, and Congressmen Fасcell and Horton for their efforts on behalf of this historic legislation. I look forward to early action by the House-Senate conference committee.

United States International Development Cooperation Agency

***White House Statement on Congressional
Approval of Reorganization Proposals.
July 11, 1979***

President Carter today expressed his appreciation for the approval given by the Congress of his proposals for reorganizing and strengthening the management of U.S. foreign economic development activities.

Noting that these proposals largely adopted suggestions of the late Senator Hubert Humphrey, the President said he wished to especially thank Chairmen Zablocki and Brooks of the responsible House committees and Chairmen Church and Ribicoff of the Senate committees for their leadership in achieving congressional support for the reorganization.

The President said the administration can now move ahead to establish the International Development Cooperation Agency (IDCA), the centerpiece of his plan to improve the programs and policies affecting the developing nations.

The principal components of the IDCA will be the Agency for International Development, the Overseas Private Investment Corporation, and the pro-

posed Institute for Scientific and Technological Cooperation. The President hopes the Congress soon will complete action to establish this Institute, which will help developing countries create and adapt technologies capable of reducing their enormous problems in such fields as health, food, and energy.

Meeting With Prime Minister Abel Tendekai Muzorewa of Rhodesia

White House Statement. July 11, 1979

President Carter met with Bishop Muzorewa this afternoon because of the President's deep personal commitment to help find a solution for the peaceful transfer of responsible political authority from the white minority to the black majority in Zimbabwe-Rhodesia.

In a frank exchange of views, the President emphasized his sincere desire to see an end to the bitterness and bloodshed in Zimbabwe-Rhodesia. He believes this can be accomplished by the establishment of a broadly based consensus on constitutional procedures and administrative processes which are responsive to the legitimate political aspirations of all the peoples of Zimbabwe-Rhodesia.

The President restated his intention to work closely with the Government of the United Kingdom, which has the primary legal and historic responsibility to bring Zimbabwe-Rhodesia to independence based on full political participation and human rights guarantees for all its citizens. He expressed the hope that the Muzorewa administration would work closely with the United Kingdom in seeking nonmilitary, political means to further this goal.

Skylab

Message to Australian Prime Minister J. Malcolm Fraser. July 11, 1979

I was concerned to learn that fragments of Skylab may have landed in Australia. I am relieved to hear your Government's preliminary assessment that no injuries have resulted. Nevertheless, I have instructed the Department of State to be in touch with your Government immediately and to offer any assistance you may need.

NOTE: Skylab was launched by the National Aeronautics and Space Administration on May 14, 1973. The orbiting spacecraft, weighing approximately 77 tons, was used as a research observatory workshop.

On reentering the Earth's atmosphere, Skylab disintegrated, and about two-thirds of the debris burned up during its descent. The remaining pieces were scattered over the Indian Ocean and Australia in an estimated 100-mile-wide, 4,000-mile-long path.

Combined Federal Campaign

*Memorandum From the President.
July 12, 1979*

Memorandum for Heads of Departments and Agencies

It is a pleasure to announce The Honorable Bob Bergland, Secretary of Agriculture, has agreed to serve as Chairman of the Combined Federal Campaign for the National Capital Area this fall.

The solicitation efforts of the United Way of the National Capital Area, the National Health Agencies, and the International Service Agencies are combined into a single drive to meet the needs of more than 150 local, national, and international health, welfare, and social service agencies in this one drive.

These organizations deserve our wholehearted support, to enable them to pro-

vide assistance to our neighbors and friends who have special needs. By working through the Combined Federal Campaign we can provide the voluntary agencies a beacon of hope for providing the needed assistance.

The Combined Federal Campaign offers a unique opportunity through a once a year gift—a pledge made easier through the use of voluntary payroll deductions—for Federal personnel to help persons in our community, in our Nation, and in overseas lands. I am confident Mr. Bergland will have your wholehearted support in this endeavor. Additionally, I hope you will commend the campaign with its payroll deduction feature to Federal employees and military personnel in your organization.

I request that you serve personally as Chairman of the Combined Federal Campaign in your organization and appoint one of your top assistants as your Vice Chairman. Please advise Mr. Bergland of the person you designate as your Vice Chairman.

JIMMY CARTER

Combined Federal Campaign

*Memorandum From the President.
July 12, 1979*

Memorandum for Federal Employees and Military Personnel

Federal government employees traditionally have responded generously in aiding those less fortunate than ourselves. Particularly noteworthy have been the tremendous compassion and support we have demonstrated through our contributions to the Combined Federal Campaign.

Once again, this yearly opportunity to support the services of voluntary health and welfare agencies, including the

United Way, The American Red Cross, National Health Agencies and International Service Agencies, by participating in the Combined Federal Campaign is upon us. These agencies help make our community a better place in which to live; they alleviate pain and suffering, and seek cures from dreaded diseases; they bring hope to those in overseas lands, and reinforce a sense of security in the aged, infirm, and handicapped.

In the spirit of neighborliness, we will continue our tradition of generosity and concern for others through contributions to the Combined Federal Campaign. I am confident of your support.

JIMMY CARTER

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

July 7–July 13

The President remained at Camp David, Md., during the week for a series of discussions and meetings on a broad range of domestic issues, particularly energy and the economy. Participants in the discussions included, at various times, Members of Congress, current and former Federal, State, and local government officials, members of the White House staff, representatives of civic, religious, and labor organizations, businessmen, civil rights leaders, and university officials.

July 12

In the evening, the President went by helicopter to Carnegie, Pa., and the home of Mr. and Mrs. William Fisher to discuss a broad range of issues with about a dozen private citizens. He then returned to Camp David.

July 13

In the morning, the President went by helicopter to Martinsburg, W. Va., and the home of Mr. and Mrs. Marvin Porterfield to discuss a broad range of issues with a group of 17 private citizens. He then returned to Camp David.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted July 12, 1979

HARVEY J. FELDMAN, of Florida, a Foreign Service officer of Class two, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Papua New Guinea and to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States of America to Solomon Islands.

J. JEROME FARRIS, of Washington, to be United States Circuit Judge for the Ninth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

BETTY BINNS FLETCHER, of Washington, to be United States Circuit Judge for the Ninth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

JAMES C. PAINE, of Florida, to be United States District Judge for the Southern District of Florida, vice a new position created by P.L. 95-486, approved October 20, 1978.

BENJAMIN F. GIBSON, of Michigan, to be United States District Judge for the Western District of Michigan, vice a new position created by P.L. 95-486, approved October 20, 1978.

DOUGLAS W. HILLMAN, of Michigan, to be United States District Judge for the Western District of Michigan, vice a new position created by P.L. 95-486, approved October 20, 1978.

**CHECKLIST OF WHITE HOUSE
PRESS RELEASES**

The following listing contains releases of the White House Press Office which are not included in this issue.

Released July 11, 1979

Announcement: nomination of Benjamin F. Gibson to be United States District Judge for the Western District of Michigan

Announcement: nomination of J. Jerome Farris to be United States Circuit Judge for the Ninth Circuit

Announcement: nomination of Betty Binns Fletcher to be United States Circuit Judge for the Ninth Circuit

Announcement: nomination of Douglas W. Hillman to be United States District Judge for the Western District of Michigan

Announcement: nomination of James C. Paine to be United States District Judge for the Southern District of Florida

Fact sheet: reorganization of U.S. foreign assistance activities

CHECKLIST—Continued

Released July 12, 1979

News conference: on the administration's mid-session review for the fiscal year 1980 budget, and other economic and budgetary issues—by James T. McIntyre, Jr., Director of the Office of Management and Budget, Lyle E. Gramley, member of the Council of Economic Advisers, and Daniel H. Brill, Assistant Secretary of the Treasury

**ACTS APPROVED BY
THE PRESIDENT**

Approved July 7, 1979

S. 984----- Public Law 96-31
An act to provide the Secretary of Agriculture with authority to reduce marketing penalties for peanuts.

Approved July 10, 1979

S.J. Res. 14----- Public Law 96-32
A joint resolution to amend the Public Health Service Act and related health laws to correct printing and other technical errors.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, July 20, 1979

Energy and National Goals

Address to the Nation. July 15, 1979

Good evening.

This is a special night for me. Exactly 3 years ago, on July 15, 1976, I accepted the nomination of my party to run for President of the United States. I promised you a President who is not isolated from the people, who feels your pain, and who shares your dreams and who draws his strength and his wisdom from you.

During the past 3 years I've spoken to you on many occasions about national concerns, the energy crisis, reorganizing the Government, our Nation's economy, and issues of war and especially peace. But over those years the subjects of the speeches, the talks, and the press conferences have become increasingly narrow, focused more and more on what the isolated world of Washington thinks is important. Gradually, you've heard more and more about what the Government thinks or what the Government should be doing and less and less about our Nation's hopes, our dreams, and our vision of the future.

Ten days ago I had planned to speak to you again about a very important subject—energy. For the fifth time I would

have described the urgency of the problem and laid out a series of legislative recommendations to the Congress. But as I was preparing to speak, I began to ask myself the same question that I now know has been troubling many of you. Why have we not been able to get together as a nation to resolve our serious energy problem?

It's clear that the true problems of our Nation are much deeper—deeper than gasoline lines or energy shortages, deeper even than inflation or recession. And I realize more than ever that as President I need your help. So, I decided to reach out and listen to the voices of America.

I invited to Camp David people from almost every segment of our society—business and labor, teachers and preachers, Governors, mayors, and private citizens. And then I left Camp David to listen to other Americans, men and women like you. It has been an extraordinary 10 days, and I want to share with you what I've heard.

First of all, I got a lot of personal advice. Let me quote a few of the typical comments that I wrote down.

This from a southern Governor: "Mr. President, you are not leading this Na-

tion—you're just managing the Government."

"You don't see the people enough any more."

"Some of your Cabinet members don't seem loyal. There is not enough discipline among your disciples."

"Don't talk to us about politics or the mechanics of government, but about an understanding of our common good."

"Mr. President, we're in trouble. Talk to us about blood and sweat and tears."

"If you lead, Mr. President, we will follow."

Many people talked about themselves and about the condition of our Nation. This from a young woman in Pennsylvania: "I feel so far from government. I feel like ordinary people are excluded from political power."

And this from a young Chicano: "Some of us have suffered from recession all our lives."

"Some people have wasted energy, but others haven't had anything to waste."

And this from a religious leader: "No material shortage can touch the important things like God's love for us or our love for one another."

And I like this one particularly from a black woman who happens to be the mayor of a small Mississippi town: "The big-shots are not the only ones who are important. Remember, you can't sell anything on Wall Street unless someone digs it up somewhere else first."

This kind of summarized a lot of other statements: "Mr. President, we are confronted with a moral and a spiritual crisis."

Several of our discussions were on energy, and I have a notebook full of comments and advice. I'll read just a few.

"We can't go on consuming 40 percent more energy than we produce. When

we import oil we are also importing inflation plus unemployment."

"We've got to use what we have. The Middle East has only 5 percent of the world's energy, but the United States has 24 percent."

And this is one of the most vivid statements: "Our neck is stretched over the fence and OPEC has a knife."

"There will be other cartels and other shortages. American wisdom and courage right now can set a path to follow in the future."

This was a good one: "Be bold, Mr. President. We may make mistakes, but we are ready to experiment."

And this one from a labor leader got to the heart of it: "The real issue is freedom. We must deal with the energy problem on a war footing."

And the last that I'll read: "When we enter the moral equivalent of war, Mr. President, don't issue us BB guns."

These 10 days confirmed my belief in the decency and the strength and the wisdom of the American people, but it also bore out some of my longstanding concerns about our Nation's underlying problems.

I know, of course, being President, that government actions and legislation can be very important. That's why I've worked hard to put my campaign promises into law—and I have to admit, with just mixed success. But after listening to the American people I have been reminded again that all the legislation in the world can't fix what's wrong with America. So, I want to speak to you first tonight about a subject even more serious than energy or inflation. I want to talk to you right now about a fundamental threat to American democracy.

I do not mean our political and civil liberties. They will endure. And I do not refer to the outward strength of America,

a nation that is at peace tonight everywhere in the world, with unmatched economic power and military might.

The threat is nearly invisible in ordinary ways. It is a crisis of confidence. It is a crisis that strikes at the very heart and soul and spirit of our national will. We can see this crisis in the growing doubt about the meaning of our own lives and in the loss of a unity of purpose for our Nation.

The erosion of our confidence in the future is threatening to destroy the social and the political fabric of America.

The confidence that we have always had as a people is not simply some romantic dream or a proverb in a dusty book that we read just on the Fourth of July. It is the idea which founded our Nation and has guided our development as a people. Confidence in the future has supported everything else—public institutions and private enterprise, our own families, and the very Constitution of the United States. Confidence has defined our course and has served as a link between generations. We've always believed in something called progress. We've always had a faith that the days of our children would be better than our own.

Our people are losing that faith, not only in government itself but in the ability as citizens to serve as the ultimate rulers and shapers of our democracy. As a people we know our past and we are proud of it. Our progress has been part of the living history of America, even the world. We always believed that we were part of a great movement of humanity itself called democracy, involved in the search for freedom, and that belief has always strengthened us in our purpose. But just as we are losing our confidence in the future, we are also beginning to close the door on our past.

In a nation that was proud of hard work, strong families, close-knit communi-

ties, and our faith in God, too many of us now tend to worship self-indulgence and consumption. Human identity is no longer defined by what one does, but by what one owns. But we've discovered that owning things and consuming things does not satisfy our longing for meaning. We've learned that piling up material goods cannot fill the emptiness of lives which have no confidence or purpose.

The symptoms of this crisis of the American spirit are all around us. For the first time in the history of our country a majority of our people believe that the next 5 years will be worse than the past 5 years. Two-thirds of our people do not even vote. The productivity of American workers is actually dropping, and the willingness of Americans to save for the future has fallen below that of all other people in the Western world.

As you know, there is a growing disrespect for government and for churches and for schools, the news media, and other institutions. This is not a message of happiness or reassurance, but it is the truth and it is a warning.

These changes did not happen overnight. They've come upon us gradually over the last generation, years that were filled with shocks and tragedy.

We were sure that ours was a nation of the ballot, not the bullet, until the murders of John Kennedy and Robert Kennedy and Martin Luther King, Jr. We were taught that our armies were always invincible and our causes were always just, only to suffer the agony of Vietnam. We respected the Presidency as a place of honor until the shock of Watergate.

We remember when the phrase "sound as a dollar" was an expression of absolute dependability, until 10 years of inflation began to shrink our dollar and our savings. We believed that our Nation's re-

sources were limitless until 1973, when we had to face a growing dependence on foreign oil.

These wounds are still very deep. They have never been healed.

Looking for a way out of this crisis, our people have turned to the Federal Government and found it isolated from the mainstream of our Nation's life. Washington, D.C., has become an island. The gap between our citizens and our Government has never been so wide. The people are looking for honest answers, not easy answers; clear leadership, not false claims and evasiveness and politics as usual.

What you see too often in Washington and elsewhere around the country is a system of government that seems incapable of action. You see a Congress twisted and pulled in every direction by hundreds of well-financed and powerful special interests. You see every extreme position defended to the last vote, almost to the last breath by one unyielding group or another. You often see a balanced and a fair approach that demands sacrifice, a little sacrifice from everyone, abandoned like an orphan without support and without friends.

Often you see paralysis and stagnation and drift. You don't like it, and neither do I. What can we do?

First of all, we must face the truth, and then we can change our course. We simply must have faith in each other, faith in our ability to govern ourselves, and faith in the future of this Nation. Restoring that faith and that confidence to America is now the most important task we face. It is a true challenge of this generation of Americans.

One of the visitors to Camp David last week put it this way: "We've got to stop crying and start sweating, stop talking

and start walking, stop cursing and start praying. The strength we need will not come from the White House, but from every house in America."

We know the strength of America. We are strong. We can regain our unity. We can regain our confidence. We are the heirs of generations who survived threats much more powerful and awesome than those that challenge us now. Our fathers and mothers were strong men and women who shaped a new society during the Great Depression, who fought world wars, and who carved out a new charter of peace for the world.

We ourselves are the same Americans who just 10 years ago put a man on the Moon. We are the generation that dedicated our society to the pursuit of human rights and equality. And we are the generation that will win the war on the energy problem and in that process rebuild the unity and confidence of America.

We are at a turning point in our history. There are two paths to choose. One is a path I've warned about tonight, the path that leads to fragmentation and self-interest. Down that road lies a mistaken idea of freedom, the right to grasp for ourselves some advantage over others. That path would be one of constant conflict between narrow interests ending in chaos and immobility. It is a certain route to failure.

All the traditions of our past, all the lessons of our heritage, all the promises of our future point to another path, the path of common purpose and the restoration of American values. That path leads to true freedom for our Nation and ourselves. We can take the first steps down that path as we begin to solve our energy problem.

Energy will be the immediate test of our ability to unite this Nation, and it can also be the standard around which we rally.

On the battlefield of energy we can win for our Nation a new confidence, and we can seize control again of our common destiny.

In little more than two decades we've gone from a position of energy independence to one in which almost half the oil we use comes from foreign countries, at prices that are going through the roof. Our excessive dependence on OPEC has already taken a tremendous toll on our economy and our people. This is the direct cause of the long lines which have made millions of you spend aggravating hours waiting for gasoline. It's a cause of the increased inflation and unemployment that we now face. This intolerable dependence on foreign oil threatens our economic independence and the very security of our Nation.

The energy crisis is real. It is worldwide. It is a clear and present danger to our Nation. These are facts and we simply must face them.

What I have to say to you now about energy is simple and vitally important.

Point one: I am tonight setting a clear goal for the energy policy of the United States. Beginning this moment, this Nation will never use more foreign oil than we did in 1977—never. From now on, every new addition to our demand for energy will be met from our own production and our own conservation. The generation-long growth in our dependence on foreign oil will be stopped dead in its tracks right now and then reversed as we move through the 1980's, for I am tonight setting the further goal of cutting our dependence on foreign oil by one-half by the end of the next decade—a saving of over 4½ million barrels of imported oil per day.

Point two: To ensure that we meet these targets, I will use my Presidential authority to set import quotas. I'm an-

nouncing tonight that for 1979 and 1980, I will forbid the entry into this country of one drop of foreign oil more than these goals allow. These quotas will ensure a reduction in imports even below the ambitious levels we set at the recent Tokyo summit.

Point three: To give us energy security, I am asking for the most massive peacetime commitment of funds and resources in our Nation's history to develop America's own alternative sources of fuel—from coal, from oil shale, from plant products for gasohol, from unconventional gas, from the Sun.

I propose the creation of an energy security corporation to lead this effort to replace 2½ million barrels of imported oil per day by 1990. The corporation will issue up to \$5 billion in energy bonds, and I especially want them to be in small denominations so that average Americans can invest directly in America's energy security.

Just as a similar synthetic rubber corporation helped us win World War II, so will we mobilize American determination and ability to win the energy war. Moreover, I will soon submit legislation to Congress calling for the creation of this Nation's first solar bank, which will help us achieve the crucial goal of 20 percent of our energy coming from solar power by the year 2000.

These efforts will cost money, a lot of money, and that is why Congress must enact the windfall profits tax without delay. It will be money well spent. Unlike the billions of dollars that we ship to foreign countries to pay for foreign oil, these funds will be paid by Americans to Americans. These funds will go to fight, not to increase, inflation and unemployment.

Point four: I'm asking Congress to mandate, to require as a matter of law, that our Nation's utility companies cut

their massive use of oil by 50 percent within the next decade and switch to other fuels, especially coal, our most abundant energy source.

Point five: To make absolutely certain that nothing stands in the way of achieving these goals, I will urge Congress to create an energy mobilization board which, like the War Production Board in World War II, will have the responsibility and authority to cut through the redtape, the delays, and the endless roadblocks to completing key energy projects.

We will protect our environment. But when this Nation critically needs a refinery or a pipeline, we will build it.

Point six: I'm proposing a bold conservation program to involve every State, county, and city and every average American in our energy battle. This effort will permit you to build conservation into your homes and your lives at a cost you can afford.

I ask Congress to give me authority for mandatory conservation and for standby gasoline rationing. To further conserve energy, I'm proposing tonight an extra \$10 billion over the next decade to strengthen our public transportation systems. And I'm asking you for your good and for your Nation's security to take no unnecessary trips, to use carpools or public transportation whenever you can, to park your car one extra day per week, to obey the speed limit, and to set your thermostats to save fuel. Every act of energy conservation like this is more than just common sense—I tell you it is an act of patriotism.

Our Nation must be fair to the poorest among us, so we will increase aid to needy Americans to cope with rising energy prices. We often think of conservation only in terms of sacrifice. In fact, it is the most painless and immediate way of rebuilding our Nation's strength. Every gal-

lon of oil each one of us saves is a new form of production. It gives us more freedom, more confidence, that much more control over our own lives.

So, the solution of our energy crisis can also help us to conquer the crisis of the spirit in our country. It can rekindle our sense of unity, our confidence in the future, and give our Nation and all of us individually a new sense of purpose.

You know we can do it. We have the natural resources. We have more oil in our shale alone than several Saudi Arabias. We have more coal than any nation on Earth. We have the world's highest level of technology. We have the most skilled work force, with innovative genius, and I firmly believe that we have the national will to win this war.

I do not promise you that this struggle for freedom will be easy. I do not promise a quick way out of our Nation's problems, when the truth is that the only way out is an all-out effort. What I do promise you is that I will lead our fight, and I will enforce fairness in our struggle, and I will ensure honesty. And above all, I will act.

We can manage the short-term shortages more effectively and we will, but there are no short-term solutions to our long-range problems. There is simply no way to avoid sacrifice.

Twelve hours from now I will speak again in Kansas City, to expand and to explain further our energy program. Just as the search for solutions to our energy shortages has now led us to a new awareness of our Nation's deeper problems, so our willingness to work for those solutions in energy can strengthen us to attack those deeper problems.

I will continue to travel this country, to hear the people of America. You can help me to develop a national agenda for the 1980's. I will listen and I will act. We

will act together. These were the promises I made 3 years ago, and I intend to keep them.

Little by little we can and we must rebuild our confidence. We can spend until we empty our treasuries, and we may summon all the wonders of science. But we can succeed only if we tap our greatest resources—America's people, America's values, and America's confidence.

I have seen the strength of America in the inexhaustible resources of our people. In the days to come, let us renew that strength in the struggle for an energy-secure nation.

In closing, let me say this: I will do my best, but I will not do it alone. Let your voice be heard. Whenever you have a chance, say something good about our country. With God's help and for the sake of our Nation, it is time for us to join hands in America. Let us commit ourselves together to a rebirth of the American spirit. Working together with our common faith we cannot fail.

Thank you and good night.

NOTE: The President spoke at 10 p.m. from the Oval Office at the White House. His remarks were broadcast live on radio and television.

Kansas City, Missouri

*Remarks at the Annual Convention of the National Association of Counties.
July 16, 1979*

Senator Tom Eagleton, Senator Jack Danforth, Congressmen Ike Skelton and Harold Volkmer, President Charlotte Williams, distinguished guests, ladies and gentlemen:

You may have heard that I spoke to the Nation last night on television. [Laughter] That speech encompassed the

ideas, the concerns, the dreams, the hopes, the determination of many Americans. Your own president, Charlotte Williams, came to Camp David to help me write that speech.

Last night I spoke to you about the deep wounds our society has suffered and about my absolute conviction that we have the power and the will to heal these wounds and to restore the unity and confidence of America. I promised last night to keep on discussing our Nation's most serious problems with Americans. And I also promised to keep on acting with the people to tackle these problems.

And today, I've come to Kansas City to meet with you to do both—to discuss the energy problem and to get you to help me succeed. I want to know, will you help me succeed? [Applause]

My belief is that almost all Americans feel the same way. Just as the energy shortage has forced us to face our deepest fears and divisions, so our goal of an energy secure America will help us to rebuild our strength and our confidence as a people. We are coming to understand that the reasons for our energy crisis go beyond gas lines and wasteful habits to a loss of confidence that divides us and threatens us and which, for years, too many years, has prevented Presidents and the Congress and a great nation from acting courageously to meet this energy challenge. That is why we must decide here and now that we can and will regroup, we can and will unite, we can and will restore our confidence, we can and will win the battle to solve our energy problems and restore our Nation's security and keep us strong.

There are no easy answers. That is why I will continue to explore new ideas and I will open new fronts and I will develop new points of attack. That is why I will seek more and more Americans, allies to

join me in this fight for our energy security, because on the battlefield of energy, this democracy which we love is going to make its stand. And on that battlefield you and I, fighting side by side, will win the energy war.

The underlying cause of the energy crisis, the energy problem, the energy challenge, the energy opportunity, is the same as it has been for many years—a massive, dangerous, growing dependence on oil, and particularly our dependence, excessive dependence on imported oil. A generation ago, we sent more oil out of the country than we brought in. Now we import almost half the oil we use, and after the latest price increase, the price we pay OPEC for our oil has almost doubled in the last 7 months.

With a government shakeup in distant Iran last winter, we lost in imports about 100 million barrels of oil. The gasoline lines are directly related to this particular vulnerability; so are the diesel fuel shortages among our farmers and among our truckers; and so are the present low home heating oil stocks as we face next winter. We simply must remove this threat to our people. I must act, the Congress must act, all of you must act now without delay, with determination, unity, courage, and confidence. With your recent expression of support for me, I have no doubt that we in this great country will succeed.

The first thing we've got to do is to face facts. There is simply not enough oil available in the world to meet all the demands of all the people in all the nations on Earth.

Americans are just now beginning to realize with simple common sense that there are only two ways to guarantee supply—one is obviously to control our demand, to cut back on the waste of energy; and the other is to develop our own sources of energy to replace foreign

imports so that we can have control over our own destiny. And with your help, I promise to do exactly that.

I believe Americans will join together if there is good leadership at every level of government, not only from the White House but from the courthouse as well. There must be clear, fair goals and programs, and we must implement courageously, sometimes without regard to political consequences, the programs that we know are best for the people who've chosen us to lead.

Let me start by making clear what our priorities for using the present oil supplies are right now. My first priority as President is to protect the lives and the well-being of all Americans. Therefore, our emergency services, such as police, fire, and health, must be maintained. So must the essentials of food and shelter.

We must have fuel to produce and to distribute food. We must have heating fuel to prevent suffering next winter in almost every part of this country, and particularly, of course, in the northern States.

We've drawn down our winter fuel stocks because of the earlier supply cut-off from Iran, which I've already mentioned. We simply must build them back. We are doing so now, and we will meet the goal that I've established for our Nation.

We will distribute limited supplies of gasoline fairly and equitably among the motorists of this country. There are things we can do to manage the current shortage of energy. We can do it better, and we will get this done.

We are pressing the refineries, for instance, to increase their production of fuel and heating oil. As a byproduct this will also produce more gasoline, as well.

We are requiring the oil industry to cooperate. If they do not cooperate voluntarily, we will not hesitate to use the

authority that I have to require the oil companies to meet the basic energy needs of our Nation. The oil companies must cooperate.

I have ordered almost 200 auditors into the field to ensure that the Nation's refiners comply with the law, and another 400 will be sent to monitor fuel jobbers and dealers. At my direction, the Department of Justice and the Department of Energy are jointly investigating the oil companies to see if the current shortage involves any improper or illegal activity. We will bring the full force of the law to bear on those who profiteer from our national shortage or who try to cheat the American public.

We now have an independent accounting firm checking on the effectiveness of the new Department of Energy in verifying oil industry data. It's very difficult to get accurate information, but I want to make sure that the information that is achieved by us and is distributed to the American people is absolutely accurate.

I'm ordering the Energy Information Administration, which is an independent group, to send its weekly report to our news media throughout the country, telling what are our present energy supplies that week. I would like the interested American public, individual citizens like you, to be just as familiar with the energy situation as you are with local weather reports.

But again, let me be totally honest with you and very direct. All of this that I have described to you does not save oil and it does not create oil. In the short term, we will simply have to stretch out a limited supply. We will have to play a kind of shuffling game, allocating limited supplies of oil among our farmers, our truckers, our homeowners, industry, and also, of course, among motorists.

This will have to go on until our long-term efforts start paying off. Therefore, I urge the Congress to give me power to set mandatory State-by-State conservation goals and to impose mandatory conservation. If a State fails to meet its target, I want to give local and State officials authority first and hope that all of you and all Governors will carry out this responsibility. If you do not, then I will act from Washington as President.

Congress must also act finally to give me authority to develop a standby gasoline rationing plan. It is absolutely crucial for us to arm ourselves against the possibility of further serious interruptions in our energy supplies. We never know when we might lose a major portion of our oil imports. If this happens, a gasoline rationing plan will help us distribute those limited supplies fairly.

But I want to now mention the most important thing of all. Every single American must stop wasting energy. These are some of the things that we can do to defend ourselves in the immediate crisis.

More than 2 years ago, you may remember, I called the energy crisis the moral equivalent of war. There were a lot of jokes about it from the oil industry and from the news media. Now the battle has been joined. This time there can be no delay, this time there can be no retreat.

Last night I set forth a general strategy for winning the energy war, one which will enable us to meet all America's new energy needs from America's own energy resources. We will have to succeed both by conservation and production, because from this time forth we will never import one drop of oil more than we did 2 years ago in 1977. I am drawing our line of defense here and now.

Now I'm going to mention one of the biggest figures you ever heard. Overall we're going to take the unparalleled peacetime commitment, an investment of \$140 billion, for American energy security, so that never again will our Nation's independence be hostage to foreign oil.

Where is the money coming from? All of this investment of Federal funds must come from the windfall profits tax on the oil industry, which I have proposed to the Congress. It's now more critical than it ever was that Congress swiftly pass a strong, permanent windfall profits tax. And I want each of you as county leaders and all Americans who hear my voice to bring your full power to bear to make sure that Congress acts to give the American people the financial weapons to win the energy war.

Let me brief you now on some of the new points of attack.

Each year I will set targets for the amount of foreign oil we import. I'm today announcing a quota for this year, 1979, which will hold U.S. imports to 8.2 million barrels per day—300,000 below the ceilings we set at the Tokyo summit and 400,000 barrels per day below what we used in 1977. And we will meet this goal.

The energy security corporation that I proposed last night to produce American energy from new sources will not be—will not be—just another Federal agency. It will be outside the Federal Government, outside the Federal bureaucracy, free to use its independent business judgment in order to produce enough alternate energy sources to meet its 10-year target of reducing our imports by 2½ million barrels of oil per day.

I'm announcing new incentives for the production of heavy oil, oil shale, and hard-to-get-at natural gas—all of which this country has in great abundance.

To make certain that energy projects such as critical pipelines, port facilities, production plants are built, a new energy mobilization board will slash through redtape and bureaucratic obstacles and will set absolute deadlines for action at the Federal, State, and local level. We are leaving with State and local authorities the first line of responsibility to remove roadblocks to these critical projects, but our energy crisis is so severe that if any level of government fails to act within a reasonable time, this board will see to it that action is taken, just as similar boards made sure that action was taken to protect our Nation's existence in World War II. It's time for us to take this bold action, and we will.

I want to make energy goals as compelling to every homeowner and every renter as for business and industry. Utilities must shift from oil to coal. But I'm also proposing to Congress a unique new program to require gas and electric utility companies to provide low-cost loans to their customers, the homeowners of America, to finance conservation improvements, repayable only at the time of sale of the home.

I'm proposing another program that will offer incentives to convert homes that are now oil-heated to natural gas and to help oil-heated homes which cannot convert with conservation.

I've earmarked \$16.5 billion in new funds for the next 10 years to improve buses, subways, and other mass transit, and to build more fuel-efficient automobiles.

Recognizing that low-income families have been hardest hit by the OPEC price increases and rising energy costs in general, I'm proposing to triple the size of the assistance program which I recommended to Congress on April 5. This will also be

paid for out of the windfall profits tax, which Congress is already considering.

In addition, we'll be expanding the weatherization program to improve homes and to make them more efficient in conserving energy.

I want to explain one thing very clearly, because misinformation is being spread among the American people. And I want you to listen to this.

We are working very closely with Mexico and Canada. The total quantity of production and export of oil and gas from Mexico is obviously a decision to be made by the people and the Government of Mexico. But we now purchase more than 80 percent of all the oil exported by Mexico—more than 80 percent. We are now negotiating a new agreement to purchase the natural gas which Mexico will be willing to export.

Although Canada's oil production will be steadily dropping during the next few years, we will continue to share hydro-electric power and other energy sources with our neighbor to the north. One major project will be the new pipeline to be built from Alaska through Canada to bring natural gas to the lower 48 States.

By 1985 Alaskan and Canadian natural gas can displace almost 700,000 barrels of imported oil per day. The North Slope producers have dragged their feet in helping to finance a pipeline needed to bring that gas to market. I've instructed the Secretary of Energy to call them in and get them going, and I will insist personally that this gas pipeline be built without further delay.

We are and we will continue to be a good customer, a good neighbor, and a good trading partner with both Mexico and with Canada.

This Nation will need to rely on a broad range of energy sources. The hard fact is that we depend on nuclear power

now for 13 percent of all the electricity consumed in the United States.

A few communities—for instance, Chicago—derive more than 50 percent of all their electricity from nuclear powerplants. The recommendations of Kemeny Commission investigating the Three Mile Island incident will help us to ensure safety, but nuclear power must play an important role in the United States to ensure our energy future.

In June I set an ambitious but important goal for meeting 20 percent of the Nation's energy needs from the Sun by the year 2000. With steeply rising OPEC prices and greater supply uncertainties, attainment of this goal is more important than it ever was. No cartel can control the price of solar power. No country can embargo solar power.

We've already tripled our Federal investment in solar energy, and the new solar bank that I have proposed will permit all Americans to join in making widespread solar power use a reality.

The actions that I've already taken with Congress the last 2 years will reduce our projected imports of foreign oil by 4 million barrels per day. The new actions I've described for you last night and today will save us an additional 4½ million barrels of oil, foreign oil, a day below what we are presently consuming, by the year 1990. I'm going to keep these initiatives moving, and every one of us, public official and private citizen, must keep up this pressure for progress.

Our basic strategy is as clear as it can be. Together you and I and every American are simply going to change the way this society creates and uses its energy. And as we do, we're going to find ourselves growing stronger, more free, and more confident at home and around the world.

As the recent positive decision made by Saudi Arabia to increase production has shown, forceful action by this country proving that we are going to save energy can encourage moderation on the part of some of the OPEC nations and make us better able to deal with all the others. The important thing I want to get across today is that each action every one of us takes will not only improve our own lives but affect the future of the world.

The heartbreaks and the triumphs of each county, each city, each neighborhood, the successes or the failures are also the successes and failures, the triumphs and the heartbreaks of our Nation. The tragedy of an elderly family who are not able to pay for heat in the winter is a national tragedy, just as the success of a local weatherization program or carpool program is a triumph of or success for the whole Nation.

I ask you to work with me throughout the counties of America to plan conservation efforts that go beyond attempts to convince people that an energy crisis is real. Together we must challenge people to make specific actions possible, as workers, employers, commuters, customers, homeowners, renters, all put together, can really comprise a genuine, workable national effort.

It's easy for us to try to leave the job for others, to the Federal Government, to the oil companies, to OPEC. We must not do that. We will not do that. That's what I want you to do for our country. I want you to make it possible for every citizen who lives in your county to join in setting local conservation standards and targets.

I'm not asking now that the leaders of every county in the country work to create another government agency. I want you to have a group of your best private citizens to look at the needs and resources that you have in your own com-

munities, to evaluate your strengths and your weaknesses, and agree with your own tactics in your own way to meet local conservation targets.

As you work with local citizens and community leaders in taking up this call to action, you can count on the support and you can count on the help of Federal officials, including myself, to live and to work with you to make this dream, this challenge a reality. I will put all Federal employees—agriculture, forestry, HUD, HEW, welfare, whatever—on notice that they must cooperate with county officials to cut out the waste of energy in your county.

In your county you are vital local leaders. I know you can get the job done, and you certainly deserve the help of the officials from the President on down in our Federal Government. You can enforce the law on speed limits. You can enforce the new regulations on building thermostat settings. There is a \$10,000 fine for setting the thermostat on a public building lower than 78 degrees in the summer and higher than 65 degrees in the winter. I intend to enforce it, and I intend to have your help in making sure that it is enforced.

You can make sure that gasoline consumption is reduced by improving public transit, by dealing with county vehicles. You can help business and industry and government employers develop ride-sharing carpools, to stagger working hours, and to reduce employee workday travel.

Some communities have done so. My wife was recently in Davis, California, for instance, which has done a tremendous job and slashed total energy use more than 35 percent below what it used to be. In so doing we're better able to understand ourselves, and we are better able to understand other tough choices that America must meet in facing the challenges of the future.

For example, last January, I set forth an austere budgetary policy for fiscal 1980, working toward a balanced Federal budget in the future to meet our serious inflation problem. I intend to hold that course steady and to enforce the program I've put forward to deal with successfully the inflation problem of our Nation. If we fail to do so, American workers, businesses, consumers will lose faith in the Government's willingness to cope with inflation. The value of the dollar would weaken and further aggravate our inflation rate.

I will also not hesitate to take action to avoid a serious recession. Now more than ever, Congress must enact our existing proposals, which you helped to develop, for targeted fiscal assistance and counter-cyclical aid to hard-pressed local governments when the unemployment rate goes up very much. These are proposals which are important, but inflation is still our Nation's most serious economic problem, and I'm determined to stick with my policies to fight inflation. And also here I need and expect your help.

In closing, let me say this: You are fellow public servants along with me. These are the kinds of choices that I have to make, because finally I only have one constituency—all the people of this Nation. These are people that you represent. Every one of your constituents is a constituent of mine. For 203 years, our Nation has stood proud and free. We have met challenge after challenge. We've overcome them all for one fundamental reason. In a crisis, we Americans have always stood together.

On the way here from Washington this morning on the airplane, Congressman Ike Skelton gave me a letter, and I'd like to read it to you.

"Mr. President: You will recall that I was a polio patient at Warm Springs, Georgia, in the late 1940's. While I was there, I copied Franklin D. Roosevelt's

undelivered address where the original is located. From that speech, may I suggest that you use his words that ended the speech as follows, and I quote from Roosevelt, 'The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith.'"

And Ike Skelton continues, "I memorized those words as a teenager, and they summarized what you said last night in your address to the Nation. Most respectfully, your friend, Ike Skelton."

We have had some serious doubts in our Nation about our Nation. Today, not only our Nation's economy but our very independence is threatened. Our freedom is beyond price. We must not let it be endangered by the energy problem. As a people, as a nation, let us join together in our struggle to secure our Nation's energy independence with all the fullness that we have in our great Nation and our will to live in freedom. We must fight together for our Nation, and, together with our renewed dedication and our renewed faith in America, we will again, as Americans, join together, lead our Nation to victory.

Thank you very much.

NOTE: The President spoke at 10:06 a.m. in the H. Roe Bartle Convention Center ballroom. His remarks were broadcast live on radio and television.

Detroit, Michigan

Remarks and a Question-and-Answer Session at the Annual Convention of the Communications Workers of America.
July 16, 1979

THE PRESIDENT. *President Glenn Watts, Communications Workers of America, my fellow Americans:*

I'd like to say a few words before I begin to take your questions.

NATIONAL GOALS

Last night I spoke to you about a nation in a time of crisis. I sounded a warning in harsh terms, terms not often used by a President speaking to the people of our country.

I did not speak this way from a sense of hopelessness or despair. I described this crisis of confidence and sounded the warning to our Nation, because our future will equal the promise of the past only if we face the truth, heed the warning, and change our course.

I spoke this way because it is the truth.

In a time of shadowy dread and fear, of growing anger and frustration, the only firm ground on which we can regroup and rebuild our own confidence is to be honest about ourselves.

The energy proposals which I presented last night and this morning in Detroit [Kansas City] will complete the list of campaign promises that I made in 1976 for legislation to be passed. But today I want to talk to you about a larger promise, the promise I made in my acceptance speech and the promise I made hundreds of times during my campaign throughout this Nation—the promise that I would describe for you and to carry forward the vision of this Nation that I hold in my heart. That's the promise that I pledged to redeem last night.

It is our common task to commit ourselves to a renaissance of America—to a rebirth of the American spirit. First of all, we must restore our confidence and our sense of the future. Somehow we've lost it, and all else pales in comparison to the importance of the need for return of confidence of Americans in the future of our Nation.

The second thing we must do is to revitalize our basic human values. What is it that we individually in our own lives

value most? We must believe and we must belong to something bigger than just ourselves, whether it be religion or community or family or our national service.

The third thing we must do is to regenerate our sense of unity, joining hands with each other in a sense of commitment to a national purpose of which we can be proud and which we can serve with commitment and determination—our belief that we are building a better nation for the years to come.

And we must define, finally, new goals for our Nation and encourage all Americans—the President and all of you—to join in determining these goals. What will our Nation be? What do we want to achieve in the years ahead for ourselves and for our children? We must bring together the different elements in America—producers, consumers, labor, business—bring all of us together from the battlefield of selfishness to a table of common purpose.

This is a vision of America towards which I will lead this Nation. In the months ahead, I will come to you throughout America with fresh proposals. Some will involve the traditional government, some will not. Above all, I will defend our common national purpose against those narrow special interests who often forget the overriding needs of America. I will persuade, I will speak against, I will fight any selfish interest that undermines our national purpose, and I will demand that the Government reflect those commitments which I make to you today.

Obviously I can't do this by myself. As I promised last night, I will continue to travel across this country to hear the people of America. I will listen, and I will act. I intend to open the government process as wide as possible so the fresh air of America can blow across Washington, D.C.

These are the promises that I made to you 3 years ago, and I intend to keep them.

I will start right here and now by hearing your views, answering your questions about America's future. Before I do, I would like to say one final thing.

I can point the way, Congress can enact laws, government can execute programs, but true success can only come from the commitment of the people of the United States. Your concerns, your sacrifices, your values, your participation will determine the future life of the nation which we all love.

A great labor union such as yours was not built by Americans who said, "Me first, me last, me always." Your organization, one of the greatest on Earth, was built the way great causes in America's past were always built—by decent, caring citizens working together with confidence for a common purpose, a common goal, a common good.

I ask each of you today for a renewed commitment to a greater America. Do I have your commitment for a greater America? *[Applause]*

Thank you very much.

You've got a partner here. You've answered my question, and now I'll answer yours. I'll be glad to answer the first question.

QUESTIONS

TAX RATES

Q. Mr. President, I'm A. D. Boutwell, vice president of Local 10509, in Hattiesburg, Mississippi.

I understand that there may be some type tax proposal in the future if the inflation rate continues at its present level, and certainly we hope and pray that it will not continue in the future as it has in the past. And I was wondering if you

might tell us what type of tax break you had in mind and when this action may be taken.

THE PRESIDENT. I do not plan on any tax increases. My primary concern at this time is to control inflation as far as the economy goes. We will monitor very carefully the economic situation in America.

In the last 2½ years, since I have been in office, we've been fortunate in cutting the unemployment rate from more than 8 percent down to 5.6 percent—more than a 25-percent reduction. We've cut unemployment compensation payments down 55 percent. In the coming months, because of a very high OPEC price increase—they've almost doubled the price of oil in the last 7 months—we do face some increase in inflation, perhaps some increase in unemployment.

If we see a real need to do something about the economy, if the unemployment rate starts getting too high, then I will take action. But that action will not be to raise taxes. It would be to lower taxes. And if we lower them, my first preference would be to lower the payroll tax.

So, I think you need not fear of tax increases while I'm in office.

OIL INDUSTRY

Q. Mr. President, Jewell White, Lockport, Illinois, Local 5011.

Mr. John Swearingen, chairman of the board of Standard Oil of Indiana, stated in the New York Times on June 4 that the oil companies won't increase production until gasoline reaches \$1.50 a gallon.

My question, Mr. President: Do you agree that to resolve the energy crisis we must reorganize by abolishing the secrecy of the oil industry and let workers learn all the facts about costs, profits, imports, refining capacity, and alternate energy sources?

THE PRESIDENT. I feel a great responsibility on my shoulders as President of this country. I have a lot of authority to deal with the oil industry, not yet enough, but I will guarantee you that we will not permit the oil companies to hold back on production, waiting for the gasoline prices to go up.

We now have the authority to require accurate information from the oil companies about imports, the amount of oil they have on hand, and the amount that they sell. This is new authority that we've just gotten recently.

I have hired one of the finest accounting firms in the Nation to look at the Department of Energy and its new responsibility, to be sure that it is getting the most accurate information now about the oil companies, what they are producing, what they can produce.

Six weeks ago they were only producing at a rate of about 82 percent of capacity. Now, because of proddings from us, the production rate of the oil refineries is about 91 percent. This is almost all they can do under the present circumstances.

In addition, there's an independent agency, not associated with government, that gets data, information about oil. And I have encouraged them—I announced this this morning in Kansas City—to distribute this information every week to all the news media throughout the country—newspapers, the weekly newspapers, the magazines, radio, television—so that you might become familiar with oil supplies on hand and production from our wells and refinery output, just like Americans do now about checking on the weather reports. So, I think you'll see a definite increase in the future, both in the volume of information that we get and distribute to you on the oil industry, and

also you'll see a great increase or improvement in the accuracy of those reports.

Finally, I've asked the Department of Energy and the Department of Justice to check the oil industry to make sure there are no improper or illegal acts. If there are, they will be prosecuted to the ultimate length of the law. I'm not going to permit the oil companies or anyone else to profiteer on the shortage of oil in this country nor to cheat the American people, and you can depend on it.

U.S. SPACE PROGRAM

Q. Mr. President, Odus Rigdon, vice president, CWA Local 3112, West Palm Beach, Florida—born in Waycross, Georgia, and proud of it. [*Laughter*]

I personally feel that the energy crisis can be solved in space exploration. I would like to know if you could tell us today why you feel that the space program is so important to us as Americans? Where do you think we are today in space exploration, and where do we go from here?

THE PRESIDENT. Fine. Almost exactly 10 years ago, as you know, the first American put his foot on the Moon. No other country has been able to match this achievement, and I would predict that in our lifetime, no other country will be able to do it.

Since then, we've had tremendous space exploration flights past the other satellites; the satellites have gone past the other parts of our solar system—recently, Jupiter, Saturn, and even Uranus. Now we're shifting toward a more routine way to deal with space with the space shuttle.

Before another year goes past, we'll be seeing space shuttle flights. We'll put them up into space, manned with a crew, carrying a cargo. They'll cruise around the Earth as many times they desire and

then come down, not in parachutes in the ocean, but down-gliding, landing on airstrips just like airplanes. That same space shuttle then can unload its valuable cargo with all the data they've collected, or instruments that have been tested. It can reload and take off again into space. This means that we now have a way at a reasonable price to have routine trips into space and back, for the first time, as you know.

So, I think we've approached the time when we can continue very advanced, very exciting research programs, trips to the planets, and even beyond, and have equipment tested in the space shuttle on a routine basis.

The first priority will be defense and our Nation's intelligence. The next will be the leasing of space, just like you rent part of a freight car or part of a truck body going across the country to transport material. We'll lease that space, that cargo space to private companies. When those needs are met, we'll lease additional space to some of our allies and friends around the world, and it'll be done to keep the space shuttles going.

I've already approved four space shuttles. The first ones will be fired from the east coast. Later, the space shuttles will be fired from the west coast. Because of various reasons, if you want to go east and west, parallel pretty much with the Equator, you fire the shuttles from the east coast. If you want to go over the poles, north and south, you fire from Vandenberg Air Base in California. Soon we'll be doing it both ways.

So, I think we're making great progress to make routine achievements out of what was formerly just an experimental effort in space. I think the prospects are right for our country. We're ahead of anybody else in this program, and I'm determined to stay ahead of everybody else.

WHEAT EXPORTS

Q. Mr. President, I'm Mike Agnew. I am from Local 2336 in Washington, D.C. And I'd like to have you share with us this afternoon your views on the ever-popular slogan, "A bushel of wheat for a barrel of oil."

THE PRESIDENT. I was hoping that all my answers could be popular. *[Laughter]* But this answer is not going to be popular.

Our Nation produces 14 percent of all the world's wheat. Of all the wheat sold among countries in foreign trade, about 40 percent of it is produced in the United States. Every time our Nation's farmers produce 100 bushels of wheat, 60 bushels are exported to foreign countries.

As you know now, the price of wheat varies up and down, around \$4 a bushel. The price of oil is up as high as \$22, sometimes \$35 a bushel [barrel]. It would be impossible to find anyone in Mexico or in the Persian Gulf area or in Venezuela or in Nigeria that would swap us a \$22 barrel of oil for a \$4 bushel of wheat.

A lot of people have said, "Well, why don't we cut off wheat shipments to the OPEC countries and force them to bring their prices down?" Let me remind you of this: First of all, the OPEC countries, in general, particularly those in the Middle East, have a very tiny population. Saudi Arabia, for instance, produces about 8½, 9 million barrels of oil a day. They only have five or six million people. A little tiny country in Europe could provide all the wheat that Saudi Arabia needs out of their surplus. If we cut off all wheat shipments to any country that produced oil, they could very easily get their wheat anywhere else. We could not punish them accordingly.

Another thing is that if I put an embargo on the shipment of American farmers' wheat to any oil-producing country,

there would be more farmers in Washington trying to run over me with tractors than you've ever seen before. *[Laughter]*

So, it's a good song and a good slogan, and we are doing tremendous amount of trade, but that equal swap is just not possible.

Let me close by saying this: Last year we set a record on agricultural exports. The year before that we set a record on agricultural exports. This year we're going to set another record on agricultural exports. Our exports of wheat are going up, and I predict to you that in the generations ahead, maybe just the decades ahead, maybe just the years ahead, we're going to find that wheat is a much more valuable export item for the world than oil is going to be, coming from the OPEC nations. So, we're in a good position in the United States of America. We're going to stay that way.

WAGE GUIDELINES

Q. Mr. President, Norman Henschel, president, Local 1108, Suffolk County, Long Island, New York.

Mr. President, with the inflation rate nearing 14 percent, and with the Communications Workers of America going into major negotiations in 1980, is it fair or realistic to stay with 7-percent wage guidelines?

THE PRESIDENT. Did Glenn Watts ask you to ask me that question? *[Laughter]*

First of all, in 1980, I do not expect the inflation rate to be 14 percent. Secondly, we have been consulting very closely with Glenn Watts and with Doug Fraser of the UAW and with other labor leaders, and also with leaders in management, to try to set wage and price guidelines that will be fair and equitable. And I don't want to punish any working people, obviously. But it must be remem-

bered that everybody has to take the best interests of our Nation at heart.

I have been very pleased at the response of the workers of our country, in very strong, well-organized unions, in trying to accommodate the needs of other Americans in the wage settlements. Most, I think, have been satisfied, and I would predict that the CWA, one of the best organized unions in America, can very carefully, on their own, negotiate a contract that will be fair to the workers that Glenn Watts represents, and also fair to our country.

That's the best answer I can give you at this point.

TRADE UNIONISM

Q. My name is Ann Kelly. I'm from Local 7102, Des Moines, Iowa, and I represent directory assistance operators.

As a trade unionist, my question is, why does the U.S. Government continue to buy products from the J. P. Stevens Company, with their long history of anti-union activities?

THE PRESIDENT. I don't know. *[Laughter]*

Q. Back into it for us.

THE PRESIDENT. It would be very difficult, I think, for the United States Government to pass a law or to enforce a law that all products bought by the Government had to be made by union workers. There would be a lot of products that were in the borderline between what was manufactured and what was not. And I think that ordinarily we work very closely with the trade unions in assuring that their products are adequately assessed.

I don't think we've punished those who do organize. Some industries, as you know, are almost 100-percent organized. Some, like the textile industry, are not very highly organized. But I think it's very

important that you ask a question like this, and I think we are treating the trade unions fairly.

I don't think we can completely freeze out, though, the purchase of any goods that might be produced by nonunion workers, even though you might prefer it.

Q. The nonunion—it's their total disregard for the law.

THE PRESIDENT. I know. As you know, our administration—I personally have strongly favored labor law reform. And with your help, if we can keep this line of enthusiasm up in CWA, UAW, and others, I believe that next year we can go back to Congress and get labor law reform passed. That's what we need to do.

ENERGY CORPORATION BONDS

Q. Mr. President, I'm Larry Vandeventer from Corpus Christi, Texas, Local 12137. I support your proposals to win our energy fight, and I would like to know when you think we will be able to buy the energy bonds that you spoke of.

THE PRESIDENT. By the way, we keep the thermostat set on 78 degrees in the Oval Office. Some of the news people send me word here that it's 80 degrees where they are and it's 86 degrees where I am. *[Laughter]*

First of all, the Congress will have to pass a law authorizing the establishment of this private corporation. It will be given special authority and a special status. I'm sure that all of you are familiar with the COMSAT arrangement, where the special Communications Satellite Corporation was set up and stock was sold in that corporation to get the original communications satellites in space. A similar arrangement will be followed in getting established the special corporation to produce energy from shale, coal, and other means in our country.

As soon as the Congress passes the law authorizing this special corporation, it will be set up. It will not be a Government agency. It will be an independent, private corporation. And at that time, hopefully sometime this year, you'll be able to buy energy bonds and own a part of our Nation's energy security future. I don't know the exact date, but if you'll help me, we'll cut out the delays that have held up Congress too long.

That's a good question.

ARMED FORCES OFFICERS

Q. Mr. President, Bob Armacher, vice president, Local 11503, Panorama City, California, representing the great San Fernando Valley. This is in a little lighter vein.

The last time we had the pleasure of your presence at one of our conventions, you were a candidate for the nomination as President of the United States for the Democratic Party. Obviously, you impressed many others as favorably as you impressed me, particularly on your talk about waste in government. I remember two items you brought up. One of them was the fact that we had more admirals sitting in Washington than we have ships in the ocean; we have more colonels in the Air Force than we have airplanes.

My question is, what is the status of this situation at the present time? *[Laughter]*

THE PRESIDENT. I'll have to check on it and let you know. *[Laughter]*

I remember very well the convention in San Diego and the fact that I pointed out we did have more admirals than we do ships, more colonels than we do airplanes in the Air Force. I'll have to find out the exact number now and let you know.

We have been cutting down, by the way, on the number of flag officers in the

Armed Forces, compared to the number of enlisted men and noncommissioned officers. But I've got your—no, the only thing I've got is Panorama City, California. If I could get your exact address, I'll get you the numbers and I'll mail them to you personally.

Q. The exact address is 8155 Van Nuys Boulevard.

THE PRESIDENT. 81—what?

Q. 55 Van Nuys Boulevard, Panorama City.

THE PRESIDENT. How do you spell the boulevard. [Laughter]

Q. B-l-v-d. Boulevard.

THE PRESIDENT. Van Nuys—Van Nuys Boulevard. I got you.

Q. Suite 902.

THE PRESIDENT. All right. A-r-m-a-c-h-e-r?

Q. That's correct, sir.

THE PRESIDENT. Thank you. You'll hear from me within a week.

WAGE GUIDELINES

Q. Mr. President, my name is Gerry Hefferan. I am the president of Local 1172, CWA. I represent the employees of ITT World Communications.

The last 25-year dinner I attended at ITT World Communications, the president of that company, Mr. George Knapp, announced the profits of the company at some \$220 million. Now, we were the first company out of the box after your speech on October 24. That morning, the negotiating team for the company came in and told us that they sent you a telegram that morning saying that they were going to stand behind your guidelines and, thus, make it mandatory on the union to accept them. We did because we felt what you had put down was effective or hoped to be effective.

Now with the rate of inflation—by the way, we would have been justified asking for, with those profits, 20 percent, 20 percent, and 20 percent over a 3-year period of time. But we didn't. We stuck by the guidelines. We sold the contract.

Now with the rate of inflation coming up at the end of the year at 10 percent, we had 7 percent, of which we had to use 2 percent for pensions and another percent for a 10-year progression. So, that meant 5 percent across the board. At the end of the year, it looks like a 10-percent inflation. We're now 5 percent down the tubes.

How is the working man going to recuperate these moneys? We took a 2-year contract, because that's all we could buy to satisfy our members. Now we have another 5 percent coming up November of this year.

Is there something that can be done in respect to catching up the way we did when President Nixon made restrictions and we got put under that one? Is there something that can be done? That's my question.

THE PRESIDENT. I don't know enough about the contract to know whether or not it can be renegotiated. Most of the settlements recently have had a cost-of-living clause in them that substantially compensated the workers when the inflation rate was increased more than we anticipated because of OPEC's action.

One of the things that we will be considering when we come out with new wage and price guidelines which, as you know, are voluntary—but it depends a lot on the patriotism of people, which you've already demonstrated. But we'll try to accommodate in those guidelines the kind of situation that you describe.

I think the way to get around it easiest is to have the cost-of-living clause included. But I don't know enough about

the details of your contract to be able to answer any better.

Q. Mr. President, ITT had four contracts that they did have COLA clauses. They took strikes on all four and did away with them. ITT conglomerate does not have a contract now that has a COLA clause in it. I wish that the Government would make it mandatory. I would settle for simply a COLA, cost-of-living.

THE PRESIDENT. I understand. I want to make sure that you understand. I'm not trying to get involved in the contract negotiations. I've got enough to handle on my own. *[Laughter]* But we will try to make the guidelines fair, and we will talk very carefully to Glenn Watts and to other labor leaders before we come out with what we recommend as voluntary wage guidelines this fall. I am sure Glenn is listening very carefully to your voice, as have I. Thank you very much.

Q. Whatever you decide, we are behind you.

THE PRESIDENT. Thank you very much.

FUEL PRICES

Q. Mr. President, Tom Scanlan, sales bargaining unit, president, Local 1395, Watertown, Massachusetts.

I live in the Northeast, where people are paying almost 90 cents a gallon for home heating oil. This really frightens the old and the poor and people on fixed incomes. How do you justify wage guidelines for workers who already pay a fourth or a large portion of their income just to keep warm? What do you plan to help us up in that area?

THE PRESIDENT. I take responsibility for a lot of things, but I can't take the responsibility for the increase in energy prices. And I cannot tell you that the prices are not going to increase further in

the future. Prices are going up on a worldwide basis, and I know that Americans are very upset and very disappointed and sometimes very angry because we have reached a 90-cent to a dollar price for gasoline and also a very high cost for home heating oil.

The price of gasoline in Italy is \$2.75 a gallon; in France, \$2.50; in England, \$2.25; in Germany, about the same. We've been very fortunate to be not only the world's greatest consumers of oil, but we are also one of the world's greatest producers of oil. But no matter what I do, no matter what the Congress does, no matter what anybody does in the years ahead, the price of energy is going to go up. That is a fact. It's a worldwide fact, and I cannot mislead you.

Now, the second point is this: It's particularly hard on the poor people of our country. I'm trying to get the Congress to pass a permanent windfall profits tax on the oil companies. I hope you'll help me get it passed, because this money, which is a lot of money, will be used for three basic purposes.

First of all, to finance the development of our own energy resources which we have not yet used—shale oil, oil from coal, other sources. The second reason that we want this windfall profits tax is to improve the quality of our public mass transit systems—buses, subways, trains, and so forth. The third reason is to give special allocations of financial help to the very poor in our country who must depend on energy to heat their homes in particular.

We proposed originally \$800 million a year to this fund to meet the kind of problem that you describe—when a poor family has the price of fuel oil go up through no fault of their own and it takes a major part of their income to pay for it. We're going to at least double this amount, maybe even triple it, when the Congress

passes the windfall profits tax, to make sure that we do not have anybody in America, particularly New England, the north, where it's so cold and where the houses are heated with oil, who have to go cold because of the price of energy increases.

We're now building up to 240 million barrels of home heating oil by the end of October. That's one thing we'll do. And the other one is to compensate those very poor families who have a large increase in the price of heating oil through no fault of their own—and, I might add, through no fault of mine.

But if the Congress will pass the windfall profits tax, we'll have enough money without increasing the taxes on you by taxing the oil companies to make sure that that suffering that you are concerned about does not happen.

VIEWS ON THE PRESIDENCY

Q. Mr. President, I'm Clint Boling from Jonesboro, Arkansas, president of Local 6505.

In your speech last night, you talked about many problems that affect all of us today. One of those problems was the lack of trust and faith that we as Americans have in the Government. Do you have a specific plan, other than some that you may have outlined today, to provide the leadership to help restore this trust and faith that is required to improve these problems?

THE PRESIDENT. The only part of your question that bothers me is something I haven't mentioned so far. I worked for 10 days on that speech, including the background for it. I had about 150 people to come to Camp David in the quietness of that mountaintop area, just to talk to me. I listened 95 percent of the time to Americans saying, "Mr. President, this is

what concerns me about my Nation, this is what concerns me about my life, this is why I'm doubtful about the future, this is why I can't work with my neighbor, this is what I don't like about the Government, this is what I don't like about you, and this is what I want you to do to change."

And I thought about it and I prayed about it, and I wrote that speech and gave it last night to tell you from the bottom of my heart that we do have some serious problems in our great Nation.

One thing is we've started dividing from one another. This country is a country of immigrants. We are a country of refugees. I bet you there are a hundred different foreign nations represented in this 4,000 people in this hall. In the past, in times of trouble, like a depression, like the First World War, like the Second World War, American people came together to meet the challenge with courage and bravery and commitment and sacrifice and unselfishness. Now we are faced with some serious problems that divide us.

When you have to sit in a gas line or when your home heating bill goes up, it doesn't pull people together. It separates people one from another, because you're mad at your neighbors, you're mad at the Government, you're mad at OPEC, you're mad at the oil companies. It's tended to divide us apart.

So, my point that I would like to make again is this: There's only one clear voice in this country on a sustained basis. That's the voice of the President of the United States. If I can't speak to you so you can understand me about the problems of our Nation, then nobody can. If I don't tell you the truth, then my voice will not be meaningful. If I don't go out among the people and listen, then I don't know what you are thinking. And if you don't be-

lieve I've got confidence in you, then you are not going to have confidence in me.

I've made some mistakes since I've been President. As I said last night, many of the people said, "Mr. President, you're not out among the people enough, you don't listen to us enough. You've been so bogged down in managing the Government that you haven't been leading our Nation." Well, I listened to that, and I've learned my lesson.

So, for the rest of the time that I'm in office, I'm going to spend more time among you, I'm going to listen to your voice, I'm going to work closer to you. During the campaign, I had to do that, because otherwise I would never have been elected. If I hadn't come to San Diego to listen to you and to talk to you then and to bare my heart to you, I would not have been elected.

So, the best thing I can do is to put my faith in the American people, and God willing, I will act to the best of my human ability so that you can always have confidence in me. I'll do the best I can. If you will join me, I guarantee you we'll have the greatest nation on Earth, like we always have.

WAGE AND PRICE GUIDELINES

Q. That's a tough question to follow, Mr. President. Ray Cordova, Local 11571, Long Beach, California. And I am experienced in the controlled 78 degrees right now, as you notice.

Mr. President, I have a brief statement as well as a question that addresses itself to the 7-percent wage guideline. When I have a member of my local who is being paid \$4 or less an hour, caring for three children, whose spouse has abandoned her, is eligible for food stamps, eligible to draw welfare payments, no child care facilities that are affordable to her,

but because of pride and dignity, attempts to work and be a productive citizen, but then, Mr. President, she is told that 7 percent is the guideline.

We are experiencing double-digit inflation, and we cannot justify to our members 7 percent. So how, Mr. President, when labor is hamstrung with 7 percent, do you intend to have business live within 7 percent?

THE PRESIDENT. Well, this kind of question really concerns me, as you've already noticed. It's not the first one I've had today.

I've tried the best I could to stay away from mandatory wage standards. My own belief is that the system of free enterprise, the great union organizations can best handle their affairs through equal authority at the bargaining table.

As President, I evolved what I thought was the best standard I could devise. In the past, our inflation rate has been running 7, 7½, 8 percent—for about 10 years. In '74 it did get up to about 13 percent, as you remember, when OPEC clamped down on the price of oil. When we set the voluntary wage and price guidelines, that was a reasonable figure, and as the inflation rate built up, different labor organizations negotiated different kinds of contracts. We've tried to be reasonably flexible in giving our approval to the contract. I don't have any authority to tear up a contract. I don't have any authority to reverse what has been negotiated. And as I've said before, I'm deeply concerned about excessive restrictions that hurt the working people of our country.

In the fall, with this new rise in inflation that's been brought about by a doubling, almost, of the price of oil, we'll have to accommodate the new circumstances, and I think the cost-of-living clause in some of the contracts have helped.

I don't know how to answer your question. I'm not trying to justify that somebody ought to suffer. I do not believe that the working people of this country ought to suffer.

One additional problem that we face is, as I said last night, that the productivity of the American workers, not through your fault, but because of different things, has been going down—in most countries it's still going up. We still have, however, the highest worker productivity in the world.

The American worker is still the most productive in the world. And I would say that with a flexible attitude, which I do have, working with great labor leaders who represent you, I believe we can come out with a wage and price guideline that will do the maximum amount to hold down inflation and at the same time accommodate local problems and also regional problems and also the problems of certain kinds of workers who, like the woman you described already, has too low an income.

I can just promise you I'll do the best I can. I'll work with Glenn Watts and others to make sure that future wage and price guidelines are fair. I think the one we set up as a target was fair at the time we did it. And now we're ready to revise it when it's been in effect for 1 year.

Let me say this in closing—I've been here now for 55 minutes—I think you've seen an outstanding cross-section of the expression of interest and a few congratulations, a few concerns, a few criticisms that come from the American people. I've learned in the process, and I'll continue to learn. In fact, we'll have to learn together.

There's one thing I want all of us to do. I asked you to do it at the end of my

speech last night. Do you remember what it was? I asked all of you, whenever you've got a chance, to—what? To say something good about our Nation.

Look, we live in the greatest nation on Earth, but quite often we get so bogged down, so concerned about a transient problem. Now, inflation's bad, gas lines are bad, home heating oil shortages are bad, sometimes unemployment is bad; but we still live in the greatest nation on Earth. And quite often we don't remember it, and we don't express our appreciation for it.

I believe one of the things that can pull our Nation back together to give us confidence, to give us unity, to restore American values, to improve the quality of our families, to strengthen our communities, to strengthen our churches, to strengthen our schools, to strengthen our government, to make sure that you can govern your own selves better, to make sure that all government officials—mayors and county commissioners and Governors and Congressmen and Presidents—will listen to your voice better, is to remember what we've got.

We've got a democracy, strong, firm, made up of free people, the best free enterprise system on Earth. Research, development—God's given us 24 percent of all the energy supplies in the world; the Middle East all put together only has 5 percent. And I think we've got reason to be confident. And one thing that can bring back confidence is for your neighbor to hear you saying, "There might be some things I don't like about it, but the United States of America is still the greatest place on Earth to live, and our country's going to be even greater in the future."

NOTE: The President spoke at 4:34 p.m. in Convention Hall "C" at the Cobo Hall Convention Center.

Department of Labor

Nomination of William P. Hobgood To Be an Assistant Secretary. July 17, 1979

The President today announced that he will nominate William P. Hobgood, of Springfield, Va., to be Assistant Secretary of Labor for labor-management relations.

Hobgood was born February 19, 1939, in Atlanta, Ga. He received a B.S. from Florida State University in 1961, an M.A. from George Washington University in 1965, and a J.D. from the University of Louisville in 1972. He served in the U.S. Navy from 1961 to 1965.

He has been active in labor relations since 1965. He has served as a mediator in Louisville, Ky.; Charlotte, N.C.; and Washington, D.C. Hobgood has worked with the Federal Mediation and Conciliation Service since 1965 and has been Director of Mediation Services since 1977.

He is also Coordinator of Labor Relations for the President's Commission on the Coal Industry and has been adjunct professor at Georgetown University Law Center since 1974.

Apollo 11 Anniversary

Message of the President. July 17, 1979

On July 20, 1969, man first reached out and touched an extraterrestrial body in the solar system. That touch, those first footsteps on the moon, greatly enlarged our thinking about our future on earth and beyond. The moon was no longer simply our visitor, to recall Shakespeare's phrase, for we had visited the moon.

The touchdown of the Apollo 11 *Eagle* in the Sea of Tranquility is an unforget-

table milestone in the history of exploration. Whatever else historians of the future may say about this century, they will surely describe our nation as dynamic and resourceful. Not only did we fulfill mankind's age-old dream of human flight, but we also successfully ventured into space.

At this moment, automated extensions of human intelligence—Viking, Pioneer and Voyager spacecraft—are exploring the solar system. While orbital observatories search the distant universe, satellites are providing data which may someday help us better to preserve and manage our earth. We look forward, as early as next year, to even greater knowledge when the Space Shuttle brings us easier, more economical and more regular access to space.

Today, as we observe the tenth anniversary of the lunar landings, our determination must be to ensure that the possibilities we have glimpsed from our Apollo missions will be developed for the benefit of all mankind.

JIMMY CARTER

Equal Employment Opportunity Commission

Nomination of Daniel E. Leach To Be a Member, and Redesignation as Vice Chairman. July 17, 1979

The President today announced that he has nominated Daniel E. Leach for reappointment as a member of the Equal Employment Opportunity Commission (EEOC) for a 5-year term. Leach would be redesignated Vice Chairman of the Commission on confirmation.

Leach has been a member of the EEOC since 1976 and has served as Vice Chairman since 1977.

He was born April 2, 1937, in Detroit, Mich. He received an A.B. from Colgate University in 1958, an LL.B. from Detroit College of Law in 1961, and an LL.M. from Georgetown University Law Center in 1963.

From 1962 to 1965, Leach was a trial attorney in the Civil Division at the Justice Department, where he handled the prosecution and defense of actions relating to the Government's water transportation and shipping interests. From 1965 to 1966, he practiced law with the Detroit firm of Sullivan, Eames, Moody and Petrillo.

From 1966 to 1976, Leach was general counsel to the Democratic Policy Committee of the United States Senate.

As Vice Chairman of the EEOC, Leach also serves as a member of the President's Regulatory Council, the Task Force on Youth Unemployment, and the Administrative Conference of the United States. He is the author of a number of articles on affirmative action and employment discrimination.

United States Space Observance, 1979

Proclamation 4669. July 17, 1979

*By the President of the United States
of America*

A Proclamation

Ten years ago this week, the Apollo astronauts changed forever, for all humanity, our concept of the universe and our relation to it. Their electrifying landing on the Moon—that “giant leap” to the surface of another world—was an unparalleled triumph of determination

and technological genius. It epitomized the strength and the potential of the American people.

During ten years since, space has become part of our daily lives. We use it for essential communications and for monitoring our environment. Nationally and internationally, the exploration and use of space hold even greater promise in the future for the wiser management of our planetary resources, for the expansion of knowledge, and for the development of civilization.

In recognition of this triumph, the Congress, by joint resolution (H.J. Res. 353), has requested that the period of July 16 through 24, 1979, be designated as “United States Space Observance.”

As we face new challenges as a nation—notably the challenge of achieving energy security—let us reflect upon the courage of the Apollo astronauts, and their predecessors in the Mercury and Gemini programs. And let us take courage and inspiration from the success of America's effort to land the first men on the Earth's Moon and return them safely.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim the period of July 16 through July 24, 1979, as “United States Space Observance.” In accord with the congressional resolution, I call upon the people of the United States to observe this period with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this seventeenth day of July, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Foreign Service Retirement and Disability System

Executive Order 12145. July 18, 1979

By the authority vested in me as President by the Constitution and statutes of the United States of America, including Section 805 of the Foreign Service Act of 1946, as added by Section 503 of Public Law 94-350 (90 Stat. 835; 22 U.S.C. 1065), in order to conform the Foreign Service Retirement and Disability System to certain amendments to the Civil Service Retirement and Disability System, it is hereby ordered as follows:

1-101. (a) The enactment (after January 1, 1974) of certain laws has affected a number of provisions of general applicability in the Civil Service Retirement and Disability System (subchapter III, Chapter 83 of Title 5 of the United States Code) or otherwise affected current or former participants, annuitants, or survivors under that System which, immediately prior to the enactment of such laws, had been substantially identical to corresponding provisions of law affecting participants, former participants, annuitants or survivors under the Foreign Service Retirement and Disability System. Those laws are set forth at Annex I, attached hereto and made a part hereof.

(b) The provisions of the laws referred to in subsection (a) above are extended, as provided by Section 805 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1065), to the Foreign Service Retirement and Disability System in accordance with the provisions of this Order, which provisions shall modify, supersede, or render inapplicable all inconsistent prior provisions of law.

1-102. In accord with Section 1 of Public Law 93-260, Section 804(2) of the

Foreign Service Act of 1946, as amended (22 U.S.C. 1064(2)), is deemed to be amended by striking out "two years" wherever it appears and inserting in lieu thereof "one year". This amendment shall apply only in the cases of participants, former participants, or annuitants who died on or after April 9, 1974 but no annuity shall be paid or recomputed, by virtue of this amendment, for any period prior to May 1, 1974.

1-103. In accord with Section 1(b) of Public Law 95-382, Section 811 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1071), shall be deemed to be amended to provide that, "No contribution shall be required for any period for which credit is allowed to persons of Japanese ancestry for being interned or otherwise detained during World War II, as described in Section 1(a) of Public Law 95-382."

1-104. In accord with Section 1 of Public Law 93-273, and notwithstanding any other provision of Section 821 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076), said Section 821 shall be deemed to be amended to provide for the payment of a minimum annuity as set forth at Section 821-1 of Annex II attached hereto and made a part hereof.

1-105. In accord with Section 2 of Public Law 93-273, Section 821 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076), shall be deemed to be amended to provide an increase in annuities, which have been computed on the highest five consecutive years of service, as set forth at Section 821-2 of Annex II, attached hereto and made a part hereof.

1-106. In accord with Sections 1(a) and 4 of Public Law 95-317, Section 821 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076), shall be deemed to be amended to provide for the

recomputation of annuities for nonmarried annuitants as set forth at Section 821-3 of Annex II, attached hereto and made a part hereof.

1-107. (a) In accord with Section 1 (c) of Public Law 95-317, the last sentence of Section 821(g) of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076(g)), shall be deemed to be amended to read as follows: "The annuity reduction or recomputation shall be effective the first day of the first month beginning one year after the date of marriage."

(b) The amendment made by paragraph (a) above shall apply with respect to survivor elections received by the Secretary on or after October 1, 1978.

1-108. (a) In accord with Section 2 of Public Law 95-317, Section 821(f) of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076(f)), shall be deemed to be amended by adding at the end thereof the following: "An annuity which is reduced under this subsection or any similar prior provisions of law shall, effective the first day of the month following the death of the beneficiary named under this subsection, be recomputed and paid as if the annuity had not been so reduced."

(b) The amendment made by paragraph (a) above shall apply with respect to annuities which commence before, on, or after October 1, 1978, but no monetary benefit by reason of such amendment shall accrue for any period before October 1, 1978.

1-109. In accord with Section 3 of Public Law 95-317, Section 821 of the Foreign Service Act, as amended (22 U.S.C. 1076), shall be deemed to be amended to provide a requirement for annual notice to participants, as set forth at Section 821-4 of Annex II, attached hereto and made a part hereof.

1-110. In accord with subsections (c) and (d) of Section 2 of Public Law

95-382, Section 821 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1076), shall be deemed to be amended to provide World War II Internment annuity credit as set forth at Section 821-5 of Annex II, attached hereto and made a part hereof.

1-111. In accord with Sections 1(a) and 2 (a) and (b) of Public Law 95-382, Section 851 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1091), shall be deemed to be amended to provide additional creditable service as set forth at Section 851-1 at Annex III attached hereto and made a part hereof.

1-112. In accord with Public Law 94-166 and Public Law 95-366, Section 864 of the Foreign Service Act of 1946, as amended (22 U.S.C. 1104), shall be deemed to be amended to read as set forth at Annex IV, attached hereto and made a part hereof.

1-113. Because the provisions of Executive Order No. 11952 of January 7, 1977, have been incorporated into this Order or its Annexes, Executive Order No. 11952 is revoked.

JIMMY CARTER

The White House,

NOTE: The annexes are printed in the **FEDERAL REGISTER** of July 20, 1979.

United States Ambassador to Bulgaria

Nomination of Jack Richard Perry.
July 18, 1979

The President today announced that he will nominate Jack Richard Perry, of Georgia, to be Ambassador Extraordinary

and Plenipotentiary of the United States to Bulgaria.

Perry was born March 21, 1930, in Atlanta. He received his A.B. (1951) and LL.D. (honorary, 1971) from Mercer University and his M.A. (1958) from Columbia University. He served in the U.S. Army from 1951 to 1954.

From 1954 to 1957, Perry was with the Associated Press. He was director of Mercer University News Bureau from 1955 to 1956 and a reporter for the Macon Telegraph in 1957.

Perry joined the Foreign Service in 1959, and served in Moscow from 1962 to 1964 and in Paris as political officer with NATO from 1964 to 1966. From 1966 to 1969, he was political officer in Paris. From 1970 to 1972, he was International Relations Officer at the State Department. Perry was Deputy Chief of Mission in Prague from 1972 to 1976 and in Stockholm from 1976 to 1978. Since 1978 he has been Deputy Executive Secretary at the State Department.

United States Ambassador to Zambia

*Nomination of Frank George Wisner II.
July 18, 1979*

The President today announced that he will nominate Frank George Wisner II, of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Zambia. He would replace Stephen Low, who is being appointed to another post.

Wisner has been Deputy Executive Secretary at the State Department since 1977.

He was born July 2, 1938, in New York City. He received a B.A. from Princeton University in 1961.

Wisner joined the Foreign Service in 1962, and served in Algiers, Saigon, Tunis, Dacca, and at the State Department. He took Arabic language training in Tangier. From 1974 to 1975, he was Director of the Office of Plans Management of the State Department's Bureau of Public Affairs. He was Special Assistant to the Under Secretary for Political Affairs from 1975 to 1976. Wisner was director of the Office of Southern African Affairs from 1976 to 1977.

President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research

*Appointment of the Membership and
Nomination of the Chairman. July 18, 1979*

The President today announced that he will appoint the 11 members of the President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research.

This Commission was created in November 1978 by Public Law 95-622 to study issues such as the definition of death, genetic testing and counseling, and the differences in the availability of health services depending on income or residence.

The members announced today are:

Morris Abram, a New York attorney and former president of Brandeis University. Abram was U.S. Representative to the United Nations Commission on Human Rights for 4 years and has served as a member of the Mt. Sinai Hospital Human Subjects Review Panel. He will be nominated as Chairman of this Commission.

Renee Claire Fox, professor of sociology at the University of Pennsylvania, a med-

ical sociologist who has written extensively on allocation of health resources. She is a member of the ethics committee of the Institute of Medicine, and of the Institute of Social Ethics and Life Sciences.

Mario Garcia-Palmieri, professor and head of the department of medicine of the University of Puerto Rico. He was formerly secretary of health for Puerto Rico and is chairman of the Latino Caucus of the American Congress of Cardiology.

Albert Rupert Jonsen, professor of ethics in medicine at the University of California School of Medicine at San Francisco, and chairman of the bioethics group for the five University of California schools of medicine. He served as a member of HEW's National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research for 4 years.

Patricia A. King, associate professor of law at Georgetown University. She is a member of the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, the Institute of Society, Ethics and the Life Sciences, and the Washington Area Seminar on Science, Technology and Ethics.

Mathilde Krim, an associate member of the Sloan-Kettering Institute for Cancer Research and coordinator of its International Laboratories for the Molecular Biology of Interferon Systems. She is on the board of directors of the National Biomedical Research Foundation, and is a member of the National Endowment for the Humanities' advisory committee on science, technology, and human values.

Donald N. Medearis, chief of children's service at Massachusetts General Hospital and Charles Wilder professor of pediatrics at Harvard University. He is a specialist in infectious diseases of children.

Arno G. Motulsky, professor of medi-

cine and genetics and director of the Center for Inherited Diseases at the University of Washington. He is an expert in genetics who has been responsible for many advances in genetic screening, testing, counseling, and education programs.

Fritz C. Redlich, professor of psychiatry at the University of California at Los Angeles, and former director of the Behavioral Sciences Center at Yale University.

Anne A. Scitovsky, chief of the health economics division of the Palo Alto Medical Research Foundation and an expert on the economics of medical care. She is a consultant to the National Center for Health Services Research.

Charles J. Walker, a Nashville, Tenn., doctor in private medical practice. He is on the board of governors of the Matthew Walker Community Health Center, and the board of trustees of Fisk University.

Management of Federal Legal Resources

Executive Order 12146. July 18, 1979

By the authority vested in me as President by the Constitution and statutes of the United States of America, it is hereby ordered as follows:

1.1 *Establishment of the Federal Legal Council.*

1-101. There is hereby established the Federal Legal Council, which shall be composed of the Attorney General and the representatives of not more than 15 other agencies. The agency representative shall be designated by the head of the agency.

1-102. The initial membership of the Council, in addition to the Attorney Gen-

eral, shall consist of representatives designated by the heads of the following agencies:

- (a) The Department of Commerce.
- (b) The Department of Defense.
- (c) The Department of Energy.
- (d) The Environmental Protection Agency.
- (e) The Equal Employment Opportunity Commission.
- (f) The Federal Trade Commission.
- (g) The Department of Health, Education, and Welfare.
- (h) The Interstate Commerce Commission.
- (i) The Department of Labor.
- (j) The National Labor Relations Board.
- (k) The Securities and Exchange Commission.
- (l) The Department of State.
- (m) The Department of the Treasury.
- (n) The United States Postal Service.
- and
- (o) The Veterans Administration.

1-103. The initial members of the Council shall serve for a term of two years. Thereafter, the agencies which compose the membership shall be designated annually by the Council and at least five positions on the Council, other than that held by the Attorney General, shall rotate annually.

1-104. In addition to the above members, the Directors of the Office of Management and Budget and the Office of Personnel Management, or their designees, shall be advisory members of the Council.

1-105. The Attorney General shall chair the Council and provide staff for its operation. Representatives of agencies that are not members of the Council may serve on or chair subcommittees of the Council.

1-2. Functions of the Council.

1-201. The Council shall promote:

- (a) coordination and communication among Federal legal offices;
- (b) improved management of Federal lawyers, associated support personnel, and information systems;
- (c) improvements in the training provided to Federal lawyers;
- (d) the facilitation of the personal donation of *pro bono* legal services by Federal attorneys;
- (e) the use of joint or shared legal facilities in field offices; and
- (f) the delegation of legal work to field offices.

1-202. The Council shall study and seek to resolve problems in the efficient and effective management of Federal legal resources that are beyond the capacity or authority of individual agencies to resolve.

1-203. The Council shall develop recommendations for legislation and other actions: (a) to increase the efficient and effective operation and management of Federal legal resources, including those matters specified in Section 1-201, and (b) to avoid inconsistent or unnecessary litigation by agencies.

1-3. Litigation Notice System.

1-301. The Attorney General shall establish and maintain a litigation notice system that provides timely information about all civil litigation pending in the courts in which the Federal Government is a party or has a significant interest.

1-302. The Attorney General shall issue rules to govern operation of the notice system. The rules shall include the following requirements:

- (a) All agencies with authority to litigate cases in court shall promptly notify the Attorney General about those cases that fall in classes or

categories designated from time to time by the Attorney General.

- (b) The Attorney General shall provide all agencies reasonable access to the information collected in the litigation notice system.

1-4. *Resolution of Interagency Legal Disputes.*

1-401. Whenever two or more Executive agencies are unable to resolve a legal dispute between them, including the question of which has jurisdiction to administer a particular program or to regulate a particular activity, each agency is encouraged to submit the dispute to the Attorney General.

1-402. Whenever two or more Executive agencies whose heads serve at the pleasure of the President are unable to resolve such a legal dispute, the agencies shall submit the dispute to the Attorney General prior to proceeding in any court, except where there is specific statutory vesting of responsibility for a resolution elsewhere.

1-5. *Access to Legal Opinions.*

1-501. In addition to the disclosure now required by law, all agencies are encouraged to make available for public inspection and copying other opinions of their legal officers that are statements of policy or interpretation that have been adopted by the agency, unless the agency determines that disclosure would result in demonstrable harm.

1-502. All agencies are encouraged to make available on request other legal opinions, when the agency determines that disclosure would not be harmful.

1-6. *Automated Legal Research and Information Systems.*

1-601. The Attorney General, in coordination with the Secretary of Defense and other agency heads, shall provide for a computerized legal research system that

will be available to all Federal law offices on a reimbursable basis. The system may include in its data base such Federal regulations, case briefs, and legal opinions, as the Attorney General deems appropriate.

1-602. The Federal Legal Council shall provide leadership for all Federal legal offices in establishing appropriate word processing and management information systems.

1-7. *Responsibilities of the Agencies.*

1-701. Each agency shall (a) review the management and operation of its legal activities and report in one year to the Federal Legal Council all steps being taken to improve those operations, and (b) cooperate with the Federal Legal Council and the Attorney General in the performance of the functions provided by this Order.

1-702. To the extent permitted by law, each agency shall furnish the Federal Legal Council and the Attorney General with reports, information and assistance as requested to carry out the provisions of this Order.

Management of Federal Legal Resources

Memorandum From the President.
July 18, 1979

Memorandum for the Heads of Executive Departments and Agencies

Subject: Management of Federal Legal Resources

I have today signed an Executive Order entitled Federal Legal Resources concern-

ing the management of Federal legal resources.

In addition to the matters specified in that Executive Order, and subject to the statutory responsibilities of the Director of the Office of Personnel Management, the Attorney General shall plan, coordinate, and operate programs to provide suitable training for Federal legal personnel. The functions now performed by the Legal Education Institute of the Office of Personnel Management shall hereafter be performed by the Department of Justice.

JIMMY CARTER

Future Farmers of America

Remarks to the Organization's State Presidents. July 19, 1979

MARK SANDBORN.¹ Mr. President, this morning we have gathered at your beautiful home as members of the Future Farmers of America; as farmers and agriculturalists and as friends, but above all, today we come as Americans.

We are so appreciative of your generous hospitality in the face of the many challenges and responsibilities that you have facing you to take time to meet with those people that you mean so much to.

All Americans feel a strong tie to you, but we feel a special tie because of your association with our organization. It is for that reason that we would like to present you with a plaque that we wanted to make special by putting on it and including in it something of your past that is a big part of our present and a part of all Americans' futures. You see, Mr. President, you are admired, respected, and loved wherever corn is grown and future farmers

meet. And so, today, on behalf of the Future Farmers of America, I present you with this plaque with the secretary's station marker, a part from the opening ceremony, and the words from our organization, which read, "Congratulations, Jimmy Carter, from secretary of Plains, Georgia FFA Chapter, to the President of the United States. On behalf of the national FFA organization, we thank you for your outstanding leadership, States Presidents Conference, July 19, 1979." And we say in the simplest and most sincere way that we can, Mr. President, thank you.

THE PRESIDENT. The first public words that I ever said in a position of responsibility was the secretary stationed by the ear of corn, your duties there, "I keep an accurate record of all meetings and correspond with other secretaries wherever corn is grown and future farmers meet."

Mark, I want to thank you and the FFA leaders here and FFA members, more than half million, all across the country for this recognition and this honor. I hope that there are other lowly secretaries around the Nation who will ultimately be President of the United States. I can vouch for the fact that it's good preparation for the highest elective office in our Nation.

FFA members mean a lot to me personally, and your organization means a lot to our country now, in the past, and in the future. The first organization that I belonged to was a Baptist church; the second organization was the FFA. And both have and do mean a lot to me.

It's no secret around the Nation that the FFA organization, the Future Farmers of America, is one of my favorite organizations. I have spoken to local chapters; I've spoken to State groups; I've spoken to the national convention, as you

¹National president, Future Farmers of America.

well know. It's been an integral part of my life.

I look forward each year to having the time to meet with the State officers who are assembled here at the White House to show the national importance of FFA, and to show your close ties with the incumbent President, no matter what background that particular President might have.

You adopted a bold theme for this year: "FFA Preparing For Progress." Progress does not just happen. Real progress comes only as a result of discipline, planning, and a lot of hard work. Our Nation faces difficult challenges in the years ahead. I described some of those challenges, some of those problems, some of those opportunities in my address to the Nation last Sunday evening. Your Government, which is distrusted by some, which is supported by almost all, is an important element in your lives, in the lives of all Americans, obviously in the lives of farmers.

I'm now involved in an intense effort to review my own role as President and the makeup, the constitution of my Government, our relationship to the Congress, to the Governors, local officials, to officials who are not in government, and to the individual citizens of our Nation, to strengthen these crucial ties between government and people. I'll make the tough decisions that are necessary for improvements, and I know that you as leaders understand that quite often the decisions of a leader are not easy.

I want you to listen to me very closely. I want to talk directly to you.

Two of the most important questions in the future of this Nation, in the future or people throughout the world, are fuel and food, for the remainder of this century, and into the next century as well.

Our Nation has been generously en-

dowed by God with tremendous reserve supplies of these precious natural resources; fuel, perhaps more than any other country on Earth, and the most bountiful gift of productive land for the production of food on which our own Nation and many nations throughout the world now depend, and will depend even more heavily in the future.

How to provide more food for a growing world population while we use less energy is a very difficult task. Our Nation must be well fed, and we must have an increasing quantity of food to export to others. How we do both these things while consuming less energy is the challenge. You, the present and future leaders of the agricultural community, must assess this basic, inherent conflict and resolve it, study agricultural practices, make changes, create new techniques and new concepts when necessary. This is what is meant by progress, and, in short, you will be called upon to transform American agriculture in the years ahead.

I have every confidence that you young men and women, the leaders of the Future Farmers of America, can take up this gauntlet and can meet this new day both with imagination, with strength, with confidence, and with vigor.

Now I would like to ask you all together for a unique call from the President to you, one tailored especially for FFA. Since everyone knows that FFA is important to me, I today ask you to link your hands and your hearts with me as President in the energy battle that we now face. I ask you to take the lead among all other youth groups in the United States, in our war for energy security. To that end, in consultation with your own leaders, I set before you this extraordinary challenge.

I'm asking every FFA chapter in this country to get involved in this basic ques-

tion of energy conservation and production tied intimately with that of food, in conserving energy and in finding new ways to use it more efficiently. It has to come from you. I cannot do it for you. I can't go into every FFA chapter in the Nation and create the leadership and the inspiration and the drive and the determination and the planning and the commitment and, sometimes, the courage that will be required to make this leadership felt, not only in your own organization but among others which involve young leaders of our country. But I will give recognition as a kind of constant symbol of my participation to the one FFA chapter in the Nation chosen by you and your leaders who does the most outstanding job in carrying out this response to the energy crisis.

Are you willing to accept the challenge? *[Applause]* Very good.

I'm going to depend upon the FFA to take the lead in energy conservation, and I'm going to depend upon you to pay the personal prices in your own lives necessary to guarantee the freedom of this Nation through restoring our energy security. I know you will do this, and it's a solemn commitment between me and you.

A quality future of our lives is built on a strong today. We've got some weaknesses in our country that I tried to outline as best I could Sunday evening. Many things change rapidly in our world, and these changes upset people. New energy facts are hard to accept.

For the first time, Americans have had to recognize the fact that there are limits, that we don't have the right anymore to squander the precious fuel reserves which our Nation possesses. We've got to husband those and to conserve those and to be good stewards over what we have been

given. This is what comprises the proper attitude of an American citizen, to assess problems, to face them frankly, to let the truth be known, to search our own lives, our own hearts, our own influence, and say, "What can I do to make my life purer, better, stronger, more admirable, and to let my life be felt meaningfully in the future of a nation which has been so good to me?"

So many changes take place; many things don't change. The fundamentals don't change—love within a family, honesty, friendship among people, a desire for peace, a respect for one another, the beauty of nature, and the genuine patriotism based on confidence in our country. As these unchangeable values become deeply engrained in our lives today, the future obviously grows even brighter.

On my recent trip to Japan, I met the Emperor of Japan and all his family. I learned that at the beginning of each year, as a symbol, the Emperor of Japan plants a tiny rice seedling—the nation watches this simple act—as a symbol of abundance and hope and confidence for the year ahead. You young people who live so close to the earth or whose families or friends live so close to the earth are a similar symbol of abundance and hope for me.

Plant your lives carefully in a foundation based on principles which do not change. Work hard. Love deeply. Commit your lives faithfully, let your lives bloom and constantly grow, no matter how many years you might spend on Earth. With these kinds of personal traits and beliefs in your lives, you become a precious possession.

Our Nation desperately needs you, and I'm sure that our Nation will not be disappointed in you.

Thank you very much.

MR. SANDBORN. Mr. President, before you stands a group that eagerly accepts constructive challenge. You asked us to join our hands and our hearts in addressing the problem of the energy that you mentioned. We want you to know that we have already joined our hands and hearts in accepting your guidance and direction in doing whatever we can as future farmers.

We will directly accept your challenge in two ways: first, by addressing the challenge you presented and encouraging chapters across the United States to participate actively in energy conservation; but secondly, we pledge to you that we will continue to train and develop the kind of young people with leadership, citizenship, skills, and abilities that have made you great as President of the United States and have produced such a great leader like yourself.

Mr. President, we gladly accept your challenge.

Thank you very much.

NOTE: The President spoke at 10:20 a.m. in the Rose Garden at the White House.

Department of Health, Education, and Welfare

Resignation of Joseph A. Califano, Jr., and Nomination of Patricia Roberts Harris To Be Secretary. July 19, 1979

The President has accepted the resignation of Secretary of Health, Education, and Welfare Joseph Califano. The President will nominate Patricia Harris, Secretary of Housing and Urban Development, to be Secretary of Health, Education, and Welfare.

The President said, "Secretary Harris has established an admirable record of

efficient and compassionate leadership at the Department of Housing and Urban Development. She has my full confidence and support as she begins to assume the responsibility for leading the department which more than any other directly touches the lives of those who must depend most upon government."

Secretary Harris and Secretary Califano have already discussed plans for an orderly transition. A successor to Secretary Harris at the Department of Housing and Urban Development will be named in the near future to ensure no interruption in the operations of that department.

NOTE: Press Secretary Jody Powell read the announcement at 12:04 p.m. to reporters assembled in the Briefing Room at the White House.

Department of Health, Education, and Welfare

Exchange of Letters on the Resignation of Joseph A. Califano, Jr., as Secretary. July 19, 1979

To Secretary Joe Califano

I accept your resignation with a genuine feeling of appreciation and of recognition for your notable accomplishments as Secretary of Health, Education and Welfare.

You have, indeed, demonstrated that major public service can exemplify both competence and compassion.

My desire is that you continue to serve with my confidence and support until your successor assumes the office. Your pledge of a smooth, harmonious and orderly transition is typical of your attitude and performance.

You have my personal best wishes and friendship.

Sincerely,

JIMMY CARTER

Dear Mr. President:

In accord with our conversation yesterday afternoon, I hereby formally tender my resignation as Secretary of Health, Education, and Welfare.

For me, it has been a deeply enjoyable and satisfying experience to administer so many of the programs enacted into law under President Lyndon Johnson.

I have called HEW the Department of the people because its programs touch the lives of so many Americans each day. The Department reflects the compassion of the American people. It tends to the needs of the old and the young, of the poor, the ill, and the handicapped. It exists to protect the health of all Americans, to assure equal educational opportunity for all citizens, and to guarantee the individual rights of victims of discrimination of all kinds. It administers Social Security and the other basic income maintenance programs of our nation.

My goal as Secretary has been to demonstrate that Government can do all these things, not only with compassion, but with competence. Achieving that goal is urgently necessary because there are still in this nation millions of people whose needs can be met only by Government—and they are the most vulnerable among us.

To do this job effectively, I needed the authority to run this Department and the freedom to decide and speak out on controversial public issues. You have given me that authority and freedom, and I appreciate it.

Whenever the laws that the Congress charges the Secretary of HEW to execute are administered with vigor, there will be

controversy. I have tried to execute these laws vigorously.

I appreciate the opportunity you have given me to serve our nation and you.

I wish you well as you continue striving to fulfill the enormous responsibilities of your office, and to build upon your achievements, of which you can be justly proud.

Sincerely,

JOSEPH A. CALIFANO, JR.

[The President, The White House, Washington, D.C.]

Agency for International Development

Nomination of Douglas J. Bennet, Jr., To Be Administrator. July 19, 1979

The President today announced that he will nominate Douglas J. Bennet, Jr., of Connecticut, to be Administrator of the Agency for International Development. He will replace John J. Gilligan who has resigned.

Bennet was born June 23, 1938, in Orange, N.J. He received a B.A. (1959) from Wesleyan University, an M.A. (1960) from the University of California, and a Ph. D. (1968) from Harvard University.

From 1963 to 1964, he was assistant to the Economic Advisor of AID. Bennet was special assistant to the Ambassador to India from 1964 to 1966. From 1967 to 1969, he was an assistant to Vice President Hubert Humphrey. He was administrative assistant to Senator Thomas Eagleton 1969 to 1973 and also held the same position on Senator Abraham Ribicoff's staff from 1973 to 1974. From 1974 to 1977, he was staff director for the Sen-

ate Budget Committee. Since 1977 he has been Assistant Secretary of State for Congressional Relations.

United States International Development Cooperation Agency

Nomination of Thomas Ehrlich to Be Director.
July 19, 1979

The President today announced that he will nominate Thomas Ehrlich, of California, to be Director of the United States International Development Cooperation Agency. This is a new position created by Reorganization Plan No. 2.

Ehrlich was born March 4, 1934, in Cambridge, Mass. He received an A.B. (1956) from Harvard College and an LL.B. (1959) from Harvard Law School.

From 1962 to 1964, he was special assistant to the Legal Advisor at the State Department and then special assistant to the Under Secretary at State from 1964 to 1965. Ehrlich was professor (1965-1971) and dean (1971-1975) at Stanford University Law School. From 1976 to 1979, he was President of the Legal Services Corporation. Since April of this year he has been a consultant at the State Department.

succeed Attorney General Bell. To ensure an orderly transition in this important department, Attorney General Bell's resignation will become effective when Mr. Civiletti is confirmed by the Senate and sworn into office.

NOTE: Press Secretary Jody Powell read the announcement at 3:35 p.m. to reporters assembled in the Briefing Room at the White House.

United States International Development Cooperation Agency

Executive Order 12147. **July 19, 1979**

By the authority vested in me as President of the United States of America by Section 9 of Reorganization Plan No. 2 of 1979, both Houses of Congress having defeated a resolution of disapproval (S. Res. 140, 125 Cong. Rec. S 8829 (July 9, 1979); H. Res. 231, 125 Cong. Rec. H. 5729 (July 11, 1979)), it is hereby ordered that Sections 2, 3, and 4 of that Plan, providing for the offices of Director, Deputy Director, and Associate Directors, are effective immediately.

JIMMY CARTER

The White House,
July 19, 1979.

[Filed with the Office of the Federal Register,
10:48 a.m., July 20, 1979]

Department of Justice

Resignation of Griffin B. Bell and Nomination of Benjamin R. Civiletti To Be Attorney General. **July 19, 1979**

As you know, Attorney General Bell has previously stated on several occasions his intention to leave the Department of Justice prior to the 1980 election year.

The President will nominate Deputy Attorney General Benjamin Civiletti to

National Science Foundation

Message to the Congress Transmitting a Report. **July 19, 1979**

To the Congress of the United States:

I am pleased to transmit to the Congress the 28th Annual Report of the National Science Foundation.

The Foundation supports a large part of the nation's basic research in science

and engineering and has national significance in its science education and training programs.

Throughout my Administration, I have frequently called to your attention that much of our social and economic progress depends upon a firm base of science and technology. In March 1979, I addressed this theme in a special message to you, highlighting the science and technology initiatives taken in my Administration in domestic, national security, and international arenas. I also pointed out that our national investment in scientific research, especially basic research, is returned to us many times over in the advances it generates in health care, energy, food production, and the protection and proper use of our resources and environment.

We live in an increasingly demanding world, in which we are called on to make judgments that affect our progress and well-being as human beings and nations. Our planning and decision-making require better understanding of the laws of nature, the effects of technological development, and the complexities of human relationships. The search for such understanding demands the aggressive development of new knowledge, an adequate supply of trained, responsible scientists, and a well-informed citizenry.

The National Science Foundation plays an important role in developing these scientific and human resources. It is my hope that this Annual Report of the Foundation will encourage your continued strong support.

JIMMY CARTER

The White House,
July 19, 1979.

NOTE: The report is entitled "National Science Foundation—Twenty-Eighth Annual Report for Fiscal Year 1978" (Government Printing Office, 143 pages).

Department of the Treasury

*Resignation of W. Michael Blumenthal and
Nomination of G. William Miller To Be
Secretary. July 19, 1979*

The President has accepted the resignation of Secretary of the Treasury Michael Blumenthal. The President will nominate William Miller, Chairman of the Federal Reserve Board, as Secretary of the Treasury. The President said, "Chairman Miller has, in his tenure at the Federal Reserve Board, established a reputation at home and abroad that will enable him to provide strong, effective leadership for economic policy. He has demonstrated a firm commitment to the defense of the dollar, sound economic policy, the fight against inflation, and strong measures to deal with our energy problem. He has my confidence and support."

The President, Secretary Blumenthal, and Chairman Miller have agreed that the transition will be handled in a manner that will ensure maximum continuity and no interruption of the effective performance at both the Treasury Department and the Federal Reserve Board.

NOTE: Press Secretary Jody Powell read the announcement at 4:38 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

Department of the Treasury

*Exchange of Letters on the Resignation of
W. Michael Blumenthal as Secretary.
July 19, 1979*

To Secretary Mike Blumenthal

I accept your resignation with great appreciation for the excellent service you have rendered at the Treasury, both for me and for the country.

The policies you have helped me mold and implement, to orient our efforts toward the fight against inflation, to maintain the strength and stability of the dollar, to assure the economic strength of our nation, to protect the integrity of the budget—have all been right and necessary for the wellbeing of the United States and our place in the world economy. These policies will be pursued with consistency and vigor.

You have served the nation well during a difficult period. I admire the strength and steadfastness with which you have presented your views, and I look forward to your continuing help and counsel. Your willingness to serve until your successor takes office will help to assure the smooth continuity in the making of economic decisions.

Mike, you have been a leading example of the readiness of prominent Americans from the private sector to render service in the public interest. As you return to private life, you have my personal best wishes for the future and my thanks for your distinguished service.

Sincerely,

JIMMY CARTER

Dear Mr. President:

This is to confirm to you that I have decided to resign as Secretary of the Treasury. I would like this resignation to be effective as early as possible and, in any case, as soon as my successor is available. I hope that this can be accomplished by the time Congress leaves for the August recess, thus ensuring a smooth transition.

As we discussed, I feel strongly that the time has come for me to return to private life and that someone else should carry on as Secretary of the Treasury in my place. I appreciate your agreeing with this assessment and am delighted to learn that you intend to nominate Bill Miller,

Chairman of the Federal Reserve Board, to succeed me. You have made an excellent choice and I am fully confident that Bill Miller will serve you and the country well.

Most importantly, I am certain that he will give you maximum and effective support in your continuing fight for sound economic policies in general and in the pursuit of your anti-inflationary policies in particular. I am convinced that Bill is as dedicated as you and I have been in our efforts to maintain a strong dollar and responsible fiscal and monetary policies.

It has been a privilege to serve as your Secretary of the Treasury for the last 2½ years. I am proud to have had that opportunity and appreciate your offering me the chance to serve.

The assignment has not always been easy. The national and international economic scene has been beset by difficulties for which there is no quick solution. As you know, I think it is vital that you continue to pursue economic policies designed to deal with these problems over the longer run. First and foremost is the issue of inflation, which I hope will remain the major preoccupation of your economic policy. A tight fiscal policy, strict controls on Government spending, efforts to bring the Federal budget under better control, and to reduce Government regulations wherever possible will be the key to success—as will continuing policies to expand the enormous productive potential of the American free enterprise system. At the same time, we must continue to defend the integrity and strength of the dollar and to play a constructive leadership role for a free and open international economic system.

I have every confidence that, with the help of your new Secretary of the Treasury, you will continue to pursue these policies. They are the best guarantees that

we will win the fight against inflation while expanding rapidly our domestic energy resources, so as to reduce the intolerable dependence of the U.S. economy on imported oil.

You have my best wishes as you continue to lead our nation and to deal with the many difficult problems we face. I am sure you will have a strong ally in Bill Miller in the future shaping of your economic policy.

As I return to private life, you can count on my wholehearted support in your efforts to achieve these goals.

With best wishes.

Sincerely,

MIKE BLUMENTHAL
W. Michael Blumenthal

[The President, The White House, Washington, D.C.]

United States Troop Withdrawals From the Republic of Korea

Statement by the President. July 20, 1979

Last February it was announced that withdrawals of U.S. ground combat forces from Korea would be held in abeyance pending the completion of a reassessment of North Korea's military strength and the implications of recent political developments in the region. That reassessment has been completed, and these policy issues have been discussed with our key allies in Asia, with principal defense and foreign policy advisers, and leaders of the Congress. Circumstances require these further adjustments in the troop withdrawal plan:

—Withdrawals of combat elements of the 2d Division will remain in abeyance. The structure and function of the Combined Forces Command will continue as established last year.

—Between now and the end of 1980 some reductions of personnel in U.S. support units will continue. This will include one I-Hawk air defense battalion whose transfer to the ROK had been planned since 1976.

—The timing and pace of withdrawals beyond these will be reexamined in 1981. In that review the United States will pay special attention to the restoration of a satisfactory North-South military balance, and evidence of tangible progress toward a reduction of tensions on the peninsula.

These decisions have been shaped by the following considerations:

—First, recent studies by the intelligence community have confirmed that the size of North Korea's ground forces, armor, firepower, and mobility are larger than previously estimated. Given the inherent economic strength of the Republic of Korea and with U.S. support, the existing imbalance in North-South military strength can be remedied. Holding further withdrawals of U.S. ground combat units in abeyance will help reinforce deterrence, avoid conveying misleading signals to the North, and provide additional time for the ROK to put its ground defenses in order. For its part the Republic of Korea recognizes the need to augment its self-defense efforts, and President Park has stated that his government would expand defense spending significantly beyond previously planned levels and accord special urgency to improving its ground defenses.

—Second, during the recent visit to Seoul, President Park and President Carter jointly announced their desire to explore possibilities for reducing tensions in Korea with representatives of North Korea. Only through authoritative discussions between representatives of the

North and South Korean Governments can a framework for peaceful coexistence between the North and South be established and progress toward eventual reunification of Korea be achieved. The United States is prepared to assist in that diplomatic effort. It is the judgment of the United States that further reductions of our combat elements in Korea should await credible indications that a satisfactory military balance has been restored and a reduction in tension is underway.

—Third, in recent months we have normalized relations with China and deepened defense cooperation with Japan. Concurrently we have witnessed the steady growth of Soviet military power in East Asia and the eruption of renewed conflict and new uncertainties in Southeast Asia. Under these circumstances, it is believed that these adjustments in our Korean withdrawal plan—together with the recent stabilization of our base agreement with the Philippines, initiation of defense planning discussions with Japan, and increased support for the security of ASEAN countries—will serve wider U.S. strategic security interests by reassuring our principal allies of our steadiness and our resolve.

Over time we will continue to adjust the detailed features of our contribution to the security of the Republic of Korea to reflect growing ROK economic and military strength and changes in the international situation. At present, however, these modifications in our withdrawal plans will best assure the maintenance of our security commitment, preserve an adequate deterrent, nurture the resumption of a serious North-South dialog, and stabilize a favorable U.S. strategic position in East Asia.

NOTE: Zbigniew Brzezinski, Assistant to the President for National Security Affairs, read the statement to reporters assembled in the Briefing Room at the White House.

Apollo 11 Anniversary

Remarks at a Ceremony in Observance of the 10th Anniversary of the Moon Landing.
July 20, 1979

MR. ARMSTRONG. Mr. President, we're delighted that you would take the opportunity to note this occasion that is very meaningful to those of us who were charged with the responsibility of meeting a national goal. And nothing matches success like more success, and the 10th anniversary of that occasion is very pleasant for all of us today.

We would like to present to you a flag that was carried on our flight 10 years ago and a replica of the one that was planted there 10 years ago today, presented to you with our very good wishes and hopes for the future.

THE PRESIDENT. Thank you very much.

MR. FROSCHE. We'd like to add to this the first copy of a piece of the history of Apollo inscribed to you from the crew.

THE PRESIDENT. Well, this is a great honor.

This 10th anniversary, even, is a great moment for our Nation and for the world. Ten years ago, all humanity watched with wonder as two brave men—Neil Armstrong and Buzz Aldrin, on my right—stepped boldly onto the Moon while a third brave astronaut, Mike Collins, was in lunar orbit. The touchdown of Apollo II *Eagle* in the Sea of Tranquility was a stunning achievement, without precedent in human experience. These three astronauts, representing the spirit of our entire Nation, fulfilled the age-old dream of mankind of venturing beyond Earth to the surface of another world.

As we honor these three bold adventurers today, we take pride in our Nation and in the unequalled technological ability that made this great endeavor possible and which still exists. The pio-

neer spirit that built our great country is symbolized by the footprints of American astronauts on the bleak landscape of the Moon.

The first lunar landing and those which followed it were due to the unique and the specialized contributions of tens of thousands of Americans—scientists, engineers, astronauts, skilled craftsmen, and many others. We must continue to use these skills and build upon the success and the inspiration of the Apollo program.

The 10th anniversary of the lunar landing is a time to reflect on what we as a nation can accomplish with unity, daring, and determination. We landed on the Moon because our Nation set a firm goal, and we united behind that effort. Today, we face an equally challenging goal in fighting for energy security. Like the Apollo mission, it is a test of our Nation's resources and our spirit as a people.

We will win energy security for our Nation in the same way we won the race to the Moon. We will marshal the unequalled technological and scientific capacity of the American people. We will draw upon our vast and abundant natural resources, and we will unite as a people in our determination to preserve our freedom and our independence as a nation.

I know that the spirit to unite, to prevail, to overcome this energy crisis is strong among the American people today. I've seen it on the faces of those with whom I have met and talked in the last few weeks. I have no doubt that as a nation we will succeed.

Our Nation will also face a number of other difficult challenges in the years ahead. But this Nation and this Government must be prepared with confidence to meet these challenges. I'm now involved in an intense and serious period of review and evaluation. I will make the decisions necessary to ensure that my administra-

tion, representing the American people, can provide the leadership this country needs.

As President, I am also determined to maintain America's leadership in space. The first great era of space exploration is about over; as an initiative, unprecedented. But the second—the era of the space shuttle, when we harvest the great benefits that have been made possible by that exploration—is about to begin.

As the poet Robert Browning wrote over a century ago, "Man's reach should exceed his grasp, or what's a heaven for?" As a nation, we always must have the boldness to reach for the heavens and to set a brave example for all peoples of this Earth.

On behalf of the United States of America, I want to repeat the gratitude of our country to these three brave men, those who followed them and preceded them in space, and the many scientists, workers, average Americans, technicians who helped to make this enormous achievement possible. Thank you very much.

NOTE: The President spoke at 12:17 p.m. in the Rose Garden at the White House. Robert A. Frosch is Administrator of the National Aeronautics and Space Administration.

Federal Emergency Management

Executive Order 12148. July 20, 1979

By the authority vested in me as President by the Constitution and laws of the United States of America, including the Federal Civil Defense Act of 1950, as amended (50 U.S.C. App. 2251 *et seq.*), the Disaster Relief Act of 1970, as amended (42 U.S.C. Chapter 58 note), the Disaster Relief Act of 1974 (88 Stat. 143; 42 U.S.C. 5121 *et seq.*), the Earth-

quake Hazards Reduction Act of 1977 (42 U.S.C. 7701 *et seq.*), Section 4 of Public Law 92-385 (86 Stat. 556), Section 43 of the Act of August 10, 1956, as amended (50 U.S.C. App. 2285), the National Security Act of 1947, as amended, the Defense Production Act of 1950, as amended (50 U.S.C. App. 2061 *et seq.*), Reorganization Plan No. 1 of 1958, Reorganization Plan No. 1 of 1973, the Strategic and Critical Materials Stock Piling Act, as amended (50 U.S.C. 98 *et seq.*), Section 202 of the Budget and Accounting Procedures Act of 1950 (31 U.S.C. 581c), and Section 301 of Title 3 of the United States Code, and in order to transfer emergency functions to the Federal Emergency Management Agency, it is hereby ordered as follows:

SECTION 1. TRANSFERS OR REASSIGNMENTS

1-1. *Transfer or Reassignment of Existing Functions.*

1-101. All functions vested in the President that have been delegated or assigned to the Defense Civil Preparedness Agency, Department of Defense, are transferred or reassigned to the Director of the Federal Emergency Management Agency.

1-102. All functions vested in the President that have been delegated or assigned to the Federal Disaster Assistance Administration, Department of Housing and Urban Development, are transferred or reassigned to the Director of the Federal Emergency Management Agency, including any of those functions redelegated or reassigned to the Department of Commerce with respect to assistance to communities in the development of readiness plans for severe weather-related emergencies.

1-103. All functions vested in the President that have been delegated or as-

signed to the Federal Preparedness Agency, General Services Administration, are transferred or reassigned to the Director of the Federal Emergency Management Agency.

1-104. All functions vested in the President by the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 *et seq.*), including those functions performed by the Office of Science and Technology Policy, are delegated, transferred, or reassigned to the Director of the Federal Emergency Management Agency.

1-2. *Transfer or Reassignment of Resources.*

1-201. The records, property, personnel and positions, and unexpended balances of appropriations, available or to be made available, which relate to the functions transferred, reassigned, or redelegated by this Order are hereby transferred to the Director of the Federal Emergency Management Agency.

1-202. The Director of the Office of Management and Budget shall make such determinations, issue such orders, and take all actions necessary or appropriate to effectuate the transfers or reassignments provided by this Order, including the transfer of funds, records, property, and personnel.

SECTION 2. MANAGEMENT OF EMERGENCY PLANNING AND ASSISTANCE

2-1. *General.*

2-101. The Director of the Federal Emergency Management Agency shall establish Federal policies for, and coordinate, all civil defense and civil emergency planning, management, mitigation, and assistance functions of Executive agencies.

2-102. The Director shall periodically review and evaluate the civil defense and civil emergency functions of the Execu-

tive agencies. In order to improve the efficiency and effectiveness of those functions, the Director shall recommend to the President alternative methods of providing Federal planning, management, mitigation, and assistance.

2-103. The Director shall be responsible for the coordination of efforts to promote dam safety, for the coordination of natural and nuclear disaster warning systems, and for the coordination of preparedness and planning to reduce the consequences of major terrorist incidents.

2-104. The Director shall represent the President in working with State and local governments and private sector to stimulate vigorous participation in civil emergency preparedness, mitigation, response, and recovery programs.

2-105. The Director shall provide an annual report to the President for subsequent transmittal to the Congress on the functions of the Federal Emergency Management Agency. The report shall assess the current overall state of effectiveness of Federal civil defense and civil emergency functions, organizations, resources, and systems and recommend measures to be taken to improve planning, management, assistance, and relief by all levels of government, the private sector, and volunteer organizations.

2-2. Implementation.

2-201. In executing the functions under this Order, the Director shall develop policies which provide that all civil defense and civil emergency functions, resources, and systems of Executive agencies are:

(a) founded on the use of existing organizations, resources, and systems to the maximum extent practicable;

(b) integrated effectively with organizations, resources, and programs of State and local governments, the private sector and volunteer organizations; and

(c) developed, tested and utilized to prepare for, mitigate, respond to and recover from the effects on the population of all forms of emergencies.

2-202. Assignments of civil emergency functions shall, whenever possible, be based on extensions (under emergency conditions) of the regular missions of the Executive agencies.

2-203. For purposes of this Order, "civil emergency" means any accidental, natural, man-caused, or wartime emergency or threat thereof, which causes or may cause substantial injury or harm to the population or substantial damage to or loss of property.

2-204. In order that civil defense planning continues to be fully compatible with the Nation's overall strategic policy, and in order to maintain an effective link between strategic nuclear planning and nuclear attack preparedness planning, the development of civil defense policies and programs by the Director of the Federal Emergency Management Agency shall be subject to oversight by the Secretary of Defense and the National Security Council.

2-205. To the extent authorized by law and within available resources, the Secretary of Defense shall provide the Director of the Federal Emergency Management Agency with support for civil defense programs in the areas of program development and administration, technical support, research, communications, transportation, intelligence, and emergency operations.

2-206. All Executive agencies shall cooperate with and assist the Director in the performance of his functions.

2-3. Transition Provisions.

2-301. The functions which have been transferred, reassigned, or redelegated by

Section 1 of this Order are recodified and revised as set forth in this Order at Section 4, and as provided by the amendments made at Section 5 to the provisions of other Orders.

2-302. Notwithstanding the revocations, revisions, codifications, and amendments made by this Order, the Director may continue to perform the functions transferred to him by Section 1 of this Order, except where they may otherwise be inconsistent with the provisions of this Order.

SECTION 3. FEDERAL EMERGENCY MANAGEMENT COUNCIL

3-1. *Establishment of the Council.*

3-101. There is hereby established the Emergency Management Council.

3-102. The Council shall be composed of the Director of the Federal Emergency Management Agency, who shall be the Chairman, the Director of the Office of Management and Budget and such others as the President may designate.

3.2. *Functions of the Council*

3-201. The Council shall advise and assist the President in the oversight and direction of Federal emergency programs and policies.

3-202. The Council shall provide guidance to the Director of the Federal Emergency Management Agency in the performance of functions vested in him.

3-3. *Administrative and General Provisions.*

3-301. The heads of Executive agencies shall cooperate with and assist the Council in the performance of its functions.

3-302. The Director of the Federal Emergency Management Agency shall provide the Council with such administrative services and support as may be necessary or appropriate.

SECTION 4. DELEGATIONS

4-1. *Delegation of Functions Transferred to the President.*

4-101. The following functions were transferred to the Director of the Office of Defense Mobilization by Section 2 of Reorganization Plan No. 3 of 1953 (50 U.S.C. 404 note); they were subsequently transferred to the President by Section 1 (a) of Reorganization Plan No. 1 of 1958, as amended (50 U.S.C. App. 2271 note), and they are hereby delegated to the Director of the Federal Emergency Management Agency:

(a) The functions vested in the Secretaries of the Army, Navy, Air Force, and Interior by the Strategic and Critical Materials Stock Piling Act, as amended (50 U.S.C. 98 *et seq.*), including the functions vested in the Army and Navy Munitions Board by item (2) of Section 6(a) of that Act (50 U.S.C. 98e(a)(2)), but excluding the functions vested in the Secretary of the Interior by Section 7 of that Act (50 U.S.C. 98f).

(b) The functions vested in the Munitions Board of the Department of Defense by Section 4(h) of the Commodity Credit Corporation Charter Act, as amended (15 U.S.C. 714b(h)).

(c) The function vested in the Munitions Board of the Department of Defense by Section 204(f) [originally 204(e)] of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 485(f)).

4-102. The functions vested in the Director of the Office of Defense Mobilization by Sections 103 and 303 of the National Security Act of 1947, as amended by Sections 8 and 50 of the Act of September 3, 1954 (Public Law 779; 68 Stat. 1228 and 1244) (50 U.S.C. 404 and 405), were transferred to the President by Section 1(a) of Reorganization Plan No. 1

of 1958, as amended (50 U.S.C. App. 2271 note), and they are hereby delegated to the Director of the Federal Emergency Management Agency.

4-103. (a) The functions vested in the Federal Civil Defense Administration or its Administrator by the Federal Civil Defense Act of 1950, as amended (50 U.S.C. App. 2251 *et seq.*), were transferred to the President by Reorganization Plan No. 1 of 1958, and they are hereby delegated to the Director of the Federal Emergency Management Agency.

(b) Excluded from the delegation in subsection (a) is the function under Section 205(a)(4) of the Federal Civil Defense Act of 1950, as amended (50 U.S.C. App. 2286(a)(4)), relating to the establishment and maintenance of personnel standards on the merit basis that was delegated to the Director of the Office of Personnel Management by Section 1(b) of Executive Order No. 11589, as amended (Section 2-101(b) of Executive Order No. 12107).

4-104. The Director of the Federal Emergency Management Agency is authorized to redelegate, in accord with the provisions of Section 1(b) of Reorganization Plan No. 1 of 1958 (50 U.S.C. App. 2271 note), any of the functions delegated by Sections 4-101, 4-102, and 4-103 of this Order.

4-105. The functions vested in the Administrator of the Federal Civil Defense Administration by Section 43 of the Act of August 10, 1956 (70A Stat. 636) were transferred to the President by Reorganization Plan No. 1 of 1958, as amended (50 U.S.C. App. 2271 note), were subsequently revested in the Director of the Office of Civil and Defense Mobilization by Section 512 of Public Law 86-500 (50 U.S.C. App. 2285) [the office was changed to Office of Emergency Planning by Public Law 87-296 (75 Stat. 630) and then

to the Office of Emergency Preparedness by Section 402 of Public Law 90-608 (82 Stat. 1194)], were again transferred to the President by Section 1 of Reorganization Plan No. 1 of 1973 (50 U.S.C. App. 2271 note), and they are hereby delegated to the Director of the Federal Emergency Management Agency.

4-106. The functions vested in the Director of the Office of Emergency Preparedness by Section 16 of the Act of September 23, 1950, as amended (20 U.S.C. 646), and by Section 7 of the Act of September 30, 1950, as amended (20 U.S.C. 241-1), were transferred to the President by Section 1 of Reorganization Plan No. 1 of 1973 (50 U.S.C. App. 2271 note), and they are hereby delegated to the Director of the Federal Emergency Management Agency.

4-107. That function vested in the Director of the Office of Emergency Preparedness by Section 762(a) of the Higher Education Act of 1965, as added by Section 161(a) of the Education Amendments of 1972, and as further amended (20 U.S.C. 1132d-1(a)), to the extent transferred to the President by Reorganization Plan No. 1 of 1973 (50 U.S.C. App. 2271 note), is hereby delegated to the Director of the Federal Emergency Management Agency.

4-2. *Delegation of Functions Vested in the President.*

4-201. The functions vested in the President by the Disaster Relief Act of 1970, as amended (42 U.S.C. Chapter 58 note), are hereby delegated to the Director of the Federal Emergency Management Agency.

4-202. The functions (related to grants for damages resulting from hurricane and tropical storm Agnes) vested in the President by Section 4 of Public Law 92-385 (86 Stat. 556) are hereby delegated to the

Director of the Federal Emergency Management Agency.

4-203. The functions vested in the President by the Disaster Relief Act of 1974 (88 Stat. 143; 42 U.S.C. 5121 *et seq.*), except those functions vested in the President by Sections 301 (relating to the declaration of emergencies and major disasters), 401 (relating to the repair, reconstruction, restoration, or replacement of Federal facilities), and 409 (relating to food coupons and surplus commodities), are hereby delegated to the Director of the Federal Emergency Management Agency.

4-204. The functions vested in the President by the Earthquake Hazards Reduction Act of 1977 (91 Stat. 1098; 42 U.S.C. 7701 *et seq.*) are hereby delegated to the Director of the Federal Emergency Management Agency.

SECTION 5. OTHER EXECUTIVE ORDERS

5-1. *Revocations.*

5-101. Executive Order No. 10242, as amended, entitled "Prescribing Regulations Governing the Exercise by the Federal Civil Defense Administrator of Certain Administrative Authority Granted by the Federal Civil Defense Act of 1950", is revoked.

5-102. Sections 1 and 2 of Executive Order No. 10296, as amended, entitled "Providing for the Performance of Certain Defense Housing and Community Facilities and Service Functions", are revoked.

5-103. Executive Order No. 10494, as amended, relating to the disposition of remaining functions, is revoked.

5-104. Executive Order No. 10529, as amended, relating to federal employee participation in State and local civil defense programs, is revoked.

5-105. Section 3 of Executive Order

No. 10601, as amended, which concerns the Commodity Set Aside, is revoked.

5-106. Executive Order No. 10634, as amended, relating to loans for facilities destroyed or damaged by a major disaster, is revoked.

5-107. Section 4(d)(2) of Executive Order No. 10900, as amended, which concerns foreign currencies made available to make purchases for the supplemental stockpile, is revoked.

5-108. Executive Order No. 10952, as amended, entitled "Assigning Civil Defense Responsibilities to the Secretary of Defense and Others", is revoked.

5-109. Executive Order No. 11051, as amended, relating to responsibilities of the Office of Emergency Preparedness, is revoked.

5-110. Executive Order No. 11415, as amended, relating to the Health Resources Advisory Committee, is revoked.

5-111. Executive Order No. 11795, as amended, entitled "Delegating Disaster Relief Functions Pursuant to the Disaster Relief Act of 1974", is revoked, except for Section 3 thereof.

5-112. Executive Order No. 11725, as amended, entitled "Transfer of Certain Functions of the Office of Emergency Preparedness", is revoked.

5-113. Executive Order No. 11749, as amended, entitled "Consolidating Disaster Relief Functions Assigned to the Secretary of Housing and Urban Development", is revoked.

5-2. *Amendments.*

5-201. Executive Order No. 10421, as amended, relating to physical security of defense facilities is further amended by (a) substituting the "Director of the Federal Emergency Management Agency" for "Director of the Office of Emergency Planning" in Sections 1(a), 1(c), and 6 (b); and, (b) substituting "Federal

Emergency Management Agency" for "Office of Emergency Planning" in Sections 6(b) and 7(b).

5-202. Executive Order No. 10480, as amended, is further amended by (a) substituting "Director of the Federal Emergency Management Agency" for "Director of the Office of Emergency Planning" in Sections 101(a), 101(b), 201(a), 201(b), 301, 304, 307, 308, 310(b), 311(b), 312, 313, 401(b), 401(e), and 605; and, (b) substituting "Director of the Federal Emergency Management Agency" for "Administrator of General Services" in Section 610.

5-203. Section 3(d) of Executive Order No. 10582, as amended, which relates to determinations under the Buy American Act is amended by deleting "Director of the Office of Emergency Planning" and substituting therefor "Director of the Federal Emergency Management Agency".

5-204. Paragraph 21 of Executive Order No. 10789, as amended, is further amended by adding "The Federal Emergency Management Agency" after "Government Printing Office".

5-205. Executive Order No. 11179, as amended, concerning the National Defense Executive Reserve, is further amended by deleting "Director of the Office of Emergency Planning" in Section 2 and substituting therefor "Director of the Federal Emergency Management Agency".

5-206. Section 7 of Executive Order No. 11912, as amended, concerning energy policy and conservation, is further amended by deleting "Administrator of General Services" and substituting therefor "Director of the Federal Emergency Management Agency".

5-207. Section 2(d) of Executive Order No. 11988 entitled "Floodplain Management" is amended by deleting "Federal Insurance Administration" and sub-

stituting therefor "Director of the Federal Emergency Management Agency".

5-208. Section 5-3 of Executive Order No. 12046 of March 29, 1978, is amended by deleting "*General Services Administration*" and substituting therefor "*Federal Emergency Management Agency*" and by deleting "Administrator of General Services" and substituting therefor "Director of the Federal Emergency Management Agency".

5-209. Section 1-201 of Executive Order No. 12065 is amended by adding "The Director of the Federal Emergency Management Agency" after "The Administrator, National Aeronautics and Space Administration" and by deleting "Director, Federal Preparedness Agency and to the" from the parentheses after "The Administrator of General Services".

5-210. Section 1-102 of Executive Order No. 12075 of August 16, 1978, is amended by adding in alphabetical order "(p) Federal Emergency Management Agency".

5-211. Section 1-102 of Executive Order No. 12083 of September 27, 1978 is amended by adding in alphabetical order "(x) the Director of the Federal Emergency Management Agency".

5-212. Section 9.11(b) of Civil Service Rule IX (5 CFR Part 9) is amended by deleting "the Defense Civil Preparedness Agency and".

5-213. Section 3(2) of each of the following described Executive orders is amended by adding "Federal Emergency Management Agency" immediately after "Department of Transportation".

(a) Executive Order No. 11331 establishing the Pacific Northwest River Basins Commission.

(b) Executive Order No. 11345, as amended, establishing the Great Lakes Basin Commission.

(c) Executive Order No. 11371, as amended, establishing the New England River Basins Commission.

(d) Executive Order No. 11578, as amended, establishing the Ohio River Basin Commission.

(e) Executive Order No. 11658, as amended, establishing the Missouri River Basin Commission.

(f) Executive Order No. 11659, as amended, establishing the Upper Mississippi River Basin Commission.

5-214. Executive Order No. 11490, as amended, is further amended as follows:

(a) Delete the last sentence of Section 102(a) and substitute therefor the following: "The activities undertaken by the departments and agencies pursuant to this Order, except as provided in Section 3003, shall be in accordance with guidance provided by, and subject to, evaluation by the Director of the Federal Emergency Management Agency."

(b) Delete Section 103 entitled "Presidential Assistance" and substitute the following new Section 103: "*Sec. 103 General Coordination.* The Director of the Federal Emergency Management Agency (FEMA) shall determine national preparedness goals and policies for the performance of functions under this Order and coordinate the performance of such functions with the total national preparedness programs."

(c) Delete the portion of the first sentence of Section 401 prior to the colon and insert the following: "The Secretary of Defense shall perform the following emergency preparedness functions".

(d) Delete "Director of the Federal Preparedness Agency (GSA)" or "the Federal Preparedness Agency (GSA)" and substitute therefor "Director, FEMA", in Sections 401(3), 401(4), 401

(5), 401(9), 401(10), 401(14), 401(15), 401(16), 401(19), 401(21), 401(22), 501(8), 601(2), 904(2), 1102(2), 1204(2), 1401(a), 1701, 1702, 2003, 2004, 2801(5), 3001, 3002(2), 3004, 3005, 3006, 3008, 3010, and 3013.

(e) The number assigned to this Order shall be substituted for "11051 of September 27, 1962" in Section 3001, and for "11051" in Sections 1802, 2002(3), 3002 and 3008(1).

(f) The number assigned to this Order shall be substituted for "10952" in Sections 1103, 1104, 1205, and 3002.

(g) Delete "Department of Defense" in Sections 502, 601(1), 804, 905, 1103, 1104, 1106(4), 1205, 2002(8), the first sentence of Section 3002, and Sections 3008(1) and 3010 and substitute therefor "Director of the Federal Emergency Management Agency."

SECTION 6. This Order is effective July 15, 1979.

JIMMY CARTER

The White House,
July 20, 1979.

[Filed with the Office of the Federal Register,
2:18 p.m., July 20, 1979]

United States Ambassador to the Soviet Union

Nomination of Thomas J. Watson, Jr.
July 20, 1979

The President today announced that he will nominate Thomas J. Watson, Jr., of Connecticut, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Union of Soviet Socialist Republics. He will replace Malcolm Toon who is resigning.

Watson was born January 8, 1914, in Dayton, Ohio. He received his B.A. in 1937 from Brown University. He served in the U.S. Army Air Corps as lieutenant colonel from 1940 to 1945.

He has been with International Business Machines Corp. since 1937, successively as vice president, executive vice president, president, chairman of the board, and presently as chairman of the executive committee.

Since 1978 he has been Chairman of the General Advisory Committee of the Arms Control and Disarmament Agency. He has served on the President's Advisory Committee on Labor-Management Policy; as director of Bankers Trust Co., Pan American World Airways, Time, Inc.; and as trustee of the American Museum of Natural History, Brown University, and Rockefeller Foundation.

Department of Transportation

Resignation of Brock Adams and Appointment of W. Graham Claytor, Jr., as Acting Secretary. July 20, 1979

The President has accepted the resignation of Secretary of Transportation Brock Adams. Secretary Adams has expressed a desire for an early transition.

Secretary of the Navy Graham Claytor will serve as Acting Secretary of the Department of Transportation for a period up to 30 days until a permanent successor has been confirmed and sworn into office.

NOTE: Press Secretary Jody Powell read the announcement at 1:37 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

Department of Transportation

Exchange of Letters on the Resignation of Brock Adams as Secretary. July 20, 1979

To Secretary Brock Adams

I accept your resignation with friendship, respect and appreciation for the accomplishments of our nation during your service as Secretary of Transportation. I share your belief that our country's system of transportation can and must be greatly improved in the future. Your continuing advice and support as we make this progress will be very valuable.

You and Betty have my best wishes, and my thanks on behalf of a nation which has benefited from your service.

Sincerely,

JIMMY CARTER

My dear Mr. President:

I hereby tender my resignation as United States Secretary of Transportation.

I have appreciated your courtesy and the personal kindness you and your wife have extended to Betty and me during the period I have served as a member of your Cabinet.

I particularly appreciated the position you stated in your Sunday night speech regarding public transportation and the need for a more fuel-efficient automobile. I hope these programs will be fully implemented soon. As you know, during the last two years I have repeatedly urged that more attention be focused on these areas because maintaining American mobility through alternatives to and more efficient use of the motor vehicle are essential to maintaining the American economy and a quality standard of living as we go through the difficult period of the future. I believe the American public shares this

view and will support using the resources and technological development necessary to achieve it. The many fine people serving in the Department of Transportation stand ready to help you in this effort.

I hope you find happiness in your job, and I join with the whole Nation in hoping that the remainder of your administration will be successful.

Respectfully submitted,

BROCK ADAMS

[The President, The White House, Washington, D.C.]

White House Conference on Families

*Remarks at a White House Reception.
July 20, 1979*

First of all, I want to thank Jim Guy Tucker¹ and all of you for being willing to serve in this most important and responsible effort.

As you know, the American family is under unprecedented pressure, and it's good to meet with people who will think and study and consider and learn before we act.

The purpose of the family conference to be held here at the White House will be not to set up some big new expensive Federal program; it's to see what we can do, not simply as a government, but as a nation, to strengthen American families. In some instances, this may mean just getting government out of the way. You'll be looking at what many public and private institutions of all kinds are doing now at all levels to see how these activities affect families.

I hope that you will not look just at the programs that were originally designed to

affect families, but also look at other programs that were designed for other purposes that might have an adverse effect on the cohesion and the strength of American families today. You must reach out, not only to scholars and to experts but to many thousands of American citizens around this country who know from their own experience what makes a family strong.

Our generation has been through a time of great social and technological change, affecting the way we live, the way we think, the way we act, the way we work, the way we assess our own status as individuals. Our institutions do not seem to offer the same degree of support for a cohesive family arrangement as they did in years past. And the signs of strain within families, those signs are all around us.

I talked last Sunday night about a crisis of confidence in our country. And the family is very much part of that crisis—part of the problem, yes, but much more importantly, it is a major part of the solution. For couples who married in the early years of this century, 1 marriage in 10 ended in divorce; for couples who have married since World War II, 1 marriage in 3 ends in divorce.

I was talking to Jody Powell the other day—who's a little bit older than my oldest son, who lived in a small Georgia town not very far from Plains—and neither he nor I could recall any divorced person who lived in Vienna, Georgia, or Plains, Georgia, in the years we were growing up. There are a lot of them there now. The rate of teenage suicide has doubled in the last 10 years. Half a million youngsters each year run away from home. Too many of our older people are lonely and sometimes even afraid. Without question, the American family is in trouble.

The family has survived, though, many social and technological revolutions in the

¹Chairperson, White House Conference on Families.

past, and our families can survive the current changes and stresses. They are too precious—the families are too basic, too essential not to survive. Ultimately, the family may emerge from this test even stronger if we are successful and the American people are successful in facing facts and acting together.

This will obviously not be automatic, and it will obviously not be easy. We all know that change is nothing new. The people who created this country were engaged in changes that shook old institutions and old ways of living profoundly; the pioneers who pushed west, the immigrants who added to the rich diversity of our people were cut off from old certainties and faced with troubling change just as we are today. They, too, had to live with dramatic, often wrenching change in their lives, and they had to adapt to new patterns of living.

They quickly learned—and this is important—to rely on each other, to build new families and new communities. They saw a change not as something to be feared, but as an opportunity. They learned to hold onto their real values and not let them change, values that bound together families. They learned to work for the family as individuals. They learned to let the families strengthen communities, and they learned to let those communities, based on the families, strengthen and develop a nation.

There's a difference. In those times—revolution, moving west, the assimilation of broad and diverse types of people—those fearsome changes had a strong tendency to bring families together for mutual support, mutual reassurance, mutual love. These days, the changes that affect us have a tendency to fragment families, to drive one part of a family in one direction, a different part of a family, maybe a different generation, in an opposite direction. That tendency, which is the new

thing, will be a major subject for you to address.

We often feel nostalgic about a past that seems to be simpler and sometimes seems to be better, and we can learn from the past. But we must not limit our vision of what a good family is just to what a family was in the past. Instead, we must find meaning in today's challenges and today's realities, which we cannot change, honestly, creatively, with courage and with compassion.

Our people are searching not for an artificially constructed family unit that we might try to impose on them, but they're searching for freedom to make their own decisions and for opportunity, as they always have. And this search is having profound effects on the modern family. For many it's already proven to be liberating and rewarding, but it also leaves many who are unsure, who are lonely and afraid. Lily Tomlin jokes that we are all in this alone. *[Laughter]* But for many of our people, these words seem not funny, but tragically true. Too many feel that they have no one to whom they can turn in a moment of crisis or a moment of need.

These problems that I've described to you so briefly are real, but they are also the kinds of problems that families have always specialized in solving. Many of our toughest problems, from energy to the decay of our cities, from inflation to coping with old age, even the strengthening of a nation's spirit can be resolved if every family does its share and takes seriously its responsibilities to its own members and to the community.

Families, as you well know, are more than just households. They are a network of relationships rooted not only in kinship based on blood but a kinship based on shared experiences, shared joys and sorrows, and I think, most of all, in shared

love that crosses vast distances and also crosses very easily the barrier of generations. Families are groups of people, some small, some large, who do not necessarily live together in one place, but who do take responsibility for each other.

There is an old Yiddish proverb, "God gave burdens, but also shoulders." Not only our own shoulders but shoulders to help us bear the burdens that are too heavy for us alone, shoulders to cry on, shoulders to be patted in a gesture of encouragement, shoulders to help others bear their loads and their burdens. That's what a family is—kind of a collection of shoulders.

We're not in this alone. With strong families, I'm convinced, as I know you are, that our Nation's strength now and in the future will be assured. That's a task that I give to you to open your hearts, to study the family structure, the structure of communities and our Nation, and building upon strong families assure the strength of the United States.

Thank you very much.

NOTE: The President spoke at 2:36 p.m. in the East Room at the White House.

Federal Regional Councils

Executive Order 12149. July 20, 1979

By the authority vested in me as President by the Constitution and statutes of the United States of America, and in order to provide a structure for interagency and intergovernmental cooperation, it is hereby ordered as follows:

1-1. *Establishment of Federal Regional Councils.*

1-101. There is hereby continued a Federal Regional Council for each of the ten standard Federal regions (Office of

Management and Budget Circular No. A-105).

1-102. Each Council shall be composed of a representative designated by the head of each of the following agencies:

- (a) The Department of the Interior.
- (b) The Department of Agriculture.
- (c) The Department of Commerce.
- (d) The Department of Labor.
- (e) The Department of Health, Education, and Welfare.
- (f) The Department of Housing and Urban Development.
- (g) The Department of Transportation.
- (h) The Department of Energy.
- (i) The Environmental Protection Agency.
- (j) The Community Services Administration.
- (k) The Office of Personnel Management.
- (l) The General Services Administration.
- (m) ACTION.
- (n) The Small Business Administration.
- (o) The Federal Emergency Management Agency.
- (p) The U.S. Army Corps of Engineers.
- (q) The Regional Action Planning Commissions.

1-103. The President shall designate one member of each Council to be Chairman. The Chairman may convene an Executive Committee to carry out specific initiatives of the Council.

1-104. Each member of each Council shall be a principal official in the region at the Administrator, Director, Secretarial Representative, or equivalent level. For the Regional Action Planning Commissions (established pursuant to Title V of the Public Works and Economic Development Act of 1965, as amended (42

U.S.C. 3181 *et seq.*) the Federal co-chairman shall serve as the Council member. Representatives of the Office of Management and Budget shall participate in the deliberations of each Council.

1-105. Each member of each Council shall designate an alternate to serve whenever the regular member is unable to attend any meeting of the Council. The alternate shall be a principal official in the Region at the deputy or equivalent level, or the head of an operating unit of the agency.

1-106. When a Chairman determines that matters which significantly affect the interests of agencies which are not represented on the Council are to be considered by that Council, the Chairman shall request the regional director or other appropriate representative of the affected agency to participate in the deliberations of the Council.

1-2. Federal Regional Council Functions.

1-201. The Federal Regional Council, as the major interagency mechanism in the field, shall ensure that Federal programs are implemented in a manner which is consistent with overall Government policy, and shall be responsive to State, tribal, regional, and local government concerns.

1-202. Each Council shall develop a mechanism for sharing information about major agency decisions or actions among agencies in the field, and shall ensure a timely and consistent Federal response to State, tribal, regional, and local concerns or inquiries about such actions.

1-203. Each Council shall establish practical and appropriate liaison functions with State, tribal, regional, and local officials, and shall implement regular procedures to inform elected officials about Government policies and initiatives.

1-204. Each Council shall attempt to identify significant problems with Federal policies and actions and, if such problems cannot be resolved in the Region, refer such problems to the appropriate agencies and the Interagency Coordinating Council.

1-3. General Provisions.

1-301. The Interagency Coordinating Council, in conjunction with the Office of Management and Budget shall, consistent with the objectives and priorities established by the President, establish policy with respect to Federal Regional Council matters, provide guidance to the Councils, respond to their initiatives and seek to resolve policy issues referred to it by the Councils. The Interagency Coordinating Council shall also provide policy guidance to the Federal Cochairmen of the Regional Action Planning Commissions on intergovernmental matters pertaining to activities undertaken by the Federal Regional Councils.

1-302. The Office of Management and Budget shall provide direction for and oversight of the implementation by the Councils of Federal management improvement actions and of Federal aid reforms.

1-303. Each Agency represented on a Council shall provide, to the extent permitted by law, appropriate staff for common or joint interagency task forces as requested by the Federal Regional Council Chairman or by the Interagency Coordinating Council.

1-304. Each Council member shall be provided administrative support by the member's agency.

1-305. Administrative support required by the Council shall be provided by the Chairman's agency.

1-306. The Federal Regional Councils are encouraged to work with Federal Executive Boards, Federal Executive As-

sociations, River Basin Commissions, Regional Councils of Government, and other similar organizations in the Region.

1-307. Executive Order No. 11647, as amended, is revoked.

JIMMY CARTER

The White House,
July 20, 1979.

[Filed with the Office of the Federal Register,

Departments of Energy and Defense

*Resignation of James R. Schlesinger and
Nominations of Charles W. Duncan, Jr.,
To Be Secretary of Energy and W. Graham
Claytor, Jr., To Be Deputy Secretary of
Defense. July 20, 1979*

As you know, Secretary of Energy Schlesinger has twice asked the President to accept his resignation. As you also know, Secretary Schlesinger has previously stated his intention to leave the Department of Energy by the fall of this year. The President will nominate Deputy Secretary of Defense Charles William Duncan, Jr., to succeed Secretary Schlesinger. Additionally, the President will nominate W. Graham Claytor, Jr., Secretary of the Navy, to succeed Mr. Duncan as Deputy Secretary of Defense.

The exact date of Secretary Schlesinger's departure will be determined by the President and Secretary Schlesinger, consistent with the mutual desire for a smooth transition. Until that time the Secretary will continue to have the President's full confidence and support.

Mr. Duncan, who has served as Deputy Secretary of Defense since the beginning of this administration, has proven to be a manager of exceptional skill at the Department of Defense. Prior to entering

Government service, he had extensive experience in managing some of the largest public and private enterprises in the world. The President feels that Mr. Duncan will provide the sort of leadership that is needed in our continuing efforts to deal with our energy problems.

NOTE: Press Secretary Jody Powell read the announcement at 3:45 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

Department of Energy

*Exchange of Letters on the Resignation of
James R. Schlesinger as Secretary.
July 20, 1979*

To Secretary James Schlesinger

With regret but with great appreciation I accept your resignation as Secretary of Energy. Under the most difficult of circumstances you have performed your many duties superbly.

The progress you have described in your letter of resignation has been the product of a team effort, and you have headed the team. It may be many years before the people of our nation can realize the benefits which have already been brought to them by your accomplishments.

During the months ahead, with your advice and support, we will implement the program we have evolved together. An aroused and united country can then guarantee our vital energy security.

You have my best wishes and thanks.
Sincerely,

JIMMY CARTER

Dear Mr. President:

It is now two and one-half years since you assigned to me the onerous and mis-

cellaneous responsibilities falling to the lot of the "energy czar." My tenure in that anomalous position has by far exceeded that of any of my predecessors. It has covered the establishment of this Department, the long battle over passage of the National Energy Act of 1978, the severe short-term difficulties posed by the fall of the Shah, the Iranian shutdown and its aftermath—as well as such lesser matters as the coal strike of 1978 and the natural gas crisis of 1977.

As we discussed prior to the Tokyo Summit, it would be far better for you to have in place one who is less scarred by earlier battles. On August 4 I shall have completed two years in this office. I trust that you will accept the resignation that I have previously offered. I would thus hope to be out of office by October 1—the second anniversary of the establishment of this Department. In the interim I shall provide steady and continuing support for the new programs you have initiated and ready assistance to Charles Duncan during this period of transition.

Mr. President, under your leadership, the energy problems, so easy to ignore, have come to be better understood. Conservation, so widely dismissed a few years ago, has now become a simple reality. The thirty year war over natural gas pricing has been ended. The controls on oil prices—with their crippling effects—are being phased out. The nuclear option has been preserved—and the age of renewables has been initiated. We have made a start on a synthetics program which promises within a decade to become massive. Despite all the difficulties, impressive achievements have occurred during these last two years.

Yet, despite all the efforts, Mr. President, I fear that the depth of our national problem has not as yet been accepted by the American people. The severe impacts

on our economy—and potentially on our political and social institutions—posed by the prospective oil stringencies of the 1980's have not been fully recognized. Even more important, the geopolitical implications of the dependence of the United States and her allies on the most volatile and vulnerable region in the world should cause the deepest apprehensions. The geostrategic risks are stark—as is the attendant precariousness of supply. The revolution in Iran, as the embargo before it, should have swept away all illusions regarding these geostrategic risks.

The task remaining is therefore, Mr. President, an imposing one. You shall have whatever assistance I can provide—as well as my best wishes—as you continue to grapple with these intractable problems.

Sincerely yours,

JAMES R. SCHLESINGER

[The President, The White House, Washington, D.C. 20500]

Changes in the Cabinet

Remarks to Reporters. July 20, 1979

I have a brief statement to make, consisting of five parts.

First, after a long and very careful assessment, I have made some major changes in my Cabinet.

Secondly, these changes are all constructive, and the transition from one leader to another in each case will be orderly and properly conducted.

Third, I do not expect any further resignations from the Cabinet, other than those that have already been made. There are a few vacancies which I will fill without delay.

Fourth, I want to express my thanks to those who have served and who will now be leaving.

And fifth, I need the full support of the American people in the future.

I am well pleased with all the changes that have been made. Every single change has been a positive change. There is absolutely no doubt in my mind that I and my administration will now be better able to serve this country and to resolve those problems and to meet those challenges which I described to the American people in my television address Sunday evening.

Thank you very much.

NOTE: The President spoke at 4:17 p.m. in the Briefing Room at the White House.

Department of State

Nomination of J. Brian Atwood To Be an Assistant Secretary. July 20, 1979

The President today announced that he will nominate J. Brian Atwood, of Maryland, to be an Assistant Secretary of State for congressional relations. He will replace Douglas J. Bennet, Jr., who has resigned.

Atwood was born July 25, 1942, in Wareham, Mass. He received his B.A. in 1964 from Boston University and attended graduate studies at American University in 1970.

He was research analyst at the National Security Agency from 1964 to 1966. From 1966 to 1971, he worked for the Department of State, first as regional administrative specialist at Abidjan and then as personnel officer at Madrid. From 1971 to 1977, he was legislative assistant to Senator Thomas F. Eagleton. Since 1977 he has held the position of Deputy Assistant Secretary of State for Congressional Relations.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

July 14

The President returned to the White House from Camp David, Md.

July 17

The President met at the White House with:

- Zbigniew Brzezinski, Assistant to the President for National Security Affairs;
- the bipartisan congressional leadership;
- the senior White House staff;
- the Cabinet.

The White House announced that the members of the Cabinet and the senior White House staff have offered their resignations to the President.

July 18

The President met at the White House with:

- Dr. Brzezinski;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- Secretary of Housing and Urban Development Patricia R. Harris.

The White House announced that the President has appointed Hamilton Jordan, Assistant to the President, as White House chief of staff.

July 19

The President met at the White House with:

- Secretary of Health, Education, and Welfare Joseph A. Califano, Jr.;
- Dr. Brzezinski;
- Mr. Moore;

- Secretary of the Treasury W. Michael Blumenthal;
- Deputy Attorney General Benjamin R. Civiletti.

The President hosted a reception for Americans for SALT in the State Dining Room at the White House.

The President declared a major disaster for the State of Kentucky as a result of severe storms and flash flooding on July 15, which caused extensive public and private property damage.

The President declared a major disaster for the State of Wyoming as a result of severe storms and tornadoes on July 16, which caused extensive public and private property damage.

The President transmitted to the Congress the 1978 annual report of the National Advisory Council on Extension and Continuing Education.

July 20

The President met at the White House with:

- Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Dr. Brzezinski, and Mr. Jordan;
- Mr. Moore;
- Jaime Roldós, President-elect of Ecuador;
- Secretary of Transportation Brock Adams;
- Gov. Hugh Gallen of New Hampshire.

The President declared a major disaster for the Commonwealth of Virginia as a result of severe storms and flash flooding on July 15–16, which caused extensive public and private property damage.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

NOMINATIONS—Continued

Submitted July 16, 1979

DANIEL EDWARD LEACH, of Virginia, to be a member of the Equal Employment Opportunity Commission for the term expiring July 1, 1984 (reappointment).

Submitted July 18, 1978

WILLIAM P. HOBGOOD, of Virginia, to be an Assistant Secretary of Labor, vice Francis X. Burkhardt, resigned.

JAMES W. KEHOE, of Florida, to be United States District Judge for the Southern District of Florida, vice a new position created by P.L. 95–486, approved October 20, 1978.

Submitted July 19, 1979

JACK RICHARD PERRY, of Georgia, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Bulgaria.

FRANK GEORGE WISNER II, of the District of Columbia, a Foreign Service officer of Class two, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Zambia.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, July 27, 1979

Citizenship Day and Constitution Week, 1979

Proclamation 4670. July 23, 1979

*By the President of the United States
of America*

A Proclamation

On September 17, 1787, in Independence Hall, Philadelphia, our Founding Fathers adopted the Constitution of the United States. With this great document as its cornerstone, our country has become the finest example in all history of the principle of government by law, in which every individual is guaranteed certain inalienable rights. The strong beliefs of its authors in the worth of the individual and the rights to be enjoyed by all citizens have made the Constitution not only an enduring document but one which finds new life with the passing of years and continues to inspire freedom-seeking people all over the world.

On February 29, 1952, by joint resolution (36 U.S.C. 153), the Congress designated September 17 as Citizenship Day, in commemoration of the formation and signing of the Constitution as a reminder of the privileges and responsibilities of citizenship. By a joint resolution of August 2, 1956 (36 U.S.C. 159), Congress authorized the President to designate the

period beginning September 17 and ending September 23 of each year as Constitution Week and to issue a proclamation calling for the observance of that week.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, call upon appropriate Government officials to display the flag of the United States on all Government buildings on Citizenship Day, September 17, 1979. I urge Federal, State and local officials, as well as leaders of civic, educational and religious organizations to conduct meaningful ceremonies and programs on that day.

I also designate as Constitution Week the period beginning September 17 and ending September 23, 1979, and urge all Americans to observe that week with appropriate ceremonies and activities in their schools, churches and in other suitable places in order to foster a better understanding of the Constitution, and of the rights and duties of United States citizens.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of July, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

United States Sinai Support Mission

Executive Order 12150. July 23, 1979

By the authority vested in me as President of the United States of America, including Chapter 6 of Part II of the Foreign Assistance Act of 1961, as amended (22 U.S.C. 2348, 2348a.-2348c.), Section 1(b) of Executive Order No. 11896 of January 13, 1976, is hereby amended to read:

“(b) The Mission shall, in accordance with the Foreign Assistance Act of 1961, as amended, including Part II, Chapter 6 thereof, the Joint Resolution of October 13, 1975 (Public Law 94-110, 89 Stat. 572, 22 U.S.C. 2441 note), and the provisions of this Order, carry out the duties and responsibilities of the United States Government to implement the “United States Proposal for the Early Warning System in Sinai” in connection with the Basic Agreement between Egypt and Israel, signed on September 4, 1975, and the Annex to the Basic Agreement, as superseded by the Treaty of Peace between the Arab Republic of Egypt and the State of Israel, signed on March 26, 1979, and Article VII of the Appendix to Annex I of the Treaty of Peace, subject to broad policy guidance received through the Assistant to the President for National Security Affairs, and the continuous supervision and general direction of the Secretary of State pursuant to Section 622(c) of the Foreign Assistance Act of 1961, as amended (22 U.S.C. 2382(c)).”.

United Nations

**Nomination of James W. Spain To Be Deputy
U.S. Representative. July 23, 1979**

The President today announced that he will nominate James W. Spain, of California, to be Deputy Representative of the United States to the United Nations. He would replace James F. Leonard, who has been transferred to the position of deputy to Ambassador Robert Strauss.

Spain has been U.S. Ambassador to the United Republic of Tanzania since 1975.

He was born July 22, 1926, in Chicago, Ill. He received an M.A. from the University of Chicago in 1949 and a Ph. D. from Columbia University in 1959. He served in the U.S. Army from 1946 to 1947.

Spain was a consultant to the Secretary of the Army in Tokyo from 1949 to 1950, and cultural officer in Karachi from 1951 to 1953. From 1953 to 1955, he was a research fellow with the Ford Foundation, and from 1955 to 1963, he was a researcher and lecturer at Columbia University.

From 1963 to 1964, Spain was on the Policy Planning Staff at the State Department, and from 1964 to 1966, he was Director of the Office of Research and Analysis for Near East-South Asian Affairs. He was Country Director for Pakistan and Afghanistan from 1966 to 1969, and chargé d'affaires in Islamabad in 1969.

From 1970 to 1972, Spain was Consul General in Istanbul, and from 1972 to 1974, he was Deputy Chief of Mission in Ankara. In 1974-75 he was diplomat in residence at Florida State University, and in 1975 he served as a Foreign Service Inspector at the State Department.

National Credit Union Administration Board

***Nomination of Harold Alonza Black To Be a
Member. July 23, 1979***

The President today announced that he will nominate Harold Alonza Black, of Carrboro, N.C., to be a member of the National Credit Union Administration Board for a 2-year term.

Black is an associate professor of finance at the University of North Carolina's School of Business Administration.

He was born July 3, 1945, in Macon, Ga. He received a B.B.A. from the University of Georgia in 1966 and an M.A. (1968) and Ph. D. (1972) from Ohio State University. His major fields of interest are financial markets and institutions, monetary and macroeconomics.

Black was an assistant professor of economics at the University of Florida in Gainesville from 1971 to 1975. From 1976 to 1978, he was Deputy Director of the Department of Economic Research and Analysis in the Office of the Comptroller of the Currency, and also served as a lecturer in economics at Howard University.

Black is the author of numerous articles on economics and banking. He was a visiting professor in the National Urban League's Black Executive Exchange Program in 1977, and he received the Treasury Department's Special Achievement Award in 1977.

Budget Deferral

Message to the Congress. July 24, 1979

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report a new deferral of \$6.2 million in budget

authority for the Bureau of Prisons in the Department of Justice.

The details of this deferral are contained in the attached report.

JIMMY CARTER

The White House,
July 24, 1979.

NOTE: The attachment detailing the deferral is printed in the FEDERAL REGISTER of July 30, 1979.

National Mediation Board

***Nomination of Robert Joseph Brown To Be a
Member. July 24, 1979***

The President today announced that he will nominate Robert Joseph Brown, of Bethesda, Md., to be a member of the National Mediation Board for a term expiring July 1, 1982. He would replace David Stowe, whose term has expired.

Brown has been Under Secretary of Labor since 1977.

He was born September 10, 1929, in Seattle, Wash. He received an A.A. from the University of Minnesota in 1951.

From 1948 to 1954, Brown was a spinner with the Donaldson Co. in St. Paul, Minn., and served as president of United Auto Workers Local 41 in St. Paul. In 1952 and 1954, he was education representative of the Minnesota State CIO.

From 1955 to 1957, Brown worked for the State of Minnesota, writing manuals and reports. From 1957 to 1963, he was a personnel officer for the State, and from 1963 to 1965, he served as deputy commissioner of conservation for Minnesota. From 1965 to 1966, he was commissioner of employment security for the State of Minnesota.

Brown was Associate Manpower Administrator for the U.S. Department of

Labor from 1966 to 1974. From 1974 to 1977, he was Regional Administrator for the Labor Department in Denver, Colo.

United States Ambassador to the United Arab Emirates

Nomination of William D. Wolle.
July 25, 1979

The President today announced that he will nominate William D. Wolle, of Sioux City, Iowa, to be Ambassador Extraordinary and Plenipotentiary of the United States to the United Arab Emirates. He would replace Francois M. Dickman, who is being transferred to another post.

Wolle has been director of the Office of Research and Analysis for Near East and South Asia at the State Department since 1978.

He was born March 11, 1928, in Sioux City, Iowa. He received a B.A. from Morningside College in 1949 and an M.I.A. from Columbia University in 1951. He served in the U.S. Army from 1946 to 1947.

Wolle joined the Foreign Service in 1951 and was posted in Baghdad, Manchester, Beirut, Aden, and Jidda. From 1962 to 1965, he was at the State Department as an international economist, then an international relations officer. From 1965 to 1967, he was officer in charge of Arab-Israeli affairs.

In 1967-68 Wolle attended the National War College, and from 1968 to 1970, he was counselor for political affairs in Kuwait. He was economic-commercial officer in Amman from 1970 to 1972 and commercial officer in Nairobi from 1972 to 1974. From 1974 to 1978, he was Ambassador to the Sultanate of Oman.

Federal Reserve System

Nomination of Paul A. Volcker To Be Chairman of the Board of Governors.
July 25, 1979

The President will nominate Paul A. Volcker as Chairman of the Federal Reserve Board. Mr. Volcker has been President of the Federal Reserve Bank of New York since 1975.

The President said, in making the announcement, "Mr. Volcker has broad economic and financial experience and enjoys an outstanding international reputation. He shares my determination to vigorously pursue the battle against inflation at home and to ensure the strength and stability of the dollar abroad."

Mr. Volcker served as Deputy Under Secretary of Treasury for Monetary Affairs, 1963 to 1965, and Under Secretary of Treasury for Monetary Affairs, 1969 to 1974. Mr. Volcker is a 1949 graduate of Princeton University. He received master's degree in political economics from Harvard and did postgraduate work at the London School of Economics. He was vice president and director of planning for the Chase Manhattan Bank from 1965 to 1969.

NOTE: Press Secretary Jody Powell read the announcement at 10:30 a.m. to reporters assembled in the Briefing Room at the White House.

Senior Adviser to the President

Appointment of Hedley W. Donovan.
July 25, 1979

The President has asked Mr. Hedley Donovan to serve as a Senior Adviser to the President. Mr. Donovan has accepted the position. He will provide substantive advice on the full range of matters before

the President and will undertake special assignments which the President may request from time to time.

Mr. Donovan will work in the White House and report only to the President. He will assume his responsibilities in mid-August. The details and duration of these responsibilities will be determined by the President and Mr. Donovan.

Mr. Donovan retired on June 1 as editor-in-chief of Time, Incorporated, a position he had held since 1964. From 1959 until 1964, he was editorial director of Time, Incorporated. He joined Fortune magazine in 1945 as a writer and in 1953 moved up to managing editor, a position he held until 1959.

Mr. Donovan graduated from the University of Minnesota in 1934 and was a Rhodes Scholar at Oxford. He was a reporter with the Washington Post from 1937 to 1942. He then served in the United States Navy during most of the Second World War.

He was born May 24, 1914.

NOTE: Press Secretary Jody Powell read the announcement at 3 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

The Cyprus Conflict

Letter to the Speaker of the House and the Chairman of the Senate Foreign Relations Committee. July 25, 1979

To Speaker Tip O'Neill (To Chairman Frank Church)

In accordance with the provisions of Public Law 95-384, I am submitting the following report on progress made during the past sixty days toward the conclusion of a negotiated solution of the Cyprus problem.

In my last report to the Congress on Cyprus, dated June 4, I took note of the decision reached by President Kyprianou and Turkish Cypriot leader Denktash during their May 18-19 meetings to resume intercommunal negotiations on June 15. These negotiations resumed as scheduled under the chairmanship of United Nations Under Secretary General Perez de Cuellar. A number of procedural issues were settled in the course of the first session. Unfortunately, however, differences soon arose over the interpretation of the ten-point communique agreed upon in Nicosia on May 18-19, which serves as a broad agenda for the talks. The Greek Cypriots took the position that the Varosha issue should be discussed first in accordance with point five of the communique which states that "priority will be given to reaching agreement on the resettlement of Varosha." The Turkish Cypriots, on the other hand, maintained that point two of the communique, dealing with the overall basis for the talks, should be discussed first.

When it became clear that these differences of approach could not easily be overcome, Under Secretary General Perez de Cuellar decided to recess the negotiations on June 22 and to pursue a compromise resolution through informal consultations with the parties. These consultations have now been in progress in Nicosia for some four weeks. As of this writing, no firm date has been set for reconvening the talks, although there have been indications of greater flexibility and the elements of a solution are beginning to emerge. Our assessment is that given sufficient determination on the part of all concerned a practical way can be found out of these current difficulties that will permit the negotiators to return to the table within a short time. I assure you that this Administration will continue to work

closely with the United Nations, the Cypriot parties and our allies both to overcome the present, hopefully temporary, difficulties and to help ensure ultimate success in the negotiations.

The Turkish Cypriot side has not yet given final endorsement to the procedures worked out in Nicosia on May 18-19 concerning the formation of a joint committee to trace and account for missing persons in Cyprus. With the assistance of expert organizations such as the International Red Cross, the proposed joint committee should be in a position to resolve this long-standing humanitarian problem.

I enclose with this report a copy of Secretary-General Waldheim's comprehensive report on May 31 to the United Nations Security Council on the United Nations operation in Cyprus.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Frank Church, chairman of the Senate Foreign Relations Committee.

Merit Systems Protection Board

Nomination of Ronald P. Wertheim To Be a Member. July 25, 1979

The President today announced that he will nominate Ronald P. Wertheim, of Washington, D.C., to be a member of the Merit Systems Protection Board for a term expiring March 1, 1981.

Wertheim is a partner in the Washington law firm of Ginsburg, Feldman and Bress, specializing in Federal litigation and practice before Federal regulatory agencies.

He was born September 7, 1933, in Philadelphia, Pa. He is a graduate of the

Wharton School of Finance and Commerce and the University of Pennsylvania Law School. He also received the diploma of The Hague Academy of International Law in 1962.

He served as assistant public defender in Philadelphia from 1959 to 1961, and earlier practiced law there. He was an associate professor of law at the University of Virginia from 1961 to 1964.

From 1964 to 1968, Wertheim was with the Peace Corps, serving as Deputy General Counsel and then as associate director of the Peace Corps in Brazil. He has been with Ginsburg, Feldman and Bress since 1969. In 1977 he served as Alternate U.S. Representative to the United Nations Conference on Law of the Sea.

Wertheim is a trustee of Arena Stage. He is also a director of the nonprofit Associates for Renewal in Education, Inc., a member of the American Civil Liberties Union, and was a founding trustee of the Capitol Children's Museum.

President's Commission on the Coal Industry

Statement on Receiving the Commission's Report. July 25, 1979

Increased coal production is a crucial element of the energy program I outlined to the Nation on July 16. The bold and constructive recommendations of the Coal Commission played an important part in the design of that program, and I deeply appreciate the work that the Commission has done. Today's discussion with the Commission and with representatives of the Congressional Coal Caucus was helpful in underlining the importance of a more active immediate effort to convert

our Nation to reliance on our bountiful supplies of coal.

I agree with the Commission's view that we can convert to coal without sacrificing our environment or the health and safety of coal workers.

At a time when thousands of coal miners have been thrown out of work, we must redouble our efforts to insist that the energy needs of our Nation are supplied as much as possible by coal.

THE PRESIDENT'S NEWS CONFERENCE OF JULY 25, 1979

NATIONAL GOALS

THE PRESIDENT. *My fellow citizens and men and women of the press:*

Ten days ago, I spoke to you about my deep concern for the future of our country—about a crisis of the American spirit, which I know to be just as real as the problems that face us on energy or inflation or any other problem of a material nature. But I also know that we can overcome these crises by uniting in a common purpose as we have done so often in the past when our Nation faces a serious challenge. The opportunity which we now have is to seize control of our energy future—to work together to overcome our dangerous overdependence on foreign oil.

Millions of Americans have responded positively to what I said—because they know that I'm telling the truth.

We have lost confidence in our government, and we have lost confidence in many other institutions—all of us know that. But we also know that we can overcome the pessimism, and with

patriotism and with hard work, we can move forward together as Americans.

In these 10 days since I addressed the Nation, I have moved swiftly—I do not believe too swiftly—to create a better administration team to work with me, a team that will be unified, a team that will be filled with confidence, a team that will be in good fighting shape to face the problems together.

And during this same period, I have proposed to the Congress a bold program to harness American ingenuity and to harness American strength to lay a groundwork for American energy security. This massive effort will cost a great deal of money, funds that can only come from a windfall profits tax on the oil companies, a tax on profits which the oil companies have not earned.

The American people overwhelmingly support such a tax, a message clearly demonstrated by the action already taken by the House of Representatives of our U.S. Congress, which has passed a bill which will finance the energy proposal that I have made and still leave plenty of new funds, additional funds, for the oil companies to proceed with exploration and production of new oil and new gas within our own country.

Now it is the turn of the United States Senate to act, and there will be a massive struggle to gut the windfall profits tax bill. If this happens, then we cannot reach our energy goals.

I want to serve notice tonight that I will do everything in my power as President to see that the windfall profits tax is passed, because I consider it to be crucial to our Nation's future.

I need your help. I need the help of the people of America. This is a democracy. Your voice can be heard. Your voice must be heard. Those of you who believe in the

future of our country, those of you who believe that our energy program must be passed, please speak to the Congress of the United States and especially to the United States Senate, which still has the responsibility to act.

Based on this windfall profits tax on the oil companies, we will have the resources to meet the energy challenge which we must face together in the future. And we will have taken a major step toward uniting our country in the effort to restore our spirit, the spirit of America, and our confidence, our confidence as people in the future of our great country.

Thank you very much. And now I'd like to answer questions.

Mr. Cormier [Frank Cormier, Associated Press].

QUESTIONS

FEDERAL BUDGET

Q. Mr. President, Republicans in the House are talking about introducing what they call a budget of hope, as contrasted to what they call your budget of despair. And their budget of hope, so-called, they say is going to be roomy enough to accommodate a very large election year tax cut for all of us. Now, that might be pretty hard to vote against in an election year. I wonder what you think about it.

THE PRESIDENT. I believe the Congress and the American people have enough judgment to know that you can't get something for nothing, that there is no free lunch involved. This is not a time for wastefulness. It's not a time to destroy our budget. It's not a time to avoid the responsibilities that we all have to make some sacrifice based on a belief and a confidence in the future of our Nation.

I think we will be restoring hope if we pass a program which, by the way, the

House has already passed, with the support of some Republicans, with the opposition of others. But I think that the bold proposals that we have made do have the confidence of the American people, do have the support of the American people, and my prediction is that before the Congress adjourns in 1979, we will have this program passed with or without the support of the Republicans in the House.

CABINET CHANGES; 1980 PRESIDENTIAL CAMPAIGN

Q. Mr. President, was it worth it to you to cause some destabilization of the dollar and demoralization of the Federal Government, spreading doubt through the land, in order to repudiate much of your Cabinet? And do you agree with Senator Jackson that your problems will force you to forgo any reelection plans and hand the Democratic nomination to Senator Kennedy?

THE PRESIDENT. Well, let me answer the first question first.

I felt, and still feel, that I had to make some changes in my Cabinet, as I said earlier, to create a new team to work with me, a team that will be united, that will be forceful and aggressive and confident in facing the problems that we must meet in the months ahead. I have no apology to make for it. Some people thought it was made too rapidly. I had the choice of either dragging it out week after week after week, with speculation and doubt and confusion, or getting it over, in effect, in 48 hours. And I felt that the abrupt action, based on a long and careful consideration, was the best approach.

Senator Jackson. Three or four years ago I was running for President against Senator Jackson. At that time he pre-

dicted that he would be the next President, beginning in 1977. His judgment was not very good then.

And now I'm ready for the next question. [*Laughter*]

PRESIDENT'S HEALTH ; SECRETARY OF
ENERGY

Q. Sir, could you please tell me about your pick of Mr. Duncan as the new Energy Secretary?

THE PRESIDENT. Yes.

Q. That's the second in a line of Energy Secretaries from the Defense Department. Is this a signal to the American people that the White House is going to be taking control of energy decisions, sir, and that in fact the Energy Department is going to be taking a second place? And also, sir, there has been some concern on your health in the recent months? Could you please comment on that, please?

THE PRESIDENT. I feel perfectly healthy.

The President is the one who makes the basic decisions on policy of the administration, whether it be in health, education, welfare, transportation, housing, energy, defense, foreign affairs. The President, I and all my predecessors seek—all of us seek the widest possible area of consultation and advice, because we desperately want to make the right decisions for our country. That's my motivation.

Jim Schlesinger, the present Secretary of Energy, has done an excellent job in putting together a new department under the most difficult circumstances and putting through Congress the major parts of an energy program that he and I shaped along with the help of many others early in 1977, more than 2 years ago. About 65 percent of that package was passed in November of 1978. At that time, Secretary Schlesinger asked that he be permitted to

step down. I asked him to stay on, to help me during this session of the Congress. In February he asked again that he be permitted to step down. Since we had not passed any legislation at that time, because of the efforts of the oil lobby concerning oil, I wanted Jim Schlesinger to stay and help me evolve and present to the Congress the program that I have just outlined to the American people.

Now I've decided to let Jim Schlesinger step down as Secretary of Energy. The change will be made in an orderly fashion. The transition will be done methodically and properly, as soon as Charles Duncan is confirmed.

Charles Duncan is an outstanding manager. He has done an absolutely superb job as [Deputy]¹ Secretary of Defense. I consider him to be qualified to be Secretary of any department in the Government, including that of Defense. I asked him to take the Energy Department, because I think at this point it does need to begin to implement the programs that Congress has already passed and will be passing this year. He's a tough, competent manager. In addition to doing a good job in Defense, he's also had a superb career, educational background, and experience in the management of some of the largest responsibilities in the free enterprise system of our country. I have no doubt that he will do an equally good job as Secretary of Energy.

HAMILTON JORDAN

Q. Mr. President, sir, what qualifications does Hamilton Jordan have, aside from the loyalty to you, to be chief of staff in the White House, and to what extent will he be making decisions at a level below your level?

¹ Printed in the transcript.

THE PRESIDENT. This event, my designation of Hamilton Jordan as chief of staff, has been one of the most grossly distorted of my career in politics. Hamilton Jordan will be chief of staff—chief of the White House staff. Because of Hamilton's knowledge of me, his closeness to me, his superb leadership capabilities, the trust that other people in the White House have in him repeatedly since I've been President, the other top members of my staff have asked me to let Hamilton be chief of staff. Had he been willing earlier, he would have already been chief of staff, like a year or a year and a half ago.

Recently I asked Hamilton again to take over the job of chief of staff. He's agreed to do it. He has my full support, he has the full support of all others who work in the White House with us. He will not be the chief of the Cabinet; I will be chief of the Cabinet. He will not be the chief of the Congress; the Congress is an independent body. We'll have the same relationship with the Congress, with the same people that we have all the time.

Hamilton Jordan will be chief of the White House staff. That's his responsibility, assigned by me. That's the job he will fulfill, and I have absolutely no doubt, based on his past experience and my knowledge of him, that he will do a superb job.

RELATIONS WITH THE NEWS MEDIA

Q. Mr. President, you were reported to have told some of those whom you saw at Camp David about reservations that you had about the Washington press corps. It was reported that you have expressed those reservations, to use a mild word, even more strongly to the Cabinet last Tuesday. Tonight you appear, tonight, before the Washington press corps

and others. You are reported to have said you wanted to speak more to the press outside Washington.

To put the question simply: What bugs you about the Washington press corps? [Laughter]

THE PRESIDENT. I'm sure that if I said that the Washington press corps was a group of superbly qualified, highly objective, extremely intelligent analysts of the American news scene, that all of you would agree completely—[laughter]—if I said it.

I have nothing against the White House press corps nor the Washington press. My own judgment is that for the first 2½ years, when I felt it was extremely important for me in effect to get acquainted with the American people, to get acquainted with the Washington scene, that I have had, I think, between 50 and 60 press conferences exclusively with the White House press corps. Now I will continue to have interviews with the White House press corps, as we are doing tonight, but not twice a month.

In lieu of that, and I don't think with any reflection on the White House press corps, my decision is now to go to different places around the country. I'll be going to Louisville, Kentucky, area next week. And then sometimes to Miami and Bangor, Maine, and San Francisco, and perhaps Des Moines, Iowa, to have press conferences there and to answer questions both from professional members of the press and also from American people in a townhall meeting format. The Washington press corps will accompany me, the White House press corps, and I will answer questions from you, too.

But I think it's better for me not to have all the questions focused on me by a group that's almost exclusively oriented within Washington as a prime place of

their residence and interest, and I would like to let my voice be heard and felt and the questions be heard by me and felt from various places in the country.

1980 PRESIDENTIAL CAMPAIGN

Q. Mr. President, if I may follow through on part of the thrust of Helen's [Helen Thomas, United Press International] earlier question; as you know, there have been suggestions that in order to restore the confidence that you have talked about in the country, and in order to restore confidence in the Presidency, that perhaps you might consider withdrawing yourself from politics next year, turning your attention primarily to governing the Nation. Now, although recent suggestions come from a Republican Member of the Senate—you have in recent months advocated the concept of a one-term, 6-year Presidency. I wonder if you might have considered not entering the 1980 campaign.

THE PRESIDENT. I think it's a compliment to me that Republican leaders are advocating that I not run again. I have considered all the options, and my decision will be announced later on this year.

VALUE OF THE DOLLAR

Q. Mr. President, are you planning to install any foreign exchange controls or capital controls in order to protect the decline of the dollar, and are you planning any further appointments from the corporate section?

THE PRESIDENT. I do not contemplate taking action of that kind. I think the dollar is sound. In the long run, the principles which will decide the value of the dollar are determined by how effective we are in dealing with the energy question, how effective we are in dealing with

the inflation question, how much we act to resolve the adverse balance of payments, how we deal with the Federal budget deficit, and so forth. The basic underlying economic factors will be what causes the value of the dollar, not some contrived action that I might take to interfere with the normal operation of the international monetary scene.

I have just announced today that I'm appointing Paul Volcker, a highly qualified person, internationally respected as a knowledgeable man on monetary systems, on whom I can depend. There's no doubt that he will work harmoniously with me, with Bill Miller, who will be the new Secretary of the Treasury. And I believe that this new team will be very effective.

I would like to reserve the right to make future appointments from the corporate world or the academic world or the journalistic world or from among mayors and Governors or Members of the Congress. But I can't exclude the corporate sector. But I can't say now where I'll make future appointments from.

Yes, sir. In the back row.

NICARAGUA

Q. Mr. President, I wonder, in looking at Nicaragua, if we are in danger of another Cuba there, and what the White House plans to do in terms of taking some positive steps to assure their safety?

THE PRESIDENT. It's a mistake for Americans to assume or to claim that every time an evolutionary change takes place, or even an abrupt change takes place in this hemisphere, that somehow it's the result of secret, massive Cuban intervention. The fact in Nicaragua is that the incumbent government, the Somoza regime, lost the confidence of the Nicaraguan people. There was a broad range of forces assembled to replace Somoza and

his regime as the head of the Nicaraguan Government.

We worked as closely as we could without intervening in the internal affairs of Nicaragua with the neighboring countries and with the so-called Andean Group in the northern part of South America to bring about an orderly transition. Our effort was to let the people of Nicaragua ultimately make a decision on who should be their leader, what form of government they should have. We also wanted to minimize bloodshed and to restore stability. That is presently being done. We have a good relationship with the new government. We hope to improve it. We are providing some minimum humanitarian aid for the people of Nicaragua, who've suffered so much.

I think that our posture in Nicaragua is a proper one. I do not attribute at all the change in Nicaragua to Cuba. I think the people of Nicaragua have got enough judgment to make their own decisions, and we will use our efforts in a proper fashion without interventionism, to let the Nicaraguans let their voice be heard in shaping their own affairs.

CHANGES IN THE CABINET

Q. Mr. President, I would like to follow up on the earlier question about Hamilton Jordan.

THE PRESIDENT. Good.

Q. Some of your fellow Democrats on Capitol Hill feel you've misdiagnosed your biggest problem—leading effectively. They claim it lies largely in the senior White House staff, and that the Cabinet shakeup won't cure it. Have any congressional Democrats made that criticism to you directly, and how would you respond to it?

THE PRESIDENT. No, they have not. A few have said that in the heat of the

publicity focused on the changes that took place over a 2- or 3-day period—and that is expectable—to be expected.

I did not make the rapid changes in my Cabinet without, obviously, some sense that there would be a disturbance in Washington, in the Congress, and otherwise. But I have no doubt that the changes I made are in the best interests of me as President, in the best interests of my administration, which is trying to serve the American people in the finest fashion, and also in the best interests of our country, whom we all serve.

I have had many congratulations given to me by Members of the Congress, and I might say that some of those changes that I did make were long advocated by Members of the Congress.

So, I don't have any hesitancy at all to say that the changes I made were the best, and I don't have any hesitancy to say that I think it was better to go ahead and get it done in about 2 days, rather than to drag it out over a period of weeks or months.

THE NATION'S ECONOMY

Q. Mr. President, with the country apparently headed into a recession, and with unemployment expected to go up, what new ideas do you have, sir, to deal with the worsening economy?

THE PRESIDENT. I think this is a time for stability. I think it's a time for the continuation of our present economic monetary and budgetary policies. While I was at Camp David, I invited a fairly large group of Members of the Congress—Democrats, Republicans, from the House and the Senate—to consult with me. And there was almost unanimity there, surprisingly so, that we ought to maintain our commitment, that inflation is the biggest single threat to the American people, both

rich and poor, and to the future of our Nation's economy in the months ahead.

There will be a period of slow growth in our country. I believe that next year we'll see this growth restored to a moderate rate. We will watch this situation very closely. Obviously inflation is not the only factor. I am deeply concerned about the chronic unemployment in some of the types of people in our country. We've done the best we could to reduce unemployment. We've had remarkable success in creating 8 million new jobs. I saw some figures the other day that said the unemployment compensation had been slashed 55 percent. But we're going to watch unemployment.

But my judgment now is to maintain our steady course and to dwell as best I can on a balanced growth in the economy as best we can manage, but let us remember that inflation is the biggest threat to all Americans at this time.

WINDFALL PROFITS TAX

Q. Mr. President, related to your earlier statement about energy, there's talk in the Senate about exemptions of the first 3,000 barrels of oil produced daily by independent oilmen from the windfall profits tax. How would this or a plowback provision or other exemptions affect your energy security corporation, the other parts of your bill, and how much room does the Senate have to tamper with the House-passed bill?

THE PRESIDENT. We need the revenues that would have been derived from my original windfall profits tax proposal to the House. The net income from the House-passed bill is roughly the same as I proposed. My proposal was a permanent tax; the House passed a tax that will be terminated in 1990.

There's a threat now that the oil lobby will focus its attention on the Senate. I think it's almost a sure thing. And unless the American people speak out, because of one reason or another claimed by some of the Members of the Senate, we'll see the windfall profits tax robbed under the proposals that you described of about \$54 billion, which will make it impossible for us to have an adequate synthetic fuels program, to have an adequate mass transit program, to have an adequate care for the poor people who are severely impacted by rapidly rising energy costs. It would in effect make it impossible for us to meet our crucial energy goals.

And I think that I cannot prevail alone here in Washington with an oil lobby working quietly unless the American people let their voice be heard. But if these exemptions are made, it'll be a grant of \$54 billion to the oil companies on top of greatly increased income to the oil companies by the phased decontrol, and they'll be able to spend these new revenues, which they have not earned, in order to increase production of oil and gas in our own country.

So, what you describe is a great threat to the very program that is so important to me and to the country.

PATRICIA ROBERTS HARRIS

Q. Mr. President, does Mrs. Harris have your full approval and encouragement to continue such HEW programs as the desegregation of the North Carolina college system, the desegregation of public schools in Chicago and other cities, and the antismoking campaign? And if the answer to that question is yes, why did you fire Secretary Califano?

THE PRESIDENT. The answer is yes.

I think the reasons for my replacement of the Cabinet are something that I don't care to discuss publicly. I have nothing but gratitude and admiration for the people that have served in my administration and left.

I expect Mrs. Harris to carry out the provisions of the laws of this country, to represent our Nation in the courts when suits are brought concerning equal opportunity in all its phases, and to be responsible for the health of Americans. And she will have my support just as the previous Secretary had.

I have no doubt that she will do an excellent job both in the administration of that very complicated bureaucracy—Health, Education, and Welfare—and I have no doubt that she has a basic commitment to the service of the constituent groups that are uniquely dependent upon government, particularly HEW. And I have no doubt that she will be a superb teamplayer, able to work with me, to work with the White House staff, to work with the Congress, and to work with other Cabinet members to carry out the policies of my administration, once those policies have been established by me.

VALUE OF THE DOLLAR

Q. Sir, you said earlier that you think that the U.S. dollar is sound. The dollar seems to be taking a pounding on the foreign exchange markets, and it's approaching the low levels that once before you had to launch a dramatic rescue program last November.

In addition to that, you've just named Paul Volcker, a conservative Republican, to head the Federal Reserve Board. How do the poundings that the dollar is undergoing on the exchange markets and your naming of Mr. Volcker square with your earlier description?

THE PRESIDENT. I see no incompatibility at all. Mr. Volcker, by the way, happens to be a Democrat. But he, I think, is a conservative in that he believes in controlling inflation and he believes in maintaining a sound dollar.

I can't guarantee what the exact value of the dollar might be in months ahead. We don't freeze the value of the dollar. That's determined by international monetary considerations. What I said was that the basic value of the dollar will be determined not by the identity of a President or even the identity of the Chairman of the Federal Reserve; it will be shaped by how effectively our Nation moves to meet the energy challenge. There is some present doubt that the Congress will pass the proposals that I have put forward. I have no doubt that the dollar will increase in value when the Congress has passed the programs that I proposed. And, obviously, the dollar will be adversely affected if inflation should increase.

My prediction is that inflation will decrease in the months ahead. And I'm sure that the dollar would be adversely affected if I abandoned my commitment to a responsible Federal budget and start on wild spending programs when they are not needed.

So, basic decisions made of fiscal soundness in our Government is a much more important factor in shaping the value of the dollar than is the identity of officials who might serve in a transient time.

STANDBY GASOLINE RATIONING PLAN

Q. Mr. President, the House of Representatives today amended a standby rationing plan bill to give either House the authority to veto any rationing plan that you would come up with. Now, is

that acceptable to you, or if that survives in both Houses, would you veto the legislation?

THE PRESIDENT. This action today by the House illustrates once again the timidity of the Congress in dealing with a sensitive political issue. I criticized the House when they failed to pass the rationing plan a few months ago. The House leadership has now promised me that an adequate rationing standby plan would be passed.

I don't object to the one-House veto if it's done expeditiously. I think only 15 days would elapse. What I do object to are the other restraints that have been placed on the evolution of a standby gasoline rationing plan. Under the proposed plan, even before it got to the floor of the House today, for instance, we could have a 50-percent shortage of gasoline, which would almost devastate our Nation's economy, and unless that shortage lasted for 20 days, I could not implement a rationing plan.

So, I hope that the House and the Senate will rapidly pass an adequate standby rationing plan so that I can develop one, have it on the shelf, if we have a severe and sustained shortage of gasoline, assure that we have equitable distribution. And I have no objection to the House, within 2 weeks, either approving the plan that I have tried to put into being, or if either House wants to veto it, they can do that. But I need the authority to go ahead with a good plan and make sure that it can be implemented rapidly when and if it's needed.

MR. CORMIER. Thank you, Mr. President.

THE PRESIDENT. Thank you.

NOTE: President Carter's fifty-first news conference began at 9 p.m. in the East Room at the White House. It was broadcast live on radio and television.

Trade Agreements Act of 1979

*Remarks on Signing H.R. 4537 Into Law.
July 26, 1979*

THE PRESIDENT. I think the number of people who are assembled here and the kind of people who are assembled here in the Rose Garden is indicative of the importance of the legislation that I am about to sign.

I will sign into law in a few minutes perhaps the most important and far-reaching piece of trade legislation in the history of the United States.

The Trade Agreements Act of 1979 received an overwhelming, bipartisan mandate from both Houses of the United States Congress. And this is an achievement of cooperation that's almost unprecedented between the executive branch of Government, the Congress, business, labor, farmers, consumers, others interested in the economic strength of our country. This degree of unity and cooperation sets a prime example, a demonstration of what we can do during these troubled times when divisiveness is so often a part of the American scene.

I'd like to pause here and make a very important observation. I know that everyone will agree with what I am about to say. Special Trade Ambassador Robert Strauss did a masterful job throughout the Tokyo negotiations and throughout the equally important negotiations with the United States Congress, and I want to congratulate him. As modest as he is—[laughter]—I knew that if I didn't make that comment, it might go unmade. [Laughter]

I would like to say as President, though, that the first time I went to an economic summit meeting in London, there was a general knowledge—not belief—that the Tokyo Round that might

lead to this momentous achievement had reached a dead end and that it was very unlikely that it would ever be revived. I don't know of anyone else who could have done it except Bob Strauss. And the other leaders of the Western industrial nations have all expressed to me the same sentiments, that without Bob Strauss, from the United States, it would not have been possible.

I particularly want to praise the efforts of Chairman Russell Long and Abraham Ribicoff, of Bill Roth and Bob Dole in the Senate and of Chairman Al Ullman and Charlie Vanik, Barber Conable, Bill Frenzel in the House, and many others, both Democrats and Republicans, who put aside partisanship in order to work harmoniously for the best interests of our Nation.

We truly live in an interdependent world. Our dependence on foreign oil is one example of this. But this is just part of the picture. Today, one-third of all the agricultural acreage in our country is used to produce food and fiber for people who live outside the United States. One out of seven of our manufacturing jobs in this country go to produce goods which are sold overseas. The strength of the dollar is determined to a major degree by how successful we are in developing new markets for American goods. This legislation, which I will sign in a few minutes, will open up vast new opportunities for American exports.

The Trade Agreements Act of 1979 builds upon the foundation of one of the most highly publicized and well-known achievements of the Kennedy administration, the passage of similar legislation in 1962. This new legislation strengthens and solidifies America's position in the international trade community. It will revise the rules of international trade to create

a fairer and more equitable and more open environment for world trade.

This legislation will remove the barriers for fair trade and will reduce unfair trade practices which sometimes cheat those and hamper those who are interested in improving the quality of the world economy.

The trade reorganization proposal, which I have now presented to the Congress to change the mechanism within the Federal Government of dealing with trade, will strengthen the ability of our own Government to take advantage of these new opportunities described in the legislation on my left and will let us administer the provisions of this act more effectively.

Our Nation has the most productive economy which the world has ever known. Our agricultural abundance and our technological leadership are important sources of America's innate, unshakable strength. This legislation will help our manufactured goods and our agricultural products to become more fully competitive on the world market.

This legislation will also help us to preserve peace and prosperity. Expanded international trade brings strength and growth to economies throughout the world. It enhances understanding, it opens up thousands of unpublicized avenues of consultation and cooperation and the sharing of responsibility which quite often can help to alleviate political tensions and eliminated divisions that sometimes make international borders an obstacle rather than an avenue for cooperation.

Peace and expansion of human rights are natural byproducts of this lessening of tension and this increase of an acknowledged and productive interdependence. Increased American exports will mean new jobs for American workers, new

markets for American business, more secure income for American farmers, a strengthened American dollar, and lower costs for American consumers.

We all share the goal of a prosperous and secure America at peace with the world. This legislation provides us with an important milestone in preserving and promoting the economic strength and the political strength of the Nation we all love so much.

On behalf of the people of our country, I would like to thank those assembled here for the roles that you have played in making this momentous achievement possible.

Thank you very much.

[At this point, the President signed the bill.]

We've got a new law.

AMBASSADOR STRAUSS. *Mr. President, distinguished guests in the Congress, other dear friends in the Government:*

First, Mr. President, for myself and for my two primary colleagues, Ambassadors Wolff and McDonald, for all of our staffs out there and our other colleagues throughout the Government, for the country itself, I want to say to you what I have said on many occasions, that this truly has been a classic example of how the system can work. And at the forefront of that was your willingness to do the courageous, the tough, and take the tenacious positions that sometimes were less than popular. You took them in London, you took them in Bonn, and, more importantly, you took them all across America. You never choked, and the people who were representing you in the Congress, in the executive branch, Republicans or Democrats alike, never choked. And it's for that reason we have this bill.

And may I now say very quickly one additional thing. I know it's wrong, but to try to single out a few—I mentioned Ambassador McDonald, who was in Geneva, Ambassador Wolff who was here. I see

Julius Katz in the State Department, Dale Hathaway from the Agriculture Department; I see so many others. And for all of your staffs, I always seem to have a habit of getting a good deal more credit than most people think I deserve—not always more than I think I deserve. *[Laughter]*

But I do know who made all of this possible for the President and for our country, and, indeed, for the world, and it's all of you. And on a very personal basis, even though it's in this rather large group, I say to you, thank you, each, very much, and God bless us all and the country.

Thank you.

SENATOR LONG. Mr. President, I feel that this occasion vindicates my judgment that occurred before you took the oath of office as President. I fought to see that the Special Trade Representative would be a Cabinet-level job. And without that I don't think you could have gotten Bob Strauss for the job, and without that this effort might have failed.

THE PRESIDENT. Bob has always considered himself to be above the Cabinet. *[Laughter]* I hope he won't be offended by what you said. *[Laughter]*

SENATOR LONG. Well, we worked on this for a long time, and I think that after 4 years, all those of us on the Finance Committee and the Ways and Means Committee are extremely proud. We have to commend every Member. But in particular, I want to commend my dear friend and a great statesman, Abe Ribicoff, the chairman of our trade subcommittee, for the fine work he did on the Senate side, and the same goes for all the members of the committee—but Senator Ribicoff worked especially hard on that, and a great deal of this success is due to him.

Thank you.

REPRESENTATIVE ULLMAN. Mr. President, I want to echo the commendation

that you have made for the Ambassador and all those that assisted him; also for Charlie Vanik, chairman of our trade subcommittee, Russell Long, Abe Ribicoff, Guy Vander Jagt, Bill Frenzel, all of the people who—and, of course, Barber Conable—who participated in a major bipartisan effort. This, indeed, should set an example and should set the pace for other things we're doing in areas that are vital to the future security of America.

I well remember back in the summer of '73, when the Ways and Means Committee met long hours, hard decisions, drafting a creative new piece of legislation that took a totally new approach to the whole problem of trade. And we set up a procedure during those hard months that laid out for the Congress a timetable without which we would not be here today. And so, I think this whole effort from the very beginning to the end should be studied as an example for other decisions that we can make in this Government, at a very critical time when we're going to all have to begin working together better than we have sometimes in the past.

Thank you.

THE PRESIDENT. I want to thank all of you again and particularly the Members of Congress. It would be nice if I could call on many others, because there were so many who played leadership roles. But because of the press of time and because there are so many who had a role in this, I think I'll thank the rest of them from the bottom of my heart for the great role they played and all of you played in making this momentous achievement possible.

Thank you very much, everyone.

NOTE: The President spoke at 11:30 a.m. at the ceremony in the Rose Garden at the White House.

As enacted, H.R. 4537 is Public Law 96-39, approved July 26.

United States-Australia Agreement on Nuclear Energy

*Message to the Congress Transmitting the
Agreement. July 27, 1979*

To the Congress of the United States:

I am pleased to transmit to the Congress, pursuant to Section 123 d of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2153(d)), the text of the proposed Agreement Between the United States and Australia Concerning Peaceful Uses of Nuclear Energy and accompanying annex and agreed minute; my written approval, authorization and determination concerning the agreement; and the Memorandum of the Director of the United States Arms Control and Disarmament Agency with the Nuclear Proliferation Assessment Statement concerning the agreement. The joint memorandum submitted to me by the Secretaries of State and Energy, which includes a summary analysis of the provisions of the agreement, and the views of the Members of the Nuclear Regulatory Commission are also enclosed.

The proposed agreement with Australia is the first such agreement submitted to the Congress since enactment of the Nuclear Non-Proliferation Act of 1978, which I signed into law on March 10, 1978 and which, among other things, calls upon me to renegotiate existing peaceful nuclear cooperation agreements to obtain the new provisions set forth in that Act. In my judgment, the proposed agreement for cooperation between the United States and Australia, together with its agreed minute, meets all statutory requirements.

I am particularly pleased that this first agreement is with Australia, a strong supporter of the Non-Proliferation Treaty and of international non-proliferation efforts generally. The proposed agreement

reflects the desire of the Government of the United States and the Government of Australia to update the framework for peaceful nuclear cooperation between our two countries in a manner which recognizes both the shared non-proliferation objectives and the close relationship between the United States and Australia in the peaceful applications of nuclear energy. The proposed agreement will, in my view, further the non-proliferation and other foreign policy interests of the United States.

I have considered the views and recommendations of the interested agencies in reviewing the proposed agreement and have determined that its performance will promote, and will not constitute an unreasonable risk to, the common defense and security. Accordingly, I have approved the agreement and authorized its execution, and urge that the Congress give it favorable consideration.

JIMMY CARTER

The White House,
July 27, 1979.

Department of Housing and Urban Development

Nomination of Moon Landrieu To Be Secretary. July 27, 1979

The President will nominate Moon Landrieu, former mayor of New Orleans, as Secretary of Housing and Urban Development.

The President said, "Mayor Landrieu enjoys a national reputation as a progressive mayor and strong administrator, as well as a respected and effective spokesman for local government. His service at the Department of Housing and Urban Development will be a contribution to this

administration and to the country. He enjoys my full confidence and support, and I am confident that he will build upon the outstanding record of Secretary Harris."

Mayor Landrieu and Secretary Harris have already discussed transition plans. The details of the transition will be worked out in a manner that will ensure continuity and efficiency of service at HUD.

NOTE: Press Secretary Jody Powell read the announcement at 12:03 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

Solar Energy Development Bank

Letter to the Speaker of the House and the President of the Senate Transmitting Proposed Legislation. July 27, 1979

Dear Mr. Speaker: (Dear Mr. President:)

I am transmitting proposed legislation which would establish, within the Department of Housing and Urban Development, a Solar Energy Development Bank. This proposal is an essential element of my recently announced national strategy for accelerating the use of solar and other renewable resources. It provides for incentives which can, in conjunction with other governmental actions to be undertaken as part of the Administration's program, stimulate the installation of solar energy systems in residential and commercial properties on a significant scale.

The Solar Bank would be governed by a Board of Directors chaired by the Secretary of Housing and Urban Development. The Board would also include the

Secretary of Energy and the Secretary of the Treasury. The Board would establish all major Solar Bank policies, particularly the depth of the subsidies to be provided.

The proposed Bank would pay subsidies to private lenders for the purchase and installation of solar energy systems. These lenders would, in turn, provide below-market financing to builders or owners of residential and commercial properties. The subsidized portion of a loan allocable to the purchase and installation of solar energy systems would be limited to \$10,000 per unit for a one- to four-family structure, \$5,000 per unit (up to a maximum of \$500,000) for structures containing more than four units, and \$200,000 for commercial properties.

Funds for operation of the Solar Bank would be derived from the proposed Energy Security Trust Fund. For this purpose, authorized expenditures would be up to (a) \$35 million for fiscal year 1980 and (b) \$150 million annually for fiscal years 1981 through 1985. Personnel within the Department of Housing and Urban Development, including personnel of the Government National Mortgage Association, would be used to administer Solar Bank programs.

I view the Solar Bank as a key component in my program to accelerate the development and use of solar technologies. Together with my Administration's other solar energy initiatives, the Solar Bank will ensure a sound national solar strategy. These measures will provide critical assistance in overcoming our Nation's energy problems. I urge its early enactment.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Walter F. Mondale, President of the Senate.

Oil Import Reduction Program

Letter to the Speaker of the House and the President of the Senate Transmitting Tax Initiative Proposals. July 27, 1979

Dear Mr. Speaker: (Dear Mr. President:)

I am pleased to transmit to you the energy tax initiatives of my Oil Import Reduction Program.

On May 7, 1979, I transmitted to the Congress the second National Energy Plan, as required by section 801 of the Department of Energy Organization Act (Public Law 95-91). The initial step in that plan was to direct the phasing out of price controls on domestic crude oil. This was begun on June 1 of this year. By October 1, 1981, all domestic oil will be decontrolled.

The next step was to recommend the imposition of a windfall profits tax on domestic crude oil production and the creation of an Energy Security Trust Fund to utilize the tax revenues generated by the windfall profits tax and increased income tax collection attributable to decontrol. This proposal is presently pending before the Congress.

I now propose several tax incentives to help achieve the goals of the Oil Import Reduction Program.

First, to help achieve the goal of generating 20 percent of the Nation's energy requirements by the use of solar energy by the year 2000, I propose tax credits to encourage the use of solar energy devices in residential and commercial construction. In addition, I propose investment tax credits for solar equipment used for process heat in industrial and agricultural applications.

Second, to further reduce our reliance on imported oil, I propose production incentive tax credits for the production of shale oil and natural gas from unconven-

tional sources in addition to financial assistance which will be provided by the Energy Security Corporation. In addition, I propose to make woodburning stoves eligible for the residential energy credit, and make permanent the excise tax exemption for gasohol.

Finally, as I indicated on July 16, the Administration is moving to decontrol heavy oil and I propose to exempt it from the windfall profits tax.

These tax credits will encourage the development and use of new energy technologies and add significantly to our independence from foreign sources of petroleum.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Walter F. Mondale, President of the Senate.

Department of Transportation

Nomination of Neil Goldschmidt To Be Secretary. July 27, 1979

The President will nominate Neil Goldschmidt of Portland, Oregon, as Secretary of Transportation.

The President said, "Mayor Goldschmidt is known as an aggressive and innovative mayor with outstanding administrative abilities. He understands from personal experience the transportation needs of local governments. He will have my full support and confidence, and I have no doubt that he will be an outstanding Secretary of Transportation."

Mayor Goldschmidt and Acting Secretary of Transportation Graham Claytor have already discussed plans for a smooth transition.

Mayor Goldschmidt served as chairman of the transportation committee of the U.S. Conference of Mayors, and has established a transportation system in Portland that is nationally recognized.

NOTE: Press Secretary Jody Powell read the announcement at 4:32 p.m. to reporters assembled in the Briefing Room at the White House.

The press release also includes a transcript of the question-and-answer session which followed the announcement.

National Consumer Cooperative Bank

Nomination of Two Government Members of the Board of Directors. July 27, 1979

The President today announced that he will nominate the remaining two Government members of the Board of Directors of the National Consumer Cooperative Bank. They are:

WILLIAM A. CLEMENT, JR., Associate Administrator of SBA for Minority Small Business and Capital Ownership Development. Clement, 36, is a former vice president of the Citizens Trust Bank of Atlanta, Ga., one of the oldest and largest minority-owned banks in the country;

GRACIELA OLIVAREZ, Director of the Community Services Administration.

The other five Government members and the six public members of the Board of Directors were nominated on July 2.

Nicaragua

Announcement of Emergency Assistance and Trip of U.S. Ambassador. July 27, 1979

President Carter is sending a special flight to Nicaragua on Saturday, July 28, to deliver emergency food and medical

supplies. The U.S. Ambassador to Nicaragua, Lawrence A. Pezzullo, will return to Managua on Saturday's flight. He will present his credentials to the new Government of Nicaragua early next week. The President is sending this special plane as an expression of his personal good will to the people of Nicaragua and to the new Government and to symbolize the concern of Americans for the hunger and distress of the Nicaraguan people after many months of devastating conflict.

The United States has already provided 732 metric tons of emergency food supplies to Nicaragua. Another 1,000 tons of food from the United States is on its way to Nicaragua by ship. In addition, the United States is providing supplies and financial assistance for airlifts being carried out by the international committee of the Red Cross. Of 9,600 pounds of medical supplies purchased by the U.S. Government for shipment to Nicaragua, 75 percent has already been delivered, and the remaining 2,500 pounds of U.S.-purchased medicines, together with 3,300 pounds of Red Cross medical supplies and 5,200 pounds of baby formula, are arriving in Nicaragua this weekend on a special flight chartered by the Agency for International Development.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

July 21

The President met at the White House with Zbigniew Brzezinski, Assistant to the President for National Security Affairs.

July 23

The President met at the White House with:

- Dr. Brzezinski;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- Vice President Walter F. Mondale;
- Hedley Donovan;
- James T. McIntyre, Jr., Director of the Office of Management and Budget.

July 24

The President met at the White House with:

- Dr. Brzezinski;
- the Democratic congressional leadership;
- Mr. Moore.

In a ceremony in the Oval Office, the President received diplomatic credentials from Ambassadors Marcial Perez-Chiriboga of Venezuela, Antonio Francisco Azeredo da Silveira of the Federative Republic of Brazil, Faisal Alhegelan of the Kingdom of Saudi Arabia, Andreas J. Jacovides of the Republic of Cyprus, and Sir Nicholas Henderson of the United Kingdom.

July 25

The President met at the White House with:

- Dr. Brzezinski;
- Mr. Moore.

July 26

The President met at the White House with:

- Dr. Brzezinski;
- Mr. Moore;
- the executive committee of the American Farm Bureau Federation;
- former Mayor Moon Landrieu of New Orleans, La.

The President transmitted to the Congress the 1978 annual report of the Saint

Lawrence Seaway Development Corporation.

July 27

The President met at the White House with:

- Vice President Mondale, Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Hamilton Jordan, Assistant to the President, and Dr. Brzezinski;
- Dr. Brzezinski;
- Mr. Moore;
- a group of editors and news directors (transcript will be printed next week);
- Mayor Neil Goldschmidt of Portland, Oreg.

The President declared a major disaster for the State of California as a result of heavy rains, flash flooding, and mudflows on July 19–20, which caused extensive property damage.

The President left the White House for a weekend stay at Camp David, Md.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted July 21, 1979

BARBARA B. CRABB, of Wisconsin, to be United States District Judge for the Western District of Wisconsin, vice a new position created by P.L. 95–486, approved October 20, 1978.

TERENCE T. EVANS, of Wisconsin, to be United States District Judge for the Eastern District of Wisconsin, vice a new position created by P.L. 95–486, approved October 20, 1978.

EUGENE P. SPELLMAN, of Florida, to be United States District Judge for the Southern District of Florida, vice a new position created by P.L. 95–486, approved October 20, 1978.

CHARLES WILLIAM DUNCAN, JR., of Texas, to be Secretary of Energy.

NOMINATIONS—Continued

Submitted July 21—Continued

W. GRAHAM CLAYTOR, of the District of Columbia, to be Deputy Secretary of Defense, vice Charles William Duncan, Jr.

Submitted July 24, 1979

JAMES W. SPAIN, of California, a Foreign Service officer of Class one to be the Deputy Representative of the United States of America to the United Nations, with the rank and status of Ambassador Extraordinary and Plenipotentiary.

HAROLD ALONZA BLACK, of North Carolina, to be a member of the National Credit Union Administration Board for the term of 2 years (new position).

ROBERT JOSEPH BROWN, of Maryland, to be a member of the National Mediation Board for the term expiring July 1, 1982, vice David H. Stowe, term expired.

Withdrawn July 24, 1979

SUSANNA B. McBEE, of California, to be an Assistant Secretary of Health, Education, and Welfare, vice Eileen Shanahan, resigned, which was sent to the Senate on June 25, 1979.

Submitted July 25, 1979

WILLIAM D. WOLLE, of Iowa, a Foreign Service officer of Class two, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the United Arab Emirates.

RONALD P. WERTHEIM, of the District of Columbia, to be a member of the Merit Systems Protection Board for the remainder of the term expiring March 1, 1981, vice Ruth T. Prokop.

Submitted July 27, 1979

GENE E. BROOKS, of Indiana, to be United States District Judge for the Southern District of Indiana, vice a new position created by P.L. 95–486, approved October 20, 1978.

The following-named persons to be members of the Board of Directors of the National Consumer Cooperative Bank for terms of 3 years (new positions):

WILLIAM A. CLEMENT, JR., Associate Administrator for Minority Small Business and Capital Ownership Development, Small Business Administration.

GRACIELA (GRACE) OLIVAREZ, Director, Community Services Administration.

NOMINATIONS—Continued

Submitted July 27—Continued

PAUL A. VOLCKER, of New Jersey, to be a member of the Board of Governors of the Federal Reserve System for the unexpired term of 14 years from February 1, 1978, vice G. William Miller.

PAUL A. VOLCKER, of New Jersey, to be Chairman of the Board of Governors of the Federal Reserve System for a term of 4 years (new position).

**CHECKLIST OF WHITE HOUSE
PRESS RELEASES**

The following listing contains releases of the White House Press Office which are not included in this issue.

Released July 25, 1979

Advance text: opening statement at the President's news conference

Released July 27, 1979

Announcement: nomination of Gene E. Brooks to be United States District Judge for the Southern District of Indiana

Biographical data: Moon Landrieu, nominated to be Secretary of Housing and Urban Development

CHECKLIST—Continued

Released July 27—Continued

News conference: on proposed legislation establish a solar energy development bank and proposed energy tax incentives—Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy

Biographical data: Neil Goldschmidt, nominated to be Secretary of Transportation

**ACTS APPROVED
BY THE PRESIDENT**

Approved July 23, 1979

H.R. 3978----- Public Law 96-
An act to amend the Federal Trade Commission Act to exempt savings and loan institutions from the application of certain provisions contained in such Act.

Approved July 25, 1979

H.R. 4289----- Public Law 96-
Supplemental Appropriations Act, 1979.

Approved July 26, 1979

H.R. 4537----- Public Law 96-
Trade Agreements Act of 1979.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, August 3, 1979

Interview With the President

*Remarks and a Question-and-Answer Session
With Editors and News Directors.
July 27, 1979*

ADMINISTRATION POLICIES

THE PRESIDENT. Ordinarily we don't have this large a group. In general, when we invite editors from around the country, about half of them prefer to come at a later time. But this time almost everyone decided to come. And I can understand why, because there's such a tremendous interest focused now on what is going on here in the Nation's Capital because of the rapidly changing series of events concerning me, personally, and the Presidency and the Cabinet, and also because of the crucial importance of decisions that will be made in the next few weeks: a series of legislative proposals—concerning energy, standby rationing, production board to expedite decisions on refineries and pipelines, power company installations, a production corporation that will meet our goal of cutting down energy imports, and, as you know, windfall profits tax to finance over the next 10 years—I think what will be a successful effort to restore our Nation's energy security. In addition, the Congress is considering many

other items, the most important of which, in foreign affairs, is obviously the SALT treaty.

I think this is a time, too, when Americans are particularly and deeply involved in a reassessment of themselves, perhaps, or of our country—who we are, what our Nation is, what we can be, how we can work more closely with one another, how natural divisiveness can be assuaged, how we can set clear goals for ourselves and achieve those goals with both competence and confidence.

I think every now and then, in every person's life there comes a time of reassessment. I think we are going through a time of national reassessment, not initiated by me; it's a self-examination process that was initiated long ago. I think we more narrowly focus now our interest on this question, but it's something that has been of concern for a long time to me as President.

There is really only one person in this country that has a constant and sustained voice in politics, and that is the President. Others, on a transient basis, because of a focus of an event, have a loud and clear voice, and during the campaigns for office, these voices are dispersed. But ordinarily, the President must be the one to speak for our country and indeed to our country.

I think there's been a much more sharpened interest lately in what I had to say, which is gratifying to some degree. It puts a responsibility on me to soberly consider what I impart to the American people and how I perform my own duties here in the White House.

I think the changes that have been made in the Cabinet recently have been all for the good. Some of them were overdue. I had a judgment to make about whether to have this done rapidly and get it concluded, recognizing that there would be some sharp shock waves going through Washington and perhaps the rest of the country, or to let it drag out, with columns and editorials and public speculation about who would go next or who would stay, and so forth. My judgment was to go ahead and do it and get it over with. And all of the departures have been harmonious as far as my relationship with the former Cabinet members is concerned. I think the appointments that I have made and will very quickly make to conclude the filling of the vacancies demonstrate that these are very fine and competent people who will be taking office. And I have no doubt there will be a more adequate teamwork in the future than there has been in the past.

I think it's best for me to answer your questions.

QUESTIONS

VISIT OF POPE JOHN PAUL II

Q. Mr. President, Father Shmaruk from Boston, from the Planet. It's been reported that Pope John Paul II will meet with you at the White House in the fall. This has to do with world politics. What subjects generally do you hope to discuss with him, and how do you evaluate his unique position in terms of world politics, human rights, and peace?

THE PRESIDENT. I think the visit of the Pope to our country is one that will be welcomed by American people of all religious faiths. There's no doubt in my mind that he will get an overwhelmingly friendly welcome and an enthusiastic welcome. I expect to meet with him in the White House in a private fashion. My belief is that his desires to come to our country, not on a political mission, but on one involving religion, morals, and ethics. I look forward to meeting with him.

I don't have any way yet to know what subjects we will discuss. I have exchanged several letters with him since he's been in his present office, and he and I have had a good and friendly relationship. Several members of my family have been there, both political family and immediate family. We do share a common desire for peace, for the broadening of the beneficial effects of religion throughout the world, and also on such major matters as human rights. But I don't know now this early how to describe the agenda any more definitely than that.

I wrote him a letter this morning, by the way, and sent it to him.

RELATIONS WITH THE CONGRESS

Q. Mr. President, I've been here for 24 hours, talking with Democrats, both in the Senate and also in the Congress itself. And the Democrats there from west Texas, where I'm from, and Oklahoma and New Mexico right now want to be disassociated with you because of the wind-fall profits situation, also the fact that we've had a 65-percent cutback in energy, in diesel fuel in our area.

What about these good representatives the people have confidence in, saying right now that they don't back your policies and

you need the confidence of the American people?

THE PRESIDENT. I don't agree with your premise. I think your information is incorrect. Recently, as you know, there were two polls conducted among the Members of the House, one by the Washington Post; one by the New York Times. I didn't participate in them, but I saw the results. I think in the South, which did include Texas, 88 percent of the Democrats said they prefer to have me on the ballot with them next year. I think 3 percent said Kennedy, and the rest were divided among a numerous number of people.

I have already seen the effectiveness with which the House has dealt with the windfall profits tax. I think they did a good job. Their bill is roughly equivalent to my own. The only problem with it is it only lasts until 1990. I prefer a permanent windfall profits tax.

This is a very difficult political season, and for someone from Texas and from the other oil-producing States, I realize that there is a duality of responsibility to the consumers, on the one hand—and there are many consumers in Texas—and to all those who depend upon the oil industry and the natural gas industry for their livelihood or who have a natural affinity for it because Texas is an oil-producing State.

My belief is that the Congress will act courageously and will implement the windfall profits tax, the security fund derived from it, the proper expenditure of those funds through the corporation to produce new kinds of energy, and the production board to expedite those decisions. My guess is that the House will, next Tuesday, vote for the standby rationing authority in an acceptable fashion. So, I don't really recruit people now to say, "I want to run with or without President

Carter, if the 1980 election should throw us together."

But I think the polls that were conducted by those two news media, respectable news media, are a better indication than the results that you apparently got from your interviews.

MAYOR NEIL GOLDSCHMIDT

Q. Mr. Carter, I'm from Portland, Oregon, and I understand the mayor's in town. I'd like to know, sir, if you intend to appoint him—or have you—as head of the Department of Transportation or some other Federal job?

THE PRESIDENT. I haven't met with him and don't know what I will do yet. I will discuss this matter with him and some others as well. I have a great respect for Neil Goldschmidt and so do all the members of my staff. I will make a decision on this matter soon. He's not the only one being considered, and I don't want to predict what the outcome might be.

Q. Will it be today, sir?

THE PRESIDENT. I can't say. Do you—does anyone know when Neil's coming?

We'll find out. I don't know when he's going to see me.

HOME HEATING OIL SUPPLIES

Q. Mr. President, I'm from Hillsboro, New Hampshire. As I'm sure you're aware, we have a primary election there in February. February's a cold month up there; between now and then there's a lot of cold nights. According to Senator John Durkin we are 20 million barrels behind last year in stockpiling oil. What I would like to know is, do you, as a candidate, seriously believe that you'll have a chance without taking further direct action to ensure a more adequate supply of heating oil? And if you do in-

tend to take that sort of action, what effect might that have on the price of the oil?

THE PRESIDENT. Let me answer your question as President instead of as a candidate, okay?

Q. I was hoping you would answer as both. [Laughter]

THE PRESIDENT. [Referring to Mayor Goldschmidt] He'll be here this afternoon.

I have promised the people of New England that they will have adequate home heating oil this fall and have set as a target goal 240 million barrels of oil to be in storage and ready in October. This can be compared with last year's inventory at that time, I think, of 133 [233]¹ million barrels.

We have had a depletion of our oil stocks, not only crude oil stocks but also the number two, number six distillates, as well as gasoline. None of those stocks have yet come up to their normal range, because we lost 100 million barrels of crude oil, ordinarily which would have been bought from Iran early this year. We're rebuilding those stocks, and this is the top priority for me now among the variables that I have to deal with.

The refineries are now operating above 90 percent capacity, which is almost 100 percent for them as far as their capability is concerned. At the beginning of last month, they were only operating at like 82 percent capacity. Part of this is because of our urging to them to produce more home heating oil. Part of it is because we've had increased supplies of crude oil coming into our country.

So, I think that I would be perfectly willing to be judged in February on the performance of my administration. Jack Watson, who works with local officials and with my agencies and also with Governors, is monitoring this on a daily basis,

and he feels quite sure that we are on schedule.

ENERGY PRODUCTION

Q. Mr. President, John Still, WVEE Radio, Memphis. With the push towards renewable energy supplies, how will future energy projects be protected against some small technicality that could stop it in its tracks, such as the \$100 million Tellico Dam project that was stopped by a 3-inch fish.

And the second part of my question, with additional appropriations from Congress to the Clinch breeder reactor project last week, will you continue your opposition to it?

THE PRESIDENT. Yes, my opposition to the Clinch River breeder reactor is unshakable. And I think it's a waste of money, and I intend to continue to oppose it, I believe successfully.

We have about a half billion dollars, which I have proposed on an annual basis, to proceed with research and development in breeder reactor technology. At the time we need a breeder reactor, at that moment, we will freeze the design and build an advanced design breeder reactor. I don't think this will come during my own administration. It'll come later than that. But I see no reason to waste hundreds of millions of dollars in building a breeder reactor plant which we do not need, which is already obsolete before it's completed.

That answers the second part of your question.

The first part is: The energy production board [Energy Mobilization Board],² when passed by the Congress—and it's making good progress—will be responsible for the expeditious decision of whether

¹ Printed in the transcript.

² Printed in the transcript.

a project should be built or not built. I mentioned earlier power production plants of all kinds, pipelines, refineries, and so forth. I don't believe there is any need for us to reduce the standards that we presently have of protecting endangered species or of protecting the quality of air or water in our Nation.

This week I received a report from the President's commission on coal use. We anticipate a doubling in the use of coal by 1985 if all the recommendations are carried out. The basic premise for this recommendation was that we would not lower air quality standards.

So, I can't see us changing the basic laws that protect the quality of life of American people. Our technological capability is good enough already to make these changes to more plentiful supplies of energy without basic changes in the laws that I've described.

ADDRESSES TO THE NATION; LILLIAN
CARTER'S HEALTH

Q. Mr. President, my name is Sam Oates with KRIG Radio in Odessa, Texas. And I think without a doubt the people of west Texas thought that your recent speech was probably the best of your administration. However, they seem to be—the feedback that I've gotten—they seem to be somewhat unsure of your recent earnestness with your speeches and what not. Also, they're not quite sure about your ideas of establishing another agency to help the oil situation.

Are you being helped along with Mr. Rafshoon or anyone else in your administration as far as communication over the television or in any other media at this point?

And secondly, how's your mother?

THE PRESIDENT. Mother's fine. I talked to Billy and Sybil just a few minutes ago,

who were right outside Mother's room. I think the diagnosis is that she has either arthritis or bursitis in her left shoulder and arm, and there's no problem with a cardiac problem or vascular problem, and I'm very pleased with that.

You know, I get help from every place I can. The Sunday evening speech was made literally from the bottom of my heart. I think a contrivance or posturing or an artificial attitude toward the American people on television would instantly be revealed, and I don't think the speech would have had as good a response as it has received if I had been trying to do something false or had been trying to mislead the American people.

As a matter of fact, I only practiced that speech twice, because I wrote it—my wife and several other people helped me with the basic structure of the speech—but I did it myself. I think Saturday afternoon at Camp David, I came in, gave the speech once, all the ones in the room said, "You don't need to practice it any more." Sunday afternoon I came to the Oval Office to get into the exact place, and I gave the speech once more before the cameras just to make sure that the timing was proper, and so forth. And again I didn't have to practice it any more. I didn't have any voice teaching; I didn't have any speech coaches and things of that kind.

It's a serious mistake for anyone in public office to try to mislead the American people about basic issues concerning the future of our Nation or concerning the psychological attitude of American people or concerning confidence or unity or trust or truth. Certainly it's a mistake to mislead the American people about their own security, either energy, on domestic economic security, or things like SALT. That would be a travesty. I would not be capable of it, and if I should ever

try it, I hope that I would be caught and that the American people would demonstrate their lack of confidence by their actions on election day.

AMTRAK

Q. Mr. President, Saul Kohler, Harrisburg Patriot News. With your admonition to the American people to conserve every drop of oil and with your request that we do without unnecessary automobile trips, why does the White House persist in cutting Amtrak service, both on the commuter and on the long lines basis? By commuter basis, I mean by cutting out tickets at commuter rates.

THE PRESIDENT. What we proposed on Amtrak several months ago was to eliminate those Amtrak services where the cost per passenger mile exceeded those by automobile or other means. These were routes and scheduled trips where people had almost abandoned them. It doesn't help to run a full-sized train at 10 percent capacity day after day and maintain a schedule whether you have the passengers or not.

With the advent of the gasoline lines, first in California and then later on the east coast, there's been a substantial increase in the use of Amtrak services, both commuter and longer distance travel. Now the Congress has passed—not exactly what I proposed, but a modification of that. Our proposal was that there be \$65 million set up in extra funds, and that those funds would be oriented to support additional Amtrak services above what we originally proposed if the passenger use level warranted continuation of that service.

So, I think the additional use of Amtrak brought about by an awareness of gasoline shortages has been accommodated with a change in administration

position. But it doesn't save fuel to have an empty train running, if a full train is more economical.

Q. Should the need arise, will you loosen the Amtrak schedules further?

THE PRESIDENT. Well, we already have. Yes, if the need arises, we will, but it's got to be measured on an individual route basis. There's no reason to run an empty train just because it's a train.

ENERGY POLICIES

Q. Mr. President, in north Missouri, we're somewhat isolated from the direct impact of inflation because of good crops this year. However, the people there want some good news, if they can get it, from Washington as far as short-term solutions to the energy problem.

Do they have to wait to 1984 or to 1990 to see the solutions of the impact?

THE PRESIDENT. No, I don't think so at all. I met with some distinguished oil executives, for instance, at Camp David during the 10 days I was there, with consultation and with other people like the head of the Audubon Society, representing environmentalists and consumers, the president of MIT, who's done most of the work, more work than any other institution, I believe, on alternate sources of energy—I had a broad range of people.

One major oil executive said that just the decision that I made to decontrol the price of oil over a phased period from now until the end of September 1981 had been enough of an incentive in his own company to make this change. They had never before expended more than a billion dollars a year on exploration for new oil and gas. As soon as I decided to decontrol, on a phased basis, oil prices, they had a board of directors meeting and decided to spend \$2 billion a year for 5 years, more than they would ever have done otherwise.

So, just the certainty of the future prices of oil and natural gas, that in itself is a major incentive for increased domestic production.

As I just outlined, the coal commission has now advocated that the shifting of presently oil-burning power company installations, electric power company installations, to coal will save a tremendous amount of oil and make this oil available for other uses.

We anticipate that over a period of time that many of the New England homes that are presently almost exclusively dependent on coal [oil]³ will be shifting toward natural gas as a heat source, and we hope to get some hydropower and other sources of energy from Canada across the border. We're pursuing that as well.

I am going to expedite the completion now of the gas pipeline coming down from Alaska to our country. We are already buying about 80 or 90 percent of all the oil that Mexico exports. We'll continue to do that, and we're trying to trade now on the basis of buying a limited amount of natural gas which Mexico will have available to sell to us in the future.

So, the shift toward coal; the enhancement of solar power; the development over a longer period of time of alternative sources of energy, like oil from shale; the bringing in of our own natural gas from Alaska—all these things put together will have immediate impact.

Overriding all this, though, is the benefits to be derived from conservation. We're now getting along fairly well in our Nation with 80 to 85 percent of the gasoline being delivered to motorists as before. In the Los Angeles area, there's been an enormous increase in the use of public transportation facilities. The number of cars on the highway has dropped. The

number of passengers per car has increased. The American people are much more careful in not wasting fuel than they have been in the past.

We expect substantial benefits to be derived from the mandatory setting of thermostats in buildings like this one, and we have little recording monitors set around at appropriate places throughout the Government buildings to make sure that we do stay at 78 degrees, and this will result in a large savings in fuel.

So, all these things put together, I believe, will have an immediate impact. The long-range impact will be quite expensive, but it's something that we need to accomplish.

STRATEGIC ARMS LIMITATION

Q. Mr. President, why should minorities, specifically black and Spanish-speaking people on the south and northwest side of Chicago, where I'm from—my name is Steen King—why should they be concerned about SALT II or the fact that General Alexander Haig wants the measure held for ransom until there's more money for defense spending?

THE PRESIDENT. I would guess minorities would be concerned about life or death or war or peace; increased trade with other countries, instead of a separation of one people from another. These kinds of factors are involved, either directly or indirectly, in the SALT II decision.

There is also a competition for limited Federal funds. Without a SALT agreement to limit immediately the level of strategic nuclear weapons, we would have to have a very large increase in expenditures for military defense, above and beyond what we would have to have with SALT II. And if we have to spend—I think Les Aspin, one of the Members of the Congress, estimated that \$21 billion

³ Printed in the transcript.

would be required extra if we don't pass SALT. That \$21 billion in a given level of budget would have to be taken from, maybe some of the social programs—housing and so forth—in which you are deeply interested.

So, I'd say an increase above what we need in defense expenditures and a general preservation of peace, increased trade that provides jobs, would be an additional tangible benefit.

We've got superb black leaders who have been briefed thoroughly on SALT and who are now speaking around the country on behalf of SALT just because a SALT treaty would help the people who look to them for leadership. One from your own region has been especially helpful, Jesse Jackson. Jesse's making speeches now to colleges and high schools and other fora around the Nation, telling them why as a black leader he knows that SALT is best for minority groups.

So, I think if you would be interested, when Jesse gets back from South Africa, he would be prepared, after thorough briefings here in the White House from me and others, to explain this even more thoroughly than I can at this moment.

Q. Mr. President, to follow up your answer to that question, you said, for example, that without the treaty, Les Aspin estimates that we have to spend another \$21 billion on arms. And yet, what seems to be building up, movement that seems to be building up among the critics of SALT, is that as a condition of agreeing to SALT that there has to be a very substantial increase in weapons involving particularly the strategic side, and apparently a good deal more than you committed yourself to in your original presentation of the SALT II arguments.

Do you feel now that in the light of this kind of building argument that you're going to have to make a very hard com-

mitment to a substantially larger increase in defense spending and particularly on the strategic weapons involvement in order to meet that kind of criticism and get this thing sold?

THE PRESIDENT. Let me respond by giving you three points.

First of all, my ultimate responsibility as President, above everything else, is to guarantee the security of my Nation, and the defense budgets that I have proposed and will propose will be adequate for that purpose.

Second, no matter what level of defense expenditure we might have—\$140 billion, \$160 billion, \$180 billion, it doesn't matter—under any level of expenditure for defense purposes within reason, we are better off with the SALT treaty than without it. I could give you the reasons, but I won't go into that, because it'll take too much time.

And the third thing is that, habitually, Presidents have—including myself—have been more inclined toward a strong defense budget than has the Congress in the ultimate analysis. The Congress is the one that makes the final judgment about budget levels.

I've had two budgets that have been made effective since I've been President—one, fiscal year 1978 and then this fiscal year 1979. The Congress has reduced the defense expenditures or authorizations that I have requested, I think roughly \$5 billion during just those 2 years alone.

So, because of those three factors, I think that the answer is that SALT is needed regardless of defense expenditures. I will provide adequate defense recommendations to the Congress. The likelihood is that if I tried to escalate defense requests substantially above what they are needed just to get Senate votes, which I

would not do, the Congress would not approve them.

Ms. BARIO. Thank you, Mr. President.

THE PRESIDENT. Thank you all very much.

We've got a larger crowd than we ordinarily have. If you don't have any objection, I'd like to get an individual photograph with you before I leave. I'll stay a few extra minutes, if you can. It is a little warm.

I thank you very much for being here.

NOTE: The interview began at 1:18 p.m. in Room 450 of the Old Executive Office Building. Patricia Y. Bario is a Deputy Press Secretary.

The transcript of the interview was released on July 28.

1977. It would complement the wide range of protections and benefits afforded United States Government personnel under the Panama Canal Treaty and related agreements during the life of that Treaty, and would establish a mechanism for other nationals of both countries to serve their sentences in their home countries. Its ratification would provide our personnel stationed in the Republic of Panama further assurance that their interests will be fully protected upon the entry into force of the Panama Canal Treaty.

I recommend that the Senate give prompt and favorable consideration to this Treaty.

JIMMY CARTER

The White House,
July 30, 1979.

United States-Panama Treaty on Penal Sentences

Message to the Senate Transmitting the Treaty. July 30, 1979

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty between the United States of America and the Republic of Panama on the Execution of Penal Sentences which was signed at Panama on January 11, 1979.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the Treaty.

The Treaty would permit citizens of either nation who had been convicted in the courts of the other country to serve their sentences in their home country; in each case, the consent of the offender would be required.

This Treaty represents the fulfillment of a commitment undertaken by both nations in the Panama Canal Treaty of

Camp David Meetings on Domestic Issues

Remarks at a White House Luncheon for Participants in the Meetings. July 30, 1979

As I stand up here and look at this group of faces, all of whom joined me at Camp David in a time of absolute frankness, with no rules on what we should discuss, no limits on the depth of analysis, I am a little bit timid, a little bit nervous.

At Camp David yesterday morning we had a new chaplain, who serves Fort Ritchie—the first time he's ever preached to the President—and he told a story that illustrated the way I feel in some ways, about this itinerant barber who had drifted all over the country out west, cutting hair and giving shaves. He finally settled in this one town and he opened his own shop. And he was extremely nervous that the people wouldn't like him and he'd have to get back on the road.

His first customer was a one-armed man who was really a rugged-looking guy, so the barber cut his hair without much problem, and he stropped his razor, and when he got started shaving, the barber got more and more nervous. He cut the guy three or four times and was wiping off blood visibly, and he couldn't think of anything to say. And finally he desperately tried to start a conversation. He said, "Have I ever served you before?" And the guy said, "No, I lost my arm in a sawmill accident." *[Laughter]*

Well, I feel somewhat the same way with you. You're people who came to Camp David in a time of deep thought and reassessment, a time of frankness, and to some degree a time of courage. We met in an atmosphere of privacy, and we discussed in the bluntest possible terms what is our Nation, what are our problems, what can be done to resolve them. And I think the product was very beneficial for our Nation.

I benefited from your judgment, from your experience, and from your wisdom, and in the process my own determination and self-assurance and confidence and will was restored. I prepared a speech and delivered a speech on Sunday evening that encapsulated as best I could the sense of our Nation, pointing out that we do have a severe crisis of the spirit, a severe crisis of confidence in one another, in our institutions, including government, and an absence of confidence about the future of our Nation.

The facing of that fact on the part of the American people, I think, has already begun. Up through last Friday we had received 39,000 telegrams and letters, personal ones, the biggest outpouring of mail that I've ever gotten from any single event. Seventy-seven percent of the people said they agreed with what I said and

wanted to do something about it. Fourteen percent of the people just had suggestions about how we could save energy, just constructive suggestions. And a very small portion, only 9 percent, had unfavorable or critical remarks to make.

Four percent said that I shouldn't use transportation to go to Camp David, to go to Kansas City, or to go to Detroit, that I could save energy by staying in Washington. Two percent said that if I would eliminate forced busing, I could eliminate the energy problem. Two percent said we should decontrol oil immediately. And one percent said they were inconvenienced enough already with high thermostat settings and less use of their own automobiles. But an unbelievable 77 percent of the people, that were either pro or con, were pro; only 9 percent negative. So, I think there has been a favorable response to what we evolved at Camp David as an analysis of our Nation.

So, we've got the wisdom; I think we've got the will. Now we've got to succeed and to take the necessary action. It's important for our people to pull together. In a time of stress or inconvenience or trial, without an overriding national emergency that unifies people, we tend to become isolated. And with isolation there's a sense of potential helplessness, and with potential helplessness comes a desire to grasp for an advantage and to cling to it, for a special advantage, for a special interest. And this causes those who are divided into small groups to fail to marshal to a spirit of unity, to seek for a national purpose or a broader purpose, or to move toward unselfishness and generosity and concern and compassion and love for one another.

Instead of being pulled apart, it's obvious that it's time for us to put our Nation together and to move toward a common

goal. I pointed out that we are at a crossroads, deciding between increased diversity and division on the one hand, or toward increased unity and a common purpose on the other.

It became obvious to me over a long period of months, accentuated at Camp David, that we do have a severe energy problem, but that our basic problem in this country goes much deeper than energy. But in the resolution of the energy question, in the solution of it, in the meeting of it, courageously, in unifying ourselves to achieve our energy goals, in that process, we have a chance to show again the strength of America, the ability of our people to work together, and the ability of us demonstrably to be successful. And I think that process will have far-reaching effects, far beyond that of energy.

There is no easy answer. There is no free lunch. There is no quick solution to problems that have been evolving in our Nation for many years, decades, even generations. But I am convinced that this is a time to meet those challenges, persistently and courageously. The people have responded well. Hundreds of organizations have already sent me word, "We are supporting you, Mr. President."

When I went to Kansas City to speak to the county officials—Democrats and Republicans—the outpouring was almost unanimous in pledging their support to go back home and organize community effort to conserve energy, to seek for new ways to strengthen our Nation and its purposes, and to bind people together again in a spirit of harmony and cooperation.

In closing my remarks, let me say that you were carefully chosen. There were a limited number of people from throughout our Nation who could come to Camp David. And I deeply appreciate every one of you being willing to do it. It was a

time of criticism of me and some doubt about what was going on there. And you came partially on faith, perhaps partially out of curiosity. But it was a very constructive thing for me and for my administration and, I think, for the Nation. And I thank you for it.

There was a wide diversity of opinion expressed, and as all of you know, I listened about 90 percent of the time and talked about 10 percent of the time. And I took careful notes, not only on a scratchpad but in my mind and in my heart, and I'll never forget some of the advice that you gave me. I'm not the kind of person who responds easily to criticism. I hate to admit that I have defects and that I have made errors. But over a period of a few days, I began to see how constructive and how helpful this could be to me as President. Because you are natural leaders, chosen to come to Camp David because of that, and because you represent a broad and diverse spectrum of America, and also because you and I in many ways, I hope in every instance, have broken the ice between us, I think your advice to me in the future will be extremely valuable.

I hope that you will retain the sense of friendship and the sense of ease in communicating with me in the future that you had at Camp David. You need not be embarrassed about giving me tough advice and very personal criticisms and suggestions in the future. We've already crossed that bridge. And I would hope that I've got a special group of people now throughout the Nation who can deal with me as a human being and without restraint and with a maximum degree of frankness. In that way, you can be an extra benefit to me and to our country.

And I would like to ask you, in addition, to add your influence and your support

and your dedication to the goal that I have described for our Nation in the energy field and the repairing of the consciousness and the attitudes of our Nation.

I hope that you will feel not only a sense of gratification that you came to Camp David and that you're having lunch at the White House, but also that you will consider yourself, Democrats or Republicans, no matter whom you might support politically in the future or have supported in the past, that you will consider yourself kind of a member of a team of people who are dedicated to assuring that our Nation will be stronger in the future, will be more united in the future, that confidence which has been lost will be restored, and that there be a searching on the part of every one of you among those who listen to your voice—your peer group, those who look to you for leadership—to make sure that our Nation is stronger in the future.

I've made some, I think, good decisions since we left Camp David. Some have been controversial, but I think they've been sound. There is no doubt in my mind that I now have a stronger and more cohesive and perhaps even a more competent Cabinet. But at least we'll be stronger and more cohesive.

I think the analysis of those who will serve in the future will soon replace in the Washington press the analysis of what did occur when I made the changes. And I think as people are assessed, who will be serving in HEW and HUD and Transportation and the Federal Reserve and Treasury and in Energy, there will be an assurance that we have replaced excellent people with excellent people. This I think you can help me with as well.

I'll be glad to answer, for about 10 minutes, any questions that you might

have. I have nothing to conceal from you. And I would appreciate not only the questions but perhaps suggestions as well.

Does anybody have a comment or question to ask?

NOTE: The President spoke at 12:55 p.m. in the East Room at the White House.

The press release does not include a transcript of the question-and-answer session which followed the President's remarks.

Meeting With United Nations Secretary-General Kurt Waldheim

White House Statement. July 30, 1979

President Carter met this afternoon with United Nations Secretary-General Kurt Waldheim for 50 minutes in the Cabinet Room. The President congratulated Secretary-General Waldheim on the results of the Geneva meeting on Indochina refugees. The President felt the Secretary-General's efforts were a key factor in the progress made on substantially increasing funding pledges and commitments from a variety of countries to resettle refugees.

On the Middle East, the President discussed U.S. policies for advancing the peace process. The two leaders discussed the question of a continued U.N. presence in the Sinai. The President told the Secretary-General that we will be consulting closely with Israel and Egypt on this question. The United States will remain in close touch with the Secretary-General and his staff.

The President urged the Secretary-General to continue to give top priority to his efforts to resolve the problem of Cyprus. He also discussed the Secretary-

General's continuing efforts to find a solution to the Namibian situation.

Those attending, along with the President, were the Vice President, Deputy Secretary of State Warren Christopher, Assistant to the President for National Security Affairs Zbigniew Brzezinski, Ambassador to the United Nations Andrew Young, Assistant Secretary of State for International Organization Affairs Charles William Maynes, and NSC staff member Lincoln P. Bloomfield.

Accompanying the Secretary-General were Under Secretary-General for Political and General Assembly Affairs William Buffum and Director, Executive Office of the Secretary-General, Albert Rohan.

Council on Wage and Price Stability

Nomination of R. Robert Russell To Be Director. July 31, 1979

The President today announced his intention to nominate R. Robert Russell to be Director of the Council on Wage and Price Stability (COWPS). He would replace Barry Bosworth, who has resigned as Director effective August 3. The President said he will designate Russell as Acting Director effective August 4.

Russell, of Escondido, Calif., has been Deputy Director of COWPS since 1978.

He was born February 17, 1938, in Rock Springs, Wyo. He received a B.A. from the University of California at Santa Barbara in 1961 and a Ph. D. from Harvard University in 1965.

From 1965 to 1966, he was on the professional staff of the Council of Economic Advisers. He was associate professor of economics at the University of California

at Santa Barbara from 1966 to 1973. He was on the faculty of the University of California at San Diego from 1973 to 1978, as associate professor, then professor.

Russell was a Woodrow Wilson graduate fellow and a Harvard graduate fellow and received a National Science Foundation Doctoral Dissertation Fellowship. He is the author of a book and numerous articles and papers on economic matters.

Panama Canal Commission

Nomination of Lt. Gen. Dennis P. McAuliffe, USA, To Be Administrator. July 31, 1979

The President today announced his intention to nominate Lt. Gen. Dennis P. McAuliffe to be the Administrator of the Panama Canal Commission. This position was created by the Panama Canal treaties and would be established by the legislation now pending in Congress to implement the treaties.

McAuliffe has been Commander in Chief of the United States Southern Command in Quarry Heights, Canal Zone, since 1975 and has over 35 years of active service in the Army.

He was born April 8, 1922, in New York City and holds a B.S. in military science from the U.S. Military Academy and an M.S. in electrical engineering from the University of Pennsylvania.

McAuliffe was the Army member of the Joint Chiefs of Staff Chairman's Staff Group from 1966 to 1967, and served as Executive Officer to the Chairman of the Joint Chiefs of Staff from 1967 to 1969. He served in Vietnam from 1969 to 1970, as Assistant Division Commander of the 1st Infantry Division, then Deputy Senior Adviser to III Corps and Military Region 3 (concurrently Commanding General of

the U.S. Army Advisory Group, III Corps and Military Region 3).

From 1971 to 1973, he was Chief of the Policy Branch in the Plans and Policy Division, Supreme Headquarters, Allied Powers, Europe. From 1973 to 1974, he was Deputy Commanding General, Combined Arms Combat Developments Activity, at Fort Leavenworth. He was director of the European region for the Office of the Assistant Secretary of Defense for International Security Affairs from 1974 until 1975, when he began serving in the Canal Zone.

As Commander in Chief of the Southern Command, McAuliffe has been a member of the Canal Zone Civilian Personnel Coordinating Board and the Panama Review Committee.

1979 World Administrative Radio Conference

Accordance of Personal Rank of Ambassador to Glen O. Robinson, Chairman of the U.S. Delegation. July 31, 1979

The President today announced that he has accorded Glen O. Robinson the personal rank of Ambassador while he serves as Chairman of the United States Delegation to the 1979 World Administrative Radio Conference. The Conference is scheduled to be held in Geneva, Switzerland, from September 24 through November 30, 1979.

Robinson was a professor of law at the University of Virginia and the Aspen Institute in New York City before becoming Chairman of the U.S. Delegation to this Conference. He was a Commissioner of the Federal Communications Commission from 1974 to 1976.

Inter-American Council for Education, Science and Culture and Inter-American Economic and Social Council

Accordance of Personal Rank of Ambassador to Irving G. Tragen, Head of the U.S. Delegation. July 31, 1979

The President today announced that he has accorded Irving G. Tragen the personal rank of Ambassador while he serves as head of the United States Delegation to the meeting of the Inter-American Council for Education, Science and Culture, and the meeting of the Inter-American Economic and Social Council.

These meetings are scheduled to be held in Barbados from September 5 to 13 and September 18 to 22, respectively.

Tragen is the Deputy Permanent Representative of the United States to the Organization of American States.

Federal Bureau of Investigation

Message to the Congress Transmitting Proposed Legislation. July 31, 1979

To the Congress of the United States:

I am transmitting today the FBI Charter Act of 1979, which will provide the first comprehensive Charter for the functioning of the Federal Bureau of Investigation. This legislative proposal will govern all the investigative and law enforcement functions of the Federal Bureau of Investigation.

The foreign intelligence and counter-intelligence functions of the Bureau will be governed by a separate charter for the entire foreign intelligence community.

This proposal was developed by the FBI and the Justice Department and has re-

ceived close scrutiny and personal approval from Attorney General Griffin Bell, Deputy Attorney General Benjamin Civiletti, and Director William Webster.

The law enforcement Charter would bring together in one statute the authorities and responsibilities that the FBI now exercises as a matter of custom and practice.

Although most departments and agencies operate under detailed statutory schemes, the FBI has lacked a statutory framework, although it is one of the most important and sensitive of all Executive Branch agencies. A one-paragraph 1908 law creating the Bureau is all that presently exists. The controversies in past years regarding particular actions of the Bureau, such as those directed at Dr. Martin Luther King, Jr., and various other persons and organizations, are to some degree attributable to this lack of statutory direction. It was these controversies which led me to call for a clear and binding charter for the FBI when I ran for President. Statutory safeguards would insure that the Bureau exercises its responsibilities in a manner sensitive to the fundamental rights of all Americans. The public must be assured that the FBI is acting properly under the law.

We need to recognize that the FBI serves a vital national function and that it has rendered distinguished service to the Nation. It has set a standard for competence, dedication and professionalism of which we should all be proud. We must be careful to maintain the fundamental capability of an institution which has served us so well. This Charter maintains that capability. Under Director William Webster the conduct of the Bureau has been exemplary and I applaud his leadership.

A clear definition of the authorities and responsibilities of the FBI is essential to

its proper functioning and is in the best interest of national law enforcement and the proper administration of justice. Enactment of this Charter will enable FBI agents to carry out their duties with greater certainty, confidence, and effectiveness.

The bill I submit today reflects three fundamental objectives:

- The Charter should be a document of broad principles, not a long detailing of procedures. It should enumerate the FBI's jurisdiction, functions and powers and set forth the limits on its activities, but should leave to the Attorney General the power to issue specific detailed procedures and guidelines.

- With few exceptions, coupled with procedural safeguards, the investigative power of the FBI should be limited to the detection, prevention and prosecution of federal crimes. This will prevent the unrestricted accumulation of information concerning individuals not suspected of criminal conduct.

- The Charter should strike a proper balance between the true needs of law enforcement and the civil liberties guaranteed by our Constitution. The greater the potential for impairment of rights, the stronger the authorization and accountability systems required.

The Charter authorizes the FBI to employ traditional and lawful investigative techniques in carrying out its responsibilities. These include confidential informants, undercover agents, and undercover operations.

Two primary types of criminal investigations are authorized: investigation of criminal acts that violate federal law and investigations into criminal enterprises that involve racketeering or terrorism. No investigation may be commenced unless based on "facts and circumstances that reasonably indicate" a criminal violation.

For the most part, this bill simply codifies current practices. However, FBI authority would be significantly expanded in two areas:

1. The FBI could issue "investigative demands" for financial records. This is a compulsory process enforceable in the courts comparable to the administrative subpoenas issued by agencies such as the Securities and Exchange Commission and the new Inspectors General in each Federal agency. This is essential if the FBI is to be effective in combatting white collar crime, fraud, corruption, and organized crime.

2. The FBI could investigate patterns of terrorist acts that involve violations of state criminal laws even without federal violations, following the model of current racketeering statutes.

The bill continues existing restrictions, procedural controls, and requirements for accountability on FBI activities. It adds, however, several new restrictions providing tighter controls over the use of informants. For example, infiltration of groups under investigation for terrorist activities and participation by an informant in criminal activity must now be approved by a supervisory FBI official.

The Charter requires that the Attorney General promulgate, and periodically review, operational guidelines for each of the Bureau's major activities. These guidelines will be filed with the Congress and made available to the public unless, in a specific case, their release would jeopardize the investigative process. The FBI is also required to report on important and sensitive activities to the Attorney General and the Congress.

This Charter strikes the proper balance between assuring both that the civil rights and liberties guaranteed to Americans by our Constitution are protected and that

the FBI can fully pursue its appropriate functions.

I urge the Congress to give this bill the careful and urgent attention it deserves and to pass the first Charter for the FBI.

JIMMY CARTER

The White House,
July 31, 1979.

Federal Home Loan Bank Board

*Nomination of Jay Janis To Be a Member, and
Designation as Chairman. July 31, 1979*

The President today announced his intention to nominate Jay Janis, of Coral Gables, Fla., to be a member of the Federal Home Loan Bank Board. The President said that on confirmation, Janis would be designated Chairman of the Board. He would replace Robert H. McKinney, who has resigned.

Janis is currently Under Secretary of the Department of Housing and Urban Development, a post he has held since 1977.

He was born December 22, 1932, in Los Angeles, Calif., and received a B.A. degree from Yale University in 1954.

Janis was a builder for the Janis Construction Co. from 1956 to 1964. From 1964 to 1966, he was a special assistant to the Under Secretary of Commerce.

Janis was executive assistant to the Secretary of Housing and Urban Development from 1966 to 1969. From 1969 to 1975, he was a coprincipal in MGIC-Janis Properties, Inc., a building and community development company in Florida. In 1976 he became a vice president at the University of Massachusetts.

Janis was chairman of Florida Gov. Reubin Askew's Housing Goals Council from 1973 to 1975. In 1972-73 he was

chairman of the NAHB Land Use Policy Committee. In 1974–75 Janis served as president of the board of trustees of the Florida International University Foundation. He was chairman of the Dade County Community Relations Board in 1972.

Louisville, Kentucky

Remarks Following a Tour of the Cane Run Generating Station of the Louisville Gas & Electric Company. July 31, 1979

President Royer, Governor Carroll, Senator Huddleston, Senator Ford, Congressman Mazzoli, and my fellow workers:

It's good to be with you.

One of the interesting and exciting things about being President is to have a chance to travel throughout our great country and to see the challenges which confront us all being met successfully by dedicated men and women like you.

This powerplant, burning American fuel, American coal, both safely and cleanly, is kind of a testimony to the technological genius of America and to the dedication of American working men and women. It's a signpost toward a future of energy security, prosperity for our people, and national strength.

As a people, we are now embroiled in a struggle to meet the challenge of the energy crisis. Most Americans don't even know that we import foreign oil. We actually import about half all the oil we use, which takes more than \$50 billion of American money and sends it to foreign nations.

We also know that the oil supplies from foreign countries are not dependable. Back in 1973, 1974, primarily because of political considerations, the oil-supplying nations, the OPEC nations, had an em-

bargo against our country, and some of those countries refused to sell us oil. We still face that possible challenge to our country. This is a struggle not just for the forms of energy we use but for our Nation's very independence, for our economic freedom as Americans.

As President, I will not permit our country to fall further and further each passing year into a dark and dangerous dependence on undependable foreign oil. I have pledged to you that our Nation will never import one drop more foreign oil than we did in 1977. With your help, America will keep that pledge, and I know you'll help me.

It's absolute folly for the United States to ship billions of dollars overseas each year to bring tankers of foreign oil to our shores, while beneath our feet, in your great State of Kentucky and others, lie more than 300 years of coal reserves just waiting to be mined and waiting to be used. It's folly that here in Kentucky, and in other States, we have idle mine capacity, mines not being used, because our Nation has failed so far to develop creative ideas to use our vast coal potential.

The United States is the Saudi Arabia of coal. In all the world, the United States owns 31 percent of all the coal reserves. We are blessed with the largest reserves in the whole world. And I'm determined to see our coal supplies light the way of our country toward a future of energy security. I want to see America's coal mines producing—not only new energy supplies for our country but new revenues for our economy, new jobs for the American people, and new security for our Nation.

I have proposed and the Congress is now acting on the most massive peacetime investment in the history of our country—a program to cut our oil imports in half and to change forever the way we use our

coal reserves.

First, I want Congress to give me the authority to require utility companies to cut in half their use of oil and to switch to other fuels, especially coal. I want legislation to permit the early retirement of oil-burning power companies [plants]¹ that cannot convert to coal. And I want Congress to provide grants and loans to utilities to make these changes at a reasonable cost to consumers. You have already led the way here in this plant. I want other power companies to follow your leadership.

First of all, we need to conserve energy, to stop wasting energy; and, secondly, to have more direct use of coal. These are the two fastest ways to move toward energy independence, and we must take these steps immediately.

We will also protect our environment. I will not permit America to be forced to choose between breathing foul air and having our waters filthy on the one hand or mortgaging our future to the OPEC oil cartel. We don't need to do either one.

This plant, burning high sulfur coal cleanly and safely, proves that our country can chart a different course for the future. With commitment, with imagination, with national unity, with courage, with America's technological genius and with our vast resources given to us by God, we can meet our energy goals while we preserve the quality of our precious land, air, and water. And we will do it. You have proven here that it can be done.

Secondly, we will launch a massive effort to produce more domestic energy supplies and synthetic fuels—oil and gas from coal.

What I want to do with Congress help is to set up an energy security corporation, a corporation where Americans can own

stock and let the private enterprise system of our country, not hamstrung or tied down by government redtape, but funded from a windfall profits tax on the oil companies on their unearned profits to convert coal into oil, to extract new supplies of natural gas, and to process oil from shale. America has talked about starting a synthetic fuels industry for years, even generations. The time has now come to stop talking and start producing oil from coal through a good synthetic fuels program.

One of the most important things with energy security is that it will provide new jobs for America, not jobs exported overseas. We can increase coal production by hundreds of millions of tons in the next 10 years and create as many as 80,000 new jobs in the coal mines alone. As you well know, being from Kentucky, the Nation's number one coal-producing State, a lot of those jobs are going to be in Kentucky, and they'll make your lives and my life both better.

This is going to cost a lot of money. I don't think it ought to be paid for by taxing the American people and going through the Federal budget. Oil prices are going to go up. And what we have proposed to the Congress and what the House of Representatives has already passed is what we call a windfall profits tax. It taxes the oil companies on profits that they do not earn. It leaves with them enough new money to increase production of American oil and gas, but it takes the rest of that money and spends it on the synthetic fuels program, develop better transportation systems, and to increase conservation both in homes and also in the production of power.

If the windfall profits tax is stopped or defeated by the oil lobby, then we will not be able to reach the goals that I've just described to you. And there is a real

¹ Printed in the transcript.

danger unless your voices are heard that this may happen.

I've talked about the gap between the Government in Washington and the people in our country, about the gap between Washington and the rest of the Nation. Now, here's a perfect and an unfortunate example: The American people overwhelmingly support a tough and a fair tax on the oil companies to give us the financial basis for energy security, new jobs, new production of synthetic fuels, new conservation, a better life for us all. Yet, despite this support, this tax on the unearned profits—and with it, our hopes for energy security—is in danger of being killed or crippled.

I'm very proud that Congressman Mazzoli has already helped us and that Senator Wendell Ford, who's the chairman of the Senate Coal Caucus, and Senator Dee Huddleston, who's one of the leaders in the Senate, are both with me in this fight. I hope you'll stick with them while they stick with me to give us this tax money, to give us energy security. Will you help do that? [*Applause*] Right on!

When the Senate passes this bill, we will have the ability to meet our responsibility as a nation and to have the financial weapons to win this energy battle. But this will not happen unless the voices of working Americans like you are heard loud and clear in Washington. You can rest assured that the oil lobbyists' voices are going to be heard loud and clear in Washington. And we need for your voice also to be heard.

With the revenues from a good, tough windfall profits tax and the oil companies, America will be uniquely equipped to win this energy war. We have unsurpassed technology. We have the enormous strength of a free economy. We've got a free enterprise system that's the best

on Earth. We've got a democratic Government that the people can run, and we've got dedicated men and women who are not afraid to work if they know what they're working for and they have confidence in the Government and confidence in our own Nation.

The skills of the American people and the dedication and courage of the American people is our single greatest resource. We need all of this to see our battle through. We need to unite with one another. We need to have confidence in our Government, confidence in ourselves, confidence in one another, confidence in the future. We need to set aside our narrow, regional interests and work together to join in a common purpose to strengthen and to serve the country that we love, the United States of America, the greatest nation on Earth.

You do your part, I'll do my part, and we'll win.

Thank you very much.

NOTE: The President spoke at 2:50 p.m. outside the Cane Run facility. In his opening remarks, he referred to Robert L. Royer, president of Louisville Gas & Electric Company.

Following his remarks, the President met at the facility with a group of coal industry executives.

The White House later issued the following information on the meeting.

At his meeting with coal industry leaders, the President responded to concerns about Government regulations by announcing that he has directed the Regulatory Council to begin an effort to eliminate overlapping and inconsistent Federal and State regulations affecting coal production and coal use.

The Regulatory Council, chaired by Doug Costle of the Environmental Protection Agency and comprised of the Federal Government's major regulatory agencies, was established by the President to improve and simplify the regulatory process. Following the President's directive, the Council will establish a Coal Regulation Project and will immediately begin a comprehensive assessment of regulatory problems affecting the coal industry. The Project will seek information from the indus-

try as well as the public. In today's meeting, the President invited the participants to submit to the Council their specific concerns about particular coal regulations.

In inviting those submissions, however, the President indicated his focus, as well as that of the Council, would be on improving the regulatory process, not on changing the substance of environmental laws. The President stated that those laws could not realistically be changed, and the industry's efforts would be best directed to working within existing laws and to helping pass a strong windfall profits tax, an energy security corporation, and a meaningful energy mobilization board. The President indicated that the tax, the corporation, and the board would provide the funds and the means to meet our energy goals without adversely affecting our health and safety.

Bardstown, Kentucky

Remark and a Question-and-Answer Session at a Town Meeting. July 31, 1979

THE PRESIDENT. Well, I finally made it to Bardstown. I'm glad to be here. My wife said that she never has had a better welcome nor made more friends in such a short time than when she came to Bardstown. And she wanted me to tell you thank you and she loves every one of you.

Two and a half weeks ago, I was planning to come to Bardstown myself, but I couldn't get away from Camp David. Every time I started to leave, I had another mess of company come—[laughter]—and I had to stay there and entertain them. But Rosalynn came to represent me.

And I thought a lot about our Nation and what I should do as President. And Sunday night before last, I made a speech about two problems of our country—energy and malaise. Senator Wendell Ford, on the helicopter, said that Bardstown could take care of both of them. He said

Kentucky could provide coal for the energy, and Bardstown could provide bourbon for the malaise. As a Baptist, I did not comment. [Laughter]

I am glad to be here.

ADMINISTRATION POLICIES

About 2 weeks ago, I did speak to you about the problems facing our country—a crisis of confidence, the fact that American people in recent years have begun to lose confidence in ourselves, in our neighbors, in our communities, in our churches, in our homes, in our schools, in our government, in our institutions; and also to talk to you about our energy problems. We have become overly dependent on foreign countries for our oil. We get more than 50 percent of all our oil from overseas, and we have to take American dollars, billions of them, every year and export those dollars and jobs overseas and import inflation. And I think it's better for us as Americans to face the facts, and as long as I'm President, I intend to tell you the facts, to tell you the truth, and to ask for your help.

Now, the energy problem is more than just statistics or figures or charts or graphs or speeches. This energy problem threatens the very security of our Nation. It threatens our economic independence. You know what happened in 1973, 1974, when a few OPEC oil-producing countries embargoed the shipment of oil to our Nation. And we've become, since then, even more dependent on foreign oil.

What we must do is to approach this threat to American security just as we have approached threats in the past to our Nation's security, like the Great Depression, the First World War, the Second World War. We are actually in a battle to win our energy independence. It's a battle that all Americans must fight together.

It's a battle that I do not intend to lose, did not intend to lose, and I believe with your help, we can win. Will you help me? [*Applause*]

Now, I don't want to mislead you. There are no easy answers. And some of the things that I propose are going to take a long time, like the synthetic production of fuels. But there are two things that we can do right away. One of them is to quit wasting energy—conservation. It doesn't cost anything. It saves money. It doesn't damage the quality of our lives. Save energy every way you can. And the second thing depends on Kentucky. Kentucky is the Nation's number one producer of coal, and we're going to use a lot of coal in the next few years.

We must see America provide basic energy from America. I would rather burn a ton of Kentucky coal than to see our Nation become dependent by buying another barrel of OPEC oil.

In the last 2 or 3 weeks, I've done a lot of thinking about my job as President—working for world peace, being certain that our Nation was secure, providing jobs for Americans. We've added 175,000 new jobs with the help of your Governor, industry, labor, and all of you in Kentucky in the last 2 years, making the Federal Government more open, more confident, more efficient. All this is part of my job as President.

But a President has an even larger responsibility, and that is to draw on the spirit of America, to call out the best that's in our people, to inspire Americans, and to work with Americans to unite, to combine ourselves together in a common purpose so that we can solve our Nation's problems, no matter what they are.

We do have some problems with energy, with confidence, with inflation, with some remaining unemployment, lot of

other things, but we must never forget that America is the strongest and the brightest and the best nation on Earth, and we've got more to be thankful for than we have to complain about.

In that speech 2 weeks ago, I talked about the separation of American people from our Government, particularly in Washington, and, again, those were not just empty words. Now, I can tell you that the Members of the Congress and the Federal employees and the Cabinet members, who work with me, are all filled with dedicated people trying sincerely to do a good job for you. But the more you live in Washington, and the more you talk to each other in Washington, you tend to become insulated from the rest of the Nation, you tend to become isolated from the people of our country. We start getting our ideas from each other, and we start getting our thoughts from each other. We spend too much time reading Federal Government forms and regulations instead of listening to people like you. And we've got to change that and listen to the people like you.

It affects me, too, but I'm determined that I'm not going to let anything erect barriers between your President and you, and I need for you to help me keep those barriers torn down.

I'll just give you one example, and then I want to answer your questions.

There is no way that we can meet our goals on energy and preserve our Nation's energy independence or our Nation's security without moving toward conservation—and that costs money—moving toward solar energy—that costs money—increase production and use of coal to make sure that consumers of electricity don't have to pay too much money; making sure that we have good air and water and land quality so that our children will have a delightful place to live as well; develop-

ing synthetic fuels in the future from coal, gas and oil from coal.

These kinds of things cost a lot of money. I don't want to be responsible for putting another tax on the American people to pay for it. What I want to do is to see the Congress pass a windfall profits tax on the oil companies to make sure that all we take from them are taxes, through taxes of profits that they have not earned. In the process, we're going to leave the oil companies with additional income which they can use to produce more oil and more gas within our country. That's a real fair proposition for the oil companies.

As I say, this bill's already passed through the House of Representatives, and now it's in the Senate. And the oil lobby is letting its voice be heard very quietly, very effectively in the halls of the U.S. Congress. There's only one way to meet that competition. Does anybody know what it is? Right with you—right? If you will let your voices be heard, we can prevail.

Now, I would hasten to add that your United States Senators, Dee Huddleston and Wendell Ford, are on my side and they're on your side. But I hope that you will write the other leaders in the Senate, the members of the Finance Committee, and let them know that you believe in the future of our Nation, that you're willing to do your share, and that the passage of the windfall profits tax is an integral part of reaching our energy security that we all want. And if you'll join in with me and with Wendell Ford and with Dee Huddleston, we will prevail, we'll pass the windfall profits tax, we'll have a secure nation and a better life for all Americans in the future.

Now I want to answer your questions. I'm ready for the first question.

QUESTIONS

WELFARE REFORM

Q. Good evening, Mr. President.

THE PRESIDENT. Good evening.

Q. My name is Catherine Roberts of Shepherdsville, Kentucky. Yesterday morning I heard on the news there were over 6,000 illegitimate children born last year alone. As a taxpayer, I would like to know if there would be job openings for mothers after the first child whereas the taxpayer would not have to support them, buy them homes—I mean, you know, help give them homes and steaks and cars to ride around in.

THE PRESIDENT. I think one of the most important things that we can do in our Nation is to strengthen American families; to cut down on the birth of unwanted children, particularly those who are illegitimate. But once they are born, I don't want to see the child branded for life and deprived of an opportunity to be a healthy and a strong and a prosperous and a happy American.

Now, one thing that we have proposed to the Congress is to reform the welfare laws, to take what money we do collect for welfare payments and not just perpetuate people who are able to work on the welfare rolls. Many people now, because of the confused welfare laws, are better off not working than they are to work, even if they're able to work.

So, I think your question's a very good one, and this is what we're trying to do, to give people who really need welfare payments and who cannot work an opportunity to live a decent life, to provide mothers who want to work a chance to keep their children in a good day care center and get jobs. And people who are able-bodied and don't have children, I

don't believe in any welfare payments for them. I think they ought to go to work.

STANDBY GASOLINE RATIONING PLAN

Q. [*Inaudible*]

THE PRESIDENT. I don't think the mike's working. Come up here and use this one. [*Laughter*]

Q. Mr. President, my name is Sean Cantrell, and I live right here in Bardstown. And what would the circumstances have to be before you ration gas, should Congress give you their permission to do so?

THE PRESIDENT. Very good. Thank you. Good question.

I've asked the Congress to give me authority to develop a standby gasoline rationing plan. The House of Representatives is voting on that authority this afternoon.

I just talked to Washington before I came in here, and the predictions are—I can't guarantee it, you don't ever know what Congress is going to do—but the prediction is that this afternoon or tonight the House of Representatives will give me that standby authority. What it means is that I will prepare for gasoline rationing. It will not be implemented. We'll put the rationing plan on the shelf as a standby, but we'll be ready. And if we do have a severe and sustained loss of gasoline, then it will be put into effect.

I hope that it will never have to be implemented. And if I do a good job as President, and if we get a good energy program through the Congress, that I've described to you in my opening remarks, then we won't have to have gasoline rationing. But I would rather have a standby gasoline rationing plan than to see gasoline rationed by price so that only the rich people can afford it. You've only got those two alternatives.

So, I will have a standby rationing plan. It will only be implemented if we have a severe shortage that lasts a long time. We need it. I believe we'll have it.

Dan, how about checking all three of the mikes?

TELEPHONE SERVICE IN BULLITT COUNTY

Q. Mr. President, I am Juanita Smith of Bullitt County. We have a terrific problem in our county, where our telephone company provides direct service—*[microphone feedback]*—

THE PRESIDENT. You shouldn't have said anything about the telephone company. [*Laughter*]

Q. —where our telephone systems provide direct service for over half of Bullitt County. The other half, which I am in, do not have the direct service. We have to pay toll charges for every call we make. We have tried to go through the Public Service Commission of Kentucky, but we have failed.

I have personally written to Senator Walter D. Huddleston. I think you might remember me writing to you. I have written to Senator Wendell Ford. We are referred back to the Public Service Commission. We get nowhere from the Public Service Commission.

My question to you, Mr. President: Could you appoint someone that could talk to us and see what they can do to help us secure this service?

THE PRESIDENT. As soon as this program is over, I will not only talk to Julian Carroll, but tomorrow morning I'll get on the telephone, and I will call the chairman of the Public Service Commission and see if I can't help Bullitt County get better telephone service. I'm not guaranteeing you any results, but I guarantee you I'll call them.

VOLUNTEER ARMED FORCES

Q. Mr. President, my name is McKay Chauvin, and my question concerns the volunteer draft. Each year the Armed Forces are losing valuable manpower, and so my question is, what can you do as President to make the services more attractive to the average American?

THE PRESIDENT. I think so far the volunteer program has worked well. Lately, however, as the unemployment rate has gone down, other jobs in some parts of the country have become much more available. So, we've lost one incentive for young men who couldn't get a job other places, who formerly came into the Armed Forces. Now they can get a job easier than they could in the past, and we are having problems getting enough young people, men and women, to volunteer for the Armed Forces to fill out our quotas.

We're now reassessing the status of whether or not people ought to be registered. I don't see any prospect anytime soon of actually calling people up to a draft, but we might have to have as a precautionary measure registration for the draft just as a standby measure.

As far as making the Armed Forces attractive, we have increased substantially the pay for young people going into the Armed Forces. As you know, there is a superb opportunity for a career training, and I think the living conditions, the food, the rapidity of transfer from one site to another, and the degree of choice you have is much better than it was when I was in the Navy for 11 years as a young person.

So, we might have a standby registration, if I decided it's needed. I don't think we'll have a mandatory draft. We'll do everything we can to make sure that the service in the Armed Forces is satis-

factory from a pay and career and living status is concerned.

The most important thing, though, is patriotism. And I think when we can restore to the United States the unity and the confidence and the true sense of love for our Nation, that will be an additional and perhaps the most important incentive for young people to volunteer to serve their country for a couple of years. I hope that happens here in Bardstown and all over the country.

DEPARTMENT OF EDUCATION

Q. [*Inaudible*]

THE PRESIDENT. Could you all hear it? The question was, since it appears that the campaign promise that I made to have a separate department of education might soon be fulfilled, would I consider appointing a classroom teacher as the secretary of education.

I will certainly consider it. I don't want to make a promise now, because I really want to wait until the bill does pass. It's already passed the House and Senate in different forms. It's to go through the conference committee, and I don't want to be presumptuous about what kind of person or who I would appoint.

But I will certainly consider a classroom teacher along with others. I can't make a promise that it would be a classroom teacher. Is that fair enough?

OIL INDUSTRY PROFITS

Q. I'm Tom Howell, from Hodgenville, Larue County. And my question is, Mr. President, why don't you try to do something about the big oil companies making so much profit?

THE PRESIDENT. I don't want to mislead you all just to get a round of applause. I believe in the free enterprise system of our country, and I believe that

the profit motive is the best incentive to provide the services that we need, the goods we need, as long as it's based on tough competition in the marketplace.

Now, we have seen in our own Nation in the last 10 or 12 years an annual decrease in the amount of oil we are producing. The only break in that downward trend was in 1977, 1978, when the Alaskan oil started coming in. We now get about 1.2 million barrels of oil a day from Alaska. But we've also seen the oil companies misuse the profits they have made. If the oil companies take the profits and invest them back into exploration and the production of additional oil and gas in our country, then I have no objection to their profits being made. But what they've done in the past is buy restaurants and motel chains; they've tried to buy circuses. They've bought department stores. They've taken profits off of oil and gasoline and not put it back in the ground to develop more energy for you and me.

We have introduced now and I support a bill that would prevent any of the 18 largest oil companies from purchasing companies like I've just described, which would force them within all practical bounds to take what profits they do make and produce more oil and gas.

We are also investigating, through the Justice Department and the Energy Department, complaints against the oil companies to make sure that they don't violate the antitrust laws, that is, that they maintain a high degree of competition and that they don't violate regulations or rules or proprieties in the adequate provision of gasoline and oil products for you.

So, to summarize, the profits are okay if the oil companies use them the right way. And it's my responsibility and yours to monitor them to make sure that the oil companies act legally and properly to serve

the American people under the free enterprise, which is so dear to us all.

ADMINISTRATION GOALS

Q. Good afternoon. My name is Buzz Turner, and I'm from Magnolia, in Larue County. Mr. President, as a graduate student of American history at Western Kentucky University, I'd like to know what do you think the history books will remember your administration for, or at least what you hope it will be remembered for?

THE PRESIDENT. I hope that when the record of my administration is written that the historians say that under the Carter administration, our Nation was secure, that our Nation was at peace, that no young American ever shed blood in a foreign war. I hope that our Nation will report—that history will report that under my administration, we've moved to restore the confidence of the American people in their own government. I hope that the history books will show that I helped to put American people back to work, and I hope that the history books will show that the threats to our security—both from foreign sources and also domestically, like energy shortages—were reduced or removed under my administration. And I hope that the history books will also show that while I served as President that I was honest with the American people when the times were difficult and that I joined in with the American people as partners in searching out the best that's in the hearts and minds of every individual American and that it be expressed in a true sense of patriotism, based on respect for one another, compassion for one another, stronger families, and love for one another. That's what I hope.

Now, you've got to help me make all those wishes come true. I believe they will.

COAL AND THE ENVIRONMENT

Q. I'm Christina Bradford, and I attend Bardstown Junior High School. Mr. President, in your energy message, you indicated an increase in the use of coal. My question is this: Are you going to allow the coal companies to take advantage of this situation to weaken the Federal strip-mining law? And what steps will you take to assure the protection of the environment for future generations?

THE PRESIDENT. Recently I had a report—as a matter of fact, this past week—from what's known as the President's commission on coal. The Chairman of that commission was Governor Jay Rockefeller, from West Virginia, and he and a group of distinguished American leaders, coal operators, environmentalists, representatives of the miners, and others, made a report to me—which is available to all of you, by the way, if you want it—on what we could do to increase the use and the production of coal.

The basic premise on which they based their study was that the environmental laws of our Nation would be carried out completely, that there would be no lowering of standards that would affect the quality of our land, our air, or our water. If we meet those standards of quality of life for Americans and carry out the laws, environmental laws of our Nation, there's an opportunity for us to double the amount of coal that we produce and use, burned cleanly and used cleanly, in the next 6 years to 10 years.

This afternoon I met at a nearby powerplant with about 50 or 60 of the leaders in the Kentucky coal industry—operators, railroad managers, coal miners, and power producers, electric power producers. I told them that the worst mistake that the coal industry could make was to insist upon a lowering of the environmen-

tal standards of our Nation. If there's one thing the people of our country fear about coal, is that it is dirty and it will lower the quality of our life. That is not true. We can burn twice as much coal in this nation and not lower our environmental standards at all. That's what I believe our Nation wants to do, and that's what I'm determined to do with the help of people in Kentucky and every other State that produces coal in our country.

REGULATORY REFORM

Q. Mr. President, Gary Hutchins from Bardstown, Kentucky. I would like to inquire as to what your administration is doing at present to reduce Government regulations which businesses are operating on daily—and it's costing each consumer, and I mean each man, woman, and child, a hidden tax, actually, of \$450 a year. The businesses in total are spending now in excess of what our national defense budget. So, what is being done to cut it down?

THE PRESIDENT. This has been one of the most difficult things I've tried to do as President. I am a small businessman myself, as you know, and went to the White House with a determination to cut down on regulations and forms, reports that are required by the Federal Government by private citizens. I think we've made a lot of progress already.

I remember one day, year before last, when we eliminated a thousand OSHA regulations in one day, and we've cut down the number of forms and regulations, for instance, in HEW, by more than 20 percent already. But we've still got a long way to go.

This was one of the questions raised this afternoon by the coal industry leaders. And I had the Chairman of our regulatory commission with me, Doug Costle—we've got a group of Federal agencies

that meet regularly now to make sure that there's no duplication or extra requirements of reports from the business community of our country that's affected by environmental laws. In the past we've had Energy, Interior, Labor, EPA, and all the rest of them requiring separate reports. Now at least they are meeting together.

Another thing that we are going to do that might be interesting to you is to have a small business convention or White House conference this winter. And in preparation for that conference, we have taken 200 sample small businesses around our Nation, and we've sent staff members in to work with that small business leader to say, "What are you required to do by the Federal Government in reports and forms and regulations compliance that might be eliminated?" And those 200 small businesses will be feeding in to me and the other members of the conference their ideas on how we can change weekly reports to semiannual reports; how we can have 5 questions instead of 50 questions; how many forms can be eliminated or how many forms can be combined between the Department of Labor, Commerce, HEW, HUD, and so forth.

So, I think that by the end of this year, when we have that White House conference, we'll make another step forward to eliminating this burden on the American people.

I don't think the American people are ever going to be satisfied, no matter how much progress we make, but we are plugging away at it and we need your help. If you are interested, you might do this: If you have Federal regulations and forms and reports in your own life that you consider to be too frequent or too complicated or not necessary, if you'll let me know directly, I'll do what I can to modify that burden on you. And since I get so

many letters, and so forth, if you will send your report to Senator Wendell Ford, he can bring your letter to me, and I'll try to use your case as an example and help other people like you who want to get this burden of regulation and paperwork and redtape off your back. Would you do that?

Okay, Wendell?

SENATOR FORD. Anything you say, Mr. President.

THE PRESIDENT. Good. Wendell said he'd be glad to do it—slightly different words.

INDOCHINA REFUGEES

Q. Mr. President, continued great courage to you. My name is Susan McDonald from Nerinx, Kentucky, and my question concerns the Vietnamese refugees. I nursed in Vietnam from 1973 through 1975. I became aware that Vietnam, during the many years of U.S. involvement, depended heavily on the U.S. Food for Peace program. We left Vietnam in '75, and at that time, severed all food aid. Now there's a scarcity of food in Vietnam, and this scarcity is part of the reason for refugees.

My question is: What is preventing us, the United States, from normalizing relations with Vietnam, giving food aid, and instead of severing that aid abruptly, tapering it off in a humane manner, thereby enabling more people of Vietnam to remain in their homeland?

THE PRESIDENT. We believe that the reason for the refugees is not because of a lack of aid from us to Vietnam. Vietnam is a nation which has not turned to us or to the rest of the world for either friendship or economic aid on any sort of reasonable terms. The Vietnamese have been forcing refugees—primarily of Chinese descent—to leave their own country and quite often have been making

them pay what money they have saved up to the Vietnamese Government for the right to leave their country under pressure. They've been pushed out from the shores of Vietnam in ships, and literally thousands of them have died.

In the meantime, the Vietnamese Government has invaded Cambodia, now known as Kampuchea, with 15 divisions of armed forces and violated those international borders.

So, under those circumstances, the pushing out under duress and pressure of thousands of refugees—in May, 50,000 alone—without any care about what happens to those refugees once they leave Vietnam, and attacking their neighbor Kampuchea with 15 divisions of armed forces, I don't think it's time for us to normalize relationships with that country.

What we are trying to do, however, is to recognize the need to take care of those refugees. I met during the weekend, the last weekend I was at Camp David before I made my energy and confidence speech, with a group of young people in Pennsylvania—Carnegie, Pennsylvania. And one of the young married women there said she didn't think we ought to take in any refugees because it was too much of a burden on the American people. And I responded to her, I know a lot of American people feel that way, perhaps, that we've already got enough burdens on the Federal Government, we don't want to pay taxes to take care of other folks. But let me repeat very briefly what I told her.

There is a total of about 220,000 Vietnam refugees that we're going to take into our country. These were our allies and friends during the war. They fought alongside of us; their lives were in danger. That's one refugee for every thousand Americans. It's not too heavy a burden for Americans to bear.

In addition to that, this is a nation of refugees. I doubt if there are any native Indians here. If so, they would be the only exceptions to the fact that all of our ancestors were immigrants and that many of them came here as refugees—as religious refugees, sometimes as prisoners who were let out of prison just if they would come to the New World. And I believe that our country is big enough and strong enough and rich enough and generous enough to take care of a few refugees from Vietnam that were our allies and friends during the last war. And that's the way I feel, and I thank you for your question.

I might add one other thing. We have had superb results with those Vietnamese who come to our country. They don't know how to speak English, most of them. They immediately begin to learn how to speak English. They are eager to get a job. They get off welfare faster than anybody I have ever seen. They become self-supporting citizens, and we have tried to place them in communities where the employment rate is very high so they do not contribute to the unemployment rate.

So, we are handling it well, and they are doing their share. I think in a few years, they'll be extremely good American citizens that will make us proud of them and proud of ourselves.

U.S. FOREIGN POLICY

Q. Mike Carney, Mr. President, from Cox's Creek. This is the same line of questioning. You've taken a tough stand on the energy situation. I'd like to know when you're going to take a tough stand on foreign policy in regards to taking up for our allies. For an example, South Korea, Nicaragua, Turkey, and in the past, Iran. And maybe we wouldn't have the energy situation we have today or, for an example, the Panama Canal—if the Govern-

ment would do what the American people wanted, then we wouldn't have the problem that we've got now.

So, how far does the Government do what we don't want done? And also on the Panama Canal, how far does human rights go, that we don't step in and help our allies and we take over and help the human rights situation?

THE PRESIDENT. I'll try to answer that.

The United States keeps its commitment to our allies. I just came from South Korea just 2 or 3 weeks ago. I have never had such an outpouring of a welcome in my life. There were literally millions of people on the street expressing their thanks to America for guaranteeing the independence and freedom of the people of South Korea.

Since I've been in office, we have substantially strengthened our own Nation's military commitment to our Allies in NATO, in Western Europe. We've got new friends that were formerly intimate allies with the Soviet Union. Egypt is a typical example. You can look at the whole coast of Asia now, from South Korea all the way down around to India; in almost every instance, we have a stronger allegiance and a closer friendship with them than we had 2 years ago, 5 years ago, or 10 years ago.

We've got strong, new allies in Africa. I remember, I think, 3½ years ago, Secretary Kissinger wanted to go to Nigeria as the Secretary of State of our country. He was not permitted to come into the nation of Nigeria, a hundred million people, the largest and the strongest nation in Africa. Now they are very good friends of ours.

So, we stand by our commitments without apology and without deviation.

Now, about Panama. I don't have any apology to make at all about the Panama Canal treaties, which, as you know, were ratified by two-thirds of the people in the

Senate. This was not a popular thing to do, but, in my opinion, it was the right thing to do. Our Nation's security is much better off having strong and friendly allies in Panama sharing with us the operation and the maintenance and the defense of the Panama Canal instead of having bitter enemies in Panama, knowing that we had broken our faith, violated our word, and mistreated those people in Panama.

Now, the canal is operated from now until the year 2000 jointly by us and Panama. They're our friends; they trust us; we cooperate. After the year 2000, the Panamanians will be responsible for the operation and maintenance of the canal. The United States will still have the right and the responsibility and the duty to defend the canal. That's what I believe is in the best interests of our own country.

It would not help us to violate our commitment to Panama, to have the Soviet Union and Cuba come in and try to change that government into a Communist government. Since we ratified the Panama Canal treaties, the Panamanians have had a free election; they have chosen 500-and-something members of their Congress. The Congress members have chosen a brand new President, and Panama is on the road now toward a true democracy.

So, I think that our human rights stand, our treating our allies with good faith, and our keeping our word of honor and making sure that we prepare for our Nation's security in the future all are wrapped up in the record that we've carved out for this administration and for the American people.

I have no apology to make, although the Panama Canal treaties was a misunderstood move that our Government made. It was not politically popular. I don't have any doubt that I lost a lot of political support on account of it, but it was right. And I would rather be right in

a case like that, when I'm sure it's for the best interests of our country, even if it does cost me something politically.

HEALTH PROGRAMS

Q. How do you do, Mr. President? My name is Tom Bruner, and I'm the director of a drug and alcohol drug treatment unit with North Central Comprehensive Care Center in Elizabethtown. And I would like to lend praise to your administration and to Mrs. Carter in particular for effecting improved mental health services. However, as Secretary Califano exits, do you intend to continue his step-up in alcohol and drug dependency programing and research, as he advocated, or is his absence indicative of a policy modification?

THE PRESIDENT. I have absolute confidence that the new Secretary of HEW, Pat Harris, has the same motivations and the same commitment to health in all its aspects, and also particularly mental health, as did Secretary Califano, who did a very good job.

I know my wife, as you've mentioned, has mental health and the problems of the elderly as her top priorities in her role as First Lady. And I can guarantee you that my wife, Pat Harris, the new Secretary of HEW, myself will be good partners with you in giving our people with mental health problems a better life in the future, including drug addiction as well. You can depend on that.

STRATEGIC ARMS LIMITATION

Q. Good afternoon, Mr. President. I'm Lloyd Bussage from Louisville, Kentucky. Concerning the ratification of SALT II, you as President have called upon the support of the American people to get this SALT II ratified. And yet other domestic leaders are telling the American

people differently. For example, General Rowny, the leader of your negotiation team, has resigned—had resigned—and he felt that it was no good, that the Russians were getting the upper hand on negotiations. And just this morning Henry Kissinger stated that he could not support the treaty until American arms and Russian arms were made equal. He felt the Americans were not quite as strong as Russia, and he would not support it until they were brought up to equal. And this sort of puts the American people in a position of being in the middle and not knowing who to believe.

Mr. President, who should we believe, and why?

THE PRESIDENT. Believe me. Also believe the Secretary of State, and also believe the Secretary of Defense. And also believe all the Joint Chiefs of Staff. The top military officer in the Army, the Navy, the Marines, the Air Force, plus the Chairman of that group, had General Rowny as their subordinate. He was their representative in the negotiations. And they all have testified since he did that the SALT treaty, in balance, is good for our country. They agree basically with what Secretary Kissinger said.

Along with a SALT II treaty—which is good for our Nation—there is a requirement that we meet the defense needs of our Nation. And I'm absolutely determined that our defense needs will be met.

We had a long downward trend in defense expenditures before I became President. We have now reversed that trend, not only in NATO but in overall expenditures as well.

I think one of the problems is that the American people need to support a strong defense. In the last 2 years alone, for instance, when I've made my defense recommendations to the Congress, the Con-

gress has reduced those recommendations by a total of \$5 billion.

The Soviets are tough negotiators, but so are we. And there is no doubt in my mind that no matter what level of defense spending we have, whether it's exactly right, \$5 billion too low, \$5 billion too high, we need the SALT II agreement, the treaty ratified. But what I'm going to do as President is work with the United States Senate and the Congress to have the SALT II agreement, which will give us peace; cut down on the nuclear arms race; let us monitor what the Soviets are doing, control the proliferation of nuclear weapons throughout all the rest of the world; stop the Soviets' buildup, which has been faster than ours in the past—all that will come with SALT II. And in addition to that, have a strong defense to make sure our Nation is always as strong as or stronger than the Soviet Union no matter what happens.

That's what I promise you.

One more, one more question.

HAZARDOUS WASTE DISPOSAL

Q. Good afternoon, Mr. President. My name is Frank Smith, State representative from Shepherdsville, Kentucky. I'd like to request that on your return flight to Louisville, that you make a pass over the Valley of the Drums.

My question is, what are your feelings on a super fund for dealing with hazardous waste materials?

THE PRESIDENT. For dealing with atomic waste materials?

Q. Hazardous wastes.

THE PRESIDENT. Hazardous wastes.

We've had nuclear wastes, as you know, for 35 years, and we are now approaching the first recommendation to the Congress on how to deal with nuclear wastes. In addition, we have proposed to the Congress

within the last few weeks, after a couple of years of preparation and hard work, a kind of an insurance program for dealing with chemical wastes and poisonous wastes of all kinds.

When a certain quantity of those chemical wastes are sold, there will be an insurance fund built up with a small premium. And then when there comes a time later on that those chemical wastes become a problem, the people who are threatened either with past uncontrolled dumping of wastes or with later deposits of wastes, they will be prevented from suffering, out of that insurance fund—with additional fill, the moving of the leaking barrels, and so forth.

I believe the Congress will act favorably on this, and I think your voice can be a very influential one and get them to do so.

So, in the control of nuclear wastes, which will be proposed to the Congress very shortly, and the chemical and poisonous wastes, which has already been presented to the Congress, I think, for the first time, our Government is moving to deal with the problem that is very serious and which you've pointed out so well.

Let me say this in closing to all of you: I'm very grateful for a chance to be with you. My listening to your questions, my receiving your comments, my shaking hands and having brief conversations with many of you, my coming to Kentucky, my visiting a coal-burning powerplant, my meeting with the coal industry people, my riding with your Congressmen, your Senators, your Governor, candidates for the future—all have given me a much clearer sense of what our Nation is, what its problems are, how to overcome those problems, what our opportunities are, and how we can take advantage of those opportunities.

The last thing I want to say is this: I'll repeat myself—we've got a lot of problems—so has everyone else on Earth—but we still live in the greatest nation in the world. And I want to make sure that all of you kind of take an inventory, count your blessings as an American: food, job opportunities, beauty, natural resources. We've got 24 percent of all the energy on Earth in the United States—the OPEC countries all put together have got less than 5 percent—freedom, the right of an individual American citizen to stand on one's own feet, to make one's own decision, to say one's own speech, to criticize when you think it is advisable; a free enterprise system that encourages innovation and initiative and competition in serving people better; a government based on democratic principles, where you can let your own voice be felt and heard and your own vote be influential, if you cast it. But the responsibility for the future cannot be resting on the shoulders of a Governor or a mayor or a U.S. Senator or a President. The responsibility for the future rests on your shoulders collectively, yours and mine alone, together.

And I believe that if we do count our blessings, analyze our problems, join ourselves together, have confidence in our Nation, fight the good fight together as Americans, there is no doubt in my mind that with God's blessing, we will prevail and we'll make our great Nation even greater in the future.

That's what I'd like to leave with you. God bless you all. He has certainly blessed us.

Thank you very much.

NOTE: The President spoke at 5:30 p.m. in the Bardstown High School gymnasium.

Following the town meeting, the President left Bardstown and went to English, Ind., to inspect the flood damage caused by severe storms on July 25. He then returned to Washington, D.C.

Conference on Security and Cooperation in Europe

Statement on the Fourth Anniversary of the Signing of the Final Act in Helsinki.

August 1, 1979

On this day in 1975, the leaders of 35 states met in Helsinki to sign the Final Act of the Conference on Security and Cooperation in Europe (CSCE). They pledged to build a future of peace and stability in Europe on the strong foundation of mutual understanding and respect for fundamental human rights.

In the years since Helsinki, we have witnessed conscientious efforts on the part of many signatory states to fulfill, fully and completely, their obligations under the Final Act. We have made progress in ensuring the freer flow of people and ideas. Flagrant abuses of human rights no longer go unnoticed and unchallenged. The Final Act provision which calls for notification of large military maneuvers has worked well. The spirit of Helsinki is alive. But there have also been important setbacks. For example, in the German Democratic Republic, harsh new laws designed to restrict contact with foreigners will take effect today, on the anniversary of Helsinki. In Czechoslovakia, members of the Charter 77 movement remain in prison, facing trial for their dedication to basic human freedoms. In the Soviet Union, organizations established to monitor compliance with the Helsinki agreement have been harassed and their members jailed. Acts like these are totally inconsistent with pledges made at Helsinki.

On the anniversary of the Helsinki accords, I rededicate this administration and this Nation to strive tirelessly for full implementation of the Final Act. We will continue to review our own record in prep-

aration for the meeting of CSCE states at Madrid in 1980. And we call upon other signatory states to work with us so that we may mutually fulfill the obligations undertaken at Helsinki to peace, security, and human rights.

National Commission on Air Quality

Appointment of Leonard A. Schine as a Member. August 2, 1979

The President today announced the appointment of Leonard A. Schine, of Westport, Conn., as a member of the National Commission on Air Quality.

Schine, 62, is an attorney who has represented both industry and environmental groups. He is a trustee of the Natural Science for Youth Foundation.

Council on Environmental Quality

Designation of Gustave Speth as Chairman. August 2, 1979

The President today announced that he has designated Gustave Speth, of Washington, D.C., to be Chairman of the Council on Environmental Quality. He replaces Charles Warren, who has resigned.

Speth has been a member of CEQ since March 1977 and has served as Acting Chairman since June 30 of this year.

Among his principal responsibilities at the Council are energy policy, water resources policy and wetlands protection, toxic chemicals and pollution control, and economics and regulatory issues. He has served as Chairman of the admin-

istration's Toxic Substances Strategy Committee and has been a member of the interagency groups which developed the administration's policies on solar energy, nuclear waste management, and water resources.

Before his appointment to CEQ, Speth was with the Natural Resources Defense Council, a national environmental organization which he helped found in 1970.

He was born in Orangeburg, S.C., on March 4, 1942. He received a B.A. from Yale University in 1964 and attended Balliol College, Oxford, England, on a Rhodes Scholarship, where he received an advanced degree in economics. In 1969 he received an LL.B. from Yale Law School.

In 1969 and 1970, Speth was a law clerk to Justice Hugo L. Black of the U.S. Supreme Court. He has served on a number of committees of the District of Columbia Bar Association and the D.C. Bar and was a trustee of the Institute of Ecology from 1972 to 1974.

Environmental Priorities and Programs

Message to the Congress. August 2, 1979

To the Congress of the United States:

Four months after I took office, I presented to the Congress a comprehensive Message on the Environment, a charter for the first years of my Administration. Building on the record of the Congress in the 1970's, I sought both to protect our national heritage and to meet the competing demands on our natural resources.

Certain basic ideas remain the foundation of American environmental policy. Our great natural heritage should be pro-

tected for the use and enjoyment of all citizens. The bounty of nature—our farmlands and forests, our water, wildlife and fisheries, our renewable energy sources—are the basis of our present and future material well-being. They must be carefully managed and conserved. The quality of our environment must be nurtured by wise decisions and protected from hasty or unplanned actions. Clean air and water remain essential goals, and we intend to achieve them in the most efficient and effective ways possible. And we have a serious responsibility to help protect the long-term health of the global environment we share with all humanity.

I am proud of the achievements of this period. The program I offer today emphasizes continuity, but it also reflects a keener awareness of certain serious emerging problems—such as disposition of the toxic wastes our highly technological society produces.

ACCOMPLISHMENTS SINCE 1977

We have made great strides together since I took office. With my strong support, the Congress enacted and I signed into law:

- the 1977 Amendments to our two fundamental laws for cleaning up pollution, the Clean Air and Clean Water Acts, including strict but enforceable standards and a strong wetlands protection program;
- the 1977 Surface Mining Reclamation Act, which established the first federal environmental standards for coal mining, and under which regulations were developed with strong public involvement;
- the 1977 Federal Mine Safety and Health Act, which established the Mine Safety and Health Administration in the Department of Labor to

promulgate and enforce health and safety standards in all mines;

- the 1977 Nuclear Non-Proliferation Act, which sets conditions on U.S. nuclear exports to deter the spread of nuclear weapons, and offers other countries incentives to cooperate with our safeguards against proliferation;
- indefinite deferral of other activities which might lead to weapons proliferation, particularly nuclear fuel reprocessing and commercialization of the breeder reactor;
- the 1978 National Energy Act, with specific policies and programs emphasizing energy conservation;
- the 1978 Federal Environmental Pesticide Control Act, which provided for generic registration and control of pesticides;
- reauthorization, in 1978, of the Endangered Species Act, including new procedures for resolving conflicts under the Act;
- enactment of the National Parks and Recreation Act of 1978 and other legislation to preserve nationally significant areas, adding 45 million acres to the National Park System, 13 new Wild and Scenic Rivers and National Trails, and protecting more than 4.5 million additional acres of wilderness.

In addition, I issued Executive Orders in 1977 and 1978 directing federal agencies to improve their implementation of the National Environmental Policy Act under new regulations, which were issued in 1978; examine the environmental effects of federal actions abroad; preserve and restore natural values of wetlands and floodplains; protect our public lands from damage caused by off-road vehicles; and analyze the impacts of new federal policies on urban areas. These directives are being implemented.

ENVIRONMENTAL PROGRAM

With these accomplishments behind us, we can turn our attention to new issues and to other key issues that are still unresolved.

In the decade ahead, we will face difficult decisions as we confront the necessity of reducing dangerous dependence on foreign oil. The leaders of the major industrial democracies met in Tokyo last month to chart a course that would help cut the use of imported oil from uncertain foreign suppliers. Each nation committed itself to a specific reduction in imports, to be accomplished in a way appropriate to its particular needs and resources.

For the past two and one-half years, conservation and energy from the sun have been major thrusts of my energy program. Solar energy funding has been tripled during that period and the Congress in 1978 enacted the National Energy Act which will save 2.5 million barrels of imported oil per day. Much of these savings will be accomplished with conservation initiatives. In addition, another 1.5 million barrels of imported oil will be saved as a result of my April energy message and June solar energy package.

To build on these major savings, I have proposed an expanded effort to put this nation on a sound energy footing, with clear goals for the next decade. That effort is based on a bold program to increase domestic energy production and on additional energy conservation initiatives. Overall, this program will reduce our dependence on foreign oil by 4.5 million barrels per day by 1990.

Some of the measures I have proposed will simultaneously serve the goals of reducing oil imports and enhancing our environment. I proposed establishing a major new residential and commercial conservation program designed to save at

least 500,000 barrels of oil a day by 1990. I further proposed a total of \$16.5 billion over the coming decade for improvements in the nation's public transportation system and in transportation fuel efficiency. A major solar energy program will help us to meet our goal of 20 percent solar energy by the year 2000.

We must also embark on a major energy production effort through a new Energy Security Corporation that will have broad responsibility for developing 2.5 million barrels a day of replacement fuels by 1990. That Corporation will be specifically authorized to develop not only synthetic fuels but also sources of energy which could have significant environmental benefits, such as natural gas and biomass. I do not pretend that all new replacement sources of energy will be environmentally innocuous. Some of the new technologies we will need to develop pose environmental risks, not all of which are yet fully understood. I will work to ensure that environmental protections are built into the process of developing these technologies, and that when tradeoffs must be made, they will be made fairly, equitably, and in the light of informed public scrutiny. We will examine not only the impact of new energy technologies on land and water and the effects of toxic chemicals, but also the longer term implications of increasing carbon dioxide concentration in the atmosphere.

I am pledged to be sensitive both to energy needs and to environmental considerations. There is no excuse for unnecessary red tape, which has plagued construction of some needed energy projects. I have proposed the creation of an Energy Mobilization Board to accelerate decision-making on critical energy facilities. This will cut out excessive delay, but I will not allow it to undermine protection of our nation's environment. I intend, for instance, to make the environmental

impact statement process fit the decision schedule set by the Energy Mobilization Board so that waivers of these statements will be rare. Only in exceptional cases will alternative procedures be necessary for the orderly completion of a critical energy facility. With the exception of new requirements imposed when construction of a critical facility is underway, the Board could not waive substantive environmental standards. The President will retain the right to override decisions of the Board on any waiver issue, and Board waiver decisions would be subject to judicial review.

Solving the nation's energy problem is essential to our economy and our security. We will not lose sight of our other goals but we must not fail in ending the energy crisis. This Administration's basic commitment to clean air, clean water and the overall protection of the environment remains strong.

ALASKA LANDS

The highest environmental priority of my Administration is the passage of adequate legislation designating National Parks, Wildlife Refuges, Wilderness Areas, National Forests, and Wild and Scenic Rivers in Alaska.

To protect these magnificent Alaskan lands, I took several actions after the 95th Congress failed to provide protection against exploitation of certain areas in Alaska. By executive action, I designated 17 areas as National Monuments, covering 56 million acres. Additional areas were set aside by the Secretaries of Interior and Agriculture. These areas should be promptly and permanently protected by legislation.

The legislation I support not only protects Alaska's natural and cultural heri-

tage but also accommodates the need for balanced development of Alaska's natural resources. Under the Alaska Statehood Act and Native Claims Settlement Act, federal land comprising an area nearly as large as Texas will soon be in state, native and private ownership. My proposals leave most of Alaska's mineral and timber wealth available for development, both on federal and non-federal lands. In particular, all of the off-shore and 95 percent of the on-shore areas in Alaska with favorable potential for oil and gas would be open to exploration and development.

The only area with significant potential for oil and gas reserves that would be foreclosed from exploration and development is the Arctic Wildlife Refuge, the calving grounds of the largest remaining caribou herd in the world and an important part of the herd's migratory route. Because of our responsibility to protect this extraordinary remnant of our continent's original wildlife, and because oil and gas are plentifully available elsewhere in Alaska, I firmly believe that the Arctic Wildlife Refuge deserves the full protection the House bill would provide.

There are other Alaskan areas where disagreements and conflicts exist over proper management. The Administration's proposals strike a balance that offers future generations of all Americans—especially Alaskans—broad opportunities for prosperity and enjoyment without the mistakes in land management we have seen elsewhere in the country.

I applaud the recent passage by the House of Representatives, by a margin of 300 votes, of a strong and fair bill which will protect Alaska's wildlife and wild areas, while providing for America's future economic needs. I urge the Senate to act with equal foresight this session.

HAZARDOUS WASTES

In August 1978, I declared Love Canal in Niagara Falls, New York, a national disaster, thus authorizing the use of federal disaster relief aid. The tragedy of Love Canal exemplifies the legacy of past improper hazardous waste disposal.

Last month I submitted to Congress a legislative proposal designed to prevent future disasters like the one at Love Canal. My proposed legislation—the Oil, Hazardous Substances and Hazardous Waste Response, Liability and Compensation Act—will provide the first comprehensive program to address releases of oil and hazardous substances from spills and from inactive and abandoned sites into navigable waters, ground waters, land and air. The legislation builds on present authority and fills gaps where present authority is inadequate to protect the human environment.

We do not yet know all of the problems associated with the disposal of hazardous wastes, but we must take further steps immediately. A report done for the Environmental Protection Agency estimates that there are 33,000–50,000 dumpsites which may contain some hazardous wastes. Of these, EPA estimates that 1,200 to 2,000 may present potentially significant problems, and 500 to 800 of them may have to be abandoned. Other accounts of improper disposal describe shallow burial in steel drums which leak after years in the ground, dumping in open lagoons, and clandestine dumping in sewers and along our highways. These abuses have caused serious damage to human health and economic welfare, pollution of ground and drinking water, and degradation of residential and recreation areas. The cost of cleaning up these sites runs into the billions of dollars. But the costs

of ignoring the problem would be far higher.

Timely action by the Congress on my program will enable the Federal government, in cooperation with State and local governments and industry, to:

- identify abandoned hazardous dump sites across the nation;
- establish a uniform system of reporting spills and releases;
- provide emergency government response and containment to clean up and mitigate pollution without delay in cases where those responsible do not respond adequately or cannot be quickly identified;
- provide vigorous investigation of releases of oil, hazardous substances or hazardous waste from spills or abandoned and inactive sites;
- provide stronger authority to compel the responsible parties to clean up dangerous sites wherever possible;
- provide compensation for damages to property and for some other economic losses resulting from spills; and
- provide financing for these actions through a national fund of appropriations and a fee on the oil and chemical industries, and State cost-sharing over certain limits.

SOLAR ENERGY

My Solar Energy Message, submitted to the Congress on June 20, 1979, calls for a national commitment to the use of solar energy. That message and the program it lays out came from a 13-month effort by my Administration and the public, begun on Sun Day—May 3, 1978.

Solar energy is renewable and secure. It is clean and safe. In the long run, solar and other renewable sources of en-

ergy provide a hedge against inflation. Unlike the costs of depletable resources, which rise at increasing rates as reserves are consumed, the cost of energy from the sun will go *down* as we develop better and cheaper ways of applying it to everyday needs. For everyone in our society—especially our low-income or fixed-income families—solar energy will provide an important way to avoid rising fuel costs in the future. No foreign cartel can embargo the sun or set the price of the energy we harness from it.

I have set a national goal of achieving 20 percent of the Nation's energy from the sun and other renewable resources by the year 2000. To do this we must commit ourselves to several major new initiatives which will hasten the introduction of solar technologies. I am proposing a variety of solar programs to be funded from my proposed Energy Security Trust Fund, including a Solar Bank to help finance solar installations in homes and commercial buildings; tax credits for new buildings that use solar energy and for using the sun's heat for industrial and agricultural processes; and stronger efforts to remove institutional, financial, and information barriers that currently inhibit the use of solar energy by citizens. These proposals are in addition to the expanded research, development and demonstration program I included in my budget for fiscal year 1980.

NUCLEAR WASTE MANAGEMENT AND SAFETY

I will soon announce a national nuclear waste management policy that will be designed to deal effectively with nuclear wastes from all sources, including commercial, defense, medical, and research activities. This nuclear waste management policy will be based pri-

marily on recommendations presented to me by the Interagency Review Group on Nuclear Waste Management. Some of the important findings of that Report include the following:

- Existing and future nuclear waste from military and civilian activities, including discarded spent fuel from the once-through nuclear fuel cycle, should be isolated from the biosphere so that it does not pose a significant threat to public health and safety.
- The responsibility for establishing a waste program should not be deferred to future generations.
- A broader research and development program for waste disposal, particularly geologic isolation, should begin promptly.
- Public participation should be developed and strengthened for all aspects of nuclear waste management programs.

I also look forward to receiving the recommendations on reactor safety from the Kemeny Commission in the aftermath of the Three Mile Island accident so that we can assure that nuclear reactors are as safe as the public expects them to be.

WATER RESOURCES POLICY

I remain firmly committed to the water resources policy reforms I announced in my Message to Congress one year ago. The revised criteria used by the Administration in reviewing proposed water projects have already shown their worth. They are producing environmental benefits and reducing wasteful government spending. In 1979, for the first time in four years, the Executive branch proposed funding new water projects, using the more systematic and objective evaluation procedures I have instituted. With the help of Congress and State and local governments, the Administration has prepared legislation to make further reforms in water resources

management, including cost-sharing and assistance to states for comprehensive water resources planning. I look forward to cooperation with the 96th Congress in this area.

NATIONAL HERITAGE POLICY ACT

I strongly support the establishment of a comprehensive Federal program to identify and protect significant natural areas and historic places. I will soon propose a National Heritage Policy Act which would help Federal agencies, State and local governments, Indian tribes and citizens identify potential heritage areas; establish a new National Register of Natural Areas to supplement the existing National Register of Historic Places; and protect areas listed on either Register, or eligible for listing, from adverse federal actions. This important legislation would support the Heritage Conservation program already established by the Secretary of the Interior in 1977.

SAVING THE WHALES

With U.S. leadership, the nations of the world are making encouraging progress toward protecting the great whales. At the July 1979 meeting of the International Whaling Commission (IWC), proposals by the United States and other countries for a moratorium on commercial whaling led to dramatic improvements. By the necessary three-fourths majority, IWC members voted to:

- End whaling from factory ships on the high seas (except for hunting of the relatively numerous minke) and allow whaling only from coastal stations;
- Reduce killing of the commercially valuable but jeopardized sperm whales by more than three-quarters,

with world quotas down from 9360 sperm whales to 2203;

- Establish a whale sanctuary in most of the Indian Ocean where no hunting of any of the great whales will be allowed for 10 years.

I am wholeheartedly committed to strong action to guarantee the survival of the great whales. The progress made in this year's IWC meeting shows that many other nations share the American commitment. I will continue to press for better scientific understanding of these magnificent and highly intelligent creatures and will maintain the effort to halt commercial whaling.

IMPLEMENTATION OF 1978 NATIONAL PARKS AND RECREATION ACT

Following passage of the National Parks and Recreation Act of 1978, the Administration has sought to speed the acquisition of new park land before it is spoiled or priced out of reach. We shall continue to do that.

Among the most significant and imaginative actions included in the 1978 legislation is the program to establish a million-acre Pinelands National Reserve in New Jersey. The Department of the Interior will support local and State efforts to protect the Pinelands and its unique scenic and natural resources while maintaining private ownership and a sound local tax base. The Administration strongly supports this new Federal, State and local partnership in the Pinelands, and will work hard to see that federal agencies cooperate with State and local governments to ensure its success.

POLLUTION CONTROL

Making the Clean Air and Clean Water Acts work is an important commitment of my Administration. We will continue the

progress we have made in the past two years in promulgating fair standards and regulations, and we will continue to encourage new approaches to control of pollution, such as alternative and innovative waste water treatment projects. The Environmental Protection Agency has taken a number of steps in the right direction. For example, the "bubble concept," "offset" policy, and permit consolidation are intended to simplify pollution controls.

I will seek the reauthorization of the Safe Drinking Water Act, which expires next year. This law protects our citizens from newly-discovered toxic pollutants within drinking water, as well as imposing standards for conventional contaminants. For toxic substances which may enter the environment in a multitude of ways, my Administration is committed to the reauthorization and vigorous enforcement of the comprehensive Toxic Substances Control Act.

OIL POLLUTION OF THE OCEANS

The recent collision in the Caribbean of two supertanker behemoths, each carrying more than 1.4 million barrels of oil, underscores the importance of effective national and international programs to reduce oil spills. At the outset of my Presidency, I proposed a comprehensive program to reduce the threat of oil pollution from tankers in United States waters, and to win international agreement to higher standards of tanker safety and pollution prevention.

Responding to the U.S. initiative, maritime nations of the world agreed in 1978 to tighten inspection requirements and significantly raise world standards for tanker construction and equipment. The Department of Transportation is completing new rules, based on the international agreement, to require improved

features on both U.S. ships and foreign tankers entering our ports, including: segregated ballast, protective location of ballast space, crude oil washing, inert gas systems, and improved emergency steering systems. Dual radars and other aids to navigation are already required.

In addition, for the past two and one-half years, the Coast Guard has boarded and examined at least once a year every foreign-flag tanker entering our ports, recorded any deficiencies, and required repairs if necessary.

The Secretary of Transportation will promptly add to this program requirements for:

- improved construction of tank barges;
- safe conduct of lightering (ship to ship transfer of oil);
- improved U.S. standards for tanker crews and pilots; and
- pollution prevention features for older, smaller tankers not covered by the international standards.

Requirements for collision avoidance aids will also be added; international agreement is near on standards for these important tanker safety devices.

The United States will continue to urge other nations to put into effect promptly the requirements of the 1978 international agreements on tanker safety and pollution prevention. I also urge the prompt adoption by all nations of the new international standards for training and certification of seafarers, agreed upon in 1978.

The proposed Oil, Hazardous Substances and Hazardous Waste Response, Liability and Compensation Act, submitted to the Congress by the Administration, provides for swift cleanup of oil spills, strict liability of spillers, and compensation for victims of oil spill damage.

I expect the Coast Guard to report to me promptly on the results of its study of devices to improve tanker maneuverability and stopping. In addition, the Coast Guard is undertaking a study of past accidents to evaluate further the usefulness of double bottoms and side protection in reducing oil spills. The Department of Transportation will continue to evaluate promising ideas to preserve the oceans and its resources from pollution by oil.

REGULATORY REFORM

Improving government regulations is important to my effort to make government more efficient and private-sector responses more cost-effective. Environmental protection can and should benefit. I intend to improve the regulatory process in a way that does not weaken our commitment to environmental quality.

If there are better methods to achieve our environmental goals, we should use them. Agencies should seek and adopt innovative alternatives to government regulations which reduce burdens on private citizens or businesses. The Environmental Protection Agency has become a leader among federal agencies in examining new approaches and has made several moves to streamline its regulatory process. In addition to the permit consolidation, bubble concept, and offset policy mentioned above, EPA is doing an effective job of implementing my Executive order on regulatory reform and published the first agenda of regulations issued by any federal agency. A regulatory calendar is now prepared and published on a government-wide basis by the Regulatory Council I recently established.

Since 1977 the Occupational Health and Safety Administration has gotten rid of hundreds of unnecessary standards, and

has reorganized its program to devote 95 percent of its resources to the most serious workplace hazards. In addition, regulatory agencies have begun to work together to coordinate their activities and use their resources more efficiently. I expect such progress to continue and I intend that it reinforce—not diminish—our environmental improvement efforts.

PENDING LEGISLATION AND REAUTHORIZATIONS

I have proposed and will continue to support reauthorization of important environmental statutes, including the Endangered Species Act, the Toxic Substances Control Act, the Safe Drinking Water Act, and the Resource Conservation and Recovery Act. I also continue to support a nongame wildlife program, and a wide range of wilderness proposals.

The Environmental Program I am outlining today expands upon the efforts we have already begun with a series of new initiatives in land and resource management, agricultural conservation, urban quality, and improving the global environment.

NEW INITIATIVES

I. LAND AND RESOURCE MANAGEMENT

America's land and natural resources have nourished our civilization. Because our original heritage was so abundant, we sometimes take these resources for granted. We can no longer do so. Our land and natural resources do have limits, and our demands upon them are growing at increasing rates. Renewable resources—farmlands, fisheries, and forests—can be depleted through overuse and misuse. We must build into our decisions the understanding that unwise actions affecting our lands and resources are difficult and costly, if not impossible, to correct.

Conservation of resources takes care and planning, and requires a partnership between various levels of government, and public and private actions. The following initiatives for protection and wise management of our coastal resources, public lands, wildlife and rivers and trails reflect this understanding.

National Coastal Protection

America's coast lines are extraordinarily varied, productive and beautiful. Congress recognized the need for special protection in the Coastal Zone Management Act of 1972, which established a voluntary Federal-State partnership for the conservation and management of coastal resources. Under this partnership, many states have already made notable progress. They have passed comprehensive coastal management laws; adopted new measures to protect wetlands, barrier islands, mineral resources, historic sites and other important coastal resources; worked out better management of hazardous areas; and streamlined Federal, State and local actions affecting the coast. By the end of 1979, 75 percent of the U.S. shoreline will be covered by Federally-approved state coastal zone management programs.

The coastal zone is subject to unusual pressures, both from natural causes and human activities. The land and water resources which support the environments and economies of coastal communities are in danger of depletion. The opportunity for our citizens to enjoy beaches, bays, and marshes is often threatened. I support efforts to improve our understanding of these coastal issues, and I heartily endorse the designation by conservation organizations of the year 1980 as the "Year of the Coast."

To help achieve the balanced, comprehensive and wise management intended by the Coastal Zone Management Act, I am announcing three initiatives to continue and improve our resource protection policy.

First, I will submit to Congress legislation to reauthorize Federal assistance to state coastal zone management programs under the Coastal Zone Management Act. Under this extension, each state would be guaranteed a total of five years of federal assistance at current levels after a state management program is approved and before federal support is gradually phased down. This will help ensure that recently developed state and local coastal zone management efforts become fully established and accepted functions of government.

Second, I will recommend enactment of new amendments to the Coastal Zone Management Act that will establish a national coastal protection policy. Working through the states, the goals of this policy will be:

- to protect significant natural resources such as wetlands, estuaries, beaches, dunes, barrier islands, coral reefs, and fish and wildlife;
- to manage coastal development to minimize loss of life and property from floods, erosion, saltwater intrusion and subsidence;
- to provide predictable siting processes for major defense, energy, recreation and transportation facilities;
- to increase public access to the coast for recreation purposes;
- to preserve and restore historic, cultural and aesthetic coastal resources; and
- to coordinate and simplify government decisionmaking to ensure proper and expedited management of the coastal zone.

Third, I am directing the Secretary of Commerce to conduct a systematic review of federal programs that significantly affect coastal resources. This review, to be conducted by the National Oceanic and Atmospheric Administration, will provide the basis for specific recommendations to improve federal actions affecting the coastal zone and to develop any additional legislation needed to achieve our national coastal management goals.

Public Land Resources

Among the many natural resource issues facing the Nation, few are more important than the management, protection and use of the 417 million acres of public lands owned by all Americans and administered by the Secretary of the Interior through the Bureau of Land Management.

The public lands include vast tracts of the arid rangelands of the West which were once lands that no one wanted. Now, some of these lands are highly valued for their energy and other valuable resources, and they have come to be appreciated for their scenic and natural values. My Administration is committed to purposeful management of the public lands and resources administered by the Bureau of Land Management in an environmentally sound and cost-effective manner.

Therefore, I am directing the Secretary of the Interior to manage the public lands administered by BLM in accordance with these principles:

- The Federal Government will be a good steward of the land, seeking to find the best balance of uses to assure that resources are available to meet the Nation's needs and that environmental values are carefully protected.

- The Federal Government will be a good neighbor, providing full opportunities for those affected by our management

decisions to be involved in making them, with a special concern for the people and institutions of the Western States that are most directly affected.

- The Federal Government will make cost-effective investments in protecting and enhancing these lands within the constraints of fiscal responsibility.

- The Federal Government will seek to resolve conflicts among competing uses in a spirit of cooperation and trust, and will make—not avoid—tough decisions on the allocation of the valued resources of public lands.

We have already made significant progress in bringing these lands under effective management. A concerted federal effort is now underway to reverse the declining productivity of the 174 million acres of rangeland ecosystems managed by the Bureau of Land Management for livestock, wildlife, soil and moisture conservation, and other beneficial purposes. We have developed a comprehensive on-the-ground planning process for each unit of BLM-managed land which involves the public and assesses the environmental impacts of alternative actions. On June 4, 1979, the Secretary of the Interior announced our new federal coal management program, which establishes a balanced and efficient process for determining coal leasing and management on federal lands.

Much more remains to be done. I am therefore directing that the following actions be taken:

- The Secretary of the Interior will establish a comprehensive "program development process" for managing all the lands under BLM stewardship, which will, for the first time, set long range goals to ensure balanced protection and use of the resources and develop and analyze alternative programs and investment strategies to meet the goals. Each alternative

program will be designed to achieve environmentally sound, fiscally responsible, and economically efficient investment, development, protection, and resource use. This new program planning process will supplement BLM's current unit-by-unit planning. It will invite State and local governments and interested citizens to participate in making better informed choices among the alternative programs.

- The Secretary will give special attention to protecting areas of BLM-administered lands with nationally significant wildlife, natural, scientific, cultural, or scenic resources. An example is the Birds of Prey area, located along the Snake River in the Idaho desert, that has North America's richest concentration of birds of prey, including dense nesting populations of falcons, eagles, and other raptors.

- Finally, I am directing the Secretary of the Interior and the Secretary of Agriculture to work together to coordinate their Departments' natural resource policies and programs, particularly those of the Bureau of Land Management and the Forest Service. I am requesting the two Secretaries to develop within six months a detailed statement of coordination objectives and a process and timetable for achieving them.

Wildlife Law Enforcement

A massive illegal trade in wild animals, wild animal parts and products, and wild plants has been uncovered in the last year through investigations by the Department of Justice, the Fish and Wildlife Service, the Customs Service and the Departments of Agriculture and Commerce.

This illegal trade in wildlife and plants has several very serious consequences. It can introduce exotic diseases, threatening agriculture. It creates a market for thousands of species of wildlife and plants taken in violation of the laws of foreign

nations, ultimately threatening the survival of these species. It is a danger to the survival of hundreds of species listed on the Convention on International Trade in Endangered Species, to which the U.S. is a signatory nation.

I am therefore submitting to Congress a bill to overcome obstacles inhibiting enforcement efforts.

In addition, I am directing the Departments of Agriculture, Commerce, Interior, Justice, and Treasury to investigate this trade aggressively and to prosecute violators of the law. I am directing the Department of the Interior to coordinate this effort, through an interagency Wildlife Law Enforcement Coordinating Committee which will review enforcement experiences, priorities and problems. I am also directing the Department of Agriculture to chair a task force to investigate the illegal trade in plants and to prosecute where appropriate.

I am further directing that the following specific steps be taken: The Treasury and Commerce Departments will raise the priority of wildlife enforcement cases; the Agriculture Department will place greater emphasis on coordinating its wildlife enforcement program with its disease quarantine program, and will begin hiring special agents to investigate the illegal plant trade; and the Department of Justice will establish a Wildlife Section which will be staffed principally by attorneys trained as wildlife law enforcement specialists.

Wild and Scenic Rivers

Our Nation's river corridors are a rich concentration of natural ecosystems, scenic beauty, and historic and recreational values. Since my Environmental Message of May 1977, eight rivers totalling 695 miles have been added to the National Wild and Scenic Rivers System, and nine

new rivers have been recommended for study. As part of the Administration's Alaska proposals, 33 additional rivers have been proposed for National Wild and Scenic Rivers designation.

Development along the banks of our rivers continues to outpace our ability to protect those rivers that might qualify for designation. This problem is particularly acute near urban areas, where there are greater demands for recreational opportunities which can partly be met by river protection.

We need to speed up the process for studying Wild and Scenic Rivers for designation and to consider the protection of rivers or parts of rivers which can protect important natural ecosystems. Moreover, the Federal government should set an example of sound management for state, local, and private landowners by taking an aggressive role in protecting possible Wild and Scenic Rivers which flow through our public lands. Accordingly, I am directing the following actions be taken:

- federal land management agencies shall assess whether rivers located on their lands and identified in the National Inventory prepared by the Heritage Conservation and Recreation Service are suitable for inclusion in the Wild and Scenic Rivers System; if so, these agencies shall take prompt action to protect the rivers—either by preparing recommendations for their designation or by taking immediate action to protect them;
- all federal agencies shall avoid or mitigate adverse effects on rivers identified in the National Inventory; and
- the Secretary of Agriculture and the Secretary of the Interior shall jointly revise their Guidelines for evaluating wild, scenic, and recreational

rivers to ensure consideration of river ecosystems and to shorten the time currently used to study rivers for designation.

In addition to the new policy initiatives, I am reaffirming my support for four river segments proposed in my last Environmental Message and recommending four new river segments which will add a total of 930 miles to the Wild and Scenic Rivers System:

- Gunnison River, Colorado (new)
- Encampment River, Colorado (new)
- Priest River, Idaho (new)
- Illinois River, Oregon (new)
- Bruneau River, Idaho (1977 Message)
- Dolores River, Colorado (1977 Message)
- Upper Mississippi River, Minnesota (1977 Message)
- Salmon River, Idaho (1977 Message)

I am also directing the Secretary of the Interior to develop, through the National Park Service and with full public participation, a conceptual master plan for the Upper Mississippi River in Minnesota. I expect this planning process to determine the specific requirements for protecting the river corridor and providing public access, campgrounds and other recreational facilities on the lands now in private ownership. The conceptual master plan for this important national resource will be developed in cooperation with the Minnesota Department of Natural Resources, affected Indian tribes, and the public. It will be completed by April 1980.

In my last Environmental Message, I proposed 20 river segments for study as potential additions to the National Wild and Scenic Rivers System. Several of those rivers have already been designated. Except for rivers where subsequent development has affected the river's qualifica-

tions for designation, I will continue to seek study authorizations for these rivers. In addition, I am submitting legislation to add the North Umpqua River in Oregon to the list of those rivers to be studied.

I am also forwarding to Congress reports on several rivers which, after thorough study, were found to qualify for inclusion in the National System. However, because of the interest of the states or local governments in protecting their natural values, the reports recommend that the rivers be protected and managed by state and/or local action. I am greatly encouraged by the efforts which all levels of government are taking to protect valued natural resources. I am particularly pleased to note that in the case of the Housatonic and Shepaug Rivers in Connecticut, local governmental agencies are taking the lead in developing management plans to protect these significant river resources. I am transmitting reports on:

- Pine Creek, Pennsylvania
- Buffalo River, Tennessee
- Youghiogheny River, Pennsylvania-Maryland
- Shepaug River, Connecticut
- Kettle River, Minnesota
- Lower Wisconsin River, Wisconsin
- Housatonic River, Connecticut
- Illinois River, Oklahoma

National Trails

More than 61 million of the Nation's people go nature walking and more than 28 million people hike or backpack at least five times a year. To meet the growing needs of these and other trail users, Congress enacted the 1968 National Trails System Act and directed that a National Trails System be established. Since the establishment of the National

Trails System, 257 National Recreation Trails have been designated, including 21 trails for those using wheelchairs and 13 trails designed for the use of blind people, with interpretive signs in braille.

The National Trails System is still in its fledgling stage and should grow to meet widespread public interest. National trails near urban areas can serve an energy-conscious nation by providing recreation close to home for the majority of our citizens and, in some cases, by providing commuter routes for bicyclists, walkers, and joggers.

To meet these objectives, under my direction, the U.S. Forest Service will establish 145 additional National Recreation Trails by January 1980, achieving a goal of two National Recreation Trails in each National Forest System unit. I am directing each Federal land management agency to follow the example set by the Forest Service and by January 1980 announce a goal for the number of National Recreation Trails each agency will establish during 1980 on the public lands administered by the agency. I am also directing that, by the end of 1980, a minimum of 75 new National Recreation Trails shall be designated on public land other than National Forests by the Federal land management agencies.

I am directing the Secretary of the Interior, through the Interagency Trails Council, to assist other Federal agencies in surveying existing trails on federal lands to determine which of those can be made part of our National Trails System and to initiate a grass-roots effort in every region of the country to assess our nationwide trails needs. In addition, I am directing the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Defense and the Chairman of the Tennessee Valley Authority to encourage

states, localities, Indian tribes, and private landholders to designate trails on their lands.

Finally, I will submit legislation to the Congress which will designate the 513-mile Natchez Trace National Trail through Tennessee, Alabama and Mississippi. I will resubmit legislation to establish the Potomac Heritage Trail through Pennsylvania, Maryland, West Virginia, Virginia and Washington, D.C. And I am reaffirming my support for the 3,200-mile North Country Trail, extending from the State of New York to North Dakota, which has already passed the House of Representatives.

I am also reaffirming the Administration's commitment to assuring the protection of the Appalachian Trail, one of America's best known and most popular recreation trails. The 2,000-mile Appalachian Trail winds through 14 states and is readily accessible to nearly half of the population of the U.S. It has been created by a volunteer movement without parallel in the history of outdoor recreation in America. In 1978 this Administration supported and I signed into law a bill to protect threatened portions of the right-of-way which are located on private lands. I expect this goal to be substantially achieved by September 30, 1981. This is a prompt but realistic timetable for the acquisition program.

II. AGRICULTURAL CONSERVATION

From our beginnings as a nation we have sustained ourselves and others on abundant yields from our farmlands. In this century, scientific and technological advances have increased our agricultural production to unsurpassed levels.

But in emphasizing ever-increasing production we have sometimes neglected to maintain the soil, water, and biological re-

sources upon which the long-term stability and productivity of our agriculture depends. These resources are being degraded in many areas of the country. Our farm and land management practices have led to excessive soil erosion, we have over-used chemical fertilizers and pesticides, and some of our most productive farmlands are being converted to nonagricultural uses. The agricultural conservation initiatives that I am announcing today address these issues.

Soil Conservation Incentives

Over the past half century we have invested more than \$20 billion of federal funds in efforts to conserve soil. These funds have been used for cost sharing, technical assistance, resource management, loans, research, and education. Yet in that same half century wind and water erosion have removed half the fertile topsoil from nearly one-third of the Nation's potentially usable croplands. The cost of replacing just the plant nutrients lost to erosion has been estimated at \$18 billion a year. Moreover, agricultural runoff adversely affects two-thirds of the Nation's streams.

Our soil protection programs have undoubtedly prevented even worse soil loss, but we must do better to maintain the long-term productivity of the soil.

The Department of Agriculture is now making an important appraisal of soil and water conservation policies under the Soil and Water Resources Conservation Act of 1977. The first Appraisal, Program and Policy reports required by the Resources Conservation Act (RCA) are due in January 1980. These documents will analyze conservation problems nationwide, set conservation targets and propose ways to solve the problems. They will provide an essential first step in the

wise management of agricultural lands, and will guide my Administration's overall soil and water conservation recommendations to the Congress. Reports will be updated every 5 years and I will receive annual reports of progress and program effectiveness.

I am directing the Secretary of Agriculture, in consultation with the Chairman of the Council on Environmental Quality, to build on the RCA process and to undertake a further detailed and systematic study of possible conservation incentives. The study will search for ways to modify or coordinate agricultural assistance programs already in existence in order to reduce soil erosion. Moreover, it will also look for conflicts or inconsistencies between farm income programs and soil conservation programs and will recommend measures to eliminate these conflicts where possible.

The results of this study will be submitted to me in January 1981. This report will provide me with specific administrative and legislative recommendations to reduce soil erosion and to improve soil stewardship in order to maintain the Nation's long-term agricultural productivity, building on the policy recommendations contained in the RCA 1980 program.

A second critical land issue for America's farmers and consumers is the availability of agricultural lands—particularly prime farmlands—and their conversion to other uses. In June, the Administration initiated an important new effort to address this issue. The Secretary of Agriculture and the Chairman of the Council on Environmental Quality are co-chairing an interagency study of factors affecting the availability of land for agricultural uses. The study will evaluate the economic, environmental, and social effects of the conversion or retention of

agricultural lands and will make recommendations for consideration by federal, state, and local governments by January 1981.

Many members of Congress are particularly interested in these two critical issues affecting the stewardship of our nation's agricultural lands. I hope that the Administration and the Congress will work together to develop and implement appropriate actions, based on the results of these studies.

Integrated Pest Management

For all their benefits, chemical pesticides can cause unintended damage to human health and the environment. Many pests have developed resistance to chemical pesticides, escalating the cost of pest control by conventional methods. This resistance to pesticides has also decreased our ability to control some pests, which has reduced agricultural yields from what they would otherwise be.

Integrated pest management (IPM) has evolved in recent years as a comprehensive pest control strategy which has important health, economic, and environmental benefits. IPM uses a systems approach to reduce pest damage to tolerable levels through a variety of techniques, including natural predators and parasites, genetically resistant hosts, environmental modifications and, when necessary and appropriate, chemical pesticides. IPM strategies generally rely first upon biological defenses against pests before chemically altering the environment.

The Federal government—which spends more than \$200 million a year on pest control research and implementation programs—should encourage the development and use of integrated pest management in agriculture, forestry, public health, and urban pest control. As a result

of a governmentwide review initiated by my 1977 Environmental Message, I am now directing the appropriate federal agencies to modify as soon as possible their existing pest management research, control, education, and assistance programs and to support and adopt IPM strategies wherever practicable. I am also directing federal agencies to report on actions taken or underway to implement IPM programs, and to coordinate their efforts through an interagency group.

III. URBAN QUALITY

Our cities give us diversity and enjoyment, occupations and avocations, shopping and services, recreation and culture. By strengthening the health of our urban environment, we broaden the range of opportunities open to all of our citizens, as I emphasized in my National Urban Policy Message last year. The investments we make in maintaining and improving urban quality—particularly those involving federal taxpayer dollars—can be designed to meet environmental objectives, such as safe, convenient, well-planned public transportation, quieter communities, and assistance in mediating potential conflicts between healthy urban economies and environments. The initiatives I am proposing today will help to achieve these goals.

Transportation Policy

Our transportation systems can greatly affect the Nation's environment, for better or worse, especially in our cities. For many years, our energy and other resources were so plentiful that the Federal government encouraged the rapid expansion of a transportation system based on the private automobile without fully con-

sidering the profound effects on our resources, our urban environments, and our way of life. Although we have developed an extraordinary transportation system, we have missed opportunities in the past to improve transportation and at the same time to achieve these other national objectives.

The United States has built the most extensive and complex transportation system in the world. Federal transportation expenditures exceed \$17 billion annually, including \$12 billion in grants to state and local agencies. Transportation consumes approximately 53 percent of all petroleum used in the U.S. The energy and cost advantages of using this system more efficiently—for example, by greater use of carpools, vanpools and mass transit—are now obvious. Better design and use of transportation systems will also help to save and strengthen our cities and their amenities and to reduce air and noise pollution. Thus transportation decisions can help to conserve limited resources, and to further our energy, fiscal, and urban environmental goals.

Federal transportation decisions cannot escape difficult choices among competing objectives, but they must be guided by new transportation policies which I am establishing for my Administration. Urban transportation programs and projects should be reoriented to meet environmental, energy and urban revitalization goals. I am therefore directing the Department to take immediate actions to assure that:

- federal transportation funds are used to promote energy conservation, for example through special lanes for carpools, vanpools and transit vehicles;
- encouragement is given to using federal funds for public transportation projects;

- a careful review is made of any transportation proposals which would encourage urban sprawl (a major cause of high energy consumption) or which would tend to draw jobs away from urban centers;
- consideration is given to improving and rehabilitating existing facilities, or using non-construction methods—such as better traffic management—to improve transportation systems, as alternatives to constructing new facilities;
- major transportation projects are used to help improve the urban economy and to attract jobs to the urban cores; and
- firm actions are taken to mitigate adverse effects of transportation projects on the natural and urban environment and to carry out the environmental commitments that are made in planning and approving transportation projects.

We have done a great deal to make our transportation policies and actions more sensitive to our national environmental and energy goals. We can do a great deal more with cooperation of state and local governments as our partners in the national transportation system. The steps I have outlined will move us in that direction.

Economic Assistance Program

Most Americans benefit directly from the healthier and more agreeable environment that results from our air, water and other pollution control programs. Although economic data indicate that environmental programs are a strong positive factor in providing employment, there is continued concern about their possible adverse impact on individual firms, communities, or groups of workers.

The fact that there have not been a large number of such economic dislocations does not suggest that those that do occur are unimportant. Furthermore, in some instances they can be avoided, or at least significantly mitigated, by appropriate government action.

In 1977 I established an Economic Assistance Task Force, chaired by the Council on Environmental Quality, to investigate whether we needed to improve federal assistance for those cases when jobs are lost partly as a result of actions taken to reduce pollution, and to recommend initiatives we might take. The Task Force concluded that existing federal assistance programs should be adequate, but that we need to take practical steps to let people know about the programs and to make sure help is delivered swiftly when it is needed.

I am therefore directing the Administrator of the Environmental Protection Agency to create an Economic Assistance Program in his agency and to designate Economic Assistance Officers both in headquarters and in the field, who will help the public understand and use the programs, and to make sure that eligible people receive assistance promptly. I am also directing all federal agencies with programs in this area to publicize and coordinate closely their programs. A booklet describing and locating available federal assistance programs will be released soon by the Council on Environmental Quality and the Environmental Protection Agency.

Urban Noise Program

A certain level of urban noise is tolerable or even agreeable, reflecting the multitude of activities that make a city thrive. However, most of our cities suffer from too much noise. Excessive noise is a

serious disturbance in city dwellers' lives, and degrades the urban environment.

Most noise abatement actions are taken by state and local governments, but there is an important role for the Federal government. I am initiating today a program to reduce urban noise by directing the Departments of Commerce, Defense, Energy, Housing and Urban Development, Transportation, and the Environmental Protection Agency and General Services Administration, in consultation with other federal agencies, to take a number of actions to improve existing noise abatement programs, including:

- programs to achieve soundproofing and weatherization of noise sensitive buildings, such as schools and hospitals;
- use of quiet-design features in transportation projects affecting urban areas;
- measures to encourage the location of housing developments away from major noise sources;
- purchase of quiet equipment and products—such as typewriters and lawnmowers which have been designed to reduce noise—and assistance to state and local agencies to do likewise; and
- support for neighborhood efforts to deal with noise problems.

IV. GLOBAL ENVIRONMENT

Efforts to improve the environment cannot be confined to our national boundaries. Ten years ago, at the dawn of the environmental decade, we landed on the moon. For the first time people could stand on the surface of another world and look at the whole earth. The sight of earthrise was awesome. It was also sobering. From that moment we could

no longer avoid understanding that all life must share this one small planet and its limited resources. The interdependence of nations is plain, and so is the responsibility of each to avoid actions which harm other nations or the world's environment. I am announcing today two initiatives which address global environmental problems of the greatest importance.

World Forests

The world's forests and woodlands are disappearing at alarming rates. Some estimates suggest that world forests could decline by about 20 percent by 2000. More than 40 percent of the closed forests of South Asia, Southeast Asia, Pacific, and Latin America could be lost.

Nearly all the world's forest loss is occurring in or near the tropics. In these areas, environmental damage from deforestation can be severe—even irreversible—and the human costs extremely high. For example, denudation of Himalayan slopes has led to severe soil erosion, silting of rivers, loss of groundwater, and intensified, catastrophic flooding downstream. Many tropical forests, once cut, will not regrow because soils, rainfall, temperature, or terrain are too unfavorable; nor will the land support crops or pasture for more than a few years. Another serious possible consequence of tropical forest loss is accelerating extinction of species. Tropical forests provide habitat for literally millions of plant and animal species—a genetic reservoir unmatched anywhere else in the world. Equally serious is the possibility that forest loss may adversely alter the global climate through production of carbon dioxide. These changes and their effects are not well understood and are being studied by scientists, but the possibilities are disturbing and warrant caution.

The United States and other nations are just beginning to appreciate fully the scope and seriousness of the problem and to assess the effects of development projects on world forests. There is much more to be done. I am therefore directing all relevant federal agencies to place greater emphasis on world forest issues in their budget and program planning. An inter-agency task force established last fall and chaired by the State Department will report to me in November 1979 on specific goals, strategies, and programs that the United States should undertake. On the basis of these recommendations, I will direct federal agencies to carry out an integrated set of actions to help toward protection and wise management of world forests.

In the international arena, the Governing Council of the United Nations Environment Programme has just adopted a resolution—introduced by the United States—calling for a meeting of experts to develop proposals for an integrated international program for conservation and wise utilization of tropical forests, and to report to the next Governing Council meeting in April 1980. I am asking the Departments of State and Agriculture, the Council on Environmental Quality, and other federal agencies to give this program full support and assistance and to encourage and support high-level multinational conferences on forest problems in regions where forest losses are severe.

To help protect the earth's natural resource base, I issued an Executive Order earlier this year, which directs federal agencies to review carefully in advance the effects of many federal activities abroad. I am directing the Council on Environmental Quality and the Department of State to report to me within six months on the best ways to designate the

globally important resources to which the order applies.

Acid Rain

Acid rain has caused serious environmental damage in many parts of the world including Scandinavia, Northern Europe, Japan, Canada and the Northeastern part of the United States. Over the past 25 years the acidity of rainfall has increased as much as fifty-fold in parts of the Eastern half of the United States. In the Adirondacks in New York, many mountain lakes have become devoid of fish partly because of increasing acidification. Adverse effects on crops and forests are suspected; steel and stone buildings and art works may suffer as well.

Acid rain is produced when rain removes sulfur dioxide and nitrogen dioxide from the air, forming sulfuric and nitric acid. Sulfur and nitrogen oxides are emitted in all forms of fossil fuel combustion. Power plants, smelters, steel mills, home furnaces, automobiles—all may contribute to acid rain.

To improve our understanding of acid rain, I am establishing a ten year comprehensive Federal Acid Rain Assessment Program to be planned and managed by a standing Acid Rain Coordination Committee. The assessment program will include applied and basic research on acid rain effects, trends monitoring, transport and fate of pollutants, and control measures. The Committee will establish links with industry to promote cooperative research wherever appropriate. The Committee will also play a role in future research cooperation with Canada, Mexico, and other nations and international organizations. The Committee will prepare a comprehensive 10-year plan for review by the end of the year. In its first

full year of operation, the program will have \$10 million in reprogrammed research funds available, double the current amount for acid rain research.

It is important to emphasize that such a long-time acid rain research program will not delay application of necessary pollution control measures to meet the mandate of the Clean Air Act. In addition, interim results from the acid rain research program will be made available to the public, to states, to industry and to the federal government agencies responsible for developing measures to reduce air pollution.

CONTINUED AND COOPERATIVE EFFORTS

The preservation of our environment has needed to become a special concern to our country at least since the ending of the Western frontier. A former President put it clearly:

"The conservation of our natural resources and their proper use constitute the fundamental problem which underlies almost every other problem of our National life. We must maintain for our civilization the adequate material basis without which that civilization cannot exist. We must show foresight, we must look ahead. The reward of foresight of this nation is great and easily foretold. But there must be the look ahead, there must be a realization of the fact that to waste, to destroy, our natural resources, to skin and exhaust the land instead of using it so as to increase its usefulness, will result in undermining in the days of our children the very prosperity which we ought by right to hand down to them amplified and developed."

That was President Theodore Roosevelt speaking in a State of the Union Message more than 70 years ago.

That message needs to be repeated and heard just as clearly today. Above all—it needs to be delivered.

My Administration will continue to lead in conserving our resources and reducing risks to the environment through sound and efficient management. But all our citizens must join the effort by contributing energies and ideas.

Only with your cooperation can we maintain our advance towards protecting our environment. Only together can we hope to secure our world for the life to come.

JIMMY CARTER

The White House,
August 2, 1979.

National Coastal Protection

Memorandum From the President.
August 2, 1979

Memorandum for the Secretary of Commerce

In my Environmental Message of August 2, 1979, I recognized the special protection that we accord coastal resources such as wetlands and barrier islands through the federal/state partnership established by the Coastal Zone Management Act. It is important to develop effective management organizations for dealing with coastal zone issues so that responsible planning and sound decisions can be made on resource protection and development proposals. I also recognized the fact that our experience in implementing the Coastal Zone Management Act has revealed areas where improvements can be made in identified aspects of federal programs which at times conflict with those of the Coastal Zone Management Act. I stressed the need for a systematic review of all federal programs significantly

affecting coastal resources to help assure consistency among federal efforts in achieving the objectives of the Coastal Zone Management Act.

Therefore, I am directing you to conduct a systematic review of all federal programs significantly affecting coastal resources and to evaluate and identify: (1) any conflicts in the policies and objectives of existing programs, particularly conflicts with CZMA goals; (2) whether these programs are being implemented in a consistent and coordinated fashion; and (3) if any program contributes to uneconomical or environmentally unsound development activities affecting critical natural systems. The federal agencies, coastal states, local governments, the private sector, scientists and citizen groups should be asked to participate in the review process.

The review shall be completed within one year, in order to provide the basis for specific recommendations to improve implementation of the Coastal Zone Management Act, to improve federal agency administration of programs and procedures affecting the coastal zone, and to develop any additional legislation to achieve our national coastal management goals.

Please give this assignment your immediate attention.

JIMMY CARTER

Public Land Resources

Memorandums From the President.
August 2, 1979

Memorandum for the Secretary of the Interior

In my Environmental Message of August 2, 1979, I recognized the importance

of the 417 million acres of public lands administered by the Bureau of Land Management for their energy and natural resources and their natural, scenic, and cultural values. I emphasized my Administration's commitment to purposeful management of these lands and resources in an environmentally sound and cost-effective manner. I am therefore directing you to manage the public lands administered by BLM in accordance with the following principles:

- The Federal Government will be a good steward of the land, seeking to find the best balance of uses to assure that resources are available to meet the Nation's needs and that environmental values are promptly and carefully protected.

- The Federal government will be a good neighbor, providing full opportunities for those affected by our management decisions to be involved in making them, with a special concern for the people and institutions of the Western States that are most directly affected.

- The Federal Government will make cost-effective investments in protecting and enhancing these lands within the constraints of fiscal responsibility.

- The Federal Government will seek to resolve conflicts among competing uses in a spirit of cooperation and trust, and will make—not avoid—tough decisions on the allocation of the valued resources of public lands.

Building on the progress we have made in the past two years, I am directing you to improve BLM's overall planning process by establishing a "program development process" for BLM which shall:

- present alternative programs for public investment on federal lands to achieve national objectives in an economically and environmentally sound manner;

- evaluate local, regional, and national demands and needs and assess and compare the value of public land goods and services with the public and private costs of providing such benefits;
- reflect evaluation and comment by the people of neighboring communities and other members of the public, and appropriate local, state, and federal officials;
- be accomplished by using ongoing assessment and planning programs and resources, to the extent possible, within the Bureau, the U.S. Forest Service and other agencies and departments; and
- be coordinated with plans and programs called for by the Resources Planning Act and developed by the Forest Service and other federal agencies.

Furthermore, I am directing that each of the alternative programs developed by BLM shall:

- be designed to reflect environmentally sound, fiscally responsible, and economically efficient resource use, development and investment strategies.
- be based on the capability and suitability of the public land resource as determined by you based on BLM's resource management planning process.
- clearly identify the assumptions used and describe environmental impacts, personnel requirements and program costs, and national, regional, and local benefits, and relate those benefits and costs through the use of cost/benefit, cost effective, or other appropriate analytic techniques.
- clearly state the inventory, planning, protection, rehabilitation, operation and maintenance work that would be

achieved under that program alternative.

In addition, I noted in my Message that lands administered by BLM contain areas of great cultural and ecological value. I am therefore directing you to give special attention to protecting areas of BLM-administered lands with nationally significant wildlife, natural, scientific, cultural, or scenic resources. As part of this effort, the Department shall develop by June 1980 a process and criteria for: (i) identifying those nationally significant resources, and (ii) proposing protective measures to provide special protective management for these resources on a continuing basis, commensurate with their national significance.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of Agriculture, the Secretary of the Interior

In my Environmental Message of August 2, 1979, I discussed the public interest to be served by improved coordination of the natural resources programs of your Departments. In particular, there is an urgent need for genuine cooperation between the Bureau of Land Management and the Forest Service—the two multiple-use management agencies that administer most of our public lands.

I recognize that much has been accomplished already by the two agencies, working in a spirit of cooperation—including cooperative fire protection efforts which have resulted in significant cost savings, an agreement for more efficient gathering and exchange of renewable resource information, and development of similar procedures for site-specific land use and resource management planning.

To give further impetus to the cooperation and progress achieved thus far, I am directing you to develop within six months a detailed statement of coordination objectives and a process and timetable for achieving them. Among the objectives you should consider are:

- Better coordination of the overall natural resource inventory and assessment process, and related program development and planning processes used by the Forest Service and Bureau of Land Management and other natural resources agencies, including compatible planning assumptions and management policies and consistent levels of decision-making responsibilities, for analogous lands and uses;
- Better coordination of field-level operations, including procedures for granting permits for use of Federal lands and the provision of technical assistance to users of Federal lands and to adjacent landholders;
- Boundary adjustments to permit more effective management;
- Pooling of facilities, equipment, personnel, training, and supplies, particularly where demonstrable cost savings can be achieved;
- Joint research and study of both policy issues and resource management problems, techniques and other matters of mutual concern; and
- Coordinated procedures and schedules for involvement of citizens, neighboring landholders, State and local government and other regional and national interests in planning, program development and management processes.

Furthermore, in my Environmental Message, I directed the Secretary of the Interior to establish a program development process for renewable and nonre-

newable natural resources managed by the Bureau of Land Management. In that endeavor, both of your Departments should cooperate fully in the preparation of the National Assessment of Renewable Resources called for by the Resources Planning Act, so that the Assessment meets the needs of the Bureau's renewable resources program preparation as well as that of the Forest Service. You should also cooperate to ensure that the processes and programs developed by both agencies are compatible.

Please give me your recommendations within six months on the desirability of legislation to establish the same 5-year program development cycle for both agencies.

Please give these assignments your immediate attention.

JIMMY CARTER

Wildlife Law Enforcement

Memorandums From the President.
August 2, 1979

Memorandum for the Secretary of Agriculture

In my Environmental Message of August 2, 1979, illegal trade in fish and wildlife was identified as a significant environmental problem. Recent criminal and civil investigations have indicated that this trade runs to tens of millions of dollars a year and can introduce serious disease. It is important that we strengthen the individual and collective abilities of agencies to deal with this problem.

We must establish a coordinated federal wildlife enforcement program. To improve the effectiveness of this program, I am submitting legislation that strengthens wildlife enforcement laws. I am also

directing agencies to take certain individual actions and to form two task forces to coordinate their activities.

I therefore direct that your Department:

- Assign a representative to a wildlife law enforcement committee chaired by the Department of the Interior which will include representatives from the Departments of Treasury, Justice, Agriculture and Commerce. The committee will review agency enforcement experiences, priorities and problems, expedite review of agency trade regulations, help coordinate federal trade enforcement policies generally and keep agency heads informed.

- Establish and chair a plant enforcement task force which will include representatives from your Department and the Departments of Justice, Interior and Treasury. The task force will investigate the illegal trade in plants and will bring appropriate prosecutions.

- Assign representatives as appropriate to interagency teams, chaired by the Department of the Interior, which will audit wildlife import documents to discover fraudulent documentation.

- Place greater emphasis on coordinating your review of quarantine-related import documents with other documents relating to wildlife imports to protect the quarantine program from the filing of fraudulent documents and to improve enforcement.

- Use special agents to investigate the illegal trade in plants.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of Commerce

In my Environmental Message of August 2, 1979, illegal trade in fish and

wildlife was identified as a significant environmental problem. Recent criminal and civil investigations have indicated that this trade runs to tens of millions of dollars a year and can introduce serious diseases. It is important that we strengthen the individual and collective abilities of agencies to deal with this problem.

We must establish a coordinated federal wildlife enforcement program. To improve the effectiveness of this program, I am submitting legislation that strengthens wildlife enforcement laws. JIMMY CARTER

Memorandum for the Attorney General

In my Environmental Message of Au-

gust 2, 1979, illegal trade in fish and wildlife was identified as a significant environmental problem. Recent criminal and civil investigations have indicated that this trade runs to tens of millions of dollars a year and can introduce serious diseases. It is important that we strengthen the individual and collective abilities of agencies to deal with this problem.

We must establish a coordinated federal wildlife enforcement program. To improve the effectiveness of this program, I am submitting legislation that strengthens wildlife enforcement laws. I am also directing agencies to take certain individual actions and to form two task forces to coordinate their activities.

I therefore direct that your Department:

- Assign a representative to a wildlife law enforcement committee chaired by the Department of the Interior which will include representatives from the Departments of Treasury, Justice, Agriculture and Commerce. The committee will review agency enforcement experiences, priorities and problems, expedite review of agency trade regulations, help coordinate federal trade enforcement policies generally and keep agency heads informed.

- Assign a representative to a plant enforcement task force, chaired by the Department of Agriculture, which will include representatives from the Departments of Agriculture, Justice, Interior and Treasury. The task force will investigate the illegal trade in plants and will bring appropriate prosecutions.

- Assign representatives as appropriate to interagency teams, chaired by the Department of the Interior, which will audit wildlife import documents to discover fraudulent documentation.

- Seek stiff penalties for persons who engage in illegal wildlife or plant trade

including jail sentences for the principal violators.

- Establish a Wildlife Section in the Land and Natural Resources Division which will be staffed principally by attorneys who will be trained to be wildlife law enforcement specialists with responsibilities similar to those of the Justice Department's white-collar crime "economic crime enforcement specialists".

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of the Treasury

In my Environmental Message of August 2, 1979, illegal trade in fish and wildlife was identified as a significant environmental problem. Recent criminal and civil investigations have indicated that this trade runs to tens of millions of dollars a year and can introduce serious diseases. It is important that we strengthen the individual and collective abilities of agencies to deal with this problem.

We must establish a coordinated federal wildlife enforcement program. To improve the effectiveness of this program, I am submitting legislation that strengthens wildlife enforcement laws. I am also directing agencies to take certain individual actions and to form two task forces to coordinate their activities.

I therefore direct that your Department:

- Assign a representative to a wildlife law enforcement committee chaired by the Department of the Interior which will include representatives from the Departments of Treasury, Justice, Agriculture and Commerce. The committee will review agency enforcement experiences, priorities and problems, expedite review

of agency trade regulations, help coordinate federal trade enforcement policies generally and keep agency heads informed.

- Assign a representative to a plant enforcement task force, chaired by the Department of Agriculture, which will include representatives from the Departments of Agriculture, Justice, Interior and Treasury. The task force will investigate the illegal trade in plants and will bring appropriate prosecutions.

- Assign representatives as appropriate to interagency teams, chaired by the Department of the Interior, which will audit wildlife import documents to discover fraudulent documentation.

- Recognize that violations involving commercial quantities of wildlife, plants or their derivatives are so significant as to be considered white-collar crime and consequently the Department of Treasury will assign a high priority to pursuing investigations of this nature.

Please give these assignments your immediate attention.

JIMMY CARTER

Wild and Scenic Rivers and National Trails

Memorandums From the President.
August 2, 1979

Memorandum for the Heads of Departments and Agencies

In my Environmental Message of August 2, 1979, I recognized the important natural, historic, and recreational values of our Nation's river corridors. It is important for the federal agencies to set an example of sound management for state, local, and private landowners by taking an aggressive role in protecting Wild and Scenic Rivers which flow through public lands.

In addition, I recognized that the 1968 National Trails System Act is designed to promote the development of recreational, scenic, and historic trails for persons of diverse interests and abilities—including the young, the handicapped, and the aged—and that the National Trails System is in its fledgling stage. The Act provides for designating trails on state, local and private lands, but only 130 trails have been established since enactment of the Act. In my Environmental Message I stressed the importance of expanding the National Trails System.

Therefore, I am directing that each of you take the following actions:

- Each federal agency shall encourage states, localities and private land holders to designate trails on their lands and to participate with federal agencies and trail users in designing and creating an overall National Trails System which will provide more fully for the trail needs of America.

- Each federal agency shall, as part of its normal planning and environmental review processes, take care to avoid or mitigate adverse effects on rivers identified in the Nationwide Inventory, prepared by the Heritage Conservation and Recreation Service in the Department of the Interior. Agencies shall, as part of their normal environmental review process, consult with the Heritage Conservation and Recreation Service prior to taking actions which could effectively foreclose wild, scenic, or recreational river status on rivers in the Inventory.

- Each Federal agency with responsibility for administering public lands shall, as part of its ongoing land use planning and management activities and environmental review processes, make an assessment of whether the rivers identified in the Nationwide Inventory and which are on their lands are suitable for inclusion in

the Wild and Scenic Rivers System. If an agency determines that a river would be suitable for inclusion in the System, the agency shall, to the extent of the agency's authority, promptly take such steps as are needed to protect and manage the river and the surrounding area in a fashion comparable to rivers already included in the Wild and Scenic Rivers System. In addition, the agency is encouraged, pursuant to the revised Guidelines, to work with the Agriculture and Interior Departments to prepare legislation to designate the river as part of the Wild and Scenic Rivers System if appropriate.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of Agriculture

In my Environmental Message of August 2, 1979, I recognized the important natural, historic, and recreational values of our Nation's river corridors. Unfortunately, development along the banks of our rivers continues to outpace our ability to identify and study those rivers which might qualify for protection under the National Wild and Scenic Rivers System. Thus, we need to improve our techniques for identifying, and designating wild and scenic rivers.

In addition, I recognized in my Environmental Message that the 1968 National Trails System Act is designed to promote the development of recreational, scenic, and historic trails for persons of diverse interests and abilities—including the young, the handicapped and the aged—and that the National Trails System is in its fledgling stage. I stressed the importance of expanding the National Trails System to provide increased recreation opportunities for the millions of

Americans who enjoy hiking, backpacking, bicycling, and similar activities.

Therefore, I am directing you to take the following actions:

- Within 120 days, together with the Secretary of the Interior, revise the Guidelines for studying Wild and Scenic Rivers. The revised Guidelines shall establish procedures to ensure consideration of river ecosystems to shorten the length of time currently used to study rivers for designation.

- Ensure that the Forest Service meets its goal of establishing 145 additional National Recreation Trails by January 1980, thereby achieving the objective of two National Recreation Trails in each National Forest System unit.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of the Interior

In my Environmental Message of August 2, 1979, I recognized the important natural, historic, and recreational values of our Nation's river corridors. Unfortunately, development along the banks of our rivers continues to outpace our ability to identify and study those rivers which might qualify for protection under the National Wild and Scenic Rivers System. This problem is particularly acute near urban areas, where there are greater demands for recreational opportunities. Thus, we need to improve our techniques for identifying, and designating wild and scenic rivers.

In addition, I recognized in my Environmental Message that the 1968 National Trails System Act is designed to promote the development of recreational, scenic, and historic trails for persons of

diverse interests and abilities—including the young, the handicapped and the aged—and that the National Trails System is in its fledgling stage. I stressed the importance of expanding the National Trails System to provide increased recreation opportunities for the millions of Americans who enjoy hiking, backpacking, and similar activities.

Therefore, I am directing you to take the following actions:

- Within 120 days, together with the Secretary of Agriculture, revise the Guidelines for studying Wild and Scenic Rivers. The revised Guidelines shall establish procedures to ensure consideration of river ecosystems and to shorten the length of time currently used to study rivers for designation.

- Furnish federal agencies, through the Heritage Conservation and Recreation Service, with the names of the rivers in its Nationwide Inventory—which is a list of rivers having the potential to be designated under the Wild and Scenic Rivers Act—and with any background analysis conducted by the Service.

- Assist other federal agencies, through the Interagency Trails Council, in surveying existing trails on federal lands to determine which of those can be made part of our National Trails System.

- Initiate a grassroots effort in every region of the country to assess our nationwide trail needs. This nationwide assessment shall examine the types of trails now in use and their proximity to trail users: estimate current and anticipated trail needs; and recommend cost-effective programs and energy-conserving actions which could produce the types and number of trails that are needed.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of the Interior, the Secretary of Defense, the Chairman of the Board of the Tennessee Valley Authority

In my Environmental Message of August 2, 1979, I recognized that the 1968 National Trails System Act is designed to promote the development of recreational, scenic, and historic trails for persons of diverse interests and abilities—including the young, the handicapped, and the aged—and that National Trails System is in its fledgling stage. I stressed the importance of expanding the National Trails System to provide increased recreation opportunities for the millions of Americans who enjoy hiking, backpacking, and similar activities.

Therefore, I am directing each of you to announce by January 1980 a goal for the number of National Recreation Trails each agency will establish during 1980 on the public lands administered by your agencies. By the end of 1980, I am directing that, at a minimum, 75 new National Recreation Trails shall be designated on these lands.

Please report your progress in meeting your goal to the Chairman of the Council on Environmental Quality and the Director of the Office of Management and Budget on June 30, 1980 and on December 31, 1980.

JIMMY CARTER

Soil Conservation Incentives

*Memorandum From the President.
August 2, 1979*

Memorandum for the Secretary of Agriculture

In my Environmental Message of August 2, 1979, I underscored my serious

concern that since 1935 wind and water erosion have reduced by half the top soil on nearly one-third of the Nation's potentially usable croplands. Although more than \$20 billion in federal funds has been invested in soil and water conservation programs of the Department of Agriculture, erosion continues to occur at very high rates. There are 28 existing soil conservation and water quality-related Department of Agriculture programs which are designed to help remedy this problem. The Resources Conservation Act (RCA) and Resources Planning Act (RPA) processes will review these and other programs and provide me in January 1980 with recommended improvements in program design and administration.

Due to the importance of the soil erosion problem I direct you, in consultation with the Chairman of the Council on Environmental Quality, to undertake a comprehensive study of possible conservation incentives, building on the analysis of the RCA process, and to provide me with a report in January 1981.

A major goal of your effort should be to analyze the implications of modifying or interrelating existing agricultural assistance programs to bring about a greater reduction in soil erosion and related non-point pollution. The study shall also identify conflicts between farm income programs and soil conservation programs and develop recommendations for eliminating these conflicts where possible. The report shall set forth specific administrative and legislative recommendations to reduce soil erosion and to improve soil stewardship in order to maintain the Nation's long-term agricultural productivity, building on policy recommendations contained in the RCA 1980 Program report.

Please give this assignment your immediate attention.

JIMMY CARTER

Integrated Pest Management

Memorandum From the President.
August 2, 1979

Memorandum for the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Defense, the Secretary of Health, Education & Welfare, the Secretary of Housing and Urban Development, the Secretary of the Interior, the Secretary of Labor, the Secretary of Transportation, the Administrator of the Environmental Protection Agency, the Administrator of the General Services Administration, the Chairman of the Council on Environmental Quality

In my Environmental Message of August 2, 1979, I recognized that integrated pest management (IPM) has both economic and environmental benefits and should be encouraged in both research and operational programs of federal agencies. Therefore, I am directing that each of your agencies:

- Modify as soon as possible your existing pest management, research, control, education, and assistance programs to support and adopt IPM strategies wherever practicable within the limits of existing resources.
- Review your pest management research, control, education, and assistance programs to assess the potential for increased emphasis on integrated pest management.
- Report actions taken to implement IPM strategies and the results of this review and assessment to the IPM coordinating committee in six months.

I am establishing an interagency IPM Coordinating Committee to assure implementation of this directive and to oversee further development and implementation of integrated pest management practices. The Committee shall be chaired by the

Council on Environmental Quality. Your agency should appoint one representative to serve on this Committee who is an Assistant Secretary, Assistant Administrator, or the equivalent. The Committee is to report to me by June 30, 1980 on progress made by federal agencies in the advancement of IPM and on any institutional barriers thereto.

The Committee may request any Executive agency to furnish such information, advice, and service as may be useful for the fulfillment of the Committee's functions. Each of your agencies shall cooperate with and furnish support to the Committee as needed to carry out its functions.

Please give these assignments your immediate attention.

JIMMY CARTER

Transportation Policy

Memorandum From the President.
August 2, 1979

Memorandum for the Secretary of Transportation

In my Environmental Message of August 2, 1979, I recognized that our transportation systems can greatly affect, for better or worse, our nation's environment, our utilization of energy, and our urban areas. I also recognized that it is my Administration's policy to enhance environmental protection, energy conservation, and urban revitalization and that the nation's transportation system must provide greater support for these national goals.

I fully support the reorientation of urban transportation programs and proj-

ects to meet energy and urban goals and to improve overall environmental quality. I am directing you to act immediately to assure that:

- transportation funds are used to promote energy conservation through such energy saving features as special lanes for carpools, vanpools, and transit vehicles, and that encouragement be given to applying funds to public transportation projects;
- careful review is given to any transportation proposals which would encourage urban sprawl—one of the major causes of our high energy consumption—or which would tend to attract jobs out of our urban centers;
- consideration is given to the improvement and rehabilitation of existing facilities and the use of non-construction methods as alternatives to constructing new facilities;
- major transportation projects are utilized as a positive factor for improving the urban economy and attracting jobs to the nation's urban cores; and
- firm actions are taken to mitigate adverse effects of transportation projects on the environment—both the natural environment and the urban environment—and that the environmental commitments that we make in approving transportation projects are carried out when the projects are built.

Please report on your progress in implementing this directive to the Chairman of the Council on Environmental Quality and the Director of the Office of Management and Budget on February 1, 1980 and August 1, 1980.

JIMMY CARTER

Economic Assistance for Pollution Control

Memorandums From the President.
August 2, 1979

Memorandum for the Administrator of the Environmental Protection Agency

In my Environmental Message of August 2, 1979, I recognized that most Americans benefit directly from the healthier and more agreeable environment that results from our pollution control programs. I also noted that unfortunately these programs have been a factor that has contributed to a limited number of closures of already marginal industrial plants. Although there are a number of federal assistance programs available which can aid those who have lost their jobs and the communities in which they reside, the existing programs are not being widely used.

Therefore, I am directing you to take the following actions:

- Establish an Economic Assistance Program, including the designation of economic assistance officers at headquarters and in the field, whose purpose is to ensure that economic adjustment assistance is both understood by all eligible parties and made quickly available to those who qualify for it.

- Expand the Environmental Protection Agency's "Economic Dislocation Early Warning System" so that it includes more information on potential disruptions to communities and groups of workers, as well as to businesses and so that it is operated in such a way that possible economic disruptions are identified as early as possible and that relevant agencies are quickly notified.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Housing and Urban Development, the Secretary of Labor, the Administrator of the Environmental Protection Agency, the Administrator of the Small Business Administration, the Chairman of the Council on Environmental Quality, the Director of the Office of Management and Budget

In my Environmental Message of August 2, 1979, I recognized that most Americans benefit directly from the healthier and more agreeable environment that results from our pollution control programs. I also noted that these programs unfortunately have been a factor that has contributed to a limited number of plant closures. Although there are a number of federal assistance programs available that can help firms avoid closure, and, when it is unavoidable, aid both those who have lost their jobs and the communities in which they reside, the existing programs are not being widely used.

Therefore, I am directing each of you together with the Council on Environmental Quality and the Office of Management and Budget to take the following actions:

- The Environmental Protection Agency shall have responsibility to inform affected parties of available assistance where it could ease adverse effects of pollution control laws, to notify the agencies offering such assistance of impending disruptions, and to work with both to encourage the effective, coordinated delivery of assistance; EPA shall report to me on June 30, 1980, and annually thereafter on the agencies' efforts to coordinate and improve the delivery of their economic assistance programs for this purpose.

- Each federal agency will cooperate closely with the Environmental Protection Agency and with other agencies to ensure that their various economic assistance programs are coordinated effectively.

- Each federal agency shall ensure that it responds effectively and expeditiously to specific adverse economic problems resulting from the implementation of pollution control laws.

- Each federal agency will recommend to me ways in which the existing assistance programs should be modified, if necessary, to enable the government to respond more effectively to economic adjustment problems that may occur in the future.

Please give these assignments your immediate attention.

JIMMY CARTER

Urban Noise Program

*Memorandum From the President.
August 2, 1979*

Memorandum for the Secretary of Commerce, the Secretary of Defense, the Secretary of Energy, the Secretary of Housing and Urban Development, the Secretary of Transportation, the Administrator of the Environmental Protection Agency, the Administrator of the General Services Administration, the Chairman of the Council on Environmental Quality, the Director of the Office of Management and Budget, the Chairman of the Interagency Coordinating Council

In my Environmental Message of August 2, 1979, I recognized that city noise is an integral part of a vibrant city lifestyle, reflecting city patterns of commerce

that must be preserved and enhanced, but that much urban noise is harmful to urban living and could be abated.

I am initiating today a program to reduce urban noise by making existing programs work better through interagency and intergovernmental cooperation. I am directing you, in consultation with other federal agencies, to:

- initiate programs to achieve sound-proofing and weatherization of noise-sensitive buildings, such as schools and hospitals;
- promote the use of quiet-design features in the planning, design, and operation of proposed urban transportation projects;
- encourage noise-sensitive developments, such as housing, to be located away from major noise sources;
- help federal, state and local agencies buy quiet equipment and products; and
- support neighborhood self-reliance efforts seeking to identify and address local noise problems.

The Federal Interagency Committee on Noise, chaired by the Administrator of the Environmental Protection Agency, shall coordinate the implementation of this program. The Chairman of my Interagency Coordinating Council will assist the Interagency Committee and other intergovernmental cooperative efforts to assure that this program is carried out fully and promptly, including consultation with state and local governments.

The Administrator of the Environmental Protection Agency will report to the Chairman of the Council on Environmental Quality and the Director of the Office of Management and Budget on the progress of this new program on February 1, 1980, and on August 1, 1980.

JIMMY CARTER

World Forests

Memorandum From the President.
August 2, 1979

Memorandum for the Secretary of State

In my Environmental Message of August 3,¹ 1979, I expressed concern about the rapid disappearance of the earth's forests, especially in the tropics and subtropics. I believe there is much that the United States can do in cooperation with other nations to contribute to environmentally sound care and management of the earth's forests and to the well-being of people affected by them.

I am directing you to give high priority to the following matters in your budget and program planning:

- improved monitoring of world forest trends, particularly tropical forests, including use of satellite observations;
- research on necessary preservation of natural forest ecosystems and their rich complex of plant and animal life;
- research on multiple uses of highly diverse tropical forests, including management of natural stands, development of ecologically sound forest plantations, and combined agriculture and forestry;
- studies on increasing yields in family-scale tropical agriculture, to relieve pressures on forest lands that are not suitable for cultivation;
- demonstration of integrated projects for reforestation, more efficient fuelwood use, and alternative energy sources;
- examination of how U.S. citizens and U.S.-based corporations may be encouraged to support sound forest management practices.

¹EDITOR'S NOTE: The correct date is August 2.

I am asking you to ensure that the inter-agency task force on tropical forests, chaired by the Department of State, submit to me by November 1979 its report and recommendations on U.S. goals, strategies, and programs to help protect and conserve world forests.

I am asking you to work with the Department of Agriculture, the Council on Environmental Quality and other relevant federal agencies, and with other nations and international organizations, to give full support and assistance to the international program of activities for conservation and wise utilization of tropical forests to be developed under the sponsorship of the United Nations Environment Programme.

I am also asking you to encourage and support high-level international conferences on forest problems in regions where forest losses are severe, to raise awareness and understanding both of the complex problems and possible solutions.

Finally, I am asking you and the Chairman of the Council on Environmental Quality to report to me within six months on the best ways to designate "ecological and natural resources of global importance" under Executive Order 12114, so that proposals for major federal actions significantly affecting these resources will be reviewed before a decision is made.

Please give these assignments your immediate attention.

JIMMY CARTER

Memorandum for the Secretary of Agriculture

In my Environmental Message of August 2, 1979, I expressed concern about the rapid disappearance of the earth's forests, especially in the tropics and subtropics. I believe there is much that the United States can do in cooperation with other nations to contribute to environ-

mentally sound care and management of the earth's forests and to the well-being of people affected by them.

I am therefore directing you to give high priority to the following matters in your budget and program planning:

- improved monitoring of world forest trends, particularly tropical forests, including use of satellite observations;
- research on necessary preservation of natural forest ecosystems and their rich complex of plant and animal life;
- research on multiple uses of highly diverse tropical forests, including management of natural stands, development of ecologically sound forest plantations, and combined agriculture and forestry;
- studies on increasing yields in family-scale tropical agriculture, to relieve pressures on forest lands that are not suitable for cultivation;
- demonstration of integrated projects for reforestation, more efficient fuelwood use, and alternative energy sources;
- examination of how U.S. citizens and U.S.-based corporations may be encouraged to support sound forest management practices.

I am also asking you to work with the Department of State, the Council on Environmental Quality, and other relevant federal agencies, and with other nations and international organizations, to give full support and assistance to the international program of activities for conservation and wise utilization of tropical forests to be developed under the sponsorship of the United Nations Environment Programme.

JIMMY CARTER

Memorandum for the Director of the National Science Foundation

In my Environmental Message of August 2, 1979, I expressed concern about the rapid disappearance of the earth's forests, especially in the tropics and subtropics. I believe there is much that the United States can do in cooperation with other nations to contribute to environmentally sound care and management of the

earth's forests and to the well-being of people affected by them.

I am therefore requesting that you give high priority in your budget and program planning and research support programs to forests and to the following areas of basic and applied research:

- research on the ecology of tropical forests;
- improved monitoring of world forest trends, particularly tropical forests, including use of satellite observations;
- research on necessary preservation of natural forest ecosystems and their rich complex of plant and animal life;
- research on multiple uses of highly diverse tropical forests, including management of natural stands, development of ecologically sound forest plantations, and combined agriculture and forestry;
- studies on increasing yields in family-scale tropical agriculture, to relieve pressures on forest lands that are not suitable for cultivation;
- identification of research methods to define the ecological disturbance in tropical forests from human activities, and to predict recovery of stressed forest systems.

Please give this assignment your immediate attention.

JIMMY CARTER

Memorandum for the Administrator of the Agency for International Development, the Director of ACTION

In my Environmental Message of August 2, 1979, I expressed concern about the rapid disappearance of the earth's forests, especially in the tropics and subtropics. I believe there is much that the United States can do in our development assistance to other nations to contribute to

environmentally sound care and management of the earth's forests and to the well-being of people affected by them.

I am directing you to evaluate your development assistance programs in light of the following objectives and to give high priority to programs which would advance these objectives:

- necessary preservation of natural forest ecosystems and their rich complex of plant and animal life;
- multiple uses of highly diverse tropical forests, including management of natural stands, development of ecologically sound forest plantations, and combined agriculture and forestry;
- increasing yields in family-scale tropical agriculture to relieve pressures on forest lands that are not suitable for cultivation;
- developing integrated projects for reforestation, more efficient fuelwood use, and alternative energy sources.

Please give this assignment your immediate attention.

JIMMY CARTER

Acid Rain Research Program

Memorandum From the President.
August 2, 1979

Memorandum for the Secretary of Agriculture, the Secretary of the Interior, the Secretary of Energy, the Secretary of Commerce, the Secretary of State, the Administrator of the Environmental Protection Agency, the Director of the National Science Foundation, the Chairman of the Council on Environmental Quality, the Director of the Office of Science and Technology Policy

In my Environmental Message of August 2, 1979, acid rain was identified as a major global environmental problem.

However, our knowledge of possible effects and specific causes of acid rain are inadequate for determining what kinds of controls would best mitigate the problems caused by acid rain. It is important that we undertake efforts to describe the magnitude of acid rain effects, to develop a more thorough understanding of its causes, and to identify measures which can mitigate acid rain impacts.

To meet these goals, we must establish a comprehensive federal acid rain research program. In order to increase the program's effectiveness as well as to reduce its costs, research should be coordinated with states and private research efforts, particularly large industry efforts. Finally, in undertaking the federal acid rain research program, we should work closely with Canada, Mexico, other nations, and international organizations which are concerned about acid rain.

I therefore direct that:

- A standing Acid Rain Coordination Committee be established comprised of policy representatives from each of your agencies.

- The Committee shall be co-chaired by the Department of Agriculture and the Environmental Protection Agency. The Council on Environmental Quality shall serve as the Executive Secretary of the Committee.

- The Committee shall plan and manage a comprehensive acid rain assessment program. A Federal Acid Rain Assessment Plan shall be completed by January 1, 1980. The Plan shall identify necessary coordination mechanisms to ensure that the results of the assessment program will be incorporated in agency planning and decisionmaking.

- The Committee shall seek cooperation of state and private research efforts, particularly industry research programs, which are conducting acid rain research

so that to the extent possible duplicative research is eliminated and research is jointly planned and conducted.

- Through the Secretary of State the federal acid rain research program shall be coordinated to the extent possible with similar efforts in Canada and Mexico as well as with other Nations and international bodies.

- Consistent with established procedures of the agencies chairing the Committee, the Committee shall actively solicit public involvement in its planning and reviews of the research results of the Committee's program; workshops, public hearings, and other techniques should be utilized.

- The Committee shall prepare and submit to the President by September 15 of each year an annual report which shall present the results of the acid rain assessment program and make recommendations as appropriate. This report shall serve as a planning document for focusing agency programs to meet the objectives of the acid rain research program.

JIMMY CARTER

United States-Turkey Treaty on Extradition and Mutual Assistance in Criminal Matters

Message to the Senate Transmitting the Treaty. August 2, 1979

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty on Extradition and Mutual Assistance in Criminal Matters between the United States of America and the Republic of Turkey, signed at Ankara on June 7, 1979.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the treaty.

The treaty is one of a series of modern extradition and mutual assistance treaties being negotiated by the United States. At the request of the Turkish side, the subjects are combined into one treaty. The treaty is self-executing and utilizes existing statutory authority.

The extradition portion of the treaty replaces the current treaty between the United States and Turkey which was signed in 1923. It greatly expands the list of extraditable offenses to include narcotics offenses, aircraft hijacking, bribery, and obstruction of justice, as well as many other offenses not now covered by our existing treaty. Upon entry into force, it will terminate and supersede the existing Treaty of Extradition. The new treaty will have only limited retroactive effect. American citizens are not extraditable to Turkey under the present treaty, although they are under the new treaty. Under the new treaty, however, they will not be extradited for extraditable offenses under the present treaty committed prior to entry into force of the new treaty. Also, the new treaty provides that extradition shall not be granted for an offense committed before this treaty enters into force which is not an extraditable offense under the present treaty.

The mutual assistance portion of the new treaty provides for a broad range of cooperation in criminal matters. Mutual assistance available under the treaty includes (1) executing requests relating to criminal matters; (2) taking of testimony or statements of persons; (3) effecting the production, preservation and authentication of documents, records, or articles of evidence; (4) returning to the Requesting Party any objects, articles or other property or assets belonging to it or obtained by

an accused through offenses; (5) serving judicial documents, writs, summonses, records of judicial verdicts and court judgments or decisions; (6) effecting the appearance of a witness or expert before a court of the Requesting Party; (7) locating persons; and (8) providing judicial records, evidence and information.

I recommend that the Senate give early and favorable consideration to the treaty and give its advice and consent to ratification.

JIMMY CARTER

The White House,
August 2, 1979.

United States-Turkey Treaty on Penal Judgments

Message to the Senate Transmitting the Treaty. August 2, 1979

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty between the United States of America and the Republic of Turkey on the Enforcement of Penal Judgments which was signed in Ankara on June 7, 1979.

I transmit also, for the information of the Senate, the Report of the Department of State with respect to the treaty.

The treaty would permit citizens of either nation who have been convicted in the courts of the other country to serve their sentences in their home country; in each case the consent of the offender would be required.

This treaty is significant because it represents an attempt to resolve a situation which has inflicted substantial hardships on a number of citizens of each country and has caused concern to both govern-

ments. It also represents a significant element in the modernization of our relations with Turkey in the field of international judicial cooperation.

I recommend that the Senate give early and favorable consideration to this treaty.

JIMMY CARTER

The White House,
August 2, 1979.

Department of Health, Education, and Welfare

Remarks at the Swearing In of Patricia Roberts Harris as Secretary. August 3, 1979

THE PRESIDENT. This is a happy day for our country. It's a great honor for me to be here as President and to have the chance as the leader of our Nation to select and to appoint a person who is so superbly qualified to head the agency that she will be leading.

It's a time of thanksgiving, I think, among those who look to the Department of Health, Education, and Welfare for a new or sustained chance in life. I've known Pat Harris for a long time. When I formed my Cabinet almost 3 years ago, there was one major department in Government that had not adequately performed its function. It had been far short of its potential after 8 years of Republican administration. The Department of Housing and Urban Development was one that was formed with a clear recognition of a great need—poor were homeless, cities were destitute. They reached toward Washington with disappointment and frustration. The Department was poorly organized, and its effectiveness was severely in doubt.

Pat Harris came as Secretary of HUD, and with her superb management capa-

bilities, she transformed this weak department into one of the most strong and able and effective and sensitive in government.

Hers has been a sterling performance as a manager with a heart. All who know her realize that she is bold, strong, outspoken. Anyone who looks to Pat Harris as a "yes woman" would be both foolish and ill-advised. [*Laughter*] I have never been that foolish, and I have never been advised. [*Laughter*]

She fights for her beliefs, and her beliefs are sound and she wins her fights. She has a big heart. With her background and with her experience, with her innate sensitivity and compassion, she has brought to that agency a superb record of performance. And if there's one area where my own political fortunes have been enhanced tremendously by the actions of a Cabinet officer, you could certainly not overlook the new confidence that local and State officials have in our Government, who have to deal with housing, urban development, the reconstitution, the rebuilding of our communities, and the provision of housing for those who often suffer by the lack of it.

She's now coming to serve the needs in health, education, and welfare. She will be following a good man, a man who has the same kind of concern and compassion for those who are served by this agency.

There is no doubt in my mind that there will be no slackening of effort, no lessening of commitment, no deviating from a path of superior service. And I know Pat Harris well enough to look forward with great anticipation to her ability, once a path has been described and delineated, that she can work harmoniously with every other member of the Cabinet, all the other Federal agencies, the local government, the State government officials, the constituency groups, the Congress in an effective way. She's got a superb batting average on the hill in

getting legislation passed.

We now have great challenges in the Congress, hospital cost containment, the only specific piece of legislation before the Congress this year positively to deal with the increasing threat of inflation. Its passage hangs in the balance, and it's going to require an absolutely superb team effort to get it passed. I have no doubt that Pat Harris can lead that team effort.

I'm dedicated to passing through the Congress and implementing in a carefully phased and responsible way a comprehensive health program. And I will look to Secretary Harris to work with the Congress, particularly Senator Kennedy, to work with the labor organizations, the constituency groups, to make sure that our comprehensive health program is indeed passed by the Congress and is implemented.

We have a crying need to enhance the status of education in our country. The new department of education can provide this role if it's effectively founded in law, adequately staffed by me with the support and the nurturing from Secretary Harris.

And the final thing I'd like to say about her is that she has a special relationship with the poor, the homeless, the disadvantaged, the black, those who can't speak English very well, the aged, and others who will be and have been looking for succor and nourishment and a helping hand and a dependable hand from the Federal Government. Her heart is in the right place.

With all those characteristics, there could not possibly be a better person to head this important agency, and I am grateful to her for being willing to serve me as President, you as leaders of our Nation, and particularly those who will benefit from her service as the Secretary of HEW.

Pat, I thank you.

And now, I would like to introduce Justice Thurgood Marshall, who will administer the oath of office to our new Secretary of Health, Education, and Welfare.

Thank you.

[At this point, Associate Justice of the Supreme Court Thurgood Marshall administered the oath of office.]

SECRETARY HARRIS. *Mr. President, Mr. Justice, and friends:*

It is an honor for me to be before you today as the Secretary of the Department of Health, Education, and Welfare. And may I say that for some of us, it is really a great day when Justice Thurgood Marshall swears in Pat Harris, because the Justice and I first met—I remember him from that meeting because he was a great man, I was just a young whippersnapper who had been sent over by Elmer Henderson, who's out there someplace—when we were sitting at the Department of the Navy trying to get them to do right, as we did so often—we were on the other side. That really makes it a great day.

When President Carter asked me to serve as Secretary of Health, Education, and Welfare, I had deep concerns. But after careful consideration, I agreed to do so. I agreed because I believe that there are no issues of our time that are more important than those dealing with the young, the poor, the handicapped, the infirm, and the aged. These are the people I served at the Department of Housing and Urban Development, and the President did me and HUD great honor by saying that we had done our job well and that he wished me to transfer my concern, my skills, and my time to doing the same kind of job on a much broader scale at HEW.

It will be a difficult and an arduous task, but I shall do my best. And I am confident that with the help of the people who share the President's concern and our

concern for the most vulnerable Americans, we will succeed.

Although we live in the mightiest, the wealthiest, and the most powerful nation on Earth, all of our accomplishments are called into question and challenged by the reality of poverty, inadequate education, and deficient health care that torment and trap so many of our fellow Americans. But I see these great problems to be the challenge of our time, and Americans have never been afraid of challenge. It is at the core of our identity, and it is at the center of our national purpose. The Department of Health, Education, and Welfare is at the center of the great national challenge and debate over these issues.

I want to assure everyone in this room and all others who view or hear this event that I will work tirelessly and resolutely to establish a separate department of education, to control the cost of hospital care, to bring reform and dignity to the American welfare system, and to enact national health insurance. We're going to do them all.

Furthermore, this member of the Cabinet, and other members as well, have an interest in the general well-being of the people that goes beyond our specific responsibilities of office. Therefore, we will be working diligently on such things as the President's concern and the concern of all of us about the cost of energy and home heating fuels for poor and moderate income Americans. These concerns can only be met by the passage of the wind-fall profits tax, and I believe with the help of the American people, these things will come about.

By nature, Americans are optimistic, but as the President noted in his televised address, the events of the past decade and a half have shattered much of that confidence. In November of 1976, however, nearly 41 million Americans said, "Jimmy Carter is the man to help restore that con-

fidence and to help redefine our own sense of national purpose." The American people elected Jimmy Carter so that we could restore confidence in government, so that we could bring peace to the troubled spots of the world, so that we could make the Government more caring and more determined to meet the acute needs of our most vulnerable citizens. And I intend to work as hard as I can over the next 18 months so that all of us in this administration can fulfill our promise to the American people to get these things done, and I am convinced that this will happen.

My friends, judgments and controversy are a part of public life, if you didn't know. [*Laughter*] They come with the turf; they go with the territory. We who choose public life can neither fear them nor avoid them. Like Gibbon, we must believe that the winds and waves serve the ablest navigators, though they may overwhelm those without purpose or direction.

You who know me know the source of my purpose and direction. They are rooted in a strong belief in our system of government and optimism about our future, a confidence in our ability to get the job done, and a deep concern for those we are called on to serve. But I sincerely doubt that anyone in public life can withstand the realities of public life without the support, advice, and assistance of good friends. I need, welcome, and cherish your advice and assistance just as today I thank you for the assurance that your support by your presence here has given me.

Now, I've behaved very well. The President was very optimistic before I came over. He said, "You are going to say a few words, aren't you?" [*Laughter*] As he has said, he said I was outspoken, I'm sure he has frequently thought, but not by

many. [*Laughter*] So, for all of you, some of whom have known me for decades, that take us to 30 years—I see Judge Parker, whom I met when we were both students at the University of Chicago in the forties; we won't say when, Barrington—but I want to say it will either reassure you or frighten you or make you say, "I told you so."

High office really hasn't changed me, and with all that that means for those of you who know me, I leave on that note, my good friends, saying thank you for being here today.

NOTE: The President spoke at 1:17 p.m. at the ceremony in the East Room at the White House.

Federal Trade Commission

Nomination of Patricia P. Bailey To Be a Commissioner. August 3, 1979

The President today announced that he will nominate Patricia P. Bailey, of Washington, D.C., to be a Commissioner of the Federal Trade Commission for a term expiring September 25, 1980. She would replace Elizabeth Hanford Dole, resigned.

Bailey is executive legal assistant to the General Counsel at the Merit Systems Protection Board.

She was born June 20, 1937, in Fort Smith, Ark. She received a B.A. from Linderwood College in 1959, an M.A. from the Fletcher School of Law and Diplomacy, Tufts University, in 1960, and a J.D. from the American University Law School in 1976.

From 1961 to 1966, Bailey was with the Agency for International Development as an assistant desk officer for the Dominican Republic, then Haiti; desk officer for Trinidad-Tobago and Guyana; and executive assistant to the coordinator of the Alliance for Progress, Latin American Bureau. In 1967 and 1968, she was a staff

assistant to Representative F. Bradford Morse. In 1968 she worked on then-Governor Nelson Rockefeller's presidential campaign.

In 1972 and 1973, Bailey worked for the National Women's Political Caucus. In 1976 she was active in the Rockefeller for President campaign, then in the President Ford Committee. From 1977 to 1979, she was at the Justice Department, serving as special assistant to the Assistant Attorney General for Improvements in the Administration of Justice. From 1978 to 1979, she was on special detail to the Attorney General to work on Federal judgeships. She has been at the Merit Systems Protection Board since March of this year.

Civil Aeronautics Board

Nomination of George A. Dalley To Be a Member. August 3, 1979

The President today announced that he will nominate George A. Dalley, of Washington, D.C., to be a member of the Civil Aeronautics Board for a term expiring December 31, 1982.

Dalley is Deputy Assistant Secretary of State for Human Rights and Social Affairs.

He was born August 25, 1941, in Havana, Cuba, and is a naturalized American citizen. He received a B.A. in economics and history from Columbia College in 1963, an LL.B. from Columbia University School of Law in 1966, and an M.B.A. from Columbia University Graduate School of Business, also in 1966.

From 1967 to 1969, Dalley was with the Metropolitan Applied Research Center, Inc., and from 1970 to 1971, he was an attorney with the firm of Stroock & Stroock & Lavan. From 1971 to 1972, he was assistant counsel to the U.S. House of Representatives Committee on the Judiciary.

From 1972 to 1977, Dalley was administrative assistant to Congressman Charles Rangel. He has been Deputy Assistant Secretary of State for Human Rights and Social Affairs since 1977, and is responsible for the formulation of U.S. human rights policy on the human rights and social issues which arise in the United Nations system.

Federal Maritime Commission

Nomination of James V. Day To Be a Commissioner. August 3, 1979

The President today announced that he will nominate James V. Day, of Kennebunk, Maine, for reappointment as a Commissioner of the Federal Maritime Commission for a term expiring June 30, 1984.

Day, 65, has been a Federal Maritime Commissioner since 1962. He is a former national director of public affairs for the American Legion and vice chairman of its Merchant Marine Committee.

International Joint Commission, United States and Canada

Nomination of Jean L. Hennessey To Be a U.S. Commissioner. August 3, 1979

The President today announced that he will nominate Jean L. Hennessey, of Hanover, N.H., to be a Commissioner on the part of the United States on the International Joint Commission, United States and Canada.

Hennessey, 52, is director of the New Hampshire Council of Management and Budget in the Office of the Governor, where she has established a Revenue Forecasting Council and a Property and Debt Management Council.

She is a consultant on foundation, corporate, and individual philanthropy, and was for 10 years executive director of the New Hampshire Charitable Fund and Affiliated Trusts, a statewide community foundation.

She is active in civic affairs, particularly those concerned with environmental issues, and serves as a trustee of the Environmental Law Institute and the New England Natural Resources Council.

United Nations

Designation of James E. Baker as Deputy U.S. Representative on the Economic and Social Council. August 3, 1979

The President today announced that he has designated James E. Baker, of Santa Rosa, Calif., as Deputy Representative of the United States on the Economic and Social Council of the United Nations.

Baker, 44, is now adviser to the Economic and Social Council at the U.S. Mission to the U.N.

He has been a Foreign Service officer since 1960 and has been at the U.N. since 1974.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

July 28

The President declared a major disaster for the State of Texas as a result of

severe storms and flash flooding caused by Tropical Storm Claudette, beginning on or about July 24, which caused extensive property damage.

July 30

The President returned to the White House from Camp David, Md.

The President met at the White House with Senator Robert Morgan and members of the North Carolina State Legislature.

July 31

The President met at the White House with:

—Zbigniew Brzezinski, Assistant to the President for National Security Affairs;

—Frank B. Moore, Assistant to the President for Congressional Liaison.

The President declared a major disaster for the State of Indiana as a result of severe storms and flooding, beginning on or about July 25, which caused extensive property damage.

The President transmitted to the Congress the 1977 Annual Coal Mine Health and Safety Report of the Department of the Interior.

August 1

The President met at the White House with:

—Dr. Brzezinski;

—the Republican congressional leadership;

—Mr. Moore;

—Robert R. Bowie, Deputy Director, National Intelligence, Central Intelligence Agency, and Dr. Brzezinski;

—Vice President Mondale;

—Representative Norman E. D'Amours of New Hampshire.

August 2

The President met at the White House with:

- Dr. Brzezinski;
- members of the United Democrats of Congress;
- Mr. Moore;
- Senator Lloyd Bentsen of Texas;
- Senator Donald Stewart of Alabama;
- Mrs. Carter, for lunch;
- Secretary of Energy-designate Charles W. Duncan, Jr.

The White House announced that applications for the 1980–81 White House Fellowships are now available and must be requested by November 15, 1979. The program was established by President Johnson in 1964 to give outstanding individuals early in their career firsthand experience in governing the Nation. It is open to all U.S. citizens except those in civilian Federal Government positions. Fellows are assigned for 1 year to a Cabinet officer, the Vice President, or a senior member of the President's staff. Although their job assignment is the core of their year, they also participate in educational seminars with top Government officials, leading scholars, journalists, and others who deal with the National Government. There are no occupational, age, sex, racial, political, or religious restrictions. Minority groups and women are encouraged to apply. Application materials and additional information can be obtained from the President's Commission on White House Fellowships, Box 7737, Washington, D.C. 20044 (202/653-6263). Requests for applications must be postmarked no later than November 15, and completed applications no later than December 1, 1979.

August 3

The President met at the White House with:

- Vice President Mondale, Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Dr. Brzezinski, and Mr. Jordan;
- Mr. Moore;
- Lyle Gramley, member of the Council of Economic Advisers;
- Polish American leaders.

A joint resolution recognizing the anniversaries of the Warsaw uprising and the Polish resistance to the invasion of Poland during World War II.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, August 10, 1979

Department of Justice

*Exchange of Letters on the Resignation
of Griffin B. Bell as Attorney General.
August 3, 1979*

To Attorney General Griffin Bell

I accept with genuine regret your resignation as Attorney General of the United States.

As a dedicated and independent professional, as a wise and judicious administrator, as a fair and compassionate public servant and as a valued personal friend of the President you have served our country well. Your accomplishments have been a source of pride for me and for others who have assessed the accomplishments of the Department of Justice under your leadership. You have left a good heritage of personnel and policy which will serve to perpetuate the advantages of your good work.

You have my best wishes and sincere thanks as you return to private practice, and I look forward to having your advice and support in the months ahead.

Give my love (and thanks) to Mary.

Your friend,

JIMMY CARTER

August 2, 1979

Dear Mr. President:

As we have discussed, I hereby formally tender my resignation as Attorney Gen-

eral of the United States, which will be effective upon the appointment and qualification of my successor. I do so with gratitude to you for affording me the opportunity to serve as Attorney General.

As a lawyer and citizen, this has been the highest privilege of my life. For 30 months I have been the lawyer for the people of the United States. The work has been hard; the challenges have been great; and I have given my best effort. It is an experience that I will cherish for all of my days.

When you asked me to undertake this responsibility, I told you I would stay on the job until I could warrant to you that the Department of Justice was strong, running well, and an institution of which you and the American people could be proud. In asking you earlier this year for my release to return to the private sector, I gave you that representation, and I now leave the Department knowing that it is in the hands of good and strong men and women whom you have placed in its top leadership positions and that it is staffed by professionals.

You have been a bulwark of strength to me in leading the Department. I have carried out your direction to develop traditions of excellence and independence in the Department and you, indeed all Americans, can have the satisfaction of

knowing that these traditions will be demanded practices for many years to come.

Finally, I simply want to state that serving in your Cabinet has been a great personal honor. I value my friendship with you, and I hope that you will call upon me whenever I can be of service.

Warm personal regards.

Sincerely,

GRIFFIN B. BELL
Griffin Bell

[The President, The White House]

NOTE: The texts of the letters were made available on August 4.

Department of the Treasury and the Federal Reserve System

Remarks at the Swearing In of G. William Miller as Secretary of the Treasury and Paul A. Volcker as Chairman of the Board of Governors of the Federal Reserve System. August 6, 1979

THE PRESIDENT. One of the enjoyable and gratifying aspects of being President of our great country is to be able to call upon distinguished Americans to serve our country. The two most important economic posts in our Government are the Secretary of Treasury and the Chairman of the Federal Reserve System. And I don't believe that anyone whom I have read and listened to very closely in the last few days have contradicted the fact that we have two superbly qualified men who will be serving in these two important posts in the days ahead.

Our country is facing troubled times economically. We've now experienced more than a decade of persistent inflation, which has sapped away the confidence of American people in the future, which has put an additional and unnecessary burden on the shoulders of our people of all

kinds, and which has been a discouraging thing for economists and for the Congress and for Presidents and other administrative officials at all levels of government.

This inflationary problem has been exacerbated in recent months by the extremely rapid increase in energy costs. In the last 6 months, OPEC has raised energy prices 60 percent, and the retail price of energy in our country has increased more than that in the last 4 months alone.

How to deal with this serious problem of inflation, how to keep a sound dollar, how to keep a strongly growing economy in our Nation, how to deal with the problems of housing and unemployment, and to meet the social needs of our people is indeed a challenge that is great, not insurmountable, but requires the best leadership and the best minds and the most intense and sincere dedication.

I think all of us know that there must be experience in these two posts. There must be competence and there must be dedication. There's no doubt that Paul Volcker and Bill Miller exemplify these characteristics to an utmost degree—an unchallenged, uncontradicted degree.

In addition, it's important for our country that the leadership in our economic community have the confidence of America, of people who labor at all levels of employment—at the business executives, bankers, the financiers, government officials. These two men must have the confidence of our Nation, and they do.

It's also extremely important for everyone who lives in our country to know that the Secretary of Treasury and the Chairman of the Fed have the confidence of the financial world, because the stability of the dollar, the persistent attack on the problems of inflation are absolutely crucial to maintaining the leadership that our country must maintain—and also that there be a stable purpose of our Nation exempli-

fied by these two men and others, like myself, who will work with them.

I'm determined to maintain a steady course, to maintain a sound fiscal policy. I'm determined to maintain a responsible policy concerning our monetary systems, and also a sound and conservative budget policy. Now is no time to change course. Now is no time to deviate from the purposes that we have espoused, that we have described to the American people and to the rest of the world.

I am absolutely confident that Bill Miller and Paul Volcker will join me in that commitment, and I am gratified to have them as partners with me, with the other administration officials, and with the Congress and the American people in pursuing this steady course based on a responsible fiscal, monetary, and budget policy.

The first to be sworn in will be William Miller, who has served in a distinguished way as Chairman of the Federal Reserve Board, who has a superb record as a corporate leader, who is a clear and evocative spokesman, both in public and in private counsels, who has shown already his ability to deal with the problems that I've outlined concerning inflation, a strong economy, employment, the meeting of our social needs in our country. And I'm grateful and honored as President to ask Judge Leon Higginbotham to administer the oath of office as Secretary of the Treasury to a fine American and a distinguished public servant, William Miller.

Judge Higginbotham.

[At this point, Judge A. Leon Higginbotham of the Third Circuit administered the oath of office.]

I'd like to say in introduction that Bill Miller will serve not only as Secretary of the Treasury but also as the chief economic spokesman of my administration and the

economic coordinator of my administration.

Bill Miller.

SECRETARY MILLER. Mr. President, it seems I was standing in this very spot on a similar occasion not so long ago, about 17 months. At that time, I would have predicted that I would serve out my term as Chairman of the Federal Reserve Board and then return to private life. I only hope my economic forecasts prove to be more accurate.

Many of my friends have been puzzled by my move from the secure and independent halls of the Federal Reserve to an insecure and exposed seat in the Cabinet. There should be no mystery. In these difficult times, every American should be willing to serve his President and his country to the best of his abilities. If each does his part, the total impact will have a powerful influence on our effectiveness and on our confidence.

Today, in dealing with the economic conditions we face, we have a towering challenge. We have inherited the most distressing economic environment in 50 years. Inflation is a clear and present danger. It has struck at our Nation's vitality. If it is not checked, then it will threaten our democratic system itself.

Never in its history has America experienced peacetime inflation of such magnitude and such duration as we've seen during the decade of the seventies. It is unprecedented.

This virulent cancer of inflation has built up over some 15 years. Its incubation period coincided with larger events which divided our Nation and weakened our resistance to this dread disease. As a consequent, inflation has become deeply embedded in our economic structure. We can no longer effect a cure by cyclical treatment. We must attack the root causes and

totally eradicate the basic sources of the malady.

Because inflation has built up over such a long period, it will not easily or quickly be dislodged. What is needed is a comprehensive, sustained, and total war against inflation. What is needed is an integrated strategy marshaling all the policy weapons at our command until we achieve unconditional surrender.

As I have often said in my former role as Federal Reserve Chairman, monetary policy certainly cannot do the job alone. But a disciplined monetary policy is a key element. President Carter has made an excellent choice in Paul Volcker as my successor. He is superbly qualified. I am sure that Paul and the other able and dedicated Governors of the Federal Reserve and the Presidents of the Federal Reserve Banks who serve on the Open Market Committee can be counted on in their independence to maintain the proper monetary stance.

At the same time, those of us with responsibility in the administration must apply ourselves with full diligence to implementing the other elements of the President's economic strategy—a disciplined fiscal policy, a program for moderation of wage and prices, commitment to a sound and stable dollar, expansion of exports, balance in our international accounts, a comprehensive energy program to reduce our dependence on imported oil, to conserve energy in every way, and to develop alternate energy sources within our borders.

And certainly the President's program on energy should be enacted as promptly as possible, including the windfall profits tax.

And we must pursue the other elements—reduction of unnecessary Government regulation and other cost-raising Government actions.

We must encourage employee training, capital investment, and the research and development and the other initiatives that are essential to increase our productivity.

Of course, economic activity is not of itself the essence of our national purpose. There are higher aspirations concerning the spiritual and humanistic values of American life and human society. But it is not likely that these higher goals can be attained in the complex and interdependent world without a sound economy.

Employment opportunities for every American, production of the goods and services we need at stable prices, advances in science and technology, molded in humane application, all are a precondition.

Without a vigorous economic system, we cannot assure the adequacy of our national security. We cannot provide sufficiently for the poor and the aged and the infirm and the veterans who have served this country. We cannot revitalize our cities. We cannot guarantee proper shelter or education or medical care for all Americans. We will be handicapped in maintaining American leadership in a fragile world.

A sound economy is thus the basis for pursuing our national goals. The government must lead the war against inflation, but the campaign most surely will succeed only if every American plays his full part.

Support of all our citizens is needed to endure a period of austerity, fairly shared, so that we may again be able to enjoy the bounty of this great land. We must have the compassion to cushion the burden in these austere times from those least able to protect themselves. It is a period of testing. Do we have the will, the determination, the character to persevere?

Watching the struggle of the boat people to find a true light in a darkened corner of the world, watching their extreme risk to find an American refuge, watching their sacrifice, speaks more eloquently than I can of the living reality of the American dream.

My purpose, Mr. President, friends, Americans, will be to serve as your Secretary of Treasury in doing my very best to assure the lasting vitality of our economic system, to fight and to win the war against inflation, to reinforce the preeminence of Americans at home and abroad, and to keep alive that great American dream.

Thank you.

THE PRESIDENT. Next, Judge Higginbotham will administer the oath of office to Paul Volcker as Chairman of the Federal Reserve System.

Mr. Volcker is a man who has devoted his entire professional career to dealing successfully with the complexities of monetary theory and practice and international finance.

I consulted with many people when I was deciding whom to ask to serve in this most important position. And the more people who talked to me, the more the choice became obvious.

Internationally, Paul Volcker is well known. His experience in the Federal Reserve Bank in New York and also within the Treasury Department itself has been a demonstration of not only sound management but incisive analysis and leadership. Among his notable peers, he is recognized as being superb in the ability to understand the complexities of a fast-changing monetary world, protecting the interest of our Nation, and making incisive decisions that were honored as their results were observed.

When I met with Paul Volcker to discuss his appointment with him, he made it clear to me, and I instantly agreed, that

both he and I and Bill Miller, who was present, would honor the independence and the integrity of the Federal Reserve System.

We also recognize the need to exchange ideas and to share responsibility in a completely appropriate way between the Government—the executive branch, the Congress, and the Federal Reserve—and the private enterprise system of our Nation.

I am extremely grateful that Paul Volcker is willing to serve. He takes this position with some financial sacrifice, but with an awareness of the possible benefits to our country in broadening and expanding his responsibility in his area of service.

I have never made an appointment, I don't believe, that was received domestically and internationally with any more uniform approbation. And so for that reason, also, I am grateful to Paul Volcker for being willing now to accept the oath of office and then the responsibilities as Chairman of the Federal Reserve System of our country.

Paul.

[At this point, Judge Higginbotham administered the oath of office.]

MR. VOLCKER. Mr. President, ladies and gentlemen, that's not the first time I've taken that oath. And every time I've done so, I end up with a little lump in my throat at the end, because it really is a great privilege for me to be asked to serve in public office and, most of all, the one I'm undertaking today.

It's obvious to all of you from what's been said today that we're face to face with economic difficulties really unique in our experience. And we've lost that euphoria that we had 15 years ago, that we knew all the answers to managing the economy.

But somehow knowledge of our limitations seems to me the beginning of wis-

dom, and I for one am convinced we can make progress now that we have the problems in clearer perspective.

And I've been particularly encouraged, Mr. President, with the forthrightness with which you have reiterated the priorities on inflation, on energy, on the budget, and all the rest—priorities and objectives that I am sure are shared not just by me but by the Federal Reserve generally and indeed by the citizens of this country.

Now, we in Federal Reserve, I suppose, are always a little sensitive about our special niche within the Government. But I assure you, we also know we operate within the framework of government. There's no moat around that marble palace on Constitution Avenue to impede communication in every direction, and particularly with the administration, with the Congress. And I look forward to maintaining those communications.

I've spent a fair amount of my life now within the Federal Reserve, and it looks as though it will be a little more. I cherish its integrity. I cherish its professionalism. And I only hope that as I take office that reputation can be maintained and, over time, even enhanced, as it was with my predecessor, whom I'm so happy and proud to share this platform today. I appreciate the chance to try to do my part.

Thank you very much.

NOTE: The President spoke at 3 p.m. at the ceremony in the East Room at the White House.

Baltimore, Maryland

Remarks Following a Tour of Neighborhood Rehabilitation Projects. August 7, 1979

As all of you know, our country is determined to win the energy war and

I believe the people here on East Biddle Street can help me. Do you agree? [Applause]

A couple of Sundays ago I made a speech to the Nation about the strength of our country and about our need to have a strong and united effort in our Nation, not only to have a good economy, with jobs for people, good housing, but also to stop the waste of energy and to let our Nation be dependent on ourselves and not on the OPEC countries.

Behind me, you see several panels on the top of this house that are going to be all over the Nation in the future. There's no way for them to embargo the sunshine, right? [Applause]

Baltimore is showing the way. You've got a great mayor in Don Schaefer. And you have worked with him to make sure that your city is becoming a better place to live.

Two and a half years ago, almost three, I came to Baltimore to see the fine housing programs that were in effect here, where people who did not have jobs were given jobs to make old homes new and to let people live in decent housing for a change, quite often with a family that was going to live in a house doing a major part of the work.

Now we have a fine weatherization program underway in Baltimore. This year, we will have 3,000 homes completely weatherized, not with expensive workers, but with CETA workers, who were formerly unemployed. They are doing a superb job. It only costs, for each home, about \$275 to make sure that the doors, the windows, the hot water heaters do not waste energy. This money comes back in saved heating bills in less than 2 years, and then for the rest of the life of the home, there's a tremendous savings in dollars and a warmer house and a better

place to live which will be of benefit to you, to the city, to your neighbors, and to our country.

This year, 3,000 homes, next year, 4,000 more homes, more jobs, and one of the good things, one of the good things is that these young workers who were formerly unemployed are learning a good trade and they are going from this program into private employment with a lot higher salary level and a stable life for the future. That's what I call cooperation. That's what we need all over the country.

I don't know if you know it or not, but 40 percent of all the energy in our country goes into the heating and the cooling of homes and other buildings—40 percent. And because we are so wasteful now, between 30 percent and 50 percent of all that heat is wasted. It costs our country in energy security. It makes us too dependent on foreign oil. It takes jobs away from our Nation and imports inflation. If we can just cut down on the waste of energy in our homes, this would be a tremendous program now and in the future.

In 1977 I proposed to the Congress and the Congress passed a bill that gives \$300 in tax credits for any homeowner who will weatherize a home to cut down energy waste and \$2,200 for any home that will install solar heat for the house itself or for hot water or sometimes even for cooling. This is a program just getting started, and we have now proposed to the Congress an additional program that will let the power companies, the gas companies, the electric light companies, give a loan to a family or to the owner of a house that's rented to make sure that the house is weatherized and made efficient and that loan will not have to be paid back until the house is sold. This will save a half million barrels of oil every day and, again, will provide tremendous savings

for the homeowners and the working people of our Nation.

It's very important that this program be understood not just by those of you assembled here on North Patterson and East Biddle Street but also by the people all over our country. We are making good progress toward giving our people a better life, and we are letting you have a part in providing for our energy security and making us free from dependence on foreign oil that might be interrupted and damage our lives and damage the country we love. Will you cooperate on this program with me? [*Applause*]

Let me add a word about the school building on my right. This building was built, I believe, in 1896. It has educated, as you know, a lot of young people. Now it's no longer used for a school building, but it's being renovated at a very low cost compared to a new building. And by December, it will be completed, and we'll have a place to live, a beautiful place to live for 19 families. This is being done in other places in Baltimore at a great savings to the taxpayers and giving good housing for all our people.

This is the kind of cooperation that you are finding now among the Federal agencies—Housing and Urban Development, which provides the funds and the know-how; Labor, which provides the CETA programs and training the young people to have permanent jobs; HEW, interested in a better life for our people in education and welfare and health; and other Federal agencies. But the most important thing is that we are working cooperatively with the State government officials and the local government officials and also private industry.

An additional thing in Baltimore is this: The people who do most of the work are the ones who live here and who want a better place to live. That's the kind of

cooperation we're going to continue, and I want to say to you from the bottom of my heart that I thank Mayor Schaefer and all the government officials here in the city. I appreciate the people who are here assembled to hear my voice, and I particularly appreciate the citizens of our country who believe that our Nation is already strong and great, that it can be greater in the future and stronger, and who will do your individual part in saving energy, cutting out waste, guaranteeing our Nation's security.

I want you to make sure that Congress cooperates with me. We and the Congress will cooperate with you. We'll have energy security for our Nation and a better life for all Americans. That's what we want; that's what we're going to have.

Thank you very much.

NOTE: The President spoke at 9:35 a.m. at the intersection of East Biddle Street and North Patterson Park Avenue, in east Baltimore.

Prior to his remarks, the President toured the home of Mrs. Genitha Rhyne. The house was rehabilitated and weatherized as part of a citywide project, and also was outfitted with a solar unit for heating. The President and Jay Brodie, Commissioner of Housing and Community Development, then toured School No. 37, one of the vacant school buildings in Baltimore being renovated into apartment housing. While he was at the school, the President met with city officials and neighborhood residents to discuss the rehabilitation projects.

Baltimore, Maryland

Remarks and a Question-and-Answer Session at the National Convention of the Order of the Sons of Italy in America.
August 7, 1979

THE PRESIDENT. *Judge Montemurro, Governor Hughes, Mayor Don Schaefer, who's done so much to keep Baltimore a great city, Senator Sarbanes, Senator Mathias, Congressman Biaggi, Judge Sirica, Colonel Battaglia, delegates, mem-*

bers, and friends of the Sons of Italy in America:

I'm not supposed to go to Italy until next year. Why is it that I already feel like I'm there?

I intend to visit your great mother country next year for an official state visit in Venice to meet with the other leaders of the industrialized Western nations to discuss matters important to our country and to the other nations on Earth.

I'm especially glad today that in addition to Congressman Biaggi and Judge Sirica and Father Baroni,¹ that I was able to bring with me the highest law enforcement officer in our Nation, the new Attorney General of the United States of America, Benjamin Civiletti. And I sincerely hope that you approve of this appointment.

It is very important that the government of our Nation represent and reflect the varied heritage of America. But I recognize a special claim that Italian Americans have. Some of us are very proud that our people came over in 1620 on the *Mayflower*, but not many of us can say that our people came over in 1492 on the *Santa Maria*. [Laughter]

For myself, today I came over on the train. And first of all, I want to say that I recommend this kind of trip to every American regardless of national background. Trains have always been a truly American way to travel, and I am determined to improve America's railway system. I want to demonstrate that trains represent the future and not the past in transportation in America. And I hope you'll help me with that.

In recent years there've been too many bankruptcies, too many terminations of rail service, to a great degree brought about by excessive Government regula-

¹ Geno Baroni, Assistant Secretary for Neighborhoods, Voluntary Associations, and Consumer Protection, Department of Housing and Urban Development.

tion. Recently, the Congress passed legislation severely reducing Government regulation of the airline industry. Many of you flew into Baltimore, and you know that passengers on airlines have saved already more than \$2½ billion. The airlines have made more money, more people travel. Now we have before the Congress a proposal to do the same thing with American railroads. And if you'll help me with Congress, we'll deregulate the railroads, put them back on a sound, blue-ink basis and have a better transportation system for our country.

Amtrak must be more efficient, more comfortable, and more economical. And we are finally changing the blocked Northeast Corridor into an open passageway for millions of Americans. This is the same thing I'm determined to do with my Presidency, to keep it open by traveling frequently and freely among the people of our Nation, and that's why I'm so glad to be here with you. I thank you for giving me this opportunity.

Now, people used to call America a melting pot, but that has never really been true. The people of this country did come from all over the world. We are a nation of immigrants; we are a nation of refugees. We came here bringing with us every kind of culture and language and religion and way of life. Our ancestors all sought the same freedom, but we never got melted down into a single featureless mass where all were exactly the same. And all of us are glad that this did not happen.

Whatever our race or religion or form of nationality, we have kept some of our original character, even as we've learned to live and to work together as Americans. We are not a melting pot. We are more like a pot of minestrone. *[Laughter]*

As I said often during my campaign throughout the country, the analogy that comes closest, to my mind, to capturing the essence of America is that we are a mosaic. Each fragment of the mosaic has

its own shape and its own color and its own size. And the beauty of this mosaic is to be found both because each piece is different and unique and because the pieces fit together in harmony so well.

This country is a mosaic made up of Italians and Irish and Poles and Jews and blacks and Orientals and Native Americans and even people with southern accents. *[Laughter]*

And I might say that all of us have on occasion suffered from some degree of prejudice. But the whole is greater than the sum of its parts, and we will go on adding pieces to this American mosaic as long as there is oppression and tyranny and suffering in the world which people need to escape and to come here for freedom.

The famous poem by Emma Lazarus inscribed at the base of the Statue of Liberty includes these lines which all of you know:

Give me your tired, your poor,
Your huddled masses yearning to
breathe free,

The wretched refuse of your teeming
shore.

Send these, the homeless, tempest-tost
to me,

I lift my lamp beside the golden door!

That old, beloved poem has new and vital meaning today, and we ought to think about this. The phrase about the tempest-tossed sounds almost like a prophecy of the boat people. The refugees from Indochina who have posed such a challenge to the conscience of the world, they are the tempest-tossed of 1979. The golden door of our Nation must be open to them just as it was open to the tempest-tossed parents and grandparents of almost everyone in this room and all those who live throughout the country.

There is a tendency in our Nation, even amongst some of us, to say, well, now it's

different. It's not different. We must be open-hearted, and we must still be concerned for those who seek to escape persecution and to find freedom.

It's good for our Nation that you are meeting here as Italian Americans, that you are working together to preserve your heritage and your culture, because you have so much to offer. I do not mean only the cultural and artistic and musical heritage, a heritage represented by names like Michelangelo and da Vinci, Verdi and Toscanini, nor do I mean even the great individual contributions of particular Italian Americans, although, of course, we are all intensely proud of people who have held our Nation together in a time of trial and testing and great threat—men like John Sirica, Peter Rodino, and now Benjamin Civiletti.

Even more important than any American, no matter how great that individual might be, is the system of values that the Italians and the Poles and the Irish and the European Jews and other immigrants brought to our shores. I mean the devotion to family, a sense of discipline, a belief in hard work, a readiness to sacrifice so that each generation's children could have a better life, and finally a sense of concern and compassion for others. That sense of compassion is very broad, and it's evident in this room, in this organization.

On this trip, I'm discussing with Mario Biaggi the plight of the people in Northern Ireland. Peter Rodino, with his committee, is working to help the boat people. There are many in this room who are concerned about Israel, who are concerned about the poor of all nationalities, and about the elderly who live among us.

During this convention I have learned the Sons of Italy will present a check for \$2 million to the March of Dimes Foundation to fight birth defects. And that money will go to help children of every racial and ethnic background. You've raised that money in your capacity as

Italian Americans, but you are donating it in your capacity as Americans. That is the spirit of the United States, the same spirit that the immigrants brought to this country, of unity, patriotism, confidence, and concern.

It's the same spirit that we must now bring to the fight to achieve and to preserve American energy security.

I'm not going to describe any particular program today. We all know that we can meet our energy security threat only if we enact legislation and then pull together as Americans.

Because our Nation is not only a mosaic ethnically and culturally but also economically, we're different one from another. Some of us financially are well off, some have to struggle just to make ends meet; some of us are energy consumers, some energy producers. Some of us are from the Northeast, where we need a lot of heating oil to keep our homes warm; some of us are from the Sun Belt, where enormous differences of distance means that we need a lot of gasoline just to go to our jobs.

Too often in the past, as we tried to deal with this complicated energy problem, we have let these differences paralyze our Nation. We've been too prone to struggle and fight among ourselves in serving our own particular interest. We have let the general interest, the national interest suffer.

I'm sorry to say that until now the general interest has had a hard time of it in the halls of Congress, despite the dedication and the work of the leadership and many Members of the Congress. The Congress has yielded to the narrow interest on energy issues time and time again. I've now called on the Congress to enact a strong windfall profits tax on the oil companies to help finance a strong national effort to achieve energy security, and I need your help.

The Congress is now in recess, and its

Members are at home listening to constituents. I'm sure that the message they will hear is a clear call to enact the windfall profits tax on the oil companies. America needs the revenues from that tax to finance a vast effort to increase energy production and also to increase energy conservation.

America needs those resources, those revenues to improve mass transit. I took the train this morning, not only because it's the best way to come from Washington to Baltimore but also because I wanted to show my support for a strong mass transportation system.

The windfall profits tax will also let us build that kind of system and will help us to ease the burden of increasing energy cost that now falls on the shoulders of the poorest among us. But we cannot do any of that unless we are willing to place the common good over the narrow special interests.

This is a challenge I talked about in my Sunday night television address. It's a challenge I'm talking about from one end of this country to another. It's a challenge I'm calling on you to help me meet together, unified, with confidence in ourselves, with confidence in each other, with confidence in our Nation, in America. You can help me and the Nation that we all love by saving energy in your own lives and in your own homes and in your own communities and by getting the message across to the representatives in Congress that all of us must cooperate and to mobilize the strength of America to achieve energy security.

We have the greatest nation on Earth. Let's make it even greater. *Sempre avanti!*

And now I'm ready for your questions.

QUESTIONS

NATIONAL HEALTH PLAN

Q. Mr. President, we're concerned

with what you think the possibility is of having a national health insurance program passed within this administration and, if so, do you feel it will be the administration's bill or do you feel it would be the bill of, say, others who've presented bills?

THE PRESIDENT. I think it's very important that our Nation have a comprehensive health program. The differences that have been highly publicized between myself and Senator Kennedy on what shape the legislation should assume, I think, have been exaggerated. We've come a long way. There are some differences that are material, but I believe that we can overcome those differences.

The Congress is responsible for doing this. One of the comments that I made in the swearing-in ceremonies for Patricia Harris—who will be the new Secretary of HEW—is that part of her responsibility will be to resolve the differences that do exist between my own proposal—which has been very carefully considered and is a very sound proposal—and that of many others who've been interested in national health programs for a long time. So, I predict that this will be passed during this Congress, if not this year, then next year.

We've got the support of people like Abraham Ribicoff, Senator Russell Long, Senator Kennedy, and many others in the Senate, and then we have equivalent support in the House.

It's not intended by either Senator Kennedy or I that the program would be effective immediately. It would go into effect in 1983, but because of its far-reaching impact and the need to be responsible on budget matters, we want to phase it in very carefully. The first phase will be to coordinate existing Government programs. The second phase will be to pursue aggressively a prevention program to prevent disease and to build on the things we're already doing so well

in that respect, and later to broaden the coverage one step at a time until all Americans, regardless of their income, have an adequate degree of health care. The total ultimate cost will not exceed, in my opinion, what the ultimate cost will be without this program, because the costs now are growing so rapidly.

The first step that I hope the Congress will pass this year, to go into effect immediately, is hospital cost containment. As you all know, because this is not a competitive industry, hospital costs have been going up twice as fast as the average cost of inflation. So, we need hospital cost containment immediately and then to implement the health program on a nationwide basis carefully, methodically, but thoroughly and with a maximum degree of cooperation between me and, as you say, others.

ETHNIC AMERICANS

Q. Mr. President, I am John Spatuzza from Chicago, Illinois. Mr. President, your predecessor had established an Office for Ethnic Affairs to demonstrate the concerns and to make available to ethnic Americans a vehicle by which they could express their concerns in their particular areas. Mr. President, does the fact that you have not chosen to establish such an office, does that in any way indicate a diminished concern for ethnic Americans?

THE PRESIDENT. I can answer that in one word—the word is “no.” It does not show any absence of concern for ethnic Americans. We are now working with the leaders of this organization and others to see how we can broaden the input from different ethnic groups throughout the country into the White House where decisions are made.

I think it's very important to realize that all of us, from the President, the Vice

President on down, attempt every day accurately to mirror the interest of ethnic Americans. But we do not have any lack of compassion or understanding, commitment, determination to serve ethnic American groups greater, and we have a broad range, for instance, of Italian Americans who serve at top levels in our administration. We'll continue with this. And I think you know that Vice President “Mondali”—[laughter]—is one of the representatives of the Italian Americans that I depend on very heavily, and now we have some more in the administration as well.

VISIT WITH ITALIAN FAMILY

Q. Good morning, Mr. President. I'm Josephine Falco, and I'm from Massachusetts. In your travels around our country, you have visited American families of many different backgrounds. Do you, Mr. President, plan to visit a family of our Italian heritage?

THE PRESIDENT. Yes. Nothing would please me more than to do that.

Q. Thank you, Mr. President. How about coming to 44 Beaverbrook Road, Waltham, Massachusetts? [Laughter]

THE PRESIDENT. That's a great temptation. Some of my top scheduling aides are here, and if they don't schedule me into an Italian American home, I might make some more changes in my staff. [Laughter]

FOOD AND ENERGY PRICES

Q. Florabell LaVerdi from Brownsville, Pennsylvania. Mr. President, Americans throughout our country are deeply concerned with the family budget and its ability to provide the adequate heat in their homes and the nutritious food on our tables. Do you believe that the ever-

escalating costs will force us to choose between adequate heat or sufficient food?

THE PRESIDENT. I'm very pleased that in the last few months the wholesale price of food has been going down, including that of red meat. So far, the so-called middlemen and the retailers of meat have been profiting excessively in spite of the fact that the price of beef and pork and poultry to the farmer has been going down. I believe that the sum total of all this, however, is a leveling off and a starting down of the price of food, which should continue the rest of this year.

There is no way that I or anyone else can promise you cheaper energy in the future. In the last 4 months alone in our country, because of OPEC price increases, which are exorbitant and excessive, the price of energy in our country has gone up about 60 percent at the retail level. This is not going to turn around. I think it won't be nearly that steep in the future.

I've just come from a poor neighborhood in Baltimore. Mayor Schaefer has a program here depending upon CETA workers to go into low-income homes with formerly unemployed young people and to weatherize those homes, to add insulation to windows, to doors, insulation around hot water heaters, and so forth. The total average cost of that for any home is only about \$275. That much can be saved in less than 2 years, and from then on, you have a saving of \$150 or so in a small home every year as long as the home lasts.

In 1977 we got through the Congress—and don't many people know this—a program to give tax credits up to \$300 for the insulation of a home, up to \$2,200 to install solar heating. This next proposal that we've just put into the Congress, depending upon the windfall profits tax, will provide loans from the power companies, the natural gas supplying companies, the

electric power companies to all homeowners, a very low interest loan, so that you can insulate your homes and not have to pay back the cost of that insulation until the home is sold.

With this program alone, we hope to save more than a half million barrels of oil every day. So, we are moving now to compensate with your help in saving actual money on energy. Even though the price of oil itself goes up by having more efficient automobiles, using mass transit, insulating homes, setting thermostats at a higher degree level in the summer, lower in the winter, these things you must do to help yourselves.

So, food prices are turning downward; energy prices are going to go up. But your total cost of heat can go down if you take care of yourself by cooperating in these programs.

Thank you very much for that excellent question.

MEXICAN ENERGY SUPPLIES

Q. Peter Tubiolo from Covina, California, in southern California. What is your administration doing with reference to resolving the relationship between Mexico and the United States relative to the fuel import disagreements?

THE PRESIDENT. We're negotiating now on the price of natural gas. The original projection of the quantity of natural gas that Mexico planned to sell has been dropping substantially, because President López Portillo has decided to use a greater and greater quantity of Mexican natural gas in his own country. So, the amount to be sold to us is much less than we had anticipated. We are still negotiating on a price for that gas.

We are already buying between 85 percent and 90 percent of all the oil that Mexico exports. So, we are already doing what a lot of Americans don't know about. We would buy 100 percent of all Mexico's exported oil if Mexico wanted to sell all their oil to just one customer. But I can understand the Mexicans' attitude. They want to have not all their eggs in just one customer's basket. So, they do sell 10 percent or 15 percent of their oil to other countries—Japan and some European countries.

So, we have an excellent relationship already with Mexico on oil; we're negotiating on natural gas. I hope that this will be a successful negotiation. I will be meeting personally with President López Portillo in Washington next month hopefully to conclude these negotiations. We've got a good relationship with Mexico, and we intend to keep it that way.

DEPARTMENT OF EDUCATION

Q. I'm Lucy Codella from White Plains, New York. Mr. President, there has been proposed a new department of education in Washington. Will this new department have any serious impact on the programing and the management of the present private, elementary, and secondary schools?

THE PRESIDENT. I would say it would have a beneficial impact. First of all, to have a separate department of education will actually decrease the Federal bureaucracy, the cost of administration, and the number of employees.

Secondly, this department will give a higher profile, a higher degree of awareness and publicity to the problems of education than you can possibly have with education buried under health and welfare.

Another thing that's important, and that is that the State and local officials

and also the private school officials will have a single identifiable person with one responsibility with whom they can deal. My own belief is that this will result in a lesser interference of the Federal Government in the affairs of the State and local public schools and also the private schools. You won't have as many lawsuits and withholdings of funds and so forth if you can have a routine natural communication and consultation and cooperation between the education officials, private and public, and the Federal Government to begin with. I think we can have fewer regulations, fewer forms, fewer requirements for Federal grants.

In the last 2½ years, we have had more increase in Federal aid for education with less interference than ever before in history, even during those days in the sixties when President Johnson was in the White House. It's been a superb achievement.

We will have within the new department an assistant secretary of education just for private schools, private education. So, I have no doubt that the relationship between the private schools and the Federal Government will be better with the new department of education than it has been in the past.

U.S.-ITALIAN RELATIONS

Q. Mr. President, I'm Guy Arigo from Revere, Massachusetts. The Italian Government has been undergoing a serious governmental crisis. Is there any change in our Government's position with respect to possible changes in the Italian Government which eventually may bring a direct communistic participation in the Italian executive branch of government?

THE PRESIDENT. I'm very proud of the fact that the United States of America has an excellent relationship with the Government of Italy. We have deplored the vio-

lence and the threats of terrorism and the acts of terrorism in Italy. We have offered our services to the Government of Italy, to the people of Italy, in a cooperative way with other nations, I might add, to help stamp out the threat of terrorism. We now see a new government taking over in Italy. We've had an excellent relationship with Mr. Andreotti. We will also have an excellent relationship with the new government.

I have been very pleased at the result of the recent election which showed that the Communists, in a free and democratic election, lost substantial support from the people of Italy.

I might say three things very quickly. It would be completely inappropriate and, I think, counterproductive for our Nation to try to interfere in the electoral process of Italy. Secondly, I hope that over a period of time, and not too long to wait, that the influence of the Communists in Italy will take another drastic drop. And the third thing is, I trust the political judgment of the people of Italy.

We don't have any fear about the future of Italy being a democratic nation, allied with us, a strong NATO member, a distinguished member of the leadership with whom I meet every year at least, and obviously tied to us with the most valuable of ties, the ties of blood kinship so well represented by this group.

ITALIAN AMERICAN JUDICIAL SELECTIONS

Q. Good morning, Mr. President. I'm Charles Caputo from Pittsburgh, Pennsylvania, the Supreme Order of the Sons of Italy, or its chief legal officer.

May I say preliminarily, in 30 years of participation in activities of the Order, I've never heard anyone received with such acclaim and warmth, with one exception, than I did you this morning. The

other exception is not too far away. It was exceeded before you got here when we received the Honorable Benjamin Civiletti.

With his appointment, Mr. President, you made all Americans of Italian descent throughout the United States very, very happy. I'd like to say, on a personal note, your appointment of Leonard Paletta in the city of Pittsburgh to the district court of western Pennsylvania was received very, very tremendously and gratifyingly by Americans of every ethnic descent. I'm so sorry he passed away before he could ascend the bench.

We wondered, and have discussed in many, many meetings, why, with all of the capable legal scholars and the proficient and efficient members of the bench in the various courts throughout the United States, why not one Italian has ever been appointed to the Supreme Court of the United States—and I know of only two——

THE PRESIDENT. I have wondered the same thing.

Q. — I know of only two that presently serve in the district courts. However, Mr. President, my question is, and I finally got around to it, will this administration continue to seek out, recognize qualified Americans of Italian ancestry in its present search for Federal judicial appointments in the many vacancies that are presently looking for filling and, secondly, would the President and his committees on selection accept recommendations backed by portfolios from this organization or any other Italian ethnic organizations?

THE PRESIDENT. I think it's very easy to answer that question. The chief adviser to the President in the selection of Federal district judges and circuit court judges and Supreme Court Justices, if there ever is a vacancy, is a very distinguished per-

son, who is present, and that's the Attorney General of the United States.

I will make you this offer. If the Sons of Italy and other distinguished groups around the country make recommendations for Federal judgeships and if you cannot get an adequate hearing in Benjamin Civiletti's office, you can come directly to me.

Q. Thank you, Mr. President. And I think we have an eloquent salesman right behind you there, Judge Frank J. Montemurro.

THE PRESIDENT. I only have time for one more question. And I'm looking forward to it.

NEW ENGLAND ENERGY SUPPLIES

Q. E. Howard Molisani of Port Washington, New York. My question deals with energy and its effect on the Northeast Corridor. In that particular corridor, Mr. President, there is a heavy concentration of Italian Americans working and living there. The energy, as far as oil is concerned, heats up our industry, gives employment, and heats up our living quarters. At the present time, I wanted to find out whether there are any special programs being initiated for that particular area, especially since that area is more afflicted than most other areas of the United States with the plague of unemployment.

THE PRESIDENT. I don't know the exact amount of money being spent on the Northeast Corridor. It's in excess of \$2 billion, and we are trying to reach out in the repair of the railroad system in the Northeast Corridor to bring in opportunities for employment among those who have high unemployment rates.

We also are particularly concerned about the possible shortage of fuel for the

Northeast Corridor, not only in transportation but for home heating purposes. One of the things which makes this region of northeast America so vulnerable is that about 80 percent or more of all the oil used in that region is imported, and I think about 80 or 83 percent of all the homes in the northeastern part of our country are heated with oil—very few in the South, or even here as far south as Baltimore.

We have pledged ourselves not only to meet the transportation needs—and obviously the railroads are a crucial and vital factor that will be served adequately with distillate fuels—but also to build up the reserve supplies for home heating to an adequate level.

Last year, we had at the end of October, 233 million barrels of oil in storage, in primary storage, for the heating of homes in New England. This proved to be adequate. This year I have promised to have built up by the end of October, 240 million barrels of home heating oil, more than we had last year just on the chance that that would be a more severe winter this year than we experienced in the winter of 1978, 1979.

So, we have this as one of our major concerns. We are monitoring the level of supplies every day, and I have pledged myself as President to make sure that there is no shortage of home heating oil for the Northeast area during this coming winter.

I might say that it obviously helps, no matter what the level of reserve supplies might be, if every homeowner will do his or her part not to waste energy. Forty percent of all the oil, of all the energy used in this country goes for the heating and cooling and servicing of buildings—40 percent. And the estimates that have been

run by MIT and by other distinguished independent organizations have shown that between 30 percent and 50 percent of this is wasted. That not only hurts our country, but it hurts the pocketbook of every family involved.

And I hope that all of you will go back—you are leaders, I know, within the Sons of Italy organization—if all of you would go back to your local organizations and encourage every member to survey your home, to get the power company to help if they will, to see where energy can be saved with storm windows and with insulation around your hot water tank, lower the temperature of your hot water tank from 140—which most of it is, I'll bet—down to 105 degrees, which is adequately hot, to put the small restrictive valves on your hot water faucets, to drive 55 miles an hour, to form a carpool or to share a ride with a neighbor, to leave your cars home 1 day a week whenever it's possible and either walk or ride a bike or get a ride with a neighbor.

These are the kind of things—they seem like they're not very important, but they are absolutely crucial to our country.

We will provide adequate fuel for transportation and for heating in the Northeast Corridor and throughout the Northeast this winter. You can depend upon that.

But I need for all Americans in this room and listening to my voice on radio, television, and news media to do your individual part to make our Nation strong, to remove this noose of energy dependence on foreign countries from around our neck, and to let our Nation, which is already great, as I say, be even greater in the future.

You've honored me by letting me come. God bless every one of you.

NOTE: The President spoke at 11:03 a.m. in the Francis Scott Key Ballroom at the Baltimore Hilton. In his opening remarks, referred to Frank J. Montemurro, Jr., administrative judge of the Family Court Division of Philadelphia, John J. Sirica, former United States District Judge for the District of Columbia, and Frank J. Battaglia, deputy commissioner of police of Baltimore.

Meeting With President Ahmed Sékou Touré of Guinea

White House Statement. August 8, 1979

The President met for 1 hour and 10 minutes today with President Ahmed Sékou Touré of Guinea, who is in the United States on a private visit.

The discussions covered a wide range of matters of mutual interest, including African and international problems, the continuing improvement of bilateral relations, and Guinea's growing role in pan-African affairs and with the nonaligned countries.

President Touré will meet this afternoon with Secretary of State Cyrus R. Vance.

While in the United States, President Touré will also consult with top-level officials of the United Nations, the World Bank, and a number of U.S. banks and corporations interested in promoting further U.S. investment in Guinea. He will also meet with Mayor Marion Barry of Washington, D.C., Mayor Tom Bradley of Los Angeles, and other officials on a tour that will take him to Los Angeles, Denver, Pittsburgh, and New York.

President Touré is accompanied by

his wife and several ministers of his Government.

Attending the meeting on the U.S. side were the President, Secretary of State Vance, National Security Adviser Zbigniew Brzezinski; Acting Assistant Secretary of State for African Affairs William Harrop, Ambassador to Guinea Oliver S. Crosby, and Jerry Funk of the National Security Council staff.

Attending on the Guinean side were President Sékou Touré; Madame Andree Touré, wife of the President; Ismael Touré, member of the National Political Bureau and Minister of Mines and Geology; Moussa Diakité, member of the National Political Bureau and Minister of Housing, State Lands and Urban Affairs; President of the National Legislative Assembly Damantang Camara; and Guinean Ambassador to the United States Mamady Lamine Conde.

Office of the Special Representative for Trade Negotiations

*Nomination of Reubin O'D. Askew To Be Special Representative for Trade Negotiations and Designation of Alonzo L. McDonald, Jr., as Acting Special Representative.
August 8, 1979*

The President will nominate Reubin Askew to be the Special Representative for Trade Negotiations with the rank of Ambassador Extraordinary and Plenipotentiary. This position will continue to be considered a Cabinet-level post. Governor Askew will succeed Robert Strauss, who is resigning the post effective today. The President earlier this year named Mr. Strauss as Ambassador at Large for the Middle East negotiations. Mr. Strauss will now be able to turn his full attention to that area.

Following confirmation, Governor As-

keew is expected to assume his duties as Special Trade Representative on or about October 1. In the interim, Alonzo L. McDonald, Jr., who is now the Deputy Trade Representative, will be the Acting Special Representative for Trade Negotiations.

Ambassador Strauss has been anxious to leave these responsibilities for quite some time, and we wanted to make this transition as soon as possible.

Both Ambassador Strauss and Ambassador McDonald have pledged to work closely with Governor Askew to ensure a smooth transition. The President is, of course, pleased that Governor Askew has agreed to join the administration in a position of this importance. The President served as Governor of Georgia at the same time that Governor Askew was in office in Florida. The men came to know each other well during that time. The President has long admired Governor Askew's abilities as a leader and as an administrator.

NOTE: Press Secretary Jody Powell read the announcement at 2:43 p.m. at the regular news briefing for reporters, held in the Briefing Room at the White House.

Federal Farm Credit Board

*Nomination of Two Members.
August 8, 1979*

The President today announced that he will nominate two persons to be members of the Federal Farm Credit Board for terms expiring March 31, 1985. They are:

JEWELL HAALAND, of Clarkfield, Minn., a retired farmer who served on the Grain Terminal Association for 21 years and is active in National Farmers Union activities; and

DWIGHT L. TRIPP, JR., of Auburn, Maine, a dairy farmer who raises registered holsteins (reappointment).

Meeting With Foreign Minister Hans-Dietrich Genscher of the Federal Republic of Germany

White House Statement. August 9, 1979

While here on a working visit, Vice Chancellor and Foreign Minister of the Federal Republic of Germany Hans-Dietrich Genscher met with President Carter this morning for 30 minutes in the Cabinet Room. Also present at the meeting were Secretary of State Cyrus Vance; Zbigniew Brzezinski, Assistant to the President for National Security Affairs; George Vest, Assistant Secretary of State for European Affairs; and Steve Larabee, NSC staff. The Foreign Minister was accompanied by West German Ambassador Berndt von Staden. During the meeting the President and Foreign Minister Genscher discussed issues of mutual concern, including theater nuclear forces, SALT II, and energy.

Following the meeting at the White House, Secretary Vance hosted a luncheon in honor of Foreign Minister Genscher, which was also attended by other senior West German and U.S. officials. Prior to his departure for the Federal Republic, Foreign Minister Genscher will also meet with Secretary of Defense Harold Brown and Dr. Brzezinski.

The meetings with Vance and other American officials are part of a regular exchange of views on matters of common interest to both countries.

Director of Selective Service

***Nomination of Bernard Daniel Rostker.
August 9, 1979***

The President today announced his intention to nominate Bernard Daniel

Rostker, of Great Falls, Va., to be Director of the Selective Service System.

Rostker is Principal Deputy Assistant Secretary of the Navy for Manpower and Reserve Affairs.

He was born February 1, 1944, in New York City. He received a B.S. in education and economics from New York University in 1964, and an M.S. (1966) and Ph. D. (1970) in economics from Syracuse University. He served in the U.S. Army from 1968 to 1970.

From 1970 to 1977, Rostker was an economist with the Rand Corp. From 1972 to 1977, he was program director for Rand's Project Air Force Manpower, Personnel and Training Program.

Rostker has been Deputy Assistant Secretary of the Navy since 1977 and has been responsible for policy development and program evaluation in all areas of Navy and Marine Corps military and civilian manpower, personnel, and training.

International Seafarers Convention

***Message to the Senate Transmitting the
Convention. August 10, 1979***

To the Senate of the United States:

I transmit herewith, for the advice and consent of the Senate to ratification, the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, with Annex, 1978 (the Convention), done at London, July 7, 1978. The report of the Department of State is enclosed for the information of the Senate in connection with its consideration of the Convention.

This Convention establishes improved and often new international requirements for training, certification and watchkeeping for masters, officers and

certain crewmembers of "seagoing" merchant ships. These requirements should provide more highly qualified personnel on board ships and thereby reduce maritime casualties and promote safety of life at sea and protection of the marine environment. Such international requirements are responsive to proposals which were made by the United States in March 1977, following a series of tanker accidents in or near United States waters. I recommend that the Senate give prompt consideration to this Convention and advice and consent to its ratification.

JIMMY CARTER

The White House,
August 10, 1979.

United States-Norway Treaty on Extradition

Message to the Senate Transmitting the Treaty. August 10, 1979

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty of Extradition Between the United States of America and Norway signed at Oslo on June 9, 1977.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the treaty.

The treaty is one of a series of modern extradition treaties being negotiated by the United States. It expands the list of extraditable offenses to include aircraft hijacking and obstruction of justice, as well as other offenses not now covered by our existing treaty with Norway. Upon entry into force, it will terminate and supersede the existing Treaty of Extradition of 1893, the Amendatory Extradition

Treaty of 1904, and the Supplementary Extradition Treaty of 1938.

This treaty will make a significant contribution to international cooperation in law enforcement. I recommend that the Senate give early and favorable consideration to the treaty and give its advice and consent to ratification.

JIMMY CARTER

The White House,
August 10, 1979.

United States-Canada Convention on Northern Pacific Halibut Fishery

Message to the Senate Transmitting a Protocol. August 10, 1979

To the Senate of the United States:

I am pleased to transmit the Protocol, with Annex, Amending the 1953 Convention Between the United States of America and Canada for the Preservation of the Halibut Fishery of the Northern Pacific Ocean and Bering Sea for Senate advice and consent to ratification. The Protocol was signed at Washington on March 29, 1979.

I also transmit for the information of the Senate the report of the Secretary of State with respect to this Protocol and an exchange of Notes, done on March 29, 1979, and an Agreed Minute, done on April 6, 1979.

This agreement was negotiated to bring the 1953 Convention Between the United States of America and Canada for the Preservation of the Halibut Fishery of the Northern Pacific Ocean and Bering Sea into conformity with the terms and intent of the Fishery Conservation and Management Act of 1976, which extended U.S. exclusive fisheries jurisdiction to 200 miles off the U.S. coasts. It

will allow continuation of the International Pacific Halibut Commission, and of the joint management of the halibut resource in the Pacific. The agreement contains provisions for an interim enforcement regime, to apply, pending final delimitation, to maritime boundary areas in which both Canada and the United States claim fisheries jurisdiction. It allows the uninterrupted continuation of the work of the International Pacific Halibut Commission, and provides for the continuation of recreational fishing by both countries in maritime areas in which each exercises exclusive fisheries jurisdiction. In general, it makes an important contribution to good fisheries relations between our two countries.

I believe that approval of this Protocol is in the best interests of the United States. I recommend that the Senate give early consideration to this Protocol and its advice and consent to its ratification.

JIMMY CARTER

The White House,
August 10, 1979.

National Aeronautics and Space Programs

Message to the Congress Transmitting a Report. August 10, 1979

To the Congress of the United States:

I transmit this report on the Nation's progress in space and aeronautics during 1978. This report is provided in accordance with Section 206 of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2476).

Included in this report are statements of policy designed to maintain American space leadership. This report concentrates

on the most significant Federal space and aeronautical activities. These emphases have enabled us to reduce the amount of detail and number of separate agency program descriptions.

JIMMY CARTER

The White House,
August 10, 1979.

NOTE: The report is entitled "Aeronautics and Space Report of the President—1978 Activities" (Government Printing Office, 103 pages).

Death of Jacob Potofsky

Statement by the President. August 10, 1979

America lost one of the giants of the labor movement when Jacob Potofsky, the former president of the Amalgamated Clothing Workers of America, died on Sunday. His long and distinguished career spanned much of modern American labor history. As a teenager, just a few years after coming to America from the Ukraine, he worked with Sidney Hillman to establish the Amalgamated Clothing Workers. In 1946 he succeeded Hillman as union president, and for 26 years he worked tirelessly to create a modern, self-sufficient, democratic, and vibrant union. While never losing sight of the needs of his members, Jacob Potofsky also recognized the need for conciliation and cooperation in labor relations.

I share with his family, the Amalgamated Clothing Workers, and the thousands of Americans who were touched by his life and his example, a sense of profound sadness at his death.

NOTE: Special Assistant to the President for Consumer Affairs Esther Peterson delivered the statement to the Amalgamated Clothing Workers of America at funeral services for Mr. Potofsky.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

August 4

The President met at the White House with Zbigniew Brzezinski, Assistant to the President for National Security Affairs.

August 6

The President met at the White House with:

- Dr. Brzezinski;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- bishops of the African Methodist Episcopal Zion Church.

August 7

The President met at the White House with:

- Dr. Brzezinski;
- former Governor Reubin O'D. Askew of Florida.

August 8

The President met at the White House with:

- Dr. Brzezinski;
- newly elected officers of the Southern Baptist Convention;
- Ambassador Ephraim Evron of Israel;
- James T. McIntyre, Jr., Director of the Office of Management and Budget.

August 9

The President met at the White House with:

- Dr. Brzezinski;

- Rev. Jesse Jackson, national president of Operation PUSH (People United to Save Humanity).

August 10

The President met at the White House with:

- Secretary of Defense Harold Brown, Deputy Secretary of State Warren Christopher, Hamilton Jordan, Assistant to the President, and Dr. Brzezinski;
- Dr. Brzezinski;
- Mr. Moore;
- a group of editors and news directors (transcript will be printed next week).

The President participated in the briefing by administration officials for Hispanic community and civic leaders held in the East Room at the White House.

The White House announced the following personnel changes in the White House staff:

- Robert J. Lipshutz, Counsel to the President, intends to resign. He will return to Georgia to serve as cotrustee with Charles H. Kirbo of the Jimmy Carter Personal Assets Trust, and he will also chair the commission that will establish the Carter Presidential Library.
- Ambassador Esteban E. Torres, currently U.S. Permanent Representative to the United Nations Educational, Scientific, and Cultural Organization, will become Special Assistant to the President, working with programs and policies important to Hispanic Americans.
- Timothy E. Kraft, Assistant to the President, is going to the Carter-Mondale Committee as campaign manager.
- Sarah C. Weddington, currently Special Assistant to the President, will become Assistant to the Presi-

dent, assuming many of the duties of Mr. Kraft as well as continuing her work with programs and policies important to women.

—Ambassador Alonzo L. McDonald, currently Acting Special Representative for Trade Negotiations, will become Assistant to the President and director of the White House staff.

The President has asked Neil Goldschmidt to assume office as Secretary of Transportation, and Mr. Goldschmidt will be sworn into office Wednesday, August 15, in Portland, Oreg. Mr. Goldschmidt will take office under the recess appointment provision of the Constitution. His nomination was submitted to the Senate on August 2, and he will go through the normal confirmation process when the Senate returns from its recess.

The President left the White House for a weekend stay at Camp David, Md.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted August 10, 1979

SAMUEL D. JOHNSON, JR., of Texas, to be United States Circuit Judge for the Fifth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

EDWARD B. DAVIS, of Florida, to be United States District Judge for the Southern District of Florida, vice a new position created by P.L. 95-486, approved October 20, 1978.

The following-named persons to be members of the Federal Farm Credit Board, Farm Credit Administration, for the terms expiring March 31, 1985:

NOMINATIONS—Continued

Submitted August 10—Continued

JEWELL HAALAND, of Minnesota, vice Alfred Underdahl, term expired.

DWIGHT L. TRIPP, JR., of Maine (reappointment).

CHECKLIST OF WHITE HOUSE PRESS RELEASES

The following listing contains releases of the White House Press Office which are not included in this issue.

Released August 8, 1979

Biographical data: Reubin Askew, nominated to be Special Representative for Trade Negotiations

Biographical data: Alonzo L. McDonald, Jr., Acting Special Representative for Trade Negotiations

Released August 9, 1979

Announcement: nomination of Samuel D. Johnson, Jr., to be United States Circuit Judge for the Fifth Circuit

Announcement: nomination of Edward B. Davis to be United States District Judge for the Southern District of Florida

ACTS APPROVED BY THE PRESIDENT

Approved August 6, 1979

H.R. 4591----- Public Law 96-46

An act to make technical corrections and miscellaneous amendments in certain education laws contained in the Education Amendments of 1978, and for other purposes.

Approved August 8, 1979

S. 976----- Public Law 96-47

An act to authorize appropriations for the international affairs functions of the Department of the Treasury for fiscal year 1980.

H.R. 1786----- Public Law 96-48

National Aeronautics and Space Administration Authorization Act, 1980.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, August 17, 1979

Interview With the President

*Remarks and a Question-and-Answer Session
With Editors and News Directors.
August 10, 1979*

THE PRESIDENT. Well, it's a pleasure to have you here. I always hate to interrupt Jody. [Laughter] If you've got him sweating, I don't want him to stop.

One of the most enjoyable and also the most productive things that we've done since I've been in office is to have these meetings with editors and news directors from around the country. We've scheduled them every 2 weeks, and we have anywhere from 30 to 65 people at each session.

WINDFALL PROFITS TAX

I know that you're eager to get to the questions of me, but I'd like to cover one subject first. You've heard a lot about the windfall profits tax. You're going to hear a lot more about it in the future. It's extremely important to our Nation for this tax bill to be passed by the Senate. It's already been passed by the House in a fairly responsible fashion.

It's designed, first of all, to give us an opportunity to develop new sources of energy; secondly, to improve our rapid

transit systems in their various forms; third, to guarantee equity, because without the windfall profit tax, there would be enormous unwarranted profits going to the oil companies which they have not earned. And the last—and the most important thing, perhaps, of all from a humanitarian point of view—is to give aid to low-income families who will be impacted, no matter what else happens, by the rapidly increasing price of oil and other energy forms.

We will present to the Congress either before or by the time they return from their working recess a specific proposal. But we are advocating that in this coming fiscal year that \$1.6 billion be allotted to the poor families of our country, and in the following years, \$2.4 billion per year—\$1.6 billion this first year, \$2.4 billion from then on. The only legitimate source for these funds is the windfall profits tax. And my hope and my expectation is that an aroused public will insist upon a fair action by the Congress to pass this tax itself.

We have varied needs for it, but this is one that will be put forward on its own when the Congress returns. We've obviously got the other elements of the energy program to pursue when the Congress returns, the SALT treaty to be rati-

fied after the Congress returns, hospital cost containment, and other items of legislation.

I would be glad to answer your questions about these or any other subjects if you have questions to ask.

QUESTIONS

WINDFALL PROFITS TAX

Q. On the windfall profits thing, if it gets a compromise, if it is accepted with a compromise, do you anticipate that the compromise would give you the amount of money you need to get all of these programs through?

THE PRESIDENT. Well, if some of the compromises that have been passed in the House of Representatives should prevail, then the windfall profits tax is adequate. They, I think, unwisely made the tax terminate in 1990. I think it would be better to have the tax be permanent, because many of the energy production projects will be very long-range in nature, and they should have an assured source of funding beyond the year 1990. However, they did increase the percentage of the tax from 50 percent to 60 percent. They made some other changes. But, in general, I would say that the net income from the windfall profits tax, as passed by the House, was equivalent to what we proposed originally.

The Senate Finance Committee has mentioned some exceptions to the windfall profits tax that would gut the tax. For instance, a change in the definition of certain kinds of oil and exclusion for so-called small producers would mean that the tax would lose forty, fifty, sixty billion dollars below what we advocated. This would certainly not be acceptable.

There is some talk among some of the Senate leaders, "Well, we'll pass an in-

adequate bill in the Senate"—which I think is irresponsible—"and then in conference committee we will work out the differences." I think that's a dangerous game, and I would personally oppose that.

I think the Senate ought to pass an equivalent tax to what I proposed, which is what the House proposed, because there would be no area, if the Senate passed an inadequate tax, to bargain without having substantial reductions below what we need.

PUBLIC CONFIDENCE IN THE GOVERNMENT

Q. Mr. President, one of the topics you touched on in your historic address to the Nation had to do with national confidence.

THE PRESIDENT. Yes.

Q. And I'm wondering if you still feel that you can provide that confidence. The polls have been brutal with you. And it is perhaps the key issue in many people's minds, confidence in the White House, confidence in the administration, confidence in Washington. Will you address that question?

THE PRESIDENT. I think the lack of confidence is very broad. There is a lack of confidence of people in themselves. There's a lack of confidence in what their quality of life will be in the future, compared to the present and the past. There's a lack of confidence in many institutions. The press and the Congress are two, by the way, that are lower than confidence in the White House. And there's a lack of confidence in the President, which does concern me very much.

I believe that this absence of confidence is unwarranted. Our Nation is prosperous. Our Nation is at peace. Our Nation has a fine prospect for the future. Our Nation is the strongest on Earth economically, militarily, politically. Our al-

liances with our friends around the world have never been any stronger. We have excellent and improving relationships with the doubtful nations of the world—the black, the poor, the new, the brown, the yellow nations—who in the past have been active enemies of ours. We have the highest reserves of energy of any nation on Earth. I think we have 24 percent of all the energy reserves known to mankind, whereas the OPEC countries all put together only have less than 5 percent, for instance. So, there's no real identifiable basis for an absence of confidence.

But it's a fact that the people have not only lost confidence in themselves now and in the future, lost confidence in our institutions, lost confidence in our Government, the free enterprise system, the press, and so forth, but they have an increasing inclination toward divisiveness.

This is the first time in history that I know about when our country has been faced with discomfort or inconvenience or more tangible and far-reaching adverse impacts on human life, without having at the same time a threat to our Nation that was cohesive in its implications. Obviously during the First World War, the Second World War, our country was bound together because we were threatened militarily. During the Great Depression, when people were inconvenienced with massive unemployment and so forth, we were bound together with an economic threat to our country. Now we don't have that tangible, identifiable threat. The threat to our national security that does actually exist from a shortage of oil supplies and an increasing and excessive dependence on foreign oil is hard for the American people to see or to quantify or to accept.

So, when this kind of thing happens, without the binding effect of an identi-

able, tangible threat, but with an inconvenience, people tend to grasp for a temporary advantage to the exclusion of others. And I think that this is something that must be first identified and addressed, as I've tried to do so far and as I'll continue to do with my travels and speeches around the country. And secondly, we need a tangible achievement to show the strength of our country, which I've outlined is there. And I think dealing with the energy question is the best and most important test of this kind.

PALESTINIAN POLICY

Q. Mr. President, so much has been said in the last few weeks about your position regarding the Palestinians, PLO, Israel, and so on and so forth. Most of the answers have been coming through the Secretary of State. I wonder if you could tell us in your own words what your position is on the creation of a separate Palestinian state—

THE PRESIDENT. I'm against it.

Q.—your position on the PLO, et cetera.

THE PRESIDENT. I'm against any creation of a separate Palestinian state. I don't think it would be good for the Palestinians. I don't think it would be good for Israel. I don't think it would be good for the Arab neighbors of such a state.

I do believe that we must address and resolve the Palestinian question in all its aspects, as was agreed to by Prime Minister Begin and President Sadat and myself in writing at Camp David.

I do believe that the Palestinians should have a right to a voice in the determination of their own future, which is also specified and agreed to by Begin, Sadat, and by me at Camp David in writing.

I will not deal with the PLO unless they do two things: accept the right of Israel to exist, which they've not yet been willing to acknowledge, and accept the fact that U.N. Resolution 242 is a document binding on them. They've got to accept 242, accept the right of Israel to exist. This is a commitment we've made. We've never deviated from it. We're not going to deviate from it.

NUCLEAR POWER

Q. Mr. President, most folks in South Carolina have accepted nuclear power development as a must. My question is, our people are deeply concerned, and our Governor Riley, who's your friend, are deeply concerned if we're being adequately protected. We don't want to become the Nation's dumping ground. And our highways are becoming—we are fearful of the hazardous conditions of the transit of so much material going to and from—both Barnwell Allied Nuclear and the Savannah River project are in my backyard, 40 miles away, so you can understand how I feel.

THE PRESIDENT. And they're also, as you know, on the Georgia line. [*Laughter*]

Q. Right. What's needed, to you?

THE PRESIDENT. Well, I've been involved in the nuclear world since the early 1950's, when that was my profession, working as a student and also working as the senior officer of the precommissioning crew of the second atomic submarine ever built. At that time I had extensive training on how to handle nuclear materials, the limitations and capabilities of nuclear power, and the problems with the disposal of waste, and also the problems with the proliferation of nuclear explosives, how one might take nuclear waste or byproducts and, through reprocessing

or conversion, change them into explosive materials.

Since I've been in office, I think we've addressed for the first time in 35 years the question of the handling of waste, and the Congress has passed a very fine law which we are implementing fully on controlling the proliferation of nuclear explosives.

The incident at Three Mile Island has been one that's brought to the consciousness of the American people the need to reassess for safety purposes design of nuclear powerplants, the technology of the operation of nuclear powerplants, the training of personnel who operate the nuclear powerplants, and also the supervision by the Government of the private operators of nuclear powerplants.

When the Kemeny report is made to me by the end of this month, I will assess it very thoroughly. I will obviously carry out the recommendations of the Kemeny report if they're at all practical, and I'm sure it would be a practical recommendation. At that time I think it would be incumbent on me as President to explain to the American people the situation that does exist with nuclear power.

There is no way that our country can close down nuclear powerplants. And I think it would be ill-advised to terminate the construction of nuclear powerplants that have already been approved. We now derive, I think, about 16 percent of all of our electricity from nuclear power. And in some areas, like Chicago, for instance, they get more than 50 percent of all their power from nuclear powerplants, electric power. So, it is an important element in our energy economy. We need to assess very thoroughly the capabilities and problems. The American people need to be as well educated as possible. And I, as President, working with the Congress and with the private sector, need to make sure that

we take steps to even increase the safety that presently exists.

As far as the waste disposal is concerned, we have been working since I've been in office on this very complicated subject with the Congress and with others. We don't have a final solution yet. Things that had been considered in the past as the best disposal possibilities have not proven to be well-advised. One of the earliest ones was dumping in the oceans. That was stopped years ago. Another one is the burying in the ground, like at Hanford Works in Washington. Some of the containers have ruptured, and some of the nuclear materials have gotten into the underground water supply. But I think that this can be a question that's resolved.

You happen to come from the State that's been in the forefront of production of nuclear materials, with the Savannah River plant and with the Barnwell site that was designed for the disposal of wastes and for reprocessing originally. I don't know the final answer on that yet.

The other thing I'd like to say is that we have an international nuclear fuel cycle evaluation study that we initiated in the economic summit conference in London in 1977. Its report will be completed this year. It's been a report evolved by the representatives of more than 50 nations, including the Soviet Union, South Africa, all of the Western allies and so forth. And I would guess that when this report is completed that it would be at the forefront of our agenda when we have our economic summit conference next year in Venice.

Conventional energy was in the forefront of the summit conference in Tokyo. My guess is that nuclear power in all its aspects would be in the forefront next year. So, there's an international move toward the resolution of this question. And I think I've given you too long an

answer. But it's a complicated subject, and I'll try to——

STEEL IMPORTS

Q. Mr. President, while imported fuel, imported oil is a big problem, imported steel in Pittsburgh is a big problem.

THE PRESIDENT. Yes.

Q. We have the trigger-pricing mechanism. But if we do get into a recession, capital orders will fall, and that could be a continuing, worsening problem. Has the administration planned anything to deal with imported steel and how it would impact a very basic industry?

THE PRESIDENT. I can't say at this point that we have a plan evolved that could be put into effect. We consider the trigger-mechanism process to be working very well. It has enough flexibility in it to accommodate anticipated changes brought about by worldwide shifts in productivity and economic growth. Bill Miller is well acquainted with the steel industry. And I think you know that the results in American production and in profits for the steel industry have been well served by the present trigger mechanism that's been put into effect. We've done this with a minimum adverse reaction from our trade allies, including Japan.

So, we'll monitor the situation. If it appears to be running into a problem, we'll use the flexibility inherent in this system and modify it if necessary. But I can't tell you that that is not needed at this point. We will be prepared for it if the time should come.

GRAIN PROCESSING STRIKE IN MINNESOTA

Q. Mr. President, the grain miller strike in Duluth-Superior has effectively shut down that port. And it's compounded the problem that's been caused by the boxcar shortage. Although the strike itself

has not caught national attention, the Governor of Minnesota has felt it was serious enough to send a telegram asking for a Taft-Hartley injunction. I think that was turned over to the Labor Department, and they turned thumbs down. Does the administration see any point if that strike continues that at some point that Taft-Hartley might become a possibility?

THE PRESIDENT. That's always an option.

I think you know that the Taft-Hartley law has very tight constraints on its own implementation. You have to be able to prove in court, for instance, that the national security of our Nation is threatened. I don't remember the exact legal language, but that's one of the aspects of it.

Ray Marshall, who's quite well acquainted with the Taft-Hartley Act and its provisions, has consulted with the White House staff, my legal staff, and also with the Justice Department, and decided at this point that implementation of the Taft-Hartley Act is not justified.

We hope that the strike will be resolved quickly, and we'll continue to monitor the situation. But at this time we don't think the Taft-Hartley implementation is advised.

1980 PRESIDENTIAL CAMPAIGN

Q. Sir, assuming that you are going to seek renomination and given the crisis of confidence, so to speak, that I think you alluded to earlier, what sort of case would you make, sir, for your own renomination and reelection? [*Laughter*]

THE PRESIDENT. That's a lot of assumptions. [*Laughter*]

I don't know how to answer that question. I'd rather wait until later on this year to make an announcement of my own

decision. I think if I decide to run again, I would have a good chance to get reelected.

Q. On what basis—if I may follow up, sir, on what would you pin your strategy?

THE PRESIDENT. Well, there are only two bases that I think are legitimate. One is the record of my own administration and the description to the American people of future achievements or actions that I think would be well-advised for the next administration. I think we've got a good record.

CHRYSLER CORPORATION

Q. Mr. President, could you tell us what plans are being made to help the Chrysler Corporation?

THE PRESIDENT. I don't think I can expand any further on what Bill Miller said yesterday. My own suggestion is you get a copy of his statement. I approved this approach to the Chrysler problem. The staff in the White House and also several of the agency heads, including Cabinet officials, evolved a series of options for me. We had a meeting here in the Oval Office, and I approved the plan that Bill Miller described yesterday.

It involves two or three elements. One is a maximum dependence on the free enterprise system, including the lending institutions and Chrysler itself and others involved, to resolve this problem; secondly, that any role of the Federal Government would be adequate, but minimal, and that the Federal Government and its investment would be protected well. And I'd say the third element would be a sharing of responsibility among all those involved of any sacrifice that would be inherent in the process. I think that what Bill Miller described is adequate, if we can get the coordinated approach that he has described.

For instance, one example about sacrifice: If the Chrysler top echelon—I don't mean the four or five, but several thousand who are at the top level in earnings in Chrysler—would forgo projected salary increases and fringe benefits and bonuses, this involves tens of millions of dollars in itself. And I would think that that would be one of the kinds of things that could be done within Chrysler without decimating the company or putting it on its knees.

We look on Chrysler as a very important part of our national economy, including both productivity and the provision of jobs. But I think that's about the best I can describe in general terms. But the specifics have already been spelled out by Bill Miller.

HEATING OIL SUPPLIES AND PRICES

Q. Mr. President, one of the most pressing problems in New England is the prospect of very high prices and perhaps low availability of heating oil. What are the reports that you get, and what plans are you contemplating to help the situation?

THE PRESIDENT. I think we'll meet our goal of the 240 million barrels of oil to be in reserve by the end of October. Last year I think we had 233 million barrels in reserve and the years before that a less amount. But we've advocated the high figure just in case there is an extremely severe winter. So, the reserves, I think, will be there, and we are monitoring this daily and have no reason for concern. There are a series of options that I can execute if we start falling behind the progression toward reaching that goal.

As far as price is concerned, I can't control the price that OPEC sets. They have increased their prices in the last 6 or 8 months alone 60 percent on basic crude oil. And of course, products from

crude oil have increased an equivalent amount. What we are doing to compensate for this is to advocate to the Congress special aid for low- and middle-income families that would help them pay the extra costs that are inevitable. I think the answer in the opening statement that I made would be the best answer for that. I need not repeat it.

MS. BARIO. Thank you, sir.

THE PRESIDENT. I'll take one more question.

MOON LANDRIEU

Q. Yes, sir. If a member of the news media outside of Washington came to this town and read the newspaper or listened to reports on radio and television, he might think that the nomination of Moon Landrieu might be in trouble. Would that be an accurate observation, sir?

THE PRESIDENT. No. No, I don't think that's accurate at all. And I hope you don't get all your impressions of Washington by reading the local newspapers. *[Laughter]*

Moon is an honorable man. He went out of the mayor's office with the highest possible esteem of his own people whom he had served. All of his actions, both as mayor and since he's been mayor, have been well known and highly publicized in the press.

He'll go through the normal confirmation proceedings. The questions that have been raised about his involvement in the real estate business, since he got out of mayor, will be completely answered. And I have no concern about this at all. I trust him, and he will be an excellent Cabinet officer.

I am very glad that you are here. If you don't mind, I would like to get a photograph with each one of you individually before you go to lunch. And I

think it might be best to—do we have a photographer here? I'll stand right over here by the door, and if you all will just come by on your way out and let me shake hands and thank you for coming individually. And we'll get a photograph and send it to you.

Thank you.

NOTE: The interview began at 11:30 a.m. in the Cabinet Room at the White House. Patricia Y. Bario is a Deputy Press Secretary.

The transcript of the interview was released on August 11.

Executive Order No. 12093 of November 1, 1978, is amended to read as follows:

"1-401. The Commission shall submit its final report to the President and the Secretary of the Interior not later than September 28, 1979."

JIMMY CARTER

The White House.

Advisory Council on Historic Preservation

Appointment of Peggy Bolton as a Member.
August 14, 1979

The President today announced the appointment of Peggy Bolton, of Alexandria, La., as a member of the Advisory Council on Historic Preservation for a term expiring February 28, 1984.

Bolton is active in civic affairs, particularly work on historic preservation, and is first president of the Historical Association of Central Louisiana.

President's Commission on the Holocaust

Executive Order 12151. ***August 14, 1979***

By the authority vested in me as President by the Constitution and statutes of the United States of America, and in order to provide additional time for the President's Commission on the Holocaust to complete its work, Section 1-401 of

Food Stamp Act Amendments

Statement on Signing H.R. 4057 Into Law.
August 15, 1979

I have signed into law amendments to the Food Stamp Act of 1977 which will allow us to continue program operations without cutting benefits for needy food stamp families and also will provide a series of new measures to reduce error and fraud. These amendments are needed chiefly because inflation in food prices has boosted program costs well above the ceiling on program spending contained in the 1977 act. The Congress has acted swiftly to raise the spending cap for this fiscal year and to appropriate the additional funding we need to avoid closing the program down entirely for the month of September. The legislation also includes measures to provide additional benefits for elderly and disabled households with high medical or shelter costs. I am also pleased that the Congress has included several antifraud provisions the administration has recommended.

The need for additional funding for the food stamp program is yet another

signal that inflation of the price of food is increasing at an unacceptably high rate. When the Food Stamp Act of 1977 was passed, food prices were projected to increase at an annual rate of between 3 and 4 percent a year, and the ceiling on program expenditures was based on this assumption. But in the last 2 years, food prices have risen nearly 20 percent. This rate of inflation in so basic a sector of our economy not only boosts the entire cost of the food stamp program, but it also adds to the inflationary spiral that erodes the purchasing power of all consumers.

Recently, we have learned that while farm prices have fallen, the food industry may not be passing those savings on to consumers. I have met with representatives of the food industry to deal with this matter and will do everything I can to see that consumers benefit from lower farm prices in terms of lower prices in the supermarket.

Recent increases in the number of Americans participating in the food stamp program have raised costs as well. In recent years, the program has undergone sweeping reforms. Administration proposals enacted by Congress have tightened and simplified administration, imposed tough penalties for fraud, and reduced or terminated benefits for higher income households. At the same time the administration's proposal to eliminate the requirement that households buy their food stamps has brought several million new participants into the program who had previously been eligible for food stamps, but had simply been unable to afford them. Many of these people are the elderly and rural poor, whose participation rate has historically been very low.

It would be callous and shortsighted to cut food stamp benefits, which now average a modest 33¢ per person per

meal, because the program is reaching larger numbers of the poorest households and because food prices have risen so alarmingly. While this administration is committed to controlling Federal expenditures, we will do so within a budget of compassion that recognizes the fundamental importance of food assistance to our Nation's poorest families.

There can be no question that these families *are* poor. More than half of the households receiving food stamps have *gross* annual incomes under \$3,600. Because of the critical importance of continued food assistance to these households, I have asked Congress to lift the spending cap for future fiscal years, and to provide the funding that will be needed to avoid cutting benefits in fiscal years 1980 and 1981.

In the interest of tighter program administration, I have also asked the Congress to enact a number of measures to save food stamp funds by reducing error rates. Some of the most important of these provisions are still pending before Congress. I ask Congress to enact these provisions along with provisions to authorize adequate funding for 1980 and 1981.

Recently, teams of doctors sponsored by the Field Foundation revisited the poverty-stricken areas where they had found serious hunger and malnutrition 10 years ago. They reported the presence of "fewer grossly malnourished people in this country today than there were 10 years ago." The doctors concluded that the food stamp program "is making the most crucial difference in improving the quality of the lives of many poor people."

I intend to give this valuable program my full support, and I call upon Congress to do the same.

NOTE: As enacted, H.R. 4057 is Public Law 96-58, approved August 14.

Department of State,
International Communication
Agency, and Board for
International Broadcasting
Appropriations Bill

*Statement on Signing H.R. 3363 Into Law.
August 15, 1979*

Today I am signing into law H.R. 3363, which authorizes appropriations for fiscal years 1980 and 1981 for the Department of State, the International Communication Agency, and the Board for International Broadcasting. Three sections of this act require my special comment.

First, section 110 of this bill represents a victory for common sense and sound foreign policy. This is the provision that permits the United States to begin paying its 1979 dues to the United Nations and its specialized agencies. For this entire year, up until now, we have not been able to pay our dues to these organizations, despite our obligations under international treaties. This inability to pay threatened the existence of programs vital to the United States in such fields as nuclear safeguards, air safety, and international health. This situation was caused by a provision (known as the "Helms amendment") passed by the Congress at the end of the last session. Section 110 has the effect of repealing this provision.

In addition, the supplemental appropriations bill for the Department of State for 1979 restores \$27.7 million intended for our assessed obligations to the United Nations system, which the Congress deleted last year. Therefore, as of today, we are able to pay our bills, and to pay them in full. I am pleased that the U.S. Government can again resume a traditional

leadership role in these international institutions.

Second, last fall the Secretary of State, after lengthy study, proposed and I approved the closing of 13 U.S. Consulates. I concluded that they were no longer needed for the performance of essential functions and viewed their closing as a sound step for economizing and for reducing unnecessary American presence abroad. However, section 108 names 10 of those posts and provides that they shall not be closed or, if closed, shall be reopened as soon as possible.

Under the Constitution, the President has the power to appoint Consuls as well as Ambassadors and other public ministers. Implicit in this grant is the right to decide when and where an Ambassador or Consul should be appointed. Just as decisions associated with the appointment of Ambassadors are acknowledged to be a constitutional prerogative of the President, I believe that Congress cannot mandate the establishment of consular relations at a time and place unacceptable to the President. In order to protect this constitutional prerogative of the President, I will therefore regard section 108 as a recommendation and not a requirement.

Third, section 408 recognizes the existing power of the President to make the decision regarding the continuation by the United States of sanctions imposed by the United Nations against Zimbabwe-Rhodesia, but declares that such sanctions are to be terminated on November 15, 1979, unless the President finds that the continuation is "in the national interest." The section purports to give Congress power to overturn this determination by concurrent resolution. This provision directly violates Article I, section 7, of the Constitution, which requires that all such resolutions, if they are to have the force

of law, be presented to the President for his approval or disapproval. By giving Congress an additional role in this decision without requiring the legislative process to be followed, section 408 violates the principle of separation of powers.

NOTE: As enacted, H.R. 3363 is Public Law 96-60, approved August 15.

Fishery Conservation and Management Act Amendments

*Statement on Signing S. 917 Into Law.
August 15, 1979*

Today I have signed into law an act to amend the Fishery Conservation and Management Act of 1976 to provide appropriations for that act for fiscal years 1980, 1981, and 1982, and for other purposes.

A major substantive amendment contained in this act establishes a procedure designed to protect whales. This amendment, initially introduced by Senators Magnuson and Packwood, provides for reductions in fishing allocations within our 200-mile fishing zone to nations which are certified by the Secretary of Commerce to be diminishing the effectiveness of the International Whaling Convention. The bill will allow the certified nation up to 1 year to remedy the conditions leading to the certification before its fishing allocation is completely terminated. Certification under this act would also result in certification under the Pelly amendment (section 8 of the Fishermen's Protective Act) which provides for embargoes of fish imports from certified nations.

I applaud Senator Magnuson, Senator Packwood, and the Members of the House who sponsored this bill. The protection

and conservation of the world's dwindling number of great whales is a major environmental concern of my administration, the Congress, and the American people. I believe that it is necessary for us to demonstrate our Nation's commitment to the conservation of whales. This bill will provide a useful tool in situations where no others are available to us.

This bill also amends section 8 of the Fishermen's Protective Act of 1967 to specifically require the Secretaries of Commerce and the Interior, as appropriate, to promptly investigate and act upon any actions by foreign nations that might be cause for certification. It also provides specifically for termination of certifications once the original conditions have been rectified. These are definite improvements to the Pelly amendment.

With regard to both the Packwood-Magnuson and Pelly amendments, the Secretaries of Commerce and the Interior should work with the Secretary of State to take prompt action to ensure that all avenues of negotiation are fully exhausted before certification is made against any foreign nation. However, in those negotiations all nations will be informed of the implications of these two amendments and the determination of this Government to use them if remedial action is not undertaken. Certification under this act will of course take place only to further the purposes of this act, that is, to provide strong support for the International Whaling Convention for the Regulation of Whaling and for the conservation of the whales.

I believe it is important also that this act makes clear the original intention of the FCMA when it was passed in 1976. These amendments require that American-owned vessels engaged in harvesting fish in the Fishery Conservation Zone must be built in America in order to be

entitled to harvest fish in America's fishery zone. This "American-built" requirement will protect the massive capital investment that American fishermen and shipyards have made in anticipation of the FCMA. This amendment does not encompass vessels engaged in activities other than fish harvesting, such as fish processing. Additionally, it does not change existing law with respect to the definition of fisheries, except to the extent that it expands the existing interpretation of the definition's geographical scope to the full 200-mile Fishing Conservation Zone.

Concerning section 2 of the act, it is my understanding that this amendment is not intended to affect foreign fishing under the Fishery Conservation and Management Act, the Governing International Fishery Agreements, or other fishery agreements to which we are party. It is also my understanding, in light of the provisions of the Covenant to Establish a Commonwealth of the Northern Mariana Islands, in Political Union with the United States of America, that section 2 of the act will not preclude the use of foreign-built vessels by fishermen of the Northern Mariana Islands for fishing in the Fishery Conservation Zone or the landing of catch by such vessels.

For many years now the United States has been active in trying to gain international recognition of the need to protect great whales. We are justly proud of the contributions to this effort made by many concerned citizens and conservation organizations. There is much to be done before heavily hunted species of whales again safely flourish in the oceans. The law that I am signing today demonstrates to the world America's determination to save the great whales.

NOTE: As enacted, S. 917 is Public Law 96-61, approved August 15.

United States Representative to the United Nations

*Exchange of Letters on the Resignation of
Ambassador Andrew Young. August 15, 1979*

To Ambassador Andrew Young

I accept with deep regret your resignation as Ambassador to the United Nations, to be effective when your successor assumes the duties of your office. Subsequently, your continuing support for the policies of our nation will be extremely valuable.

You have earned the gratitude of all Americans with your superb performance in a most difficult assignment. You have helped to prove, thanks to your dedication and sensitivity, that our country is sympathetic to the deepest social and political aspirations of increasingly awakened human beings throughout the world. You have proven that we are sensitive to the demands for world peace and racial justice, and have earned for us the friendship, trust and respect of many nations which had previously considered the United States to be suspect and unworthy of such a relationship. You have truly exemplified the finest attributes of the American character.

You can be justifiably proud of the many achievements of yourself and your assistants and staff in the United Nations.

You have my best wishes and personal thanks.

Your friend,

JIMMY CARTER

August 14, 1979

Dear Mr. President:

It has been an extremely exciting and rewarding opportunity to serve as your Ambassador to the United Nations. I have appreciated the support and encourage-

ment from you and Secretary Vance. Your commitment to negotiated actions in this multi-lateral forum has made it possible to advance the cause of peace, human rights and economic development far beyond my expectations. I will always be grateful for my service with your administration.

I am afraid, however, that my conduct has created serious difficulties for the administration on several occasions. It has made me question my value as a continued part of your team.

I have always acted in behalf of what I felt was the best interest of our nation, though often it has been interpreted to the contrary.

I want you to fulfill the tremendous promise of your administration, and that depends to a great extent on a settlement of the situation in the Middle East.

It is therefore extremely embarrassing that my actions, however well-intentioned, may have hampered the peace process. In order to avoid any further complications, I would like to offer my resignation as the United States Permanent Representative to the United Nations.

I will be glad to continue during the month of August as President of the Security Council and also to fulfill a commitment to lead a trade mission to Africa in early September.

There is a good staff here at USUN and they are fully capable of carrying on through the General Assembly.

I will return to Atlanta and after a brief period of respite, I will begin to campaign diligently for your re-election.

It has been an honor and privilege to serve with your administration.

Sincerely,

ANDY
Andrew Young

Firefighters' Memorial Sunday, 1979

Proclamation 4671. August 15, 1979

*By the President of the United States
of America*

A Proclamation

Courageous firefighters have protected the lives of their neighbors from the ravages of fire since the beginning of civilization.

Volunteer and professional firefighters are members of America's most hazardous profession. More than half of the injuries in fires each year are sustained by firefighters, over 55,000 each year.

Numerous churches and many denominations have indicated a desire to participate in a designated Memorial Sunday honoring these consecrated firefighters for their ultimate sacrifices for their fellowmen.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Sunday, October 7, 1979, as Firefighters' Memorial Sunday.

Because of my grave concern for the firefighters of this country, I have urged the Federal government to undertake numerous programs aimed at reducing the dangers faced by this country's firefighters. We must do more to reverse the trend toward more injuries and deaths of firefighters.

This year the 50-year dream of a National Fire Academy became a reality. At that site, firefighters from across the Nation can receive advanced training and education in health and safety. I invite the firefighters of the country to take full advantage of this long-awaited facility.

I also call upon the members of the Joint Council of National Fire Service

Organizations, members of the International Association of Fire Fighters, members of the International Association of Fire Chiefs, the National Fire Protection Association, all other organizations concerned with fire safety, and the United States Fire Administration to provide leadership and innovation to protect the lives of America's volunteer and professional firefighters.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register,

Fire Prevention Week, 1979

Proclamation 4672. August 15, 1979

*By the President of the United States
of America*

A Proclamation

Fire causes more loss of life and property in the United States than all other natural disasters combined. Fire is the second most frequent cause of accidental death in the home. Volunteer and professional firefighters bear a disproportionate burden of the human costs of fire; firefighting is still America's most hazardous profession.

Last year 8,700 Americans died, 280,000 were injured in fires and \$5 billion in property was lost. America's loss to fire is among the very highest in the industrialized world.

As evidence of my strong personal concern about our fire problem, I have im-

plemented a Reorganization Plan that puts the Federal government's principal fire programs in the new Federal Emergency Management Agency. This agency now coordinates America's disaster preparedness and response efforts. But the Federal government alone cannot reduce America's fire losses. The public and private sector must do their part. Together we can lessen this unnecessary, life-threatening destruction.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate October 8-14, 1979, as Fire Prevention Week.

Because fire deaths most often occur in homes, I call upon American families and other property owners to install smoke detectors, to practice exit drills, and to be especially vigilant in guarding against fires.

I encourage the fire service, police, prosecutors, the insurance industry, and government to work together to improve arson detection and prosecution so that we can begin to eliminate this costly, often murderous crime.

I call upon every fire department in the country to teach citizens the fundamentals of basic life support, cardiopulmonary resuscitation, and to improve the delivery of emergency medical services.

I urge the fire service to fully open their profession to women, and I offer my support to the growing number of professional and volunteer women firefighters.

I encourage the fire service to take full advantage of the National Fire Academy that became a reality this year. The Academy will be an effective tool in providing training and education for the Nation's firefighters.

I support and encourage the cooperative efforts of private enterprise and gov-

ernment in developing low cost residential sprinkler systems that may revolutionize fire safety in the home.

Finally, I call upon members of the Joint Council of National Fire Service Organizations, members of the International Association of Fire Fighters, members of the International Association of Fire Chiefs, the National Fire Protection Association, all other organizations concerned with fire safety, and the United States Fire Administration to provide the leadership, planning and innovation necessary for an effective national fire prevention and control effort.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Commission on the Review of the Federal Impact Aid Program

*Appointment of 10 Members.
August 15, 1979*

The President today announced the appointment of 10 persons as members of the Commission on the Review of the Federal Impact Aid Program.

This Commission was created in November 1978 to review and evaluate the operation of the Federal Impact Aid program, a program created in 1950 to provide financial aid to local education facilities when the actions of the Federal Government increase their costs.

The members appointed today are:

- CHARLIE AKINS, of Elizabethtown, Ky., superintendent of the Hardin County schools and State chairman of the Kentucky Impact Aid Schools Organization;
- POLLY BACA-BARRAGAN, a Colorado State senator, who serves on the board of directors of the National Mexican American Legal Defense and Educational Fund and the National Housing Assistance Council;
- EDWARD C. BOLSTAD, of Minneapolis, executive secretary of the Minnesota Federation of Teachers;
- ROBERT L. CHISHOLM, superintendent of schools for the Clover Park School District in Tacoma, Wash., and a member of the board of directors of the Northwest Regional Education Laboratory;
- ANSELM G. DAVIS, JR., assistant superintendent of the Window Rock School District No. 8 in Fort Defiance, Ariz., and a former education specialist with the Bureau of Indian Affairs;
- FRANKLIN L. LEWIS, a member of the Nebraska State Legislature and former chairman of its education committee, who has been a classroom teacher;
- BARBARA ROBERTS MASON, an executive director of the Michigan Education Association and former speech therapist;
- FRANK J. MACCHIAROLA, chancellor of the New York City Public Schools and a former professor of political science;
- HAROLD E. ROGERS, JR., a San Francisco attorney specializing in the field of municipal law and finance;
- VIRGINIA ALLRED STACEY, of San Antonio, Tex., a teacher in the Lackland Independent School District and 1978-79 State president of the Texas State Teachers Association.

Federal Government Organization and Employees

Executive Order 12152. August 14, 1979

DIRECTOR OF THE OFFICE OF
MANAGEMENT AND BUDGET

By the authority vested in me as President by the Constitution and statutes of

the United States of America, including Section 301 of Title 3 of the United States Code, and in order to ensure the continued delegation of certain functions which had been previously assigned but which are now vested directly in the President by virtue of H.R. 4616 that I have signed into law today, it is hereby ordered that the functions vested in the President by Sections 305(b), 4111(b), and 4112 (a) of Title 5 of the United States Code are hereby delegated to the Director of the Office of Management and Budget.

JIMMY CARTER

The White House,
August 14, 1979.

[Filed with the Office of the Federal Register,

NOTE: The Executive order was announced on August 16.

Department of Justice

Remarks at the Swearing In of Benjamin R. Civiletti as Attorney General.
August 16, 1979

THE PRESIDENT. It's indeed a pleasure and an honor for me to be here in this assembly with Griffin Bell and the other members of the establishment. [Laughter]

As a fellow Georgian, I was hoping that Griffin would survive the screening process in the Cabinet recently. [Laughter] But I think it's accurate to say that this is a time of reassessment and of congratulations and of looking to the future. Griffin has certainly made this a nonpolitical organization. He proved that with his interview with the press recently. As a matter of fact, along with the Chief Justice, Griffin has always had a superb record in getting along with the press. [Laughter] Griffin has gotten more mileage out of rooster pepper sausage than I

did out of the Middle East peace treaty, as a matter of fact. [Laughter]

In 1976, after I was elected President, I called on Griffin Bell to help me with the screening process for Cabinet officers because of his judgment, his integrity, his intelligence, his experience, and because as a long-time friend, I had absolute confidence in him. I finally decided that there was no person in this Nation better qualified to be Attorney General than Griffin Bell. It was one of the wisest decisions that I have ever made, and I want to express my thanks to him.

He was my friend then and now; but he's become a friend of the Nation, he's become a man who has earned the trust and confidence and appreciation of all those who look on the Department of Justice as a source of fairness and equity and sensitivity and compassion. And I'm deeply grateful to him for that as well.

He's brought to this Department, to his position as Attorney General, a sense of absolute integrity, of professionalism and of merit, and of justice in the finest and most all-encompassing meaning of the word.

When he arrived here, there were some difficult cases whose resolution had been long postponed. He has helped to clear up those difficult cases in a proper way. He's brought into his own top staff, his deputy and others, the Director of the Federal Bureau of Investigation, people who share and perhaps even equal his own superb characteristics.

Griffin mentioned to me a few minutes ago that he and I together have assessed, and I have already personally approved, 232 Federal judges. And by the time the process is over and the next 22 judges have been identified and approved by me, this will encompass 40 percent of all the Federal judges who serve in this country.

The selection has been made strictly on the basis of merit, with adequate at-

tention to affirmative action—and that is apparently a conflict. But under Griffin Bell it has not been a conflict, because as we've moved out and explored the identity of those who could serve superlatively as Federal judges, among women and among representatives of minority groups who have suffered from discrimination for too long, we have never deviated from the highest possible standards of merit. And I'm deeply grateful for that achievement of the Attorney General as well.

With the ceremony today, I express my gratitude to Attorney General Griffin Bell, my regrets that he has decided to leave this post, my confidence that he will continue to help me and this country in the future to perpetuate what he's initiated here, and also to express my gratitude to the man who will be sworn in today, Benjamin Civiletti.

Under Ben Civiletti, as the new Attorney General, we will build on the standards of excellence that have been established here in the Justice Department. He will be the highest law enforcement officer in our land, entrusted, with complete confidence, with the responsibilities which I have just described so briefly: integrity, compassion, sensitivity, fairness, equity, justice as a tangible thing, but also an accurate image of it, because the people of our country, particularly those who are poor or inarticulate or deprived must have an accurate sense that the system of justice works for them and not against them. And there is no doubt in my mind that Benjamin Civiletti is eminently qualified to have both the substance of justice and an accurate image that our Nation's Government represents the essence of fairness and justice for all.

He's a courageous man, and this is a job that requires courage. And I'm very deeply grateful to him for being willing to serve.

I look forward to the ceremony, now imminent, wherein the Chief Justice of the United States will give the oath of office as Attorney General to a fine and distinguished public servant who has already proven his qualities to be exemplary, Ben Civiletti.

Thank you very much.

ATTORNEY GENERAL BELL. We are deviating from the program just the slightest bit, Mr. President.

Thank you for your remarks. We all work for you. You are really, under the Constitution—you are the Attorney General. The President, under the Constitution, is the only person charged with the duty to faithfully execute the laws. And so, as Attorney General, and as others here at the Department, our job is to assist the President in faithfully executing the laws.

Chief Justice Burger is a great friend, if not the greatest friend in our country of judicial administration. He honors us today with his presence, and before we have the swearing-in ceremony, he wants to say a few words.

CHIEF JUSTICE BURGER. Thank you, Mr. Attorney General.

Mr. President, Mr. Attorney General-to-be, Mrs. Civiletti:

I accepted the Attorney General's invitation to make a few brief remarks because I thought it might help to remind all the young lawyers in the Department of Justice that this is a pretty good place to start. It is 26 years ago that I began here, and I retain the fondest recollections of this great Department.

From the time I was a student up to the present, and when I was a student, my fellow townsman, William D. Mitchell, was appointed Solicitor General first, and then Attorney General. From that time down to the present, I have met

or known, and very often known well, every Attorney General of the United States.

There has been no finer man—and I can echo the President's praise of Griffin Bell—there has been no finer man, no man more dedicated to professional excellence and professional integrity, and a fair administration of justice, than this man who has been my friend and colleague for many years, and I salute him and congratulate him on the splendid administration he's given this great Department of Justice.

And now, Mr. Civiletti, are you prepared to take the oath of office?

[At this point, Chief Justice of the United States Warren E. Burger administered the oath of office.]

ATTORNEY GENERAL CIVILETTI. *Mr. President, Mr. Chief Justice, Mr. Vice President, former Attorney General Bell—[laughter]—Mrs. Bell, Senator Thurmond, Chairman Rodino, Mr. Dunlap,¹ distinguished guests and officials in the Government, fellow Cabinet members, Senators, outstanding Italo-Americans, members of my former law firm, which I see back there, and friends and fellow employees, men and women in this great Department:*

First, I would like to introduce all of you to the people who have been most important in my life. You know one of them already, Gail Civiletti. I'm privileged to have my mother and father here today, Ben and Virginia Civiletti. Would you please stand? My sister, Pamela Haber. Would you please stand, Pam? My children—Ben Civiletti; Drew Civiletti, the famous Oriole baseball commentator; and Lynn Civiletti.

¹ Georgia attorney James Dunlap, who headed a group which presented the Department of Justice with the official portrait of Attorney General Bell. The portrait was unveiled at the swearing-in ceremony.

As the President has said, I will attempt to follow and to build on the great work that Attorney General Bell has done in this Department, as he in turn built on the foundations that were laid by Attorney General Levi. And we are aided in that process, he in his work and I will be in my work, by the fact that there are men and women in the Department who have not only been here under Attorney General Levi and Attorney General Bell, but will be here under Attorney General Civiletti, and probably many of his successors.

The leadership changes—and we can assist or accelerate, or in some sad instances, we can detract from the Department—but the heart and soul of the Department of Justice are the career men and women and lawyers who are here, year in and year out, of high competence, great ability, integrity, and little recognition. And I recognize them and believe that they truly represent the finest in the traditions which the President has mentioned.

The themes that Attorney General Bell, seems to me, has followed, and which I have had only a small part to play in developing, but which I believe in, are, one, the access to justice, increasing it, developing it, strengthening it; the professionalism and training, the competence of the lawyers, the staff, paralegals within the Department in every possible way; and, thirdly, what the President mentioned to me when he asked me to become Attorney General: the independence and integrity of the Department—as Judge Bell says, the neutral zone concept with regard to the initiation and handling of cases.

The President said that he thought one of the most important legacies of his administration to the American people would be that concept of independence and integrity of the Department of Justice in the handling of prosecutions and cases

and investigations, and that he was extremely proud of Judge Bell's work in developing, strengthening that concept which has been with the Department for many, many years. And he was confident that I could carry it forward.

Of course, there are a few refinements or modifications, things that I will perhaps do somewhat differently, additional themes that I will stress. Within those themes and beyond them, I think one of the most important functions within the Department of Justice, within its many functions and duties and responsibilities, is to represent well not only all citizens of the United States but to represent the disadvantaged, whether they be minorities, handicapped, the aged, those who cannot well represent themselves, who, without the Department of Justice and the Government to look for their rights with care and attention, they will lose their rights or not know of them or not be able to exercise them.

Secondly, I believe in strong and effective law enforcement. If the Attorney General is not an advocate for strong and effective law enforcement, who can be? It is vital not only to protect public safety and the lives and property of all persons but also to safeguard the social environment just as we must protect the physical environment, because only through effective enforcement and the resulting achievement of public safety and peace can our society truly and fully engage in the pursuit of happiness.

In addition to making possible the exercise and enjoyment of all other rights, the pursuit of the right and the enforcement of personal safety and freedom from crime does not require compromise or sacrifice of constitutional rights or civil liberties. As the Department of Justice's proposed legislative charter for the FBI—which is a dominant goal and priority of our efforts in Congress—just as it demon-

strates, strengthening law enforcement and enhancing civil liberties are consistent and complementary and mutually supportive goals.

Third, a mission and duty within the Department, which is primary, is the protection and the defense of the free enterprise system, preservation of competition. And I'm happy to say that I think we're alive and well in that regard under John Shenefield's leadership of the Antitrust Division.

I think that the progress we've made in increasing the confidence and the tools by which the men and women of the Department are able to undertake these tasks has been remarkable. With the Attorney General's advocacy institute, with training programs throughout the Department of Justice, we are now training, in 1 year, more lawyers, more paralegals, more investigators than, 3 years ago, we were training in 4 years. But I think we have a way to go. We must work faster, we must decide cases and investigate them thoroughly, but with expedition—justice delayed is justice denied. And we must have the courage to end cases, to end investigations, whether it be through successful and vigorous prosecutions, or be it in closing a case that does not merit the exercise of the prosecutorial or the civil power to bring suit.

I want to thank my staff in the Deputy Attorney General's Office. I selected it over some period of time. Some people wondered if I'd ever get a staff together. But I did it with care, and they have worked with diligence, with my total respect and confidence, and they have performed, day and night, any task, either which they thought needed doing or which I assigned to them. They have kept me from many errors, and since you all know the errors I've made, you know what a hard job they've had and how well they've done.

By the way, there's an opening on that staff. The Deputy Attorney General slot is open. I don't suppose you'd be interested, Judge Bell? *[Laughter]* We need a good person in that job, a good right hand. Do a service to your country. *[Laughter]* You don't have to commit to more than about a year-and-a-half or 2 years or so. *[Laughter]*

Good to see two outstanding Italian American citizens on the stage, Chairman Rodino and Vice President "Mondali." *[Laughter]* I always thought that was spelled with an "e."

And it's particularly pleasing to see here on the stage Senator Thurmond, the ranking Republican on the great Senate Judiciary Committee, before whom I've had the privilege of appearing three times. I won't go into the number of hours that I have devoted to the Judiciary Committee. I'm pleased that I will not be appearing, at least in a confirmation proceeding, ever again before them. I look forward, though, to appearing before that committee on many matters of importance to this Department and to this country. On every occasion, Senator Thurmond has treated me, as well as all others who I've witnessed appearing before that committee, with great dignity and great respect, as well as with some vigor.

My view of the Department and my view of the mission of the Attorney General can, in part, be summed up by this quote from President Madison in the Federalist No. 51. "It is of great importance in a republic not only to guard the society against the oppression of its rulers, but to guard one part of the society against the injustice of the other part. . . . Justice is the end of government. It is the end of civil society. It ever has been and

ever will be pursued until it be obtained, or until liberty be lost in the pursuit."

I thank you, Mr. President, for giving me the opportunity to share with the men and women of the Department of Justice in the pursuit of justice. Thank you.

I now have the privilege of introducing Senator Strom Thurmond, whom I mentioned earlier, and whom all of us in the Department of Justice rely on and trust and respect.

NOTE: The President spoke at 11:07 a.m. in the Great Hall at the Department of Justice.

The press release does not include a transcript of Senator Thurmond's remarks.

General Pulaski's Memorial Day, 1979

Proclamation 4673. August 16, 1979

By the President of the United States of America

A Proclamation

On the eleventh day of October, the people of the United States will honor the 200th anniversary of the death of the Polish patriot, Casimir Pulaski. On the bicentennial of his death, caused by wounds suffered during the Battle of Savannah, we are reminded of his heroism and his selflessness as he led his famous cavalry unit, The Pulaski Legion, in the struggle for American independence.

As we pay tribute to General Pulaski and his sacrifices for freedom, both here and in his native land, we also honor the contributions made by generations of Americans of Polish descent to the greatness of our Nation.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America,

do hereby designate Thursday, October 11, 1979, as General Pulaski's Memorial Day, and I direct the appropriate government officials to display the flag of the United States on all government buildings on that day.

I also invite the people of the United States to honor the memory of General Pulaski by holding appropriate exercises and ceremonies in suitable places throughout our land.

IN WITNESS WHEREOF, I have hereunto set my hand this sixteenth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Budget Deferrals

Message to the Congress. August 16, 1979

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report four new deferrals of budget authority totalling \$204.5 million. These items involve economic support fund assistance for Egypt, the White House Conference on Aging, the National Alcohol Fuels Commission, and the National Commission on the International Year of the Child.

The details of the deferrals are contained in the attached reports.

JIMMY CARTER

The White House,
August 16, 1979.

NOTE: The attachments detailing the deferrals are printed in the FEDERAL REGISTER of August 21, 1979.

Federal Mine Safety and Health Act of 1977

Message to the Congress Transmitting a Report. August 16, 1979

To the Congress of the United States:

I transmit herewith the 1978 Annual Report of Health Activities under the Federal Coal Mine Health and Safety Act of 1969.¹

The Report, prepared by HEW's National Institute for Occupational Safety and Health, Center for Disease Control, Public Health Service, describes the coal mine health research conducted by the Institute, as well as the Institute's medical examination program for coal miners required by the Act.

I recommend that, in order to save HEW staff resources and time, the statutory reporting requirement for this Report be changed from once every year to once every three years. All of the information contained in this Report is available to Congress during annual appropriations and oversight hearings, and HEW will inform Congress immediately of any scientific breakthroughs in the field.

JIMMY CARTER

The White House,
August 16, 1979.

NOTE: The 11-page report is entitled "The Federal Mine Health Program in 1978: Annual Report of Health Activities Under the Federal Mine Safety and Health Act of 1977—U.S. Department of Health, Education, and Welfare, Public Health Service, Center for Disease Control, National Institute for Occupational Safety and Health, March 1979."

¹ EDITOR'S NOTE: As amended by the Federal Mine Safety and Health Act of 1977.

Privacy Act of 1974

Letter to the Speaker of the House and the President of the Senate Transmitting a Report. August 16, 1979

Dear Mr. Speaker: (Dear Mr. President:)

This letter forwards the Fourth Annual Report of executive branch activities covered by the Privacy Act of 1974. The report reaffirms this Administration's commitment to protecting individual privacy, illustrates steps taken to achieve this goal, and outlines agency activities in administering the Privacy Act during 1978.

I hope you will take this record of our progress into account as you consider the Administration's legislative proposals on individual privacy. This report not only documents how far we have come since the passage of the Privacy Act, but how important personal privacy is to this Administration.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Walter F. Mondale, President of the Senate.

The report is entitled "Federal Personal Data Systems Subject to the Privacy Act of 1974: Fourth Annual Report of the President—Calendar Year 1978" (22 pages plus appendices).

United States Ambassador to Kuwait

Nomination of Francois M. Dickman. August 16, 1979

The President today announced that he will nominate Francois M. Dickman, of Laramie, Wyo., to be Ambassador

Extraordinary and Plenipotentiary of the United States to the State of Kuwait. He would replace Frank E. Maestroni, who is being transferred.

Dickman has been Ambassador to the United Arab Emirates since 1976.

He was born December 23, 1924, in Iowa City, Iowa. He received a B.A. from the University of Wyoming in 1947 and an M.A. from Fletcher School of Law and Diplomacy in 1948. He served in the U.S. Army from 1943 to 1946 and 1950 to 1951.

Dickman joined the Foreign Service in 1951 and was posted in Barranquilla, Beirut, and Khartoum. From 1960 to 1961, he was at the State Department as an international relations officer, then international economist. From 1961 to 1965, he was desk officer for the United Arab Republic (Egypt) and the Syrian Arab Republic.

From 1965 to 1968, Dickman was economic officer in Tunis. In 1968-69 he attended the Army War College. From 1969 to 1972, he was counselor for economic affairs in Jidda, and from 1972 to 1976, he was Director of Arabian Peninsula Affairs at the State Department.

United States Ambassador to Lesotho

Nomination of John R. Clingerman. August 16, 1979

The President today announced that he will nominate John R. Clingerman, of Lansing, Mich., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Kingdom of Lesotho. He would replace Donald R. Norland, who is being appointed to another post.

Clingerman is Deputy Chief of Mission in Lusaka, Zambia.

He was born May 9, 1931, in Doniphan County, Kans. He received a B.A. (1953) and M.A. (1957) from Michigan State University. He served in the U.S. Army from 1953 to 1955.

Clingerman joined the Foreign Service in 1957 and was posted in Katmandu, Leopoldville, and Kisangani. In 1965-66 he took African studies at the University of Paris, and from 1966 to 1969, he was Deputy Chief of Mission in Cotonou.

From 1969 to 1972, Clingerman was political officer in Brussels. From 1972 to 1975, he was at the State Department as an educational and cultural officer, then a personnel officer. He attended the National War College in 1975-76 and since 1976 has been Deputy Chief of Mission in Lusaka.

National Advisory Council on Economic Opportunity

Appointment of 14 Members and Designation of Chairman. August 16, 1979

The President today announced the appointment of 14 persons as members of the National Advisory Council on Economic Opportunity. They are:

HANNAH HUME BAIRD, of Florence, Ky., where she is active in civic and political affairs including the Northern Kentucky Area Development District Human Services Advisory Board;

ARTHUR I. BLAUSTEIN, director of the National Economic Development Law Project at the Earl Warren Legal Institute of the University of California at Berkeley (also designated Chairman of this Council);

IRVING BLUESTONE, of Detroit, vice president of the International Union of the United Auto Workers, and director of the UAW's General Motors Department;

WILLIAM MICHAEL DALEY, a Chicago attorney;

L. C. DORSEY, of Jackson, Miss., an organizer for the Southern Coalition on Jails and Prisons with a background as a social worker;

HAZEL N. DUKES, president of the New York State Conference of the NAACP;

GEOFFREY FAUX, of Whitefield, Maine, codirector of the Exploratory Project for Economic Alternatives, a research and public education program;

EDWARD F. FEIGHAN, a commissioner of Cuyahoga County, Ohio;

LINDA HADLEY, of Chinle, Ariz., assistant director of the Navaho mental health program at Rough Rock Demonstration School;

CHRISTINE PRATT MARSTON, an instructor at the University of Washington's School of Social Work and cochair of the National Organization for Women Task Force on Women and Poverty;

PHILIP W. MCLAURIN, the State of Oregon ombudsman and a former acting director of the city of Portland's training and employment division, human resources bureau;

JUAN JOSE MOLDONADO, mayor of the city of San Juan, Tex.;

RALPH M. OCHOA, assistant to California State Assembly Speaker Leo T. McCarthy, and former associate director of the Greater Los Angeles Urban Coalition;

EVELYN WATTS, of St. Petersburg, Fla., a retired nurse who is active in community affairs and serves on the Pinellas County boards of the NAACP, Council of Human Relations, and Pinellas County Opportunity Council.

National Advisory Council on Vocational Education

Appointment of 17 Members and Designation of Chairman. August 16, 1979

The President today announced the appointment of 17 persons as members of the National Advisory Council on Vocational Education. They are:

PEGGY SUE ARMSTRONG, a junior at Iowa State University, majoring in animal science;

CHERYL J. COSTLEY, an expert on vocational education, who is director of education for Bill Knapp's Inc., of Battle Creek, Mich., where she is responsible for the development and administration of training and educational programs for all employees;

REV. JOHN R. ERWIN, senior chaplain with the Cook County Department of Corrections in Chicago, and founder of PACE Institute, Inc., a nonprofit school offering adult basic education, vocational orientation and counseling to inmates of Cook County Jail;

KAREN MARIE CORNELIUS FENTON, director of the human resources development program of the Confederated Salish & Kootenai Tribes in Pablo, Mont.;

JOSEPH R. FITTIPALDI, coordinator for education of the New Jersey Catholic Conference and a former high school teacher and administrator;

CAROL SAUNDERS GIBSON, director of the education division of the National Urban League, whom the President has also designated Chairman of this Council;

ELI GINZBERG, the A. Barton Hepburn professor of economics at Columbia University's Graduate School of Business, director of the Conservation of Human Resources Project, and chairman of the National Commission for Manpower Policy;

LAWRENCE R. HAWKINS, a member of the Florida House of Representatives, who is a disabled veteran and an active campaigner for the rights of handicapped persons;

GLORIA T. JOHNSON, of Washington, D.C., director of education and women's activities for the International Union of Electrical Radio and Machine Workers;

HERNAN LAFONTAINE, superintendent of schools for the Hartford (Conn.) public schools, an expert on bilingual education, and a former high school teacher;

JOHN M. LIPTON, of Warren, Ark., a member of the Arkansas General Assembly and chairman of the Arkansas Advisory Council on Vocational Education;

ROMAN PUGINSKI, of Chicago, a former Member of the U.S. House of Representatives, where he was chairman of the Standing Committee on Select Education and the Standing Committee on General Education, now a Chicago alderman (reappointment);

JACK B. REIHL, of West Bend, Wis., secretary-treasurer of the Wisconsin State AFL-CIO and a member of the State Advisory Committee on Trade and Industrial Education and the Wisconsin State Apprenticeship Advisory Council for Industrial Crafts;

JOHN D. ROWLETT, a professor of industrial education and technology at Eastern Kentucky University, where he is also vice president for academic affairs and research and dean of the faculties;

JACK SILVERS, master of the Washington State Grange and a Yakima Valley fruit grower;

WILLIAM ASBURY STEMBRIDGE, SR., of Macon, Ga., a businessman who is vice chairman of the State Board of Education and serves on the State Vocational Committee; and

PATRICIA M. VASQUEZ, a San Antonio attorney who has been director of the Mexican American Legal Defense and Educational Fund's Chicana Rights Project.

Counsel to the President

*Appointment of Lloyd N. Cutler.
August 17, 1979*

The President today announced the appointment of Lloyd N. Cutler as Counsel to the President.

Cutler is a member of the Washington law firm of Wilmer, Cutler & Pickering. He has served as counsel to the President on ratification of the SALT II treaty since earlier this year, and was the President's special representative for maritime resource and boundary negotiations with Canada from 1977 to 1979.

He was born November 10, 1917, in New York City. He received a B.A. from Yale University in 1936 and an LL.B. from Yale Law School in 1939. He served in the U.S. Army from 1942 to 1945.

Cutler was a partner in the law firm of Cox, Langford, Stoddard & Cutler

from 1946 until 1962, when he joined his current firm.

Cutler is a member of the executive committee of the Lawyers' Committee for Civil Rights under Law, and is a director of the Mexican-American Legal Defense Fund. He was Special Counsel to the President's Committee on Urban Housing from 1967 to 1968. In 1968 and 1969, he was executive director of the National Commission on the Causes and Prevention of Violence, and he was chairman of the District of Columbia Committee on the Administration of Justice under Emergency Conditions.

Price Controls on Heavy Crude Oil

*Remarks on Signing Executive Order 12153.
August 17, 1979*

To implement a program to reduce our excessive dependence on foreign oil is absolutely necessary to secure and to preserve our own Nation's security. We must at this time minimize both divisive debates and any further delay.

Our goals are, first of all, to encourage conservation to eliminate the waste of energy and, secondly, to increase production of energy in all forms in our own country. The Congress and, indeed, every single American must act both boldly and as soon as possible to carry out these two goals.

Today, as President, I'm taking action that will significantly increase production of American crude oil reserves, lifting price controls on heavy crude oil. This Executive order, which I will sign in a minute, coupled with other related actions, will increase crude oil production in our

country by 1990 by about 500,000 barrels per day. Much of this increase will occur much earlier, between now and 1985, and, therefore, will make an immediate contribution to our Nation's security.

Our Nation is blessed with approximately 10 billion barrels of crude oil reserves which are heavy oil. Much of it's in California; other substantial reserves are in Mississippi, Louisiana, Texas, and Wyoming. However, this very thick, heavy oil is expensive to produce, because it's so difficult to extract from the ground and to transport to the refineries. The combination of high cost of the production and transportation, plus the previously existing price controls, have, indeed, impeded development of this important source of American energy.

Today's action will end this problem. Finally we'll be able to take advantage of a domestic energy source which can be the equivalent of all the oil that we know of in Alaska's Prudhoe Bay reserves. Heavy crude oil is one fuel which we can provide with important production incentives without having an adverse impact on inflation. The more domestic oil we produce, the less our Nation must depend on uncertain and extremely expensive foreign sources of oil.

With this action, I have taken all of the major steps on which I can act alone to accelerate domestic production. It's now up to Congress to act on the other proposals which I made to cut our import dependence.

Pending before Congress are a number of vitally important measures that can cut our dependence on foreign oil more than half by the year 1990. The most important of these, and the basis for all the others, is the windfall profits tax. The issue

is simple—who will benefit from the increased prices of oil caused by decontrol, the oil companies or the American people? I'm determined that the American people will be the ones to benefit.

As I've emphasized over and over again, we need the revenues from the windfall profits tax to increase the production of synthetic fuels, to harness solar energy, to provide the means to spur energy conservation, to develop mass transit, and to help our poorest citizens to cope with rising energy prices.

The Senate Finance Committee, however, is currently considering some very broad exemptions to the tax, loopholes big enough to sail an oiltanker through. In many cases, these exemptions will not increase American production at all. In some other cases, the exemptions or loopholes will increase American production a very small amount. The cost of that increased production will be enormous to the American people.

I've made my position clear on what should be done about energy. My proposals have been made both to the American people and to the Congress. As I travel through the heartland of America this coming week on kind of a working vacation, I intend to explain to the American people the magnitude of the choices which now are before the Congress. I'm confident that they will share my conviction that we need an effective windfall profits tax without major exceptions and without unwarranted loopholes. Only then can our Nation be assured of the resources for genuine energy security for the United States.

Thank you very much.

NOTE: The President spoke at 1:03 p.m. to reporters assembled in the Oval Office at the White House.

Price Controls on Heavy Crude Oil

Executive Order 12153. August 17, 1979

DECONTROL OF HEAVY OIL

By the authority vested in me as President by the Constitution and statutes of the United States of America, including the Emergency Petroleum Allocation Act of 1973, as amended (15 U.S.C. 751 *et seq.*), and notwithstanding the delegations to the Secretary of Energy in Executive Order No. 11790, as amended by Executive Order No. 12038, it is hereby ordered as follows:

1-101. Effective August 17, 1979, prices charged in the first sale of heavy crude oil are exempted from price controls adopted pursuant to the Emergency Petroleum Allocation Act of 1973, as amended. For purposes of this section, the term "heavy crude oil" means all crude oil produced from a property, but only if, during the last month prior to July 1979 in which crude oil was produced and sold from that property, such crude oil had a weighted average gravity of 16.0° API or less, corrected to 60° Fahrenheit.

1-102. The Secretary of Energy, or his delegate, shall expeditiously conduct a public inquiry as to what other types of heavy crude oil, if any, should be exempted from price controls adopted pursuant to the Emergency Petroleum Allocation Act of 1973, as amended, in order to maintain or increase production of such crude oil. Upon completion of that inquiry, the Secretary shall make a recommendation to the President as to what other types of heavy crude oil, if any, should be exempt from price controls.

1-103. The Secretary of Energy may pursuant to Executive Order 11790, as amended by Executive Order 12038,

adopt such regulations as he deems necessary to implement this Order.

JIMMY CARTER

The White House,
August 17, 1979.

[Filed with the Office of the Federal Register,
3:32 p.m., August 17, 1979]

United States Ambassador to Nigeria

Nomination of Stephen Low.
August 17, 1979

The President today announced that he will nominate Stephen Low, of Cincinnati, Ohio, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Federal Republic of Nigeria. He would replace Donald B. Easum, who is resigning.

Low is now Ambassador to the Republic of Zambia.

He was born December 2, 1927, in Cincinnati. He received a B.A. from Yale University in 1950 and an M.A. (1951) and Ph. D. (1956) from Fletcher School of Law and Diplomacy. He served in the U.S. Army from 1946 to 1947.

Low joined the Foreign Service in 1956 and was posted in Kampala and Dakar. From 1964 to 1965, he was officer in charge of Guinea-Mali affairs at the State Department, and from 1965 to 1967, he was Special Assistant to the Deputy Under Secretary of State for Political Affairs.

In 1967-68 he attended the National War College, and from 1968 to 1971, he was counselor for political affairs in Brasília. He was director of Brazil affairs at the State Department from 1971 to 1974. From 1974 to 1976, he was detailed to the National Security Council, and since 1976 he has been Ambassador to Zambia.

International Civil Aviation Organization

Appointment of Clyde W. Pace, Jr., as Alternate U.S. Representative.
August 17, 1979

The President today announced that he has appointed Clyde W. Pace, Jr., of Arlington, Va., to be Alternate U.S. Representative on the Council of the International Civil Aviation Organization.

Pace is currently Assistant Administrator of the Federal Aviation Administration for Europe, Africa, and the Middle East Region.

Pace, 51, has been with the FAA since 1956 and is a former airport engineer.

United States Court of Military Appeals Nominating Commission

Appointment of the Membership.
August 17, 1979

The President today announced the appointment of the six members of the Court of Military Appeals Nominating Commission, established by Executive Order 12063 (June 5, 1978):

DEANNE C. SIEMER, Chairperson, General Counsel, Department of Defense;

ANTONIA HANDLER CHAYES, Under Secretary of the Air Force;

NEAL ARTHUR, manager of government relations and human resources, Rohr Industries, Inc., Chula Vista, Calif.;

STUART POLLAK, attorney, San Francisco, Calif.;

CLINTON BAMBERGER, attorney, Boston, Mass., formerly Executive Vice President of the Legal Services Corporation;

A. KENNETH PYE, chancellor, Duke University.

The President also requested the assistance of the Commission in filling the va-

cancy on the Court of Military Appeals which will be created following confirmation of the Honorable Matthew Perry as a United States District Court Judge for the District of South Carolina. Judge Perry is now a member of the Court of Military Appeals.

The President directed the Commission to make special efforts to consider well-qualified women and members of minority groups as possible nominees.

Labor Dispute in the Grain Industry

Statement by the President. August 17, 1979

The dispute between the American Federation of Grain Millers and the grain companies, now entering its seventh week, is a matter of great concern to me. The farmers, who are not a party to the dispute, but whose livelihoods are so deeply affected by it, have no satisfactory alternative means of getting their product to market. With the peak harvest season now upon us, the importance of an early agreement is evident.

I have directed that Secretary Bergland and Secretary Marshall monitor the situation closely and report regularly to me. I have also directed that the Federal Mediation and Conciliation Service provide whatever assistance will facilitate the strike's prompt settlement.

This evening I will meet in St. Paul with Governors Link of North Dakota and Quie of Minnesota to discuss the strike and its effect on the upper midwest.

But there should be no doubt about my own views concerning the best way to resolve this strike. It has been demonstrated repeatedly that the process of free collective bargaining is the best method

for resolving disagreements between labor and management. In exercising their rights under that process, the parties to a dispute have a special responsibility to recognize and consider the hardships their actions are imposing on others. I urge the Grain Millers and the companies to work conscientiously with the Federal Mediation and Conciliation Service to achieve an early, equitable settlement to this dispute.

In this situation, it is clear that such a settlement can occur if the local parties, who are the most sensitive to local problems and needs, are allowed to continue negotiating together. Although the impact of the strike is causing hardship in this area, the stringent legal test of Taft-Hartley requires a demonstration of danger to the health and safety of the entire Nation. That strict requirement now effectively precludes the use of this remedy.

I am confident that the Grain Millers and the companies will act responsibly and in the Nation's best interest in attempting to resolve this strike promptly and fairly.

Community Involvement in Energy Conservation

Letter to City Officials. August 17, 1979

As you know, local leaders around the country are already working hard to make their communities more energy efficient, and the people who live there more energy conscious. I am writing to pledge the full assistance of the Federal Government in your efforts and to request your most vigorous leadership in developing your own community-wide conservation plans.

Many communities such as Portland, Oregon; Clinton County, Michigan;

Davis, California; and Greensboro, North Carolina, have successfully created participating public efforts that bring together business, civic, religious and community groups to formulate energy savings.

The potential contribution from a concentrated effort by communities across the country to our nation's battle in energy security is enormous. In fact, if extensive conservation measures are implemented in residential, public and commercial buildings alone we might reduce oil imports by well over a million barrels a day. Several hundred thousand more barrels of oil a day could be saved if we expanded use of ridesharing and took simple steps to improve automobile efficiency. These measures will also reduce the cost of living for all Americans who participate by lowering utility bills and cutting the cost of transportation.

If our national efforts to conserve are to be successful, your community's imagination and creativity must be encouraged.

Along these lines, in my July 16 speech before the National Association of Counties in Kansas City, I urged those Federal officials who had not done so to work with other leaders in their community—from both inside and outside of government—to set ambitious local conservation goals and to develop action plans to meet these goals.

I have enclosed some brief descriptions from the growing number of existing local efforts. To assist you in sharing this information and in learning more about the programs of other communities I have established a special clearinghouse to serve leaders who are undertaking energy conservation initiatives. A toll-free hotline will be opened in early September. Correspondence can be addressed now to the President's Clearinghouse for Community Energy Efficiency, Suite 185, 400 North

Capitol Street, N.W., Washington, D.C. 20001.

It is through the application of your citizens' initiatives and inspiration that America can win the energy war. Our nation is counting on your help and your leadership. Thank you for your efforts. I look forward to hearing of your success.

JIMMY CARTER

NOTE: This is the text of identical letters sent to more than 6,000 mayors and elected city officials throughout the Nation.

The White House Press Office also made available the enclosure detailing the local energy conservation efforts.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

August 13

The President returned to the White House from Camp David, Md.

The President met at the White House with:

- Vice President Walter F. Mondale;
- Secretary of Agriculture Bob Bergland, Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy, Anne Wexler, Assistant to the President, Alfred E. Kahn, Advisor to the President on Inflation, Esther Peterson, Assistant to the President for Consumer Affairs, and representatives of the food industry, to discuss food prices.

In a ceremony in the Oval Office, the President received diplomatic credentials from Ambassadors Sadek Jawad Sulaiman of the Sultanate of Oman, Bernard

Administration of Jimmy Carter, 1979

Kendrick Radix of the People's Revolutionary Government of Grenada, and Sukru Elekdag of the Republic of Turkey.

August 14

The President met at the White House with:

- Zbigniew Brzezinski, Assistant to the President for National Security Affairs;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- Vice President Mondale, Stansfield Turner, Director of Central Intelligence, Hamilton Jordan, Assistant to the President, and Dr. Brzezinski.

The President participated in a briefing on the administration's programs and policies given for civic and community leaders from Texas in the East Room at the White House.

August 15

The President met at the White House with:

- Vice President Mondale, Secretary of Health, Education, and Welfare Patricia Roberts Harris, Secretary of Labor Ray Marshall, Secretary-designate of Housing and Urban Development Moon Landrieu, Secretary Bergland, James T. McIntyre, Jr., Director of the Office of Management and Budget, Jack H. Watson, Jr., Assistant to the President for Intergovernmental Affairs, and Mr. Eizenstat, to discuss domestic policies;
- Dr. Brzezinski;
- Mr. Moore;
- Ambassador Andrew Young, U.S. Representative to the United Nations.

The President participated in a briefing by administration officials on the

strategic arms limitation treaty held for community leaders in the East Room at the White House.

The President announced that he will nominate Secretary of the Treasury G. William Miller to be U.S. Governor of the International Monetary Fund, Governor of the Inter-American Development Bank, U.S. Governor of the Asian Development Bank, and U.S. Governor of the African Development Fund. He also announced that he has designated Miller as a member of the Council on Wage and Price Stability, Chairman of the U.S. Section of the Joint U.S.-U.S.S.R. Commercial Commission, and U.S. Chairman of the U.S.-China Joint Economic Committee. All of these positions are normally filled by the Secretary of the Treasury.

August 16

The President met at the White House with:

- Dr. Brzezinski;
- Mr. Moore;
- Mrs. Carter, for lunch;
- Gustave Speth, Chairman of the Council on Environmental Quality.

In a ceremony in the Oval Office, the President was presented the International Mediation Medal by officials of the American Arbitration Association for his efforts in resolving the conflict in the Middle East.

The President participated in a briefing by administration officials on the strategic arms limitation treaty held for community leaders in the East Room at the White House.

August 17

The President met at the White House with:

- Vice President Mondale, Secretary of Defense Harold Brown, Deputy Secretary of State Warren M. Chris-

topher, Hedley W. Donovan, Senior Adviser to the President, Mr. Jordan, and Dr. Brzezinski;

—Mr. Moore.

The President announced that he has appointed Paul A. Volcker to be U.S. Alternate Governor of the International Monetary Fund. This position is normally filled by the Chairman of the Board of Governors of the Federal Reserve System.

The President left the White House for St. Paul, Minn. In St. Paul he participated in a briefing on energy for city officials and citizens (transcript will be printed next week). He then boarded the riverboat *Delta Queen* for a week-long trip down the Mississippi River, to end in St. Louis, Mo., on August 24.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted August 16, 1979

G. WILLIAM MILLER, of California, to be United States Governor of the International Monetary Fund for a term of 5 years and United States Governor of the International Bank for Reconstruction and Development for a term of 5 years; a Governor of the Inter-American Development Bank for a term of 5 years; and United States Governor of the Asian Development Bank and United States Governor of the African Development Fund.

FRANCOIS M. DICKMAN, of Wyoming, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the State of Kuwait.

JOHN R. CLINGERMAN, of Michigan, a Foreign Service officer of Class three, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Kingdom of Lesotho.

CHECKLIST OF WHITE HOUSE PRESS RELEASES

The following listing contains releases of the White House Press Office which are not included in this issue.

Released August 13, 1979

News conference: on the President's meeting with food industry representatives—by Alfred E. Kahn, Advisor to the President on Inflation

Released August 15, 1979

Transcript: remarks announcing the President's acceptance of the resignation of Ambassador Andrew Young as U.S. Representative to the United Nations—by Press Secretary Jody Powell

Released August 17, 1979

Transcript: announcement of appointment of Lloyd N. Cutler as Counsel to the President and remarks on Executive Order 12153, price controls on heavy crude oil—by Press Secretary Jody Powell

Fact sheet: Executive Order 12153, price controls on heavy crude oil

ACTS APPROVED BY THE PRESIDENT

Approved August 13, 1979

H.R. 4476----- Public Law 96-49
Higher Education Technical Amendments of 1979.

H.J. Res. 19----- Public Law 96-50
National Lupus Week.

H.J. Res. 209----- Public Law 96-51
National Diabetes Week.

S. 1318----- Public Law 96-52
An act to amend title 13 of the United States Code to provide a limited exemption to the Bureau of the Census from the provisions of 322 of the Act of June 30, 1932.

H.R. 896----- Private Law 96-1
An act for the relief of Joseph J. Andrews.

H.R. 899----- Private Law 96-2
An act for the relief of Mr. and Mrs. Aaron Wayne Ogburn.

H.R. 932----- Private Law 96-3
An act for the relief of Doris Mauri Coonrad.

H.R. 1158----- Private Law 96-4
An act for the relief of James C. Wilkinson.

Administration of Jimmy Carter, 1979

ACTS APPROVED—Continued

Approved August 14, 1979

- H.R. 3324----- Public Law 96-53
International Development Cooperation Act
of 1979.
- H.R. 4616----- Public Law 96-54
An act to make certain technical and clerical
amendments to title 5, United States Code.
- H.R. 4811----- Public Law 96-55
An act for the relief of the city of Nenana,
Alaska, and to amend the Act of January 2,
1976, as amended, and for other purposes.
- H.R. 2807----- Public Law 96-56
An act to amend the Bankruptcy Act to pro-
vide for the nondischargeability of certain
student loan debts guaranteed or insured by
the United States.
- H.R. 3914----- Public Law 96-57
An act to amend the National Capital
Transportation Act of 1969 to remove the
limitation on the amount authorized for
District of Columbia contributions for the
cost of construction of the rapid transit sys-
tem of the National Capital Region.

ACTS APPROVED—Continued

Approved August 14—Continued

- H.R. 4057----- Public Law 96-58
An act to increase the fiscal year 1979 au-
thorization appropriations for the food
stamp program, and for other purposes.
- S. 41----- Public Law 96-59
An act to require the Secretary of Agricul-
ture to convey a reversionary interest held by
the United States in certain lands located in
Bell County, Kentucky, to the Board of Ed-
ucation, Bell County, Kentucky.

Approved August 15, 1979

- H.R. 3363----- Public Law 96-60
An act to authorize appropriations for fiscal
years 1980 and 1981 for the Department of
State, the International Communication
Agency, and the Board for International
Broadcasting.
- S. 917----- Public Law 96-61
An act to authorize appropriations to carry
out the Fishery Conservation and Manage-
ment Act of 1976 during fiscal years 1980,
1981, and 1982, and for other purposes.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, August 24, 1979

St. Paul, Minnesota

Remarks at an Energy Briefing by St. Paul Citizens. August 17, 1979

ENERGY

THE PRESIDENT. Mayor Latimer and all of those who've come here to help me deal with one of the most important and significant challenges that our Nation has ever faced, let me express my thanks to you.

I'm going to be on the beautiful Mississippi River for the next 7 days with about 140 fine Americans, and I know we'll make many new friends on the ship. It'll be kind of a working vacation, because I will take every opportunity to express to the American people my deep concern about the first development in the rapid changing characteristics of energy supply that have ever comprised a direct, serious threat to the security of the Nation that we love.

This is no exaggeration. We have become overly dependent on uncertain and very expensive imported oil. We import not only oil, but we import unemployment and we import inflation. I've already taken action with the help of the Congress to save 4 million barrels of oil

per day by 1990, and I propose to the Congress savings for another 4½ million barrels of oil per day.

I can pledge to you that the most oil that this country will ever import in a year was imported 2 years ago in 1977. We're going to freeze that import and start bringing it down to make our energy security something on which we can depend. The basis for it is the windfall profits tax. The basic decision there is, as oil prices go up with decontrol to encourage American production, who is going to benefit? The oil companies or the American people? I'm determined that it will be the American people, and it must be as a result of the passage of the windfall profits tax. Only your voice can make that possible.

And out of the windfall profits tax will come money to help the poorest American families bear the increased burden of inevitable increases in the price of energy. It will let us form much more effective mass transit systems. It will also mean that we can increase American production. More coal will be used, clean-burning coal; more solar energy; more production of oil and natural gas. And the most important thing of all and the cheapest thing

of all—more conservation, how to stop wasting energy.

This beautiful building has been renovated so that it does become energy-efficient. Every single building in St. Paul can have the same degree of achievement. But it can only be done with the full cooperation and involvement of all the citizens of this community.

This meeting is very important, not only for you but for the entire State of Minnesota and, indeed, for the entire Nation. Because you've done such good work before I got here, and to some degree because I'm here, people will know what you're going to do, and this is very important to us all.

Today, in preparation for my visit here to St. Paul, I sent a personal letter to every senior elected official of every county and city in the United States of America, 6,000 personal letters, with an enclosure saying what certain communities have already done. And it wasn't a coincidence that one of those communities that I've used as an example was St. Paul, because you've done a good job.

Now, I came here to listen primarily, but I want to make two very quick points. There are two basic errors or misconceptions that permeate America. One is that conservation can be accomplished by government. It cannot. It must be accomplished by citizens. Secondly, that conservation is somehow painful or inconvenient. It does not have to be painful or inconvenient. It can be exciting. It can be enjoyable. And instead of dividing one American from another, it can form a basis for closeness within a family or within a community or, indeed, within a whole nation. And it saves a lot of money—not my money, not the Government's money, but your money. This must be done. And if all the communities in our Nation will do as St. Paul is planning,

then our conservation effort will be successful. That's what I hope and pray.

And now I'm eager to listen to the presentations that have been prepared. And if you don't mind, I might interrupt every now and then to ask a question if I feel the urge.

Thank you for letting me be here. It's a great honor and pleasure for me. It's going to help the whole Nation, what you're doing.

Thank you very much.

STATEMENTS

MAYOR LATIMER. *Mr. President, ladies and gentlemen:*

In preparation for this our first meeting, as you know, we have divided into five committees. We began as a committee of 100 for a 100-day effort, and we now have three times the number of people, and I hope that means one-third the number of days. But as preparation for this, Mr. President, we have asked eight people who had previously asked to serve on this committee to make presentations on different subjects.

CENTRAL HEATING PROJECT

The first presenter is Cliff Olsen, who is from the First National Bank of St. Paul. He represents the Chamber of Commerce in the energy committee, and he's a vice president of the District Heating Development Company, which is the subject which Mr. Olsen's going to speak about.

Cliff?

MR. OLSEN. *Mr. President, Mrs. Carter, Amy, Mr. Mayor, honored guests:*

Several years of effort were fulfilled in June of this year when the public and private sectors of our community joined to form the St. Paul District Heating Development Company. Its purpose is to demonstrate the technical and the eco-

nomic feasibility of providing a metropolitan community such as ours with central heating through the medium of hot water produced through cogeneration in conjunction with an investor-owned electric power station. This power station, incidentally, uses only coal as its fuel. While innovative, the concept is not revolutionary. Central hot water heating systems have been used in Europe for many years. The point is that it's never been tried in the United States.

The advantage offered by this system is the almost doubling of thermal efficiency, because energy otherwise wasted in electric generation is recaptured and becomes the hot water used in the heating system. Also the oil and natural gas which is not used to heat homes and industries is saved, and it amounts, by our engineers' calculations, to be sufficient to heat some 200,000 homes. This is about twice the number of homes that we have in St. Paul.

Our efforts have been helped very greatly by the significant contributions of the Minnesota Energy Administration and the Department of Energy. Particularly, we owe a debt of gratitude to the facility at Oak Ridge. We are also most appreciative of the interest that DOE, Under Secretary John Deutch, has shown and also for the substantial financial assistance which you have tendered to us.

We are presently in the final stages of planning which will lead to the construction, we hope in early 1981, of a demonstration project, which will include the downtown central business district and also the capital building complex.

We are very pleased with our progress to date. And we recognize that it is due to the unselfish and complete cooperation of business, labor, and every level of government. Given the opportunity to compete in a truly free market, we sincerely believe that district heating is the mode of the

future, and we in St. Paul are pleased to provide an example to the rest of the country.

MAYOR LATIMER. Thank you very much, Cliff.

TRANSPORTATION PROGRAMS

The second speaker is Malcolm McDonald, who manages the Space Center Buildings in St. Paul, Minnesota, and works with Operation 85, which he'll tell the people and the President about.

Malcolm?

MR. McDONALD. Mr. President, Operation 85, trades and labor, business and civic leaders who are planning the St. Paul of tomorrow. Acting in the conviction that most practical local solutions to our energy problems will be found through a productive partnership, we as citizens have tried to construct a here-and-now energy conservation program to reduce our daily energy consumption, increase our downtown air quality, and save money for all of us.

In cooperation with the city and in particular the office of the mayor, the Metro Transit Commission, and private industry, Operation 85's Committee on Commuter Alternatives has designed four energy-saving programs for cars and people. In October we will announce the first phase.

These programs for carpools, vanpools, greater bus riding, and parking at the edge of the city have as their common goals reducing the number of cars by 15 percent, reducing gasoline consumption through shorter trips, and reducing downtown traffic congestion, increasing the use of existing public transportation systems for greater efficiency, increasing revenue for our bus system to reduce its deficit, increasing our air quality, and saving money for all of us.

To make these programs happen, the public and private sectors are cooperating to provide special aims—parking and cost incentives for van- and carpoolers; properly spec'd, long-lasting equipment designed for low-speed, continuing shuttle, to reduce maintenance and operating costs; variable work hours, flex-time, to reduce peak pressure on transit facilities; encouragement for appropriate bicycle use; and rediscovering how to walk down our new pedestrian malls.

For the future, we are looking to help St. Paulites with areawide matchups for carpools, shared-ride taxis, dial-a-ride for the handicapped, additional shelters at fringe parking lots, and extensive information programs.

Our public and private cooperation comes from our common desire to build the St. Paul of tomorrow, through the best and most economical use of public and private funds and people time.

Looking further into the future, we have been considering a peplemover; light-rail transit; computer-controlled traffic management; expanded use of buses, jitney, small bus, and schoolbus to replace car use during the middle of the day.

Mr. President, all of us have benefited from public support at the local, State, and Federal level, both in funding and in personal commitment. We look forward to continued cooperation. The private sector of business and labor here in St. Paul wants to show through all of these efforts what we can do for ourselves.

Thank you, Mr. President.

ST. PAUL ENERGY PARK

MAYOR LATIMER. Next is Allen Boyce, who is the president of the Citizens League, which, Mr. President, is an extraordinary, not-for-profit group of citizens who research every level of govern-

ment in the major issues, as well as being an employee of the Burlington-Northern Railroad. Allen will talk to us about the potential of the energy park in St. Paul.

Mr. Boyce.

MR. BOYCE. Mr. President, I'm very glad that you decided to begin your trip here in St. Paul. I think it's particularly appropriate on a trip revolving around the energy issue that you begin in a central city like St. Paul, which is inherently energy-efficient. This is because of the proximity within our city of our facilities for shopping and work, recreation, and housing.

And I think here in St. Paul we have the opportunity to take this inherent advantage one step further. What we have—and I think this is rather unique—is a site of approximately 250 acres of land right in the heart of our metropolitan area, halfway between the downtowns of Minneapolis and St. Paul, which is available for development. This area presently contains a coke plant, which has recently shut down, an under-used stadium, and a great deal of vacant land. What we see here is the potential for the development of what we call an energy park. This would be an area which would demonstrate new techniques for combining energy-efficient light industry, housing, transportation, and the production of energy itself.

We foresee a public-private corporation which would be established to develop the following types of facilities, all in one complex: high-density, energy-efficient housing; an office industrial park for energy-related industries; an energy research and development center in connection with the University of Minnesota; a solid waste recovery plant to make use of some of the wastes generated in the complex; a hot water district heating system which could potentially produce both electricity and then, through cogenera-

tion, use some of that waste heat for district heating.

There's also potential for a cable television system which could provide special energy-saving features that would help reduce the need for people living and working in this area to travel. Also there's a possibility for further development of our mass transit facilities, and I think placing a development like this in the center of a city like St. Paul helps to begin reducing the need for people to travel long distances to work, to live, and to have their recreation. And it makes the production and the distribution of energy much more efficient because of the compactness of our central city areas.

So, I hope you'll be supportive of this energy park project in St. Paul.

Thank you.

HOME WEATHERIZATION

MAYOR LATIMER. Mr. President, as you have pointed out numerous times, the greatest burden on the poor is in fact the inflationary impact of energy costs. And that's why it's very important to us that our next speaker, Michael McAllister, is the director of energy conservation for our local CAP program, which is called the Ramsey Action Program.

Mike?

MR. McALLISTER. Mr. President, Ramsey Action Programs in St. Paul is a community action agency serving the low-income people in Ramsey County. Among the many programs offered, the energy programs are providing a much-needed service in two Ramsey County residences.

Currently the energy programs have three main components. One, optimum weatherization research projects—this program's operation is in conjunction with the National Bureau of Standards and the Community Services Administration in Washington, D.C. This project is

a thorough evaluation and a study on the cost-effectiveness of weatherization and the development of new and improved weatherization techniques and methods. This research program is determining which energy conservation measures are the most cost-effective in residential construction.

Two, the State and Federal Crisis Intervention and Emergency Energy Assistance programs. In the past 6 months, 4,554 households have received assistance because of the high energy costs. In Minnesota, this program should be expanded and the funds administered on a year-round basis. Three, home weatherization program. In Ramsey County, this program is being accomplished by a joint effort from the city of St. Paul manpower programs, the Community Services Administration, and the State department of economic security.

Recently a needs assessment on the homes in Ramsey County was completed. 45,402 eligible people for the home weatherization program were identified. Our priorities for weatherization are fuel oil users, senior citizens, and handicapped people. In addition, the study revealed that the working poor need fuel assistance and weatherization assistance. Currently they are not eligible for assistance, because their gross income is above the guidelines; however, their net income is below the guidelines.

In the past years we have weatherized over 500 homes in Ramsey County. In 1979 we expect to weatherize 453 homes, and in 1980 over 1,000 homes will be weatherized. Depending on the living habits, our studies show that energy consumption can be reduced by 30 percent with proper weatherization methods. However, there are problems with the program.

The CETA regulations, such as the average for CETA employees, has to be

resolved at the national level. In addition, there is plenty of Federal funds for weatherization materials, but very few funds for labor and support costs. The people in the State of Minnesota and the community action agencies need more funds to support the energy conservation programs.

Thank you, Mr. President.

MAYOR LATIMER. Thank you very much, Mike.

INNER-CITY PROGRAMS

Mr. President, the city of St. Paul is a very strong neighborhood-oriented city. The next speaker comes from one of our great old, nearby, downtown neighborhoods, the West Seventh Street area. Her name is Becky Yust, and she also teaches at the University of Minnesota as a home economist.

Becky?

Ms. YUST. Good evening, Mr. President.

Tonight I'm representing the West Seventh Federation, an organization in an inner St. Paul neighborhood.

It is my belief that we can have simple but long-lasting solutions to affect energy consumption. Two very basic concerns that affect families the most are simply getting to work and keeping warm in their homes.

The need for efficient transportation is great. Over 40 percent of the households in our community do not even own a car. For 2 years we have investigated and proposed a light rail system or modern trolley for our community. As in most city neighborhoods, we have one main business street that serves as a corridor from downtown to the airport and suburbs. Three different bus lines intersect it, and it is a natural collecting point for residents. Light rail is a preferred transit system, because it is nonpolluting, it operates in

our severe climate, and it is not capital-intensive; plus the efficiency and technology has been proven here and in Europe.

The second problem involves heating our homes. We have very few newly constructed housing units in the inner city. The vast majority of the housing structures are existing and too expensive to replace, and because of their age, they do not have insulation. We need funds through the HUD 312 program to provide moneys to help people insulate, weatherstrip, replace rotted windows, and ventilate.

Targeting moneys to pay heating fuel bills alone will not effect the conservation of energy. We do not want to maintain the present situation. We need to change consumption so that families can have lower heating costs.

In summary, the problems of the inner city are not new. We are still trying to deal with jobs, housing, and schools. Energy just provides a different perspective on these same issues. It is my hope that as renewed attention and pressure is placed on the inner city because of energy conservation, that you will listen to the residents living there now for the solutions.

The inner-city neighborhoods have been victims of crises in the past. Policies need to be responsive to the communities they directly affect so that the quality of life does not deteriorate.

It would seem that it is easier for the Government to effect physical changes than attitudes and habits of individuals. Therefore, in neighborhoods such as ours, improvements in transportation systems like implementing light rail transit and improvements in our existing housing stock could substantially help inner-city neighborhoods and complement ongoing rehabilitation and revitalization efforts.

Thank you.

THE PRESIDENT. I've asked the mayor to let me say just a word.

We have three more presentations to make, but there are three themes that run through all these presentations. One is there is no possibility of success without a joint, cooperative effort. One person alone, a President or a mayor, Congress, can't do it. It has to be a joint effort. Secondly, every one of the programs proposed—even the cogeneration plan or the people-mover, the weatherization of homes—is already dependent upon Federal funds as kind of a core basis for a much broader, magnified effort by everyone else. And third, every one of these proposals so far doesn't make life more dismal. It makes life better. It is not a sacrifice to get to work efficiently, not to have traffic jams, to have an easy way to shop, to save heat in your homes, not to throw away heat in the generation of power, and as you well know, every time you don't burn either coal or gas or oil, air pollution goes down.

So, those three things—a cooperative effort, the Federal Government must and is helping and can help more with the windfall profits tax, and third, conservation—makes our life better and not worse. It's a good thing for us to remember, and I know you'll watch this and see if what I've said is true for the last three speakers.

Thank you, Mr. Mayor.

MAYOR LATIMER. Thank you.

The sixth speaker is Greg Haley, who is an architect, has been very active in his community, and, in particular, has been working on community planning in his neighborhood and would like to talk about that aspect of it.

Greg?

COMMUNITY PLANNING

MR. HALEY. *Good evening, Mr. President, Mrs. Carter, ladies and gentlemen:*

I am representing District 12 Community Council. District 12 is one of 17 neighborhood planning areas created to facilitate citizen participation in the city of St. Paul. The council and other neighborhood groups have been working diligently on projects that deal either directly or indirectly with energy concerns. Our plan has been developed over a 3-year period by residents and businessmen. The city will use it and other district plans to help formulate an overall city plan.

The principal element of our plan is to propose the residential and industrial development of the vacant and under-utilized railroad land that bisects our district. New housing would fill a need for university students and provide homes for families who prefer to live and work in the city. Industrial development would help stem the flow of companies to suburban industrial parks, decrease employee commuting time, and provide a centralized distribution point for goods and services.

The University of Minnesota's inner-campus transit system will pass through this redevelopment area, affording transportation to students and staff living in the neighborhood. This under-utilized railroad land and adjacent properties make up Mayor Latimer's proposed energy park. At the very least, the energy park could be a refreshing alternative to urban redevelopment. We hope it can be a stimulating learning tool and a model for other cities to emulate.

Our neighborhood is also pursuing solutions to energy-related problems on a smaller scale. We have volunteer staff in the home improvement centers who will give out information on reinsulating and renovating older homes and how to finance the work. We have formed a local development company composed of businessmen and residents to help small businessmen secure financing for capital im-

provements, including rehabilitating older structures for energy efficiency.

We have also actively pursued a recycling program in District 12. We now have once-a-month curbside pickup, and our goal is to have collection of separated recycling materials in conjunction with our regular weekly refuse pickup. The district planning process in St. Paul has been a highly successful vehicle in shaping the future of the city. Involving citizens in the decisionmaking process has created an impetus which is necessary to renew the vitality of our core city.

We hope District 12 has and will play an important part in the continuing revitalization. Our interests lie in many areas, and we feel that the diversity of our projects are necessary to help deal with the multifaceted energy problem. We especially look forward to working with Federal, State, and local officials on Mayor Latimer's proposed energy park.

Thank you very much.

MAYOR LATIMER. Thank you very much.

SOLAR ENERGY PROJECTS

The next speaker is Russell Doty, who is an attorney and has done considerable research professionally in solar and alternative energy sources and the kinds of ordinance and statutory changes that might be needed to adapt to the new technology.

Mr. Doty?

MR. DOTY. Mr. President, Mrs. Carter, Ramsey County has 30 to 50 solar installations, and from these projects and the 400 to 700 other operating solar systems in Minnesota, we have confirmed that Minnesota's climate is definitely suitable for solar applications. For example, one Twin City solar system was producing 90-degree tapwater on Christmas Day 2 years ago. Many of Minnesota's systems have

been working successfully for more than 2 years, and many of them are warranted for up to 10 years. But people do not yet realize that solar systems work here, and we continue to need massive amounts of money to make solar curriculum guides and resource people available to the educational projects.

The effect of education is dramatic. Your July speech created so much interest that the Minnesota solar dealers who I've talked to who have been on the verge of going broke now believe that they may even be able to make it. But interest alone does not mean that solar soon will be available to everyone who is interested.

Even though we have a low-income solar loan program administered through the Minnesota Housing Finance Agency, and even though we now have a combined Federal-State tax credit that defrays up to 50 percent of the solar systems' costs, most people cannot afford the initial investment, that two to ten thousand dollar, upfront cost of the solar system. Energy utilities finance that upfront cost of powerplants by floating bonds that are amortized over long periods. And they float tax-free bonds for some of that plant. Now, solar energy-generating plants also should be paid for by long-term financing—but financing that allows the people and not the utilities to own their energy-generating systems once the costs are amortized.

Your proposed loan grant and small energy business assistance programs have and will help, but those funding sources won't and don't provide enough money to go around. And under them, the larger established firms likely will continue to ace out smaller applicants who are just as creative. You can help solve that problem—and this is my most important point—by advocating Federal legislation to enable St. Paul and other municipi-

palties to support the issuance of tax-exempt, low-interest-rate industrial revenue bonds.

The bonds will finance on a lease-purchase-type basis the widespread use of individual solar systems. People can then pay for the solar system over long periods of time at Btu rates equal to utility rates, and the money market, not the government's budget, will be the only limit on available funding.

For example, a \$400 million bond issue will provide more than enough money to install solar tapwater heating systems on all of the housing units in St. Paul. Direct heating solar systems can now produce more Btu's per dollar invested than nuclear and coal electric generating systems.

So, continue to challenge us, Mr. President. Give solar the same money market access and fast write-off and other tax advantages that coal and nuclear power-generating utilities enjoy, and we'll insulate and solarize and do everything that we haven't done yet and should do and do our best to see that you never have to find another \$400 million to clean up a plant like Three Mile Island.

Thank you.

MAYOR LATIMER. Mr. President, you probably noticed, although we believe strongly in local control and citizen participation, that the prospect of Federal moneys continues to have some interest to us. Do you get that feeling? [Laughter]

THE PRESIDENT. With the windfall profits tax, we will have that money

MAYOR LATIMER. All right.

Our final and perhaps our briefest speaker—[laughter]. You can tell, Mr. President, that in St. Paul they know the next speaker, and they know that he's not going to be brief, but he promised me he would be. His name is Tod Lefko.

THE PRESIDENT. If I miss my boat, he's going to have to swim with me. [Laughter]

ENERGY PLANNING PROCEDURES

MAYOR LATIMER. Mr. Lefko is important to this city, because he helped to formulate the neighborhood participation process that we have been working under so successfully. He teaches at the university. He has about all of the qualities you could look for, except he can't seem to get elected to office. [Laughter]

MR. LEFKO. Thanks, George.

Mr. President, and fellow citizens, how can we translate public awareness of what can be into public action or what should be? The issue of energy is before us. In St. Paul, the possibility of solutions are enhanced because of our style of decisionmaking. In St. Paul, decisions are approached in a philosophically and pragmatically different manner than many other cities.

We begin with four philosophical bases: first, a belief in local responsibility and application of pragmatic planning. We have a tradition of identifying and facing problems and not waiting for Federal action. Next, if we have a secret, it is that we are process-oriented. We have learned that issues must not be faced as a crisis, and we've developed processes for integrated decisionmaking.

Third, in St. Paul the choice is not between the new and the old. We realize that the future is a balance. There's something just and proper about talking about energy alternatives in this building. And if you want to see what the true and best demonstration of St. Paul is, here it is.

Fourth, we see energy as but a part of a larger system, tied to economic development, housing, integrated planning, education, and movement toward self-

sufficiency. Even seeking self-sufficiency we realize our obligation and interdependence. In fact, Mr. President, we know that Minneapolis has always looked to us for leadership. And we have never failed them. We shall not this time, either.

Mr. President, with these bases, St. Paul has created a number of decision processes which allow us to raise awareness and action levels. These include, first, a decentralized neighborhood planning process which recently received the award as one of the best in the Nation; second, designation by your administration as the test area for the negotiated investment strategy—and a wise decision it was, sir—third, a nationally recognized mixture of foundation grants, private investment, and governmental expenditures for urban renovation; and fourth, a State and regional decision process on energy and land use. Our State department of energy has been viewed as the pioneer in energy planning and data collection.

Mr. President, we've been successful in establishing the processes. Now we must be even more creative in utilizing them. In this view, we are discussing establishment of a model citizen educational process on energy, gardening, housing, economic development, and governmental forms and functions. Next, establishment of an urban extension service tied to our neighborhood planning process is being researched. And third, creation of an expanded participatory planning process on St. Paul, the eighties and beyond, is being explored.

Mr. President, we see a city where for the first time information, education, leadership, systems planning, and investment are being integrated. Here in St. Paul awareness can and shall be translated into action.

Mr. President, look about you. You see a city with faith in itself and the ability to

become even more of a model for what neighborhoods, cities, and our society can, with vision, become.

Thank you.

MAYOR LATIMER. Mr. President, I really appreciate your generosity, and that's what I call it. I might add, by the way, that I broke up my vacation to come back here, too. *[Laughter]* But I've got more little kids than you have, and I couldn't afford to bring them all back with me, and I regret that. But it was very generous for you to do this. I know that.

I do feel very strongly that you have sparked a sense of mission in dealing with the energy issue, because it will affect poor and rich alike. You've also said something else today that I have been preaching and repeating here, and that is that we are at another crossroads. And the energy problem is not merely a problem but also a productive solution, that energy is going to be a job-producing entity, that energy indeed can pull the community together, as you have pointed out.

I think that we can take a very positive approach to the solutions to energy. And I also believe we can do it locally here, as so beautifully pointed out by Mr. Lefko.

I repeat to Mrs. Carter and to Amy and to the President, thank you so very, very much for blessing our city with your own presence and the presence of your family.

THE PRESIDENT. Thank you very much.

I can truthfully say, from the bottom of my heart, this has been an enjoyable and an inspirational meeting.

We live in the greatest nation on Earth, and we are blessed beyond all people. And

still I'm absolutely convinced that what I said that Sunday night in July is accurate, that our Nation is on the verge of a very serious problem. We have tended to lose confidence in ourselves, to lose confidence in one another, to come alienated or even antagonistic toward our own Government, and to fail to recognize the blessings that we have.

God's given us every possible natural and human advantage—freedom where individuality and initiative and innovation can be nourished and used to overcome any challenge, which has always been proven in the past. We've got five times more energy reserves in our country than all the OPEC nations combined.

We're the strongest nation on Earth militarily, the strongest nation on Earth economically, the strongest nation on Earth politically. We're a democracy. Our free enterprise system encourages challenge and competition and dynamism and flexibility to meet any possible obstacles that might stand in the way of American people having a better life. And I want to see the wounds that exist and the discouragement that exists healed, and I want to see the challenges that arise overcome. And I want to see the problems that present themselves solved and the questions answered. And nobody claims—certainly I don't—that all those answers and all those solutions and all those challenges can be met from Washington.

St. Paul has the kind of spirit that can make us all proud of our country. And they can bind us together in a spirit of brotherhood and sisterhood and unity that must be the basis for future progress.

I'm thankful to you. And my visit here has made me even prouder to be the President of the greatest nation on Earth.

Thank you very much.

NOTE: The President spoke at 8:03 p.m. in the lobby of Landmark Center.

Following the energy briefing, the President went to the Lambert Landing in St. Paul, where he boarded the riverboat *Delta Queen* to begin his trip down the Mississippi River.

Labor Dispute in the Grain Industry

*Telegram to Industry and Union Leaders.
August 18, 1979*

It is apparent that the current work stoppage between the American Federation of Grain Millers and the eight grain facilities in Duluth, Minn., and Superior, Wis., is having an increasingly severe impact upon the general economy and public welfare of this geographical area as well as seriously threatening the many thousands of farmers who are now into their annual harvest with no means to ship their grain.

It is my deep concern therefore that every effort be made to bring an immediate end to this dispute.

In this regard, I am directing Wayne L. Horvitz, the national director of the Federal Mediation and Conciliation Service, to become personally involved and to provide whatever assistance he deems necessary.

In this endeavor, a meeting has been scheduled for Tuesday, August 21, 1979, commencing at 2 p.m. at the offices of the Federal Mediation and Conciliation Service in Minneapolis, Minn.

I am confident that you will participate in these meetings recognizing not only your own personal concerns, but also your responsibility to the interests of those being adversely affected by this unfortunate dispute.

This will require a total commitment by you to continue bargaining until an all-out exhaustive effort has brought about an end to this strike.

JIMMY CARTER

NOTE: This is the text of identical telegrams addressed to E. H. Ryan, Peavey Co., Minneapolis, Minn.; Anthony Corvino, Continental Grain Co., New York, N.Y.; Gerald Mattson, International Multifoods, Minneapolis; Felix Ricco, Cargill Co., Wayzata, Minn.; Donald Friborg, General Mills, Minneapolis; Harold Schuler, Con-agra, Omaha, Nebr.; Douglas Larson, Farmers Union GTA, St. Paul, Minn.; Dale Benson, Archer-Daniel-Midlands, Decatur, Ill.; Joseph Devich, American Federation of Grain Millers, Superior, Wis.; Frank Hoesse, American Federation of Grain Millers, Minneapolis; and Mike Miller, American Federation of Grain Millers, Minneapolis. Copies of the telegram were also sent to David Roe, president, Minnesota AFL-CIO, St. Paul; and John Schmitt, president, Wisconsin AFL-CIO, Milwaukee.

The text of the telegram was released at Bloomington, Minn.

Labor Dispute in the Grain Industry

Telegram to the Governors of Minnesota and North Dakota. August 18, 1979

Following our conversations yesterday aboard Air Force One regarding the current work stoppage between the American Federation of Grain Millers and the grain companies in Duluth, Minn., and Superior, Wis., I have today directed the head of the Federal Mediation and Conciliation Service, Wayne L. Horvitz, to become personally involved in these negotiations, and to provide whatever assistance he feels is necessary to help bring about an immediate end to this dispute.

In this effort I have also called upon all parties directly involved to participate in a resumption of negotiations with

Director Horvitz beginning on Tuesday, August 21, in the Minneapolis offices of the Federal Mediation and Conciliation Service.

In addition, I have asked the parties to continue bargaining until an all-out exhaustive effort has ended this strike.

I share your deep concern about this lingering dispute and will appreciate any assistance you may offer, should Director Horvitz call upon you.

JIMMY CARTER

NOTE: This is the text of identical telegrams addressed to Gov. Al Quie of Minnesota and Gov. Arthur A. Link of North Dakota.

The text of the telegram was released at Bloomington, Minn.

Wabasha, Minnesota

*Remarks on Arrival at the City.
August 18, 1979*

THE PRESIDENT. There is no doubt in my mind that all of us enjoy the privilege of living in the greatest country on Earth. We are a nation which has indeed been blessed by God with blessings which exceed those of any other peoples on Earth. We're a nation of freedom. We're a nation of strength, of courage, of vitality. We're a nation which has always been able and eager to meet any challenge, no matter how difficult it might have been, to solve any problem, no matter how complex it might be, or to answer any question which confronts the people of the United States of America.

I'm very proud to be the highest elected official in the greatest country on Earth, and I think what you've done here this morning in Wabasha, Mayor Meisch, and all of you, is a tremendous testimony to what our country can be in the future if we are indeed united.

Sometimes we tend to forget the blessings of freedom and the blessings of living in a democracy, where every human being is important, where each one of us has a right to be different, to live where we choose, to worship as we choose, to have equal opportunity, no matter what language we might speak or how long our family may have been in this country or what color our skin might be or how wealthy our families might be, either. These kinds of differences don't make our Nation weak. They make our Nation stronger.

We have people in our country from almost every race and every nation on Earth. We have ties to all the rest of the world, and when we are faced with a tremendous challenge, like World War I or World War II or the Great Depression—when I was a young man, those challenges were easy to see and easy to understand. We felt that our Nation was threatened and our future was not certain, and with that threat our families were drawn closer together and our communities were drawn closer together, and our Nation enjoyed a high degree of unity, because we knew that our Nation was under a threat. That was when we were strongest, with a mutual commitment, because we knew that each person was important. And we had to have faith in one another, and we had to have faith in the future.

Recently our country has been faced with a series of problems which we couldn't quite understand—the Vietnam war, the Watergate scandals, 10 or 12 years of inflation, and a shortage of energy which has caused us to turn too much to foreign nations for oil. It's made our Nation overly dependent on uncertain supplies of oil from the Middle East and other places, and it's let us realize for the first time in our great country

that we do have limits, and we cannot afford to waste any more, as we have wasted, what God gave us in the past.

This is not a problem that we cannot solve. It's not a question that we cannot answer. It's not an obstacle that we cannot overcome, if we are united. But we must do two things. First of all, we must conserve energy. We must quit wasting energy. And secondly, we must increase the energy that we produce in our own country—solar energy; increased use of coal; more production of oil and gas from our own wells; the production of new kinds of energy; synthetic oil from shale rock, from coal.

These kinds of things are a great challenge to us. But they ought to unite us and not divide us, one from another. It's very important for you to have confidence in your government—in your mayor, your county officials, your State officials, your Federal officials, your President. Regardless of whether you might be Republican or Democrat or Protestant or Catholic or Jewish, that doesn't matter. In a time of stress and trial, that's the time we need to unite with a common effort.

When elections come, vote how you choose, but when our Nation is faced with a problem, every single American must say, "What can I do to make my Nation stronger and greater and more united to face a common challenge?"

There is no doubt in my mind that we can resolve our energy problem and give our Nation security so that no matter what happens in the Middle East, our Nation will not suffer, so that we can be reliant on ourselves. We now have before the Congress proposals that will solve these problems if Congress acts. A wind-fall profits tax will give us money derived from taxing the oil companies, to help poor families pay the increased cost of energy, to give us a way to conserve en-

ergy and to weatherize homes, to make automobiles more efficient, to give us mass transit systems, and to produce synthetic fuels.

We have the means in our hands to solve our national problem, but the most single important thing is for us to have confidence in one another, faith in ourselves, and to be unified in facing the future.

You have really thrilled me this morning and inspired me and, I think, all Americans who will see this on television and read about this in the newspaper and hear this on the radio, to know that the people in Wabasha have come here—a lot more people than live in Wabasha; I don't know where you all came from—[laughter]—to show that you believe in the strength of our country.

How many of you believe that we live in the greatest nation on Earth? [Applause] Very good.

How many of you believe that we can have energy security in the United States of America? [Applause]

This is the most difficult question: How many of you are going to do your part and a little more to save energy and to make sure our Nation is secure in the future? If you'll do your part, would you let me know? [Applause] Very fine.

One other question. How many of you think that even though we live in the greatest nation on Earth now, we're going to all combine our efforts to make it even greater in the future and have the United States of America be an even more wonderful place to live in years to come? How many of you believe that? [Applause] Very good.

Well, you've made me very happy, and I know that Rosalynn would say this is the best birthday party she has ever had. Thank you very much.

MRS. CARTER. I want to thank you,

too, for this wonderful welcome, for all your birthday wishes, and for your prayers. And I want to thank you for the birthday cake, too, with the energy pledges, because as Jimmy has said, every effort helps. And when you save energy, you help not only yourselves and your community, but you help our whole country.

I'm very proud of you and proud to be here today. Thank you very much.

NOTE: The President spoke at approximately 11 a.m. near the docking site of the *Delta Queen*.

Alma, Wisconsin

*Remarks on Arrival at the City.
August 18, 1979*

I hope that you'll all remember what a great country we have, how strong we are, and how much God has blessed us.

We have a serious problem, as you know, right now with inflation that's been with us for 10 or 12 years and with too much dependence on foreign oil, which makes our Nation's security a cause of great concern. There's only two things we can do about it. One is to save energy, conservation, to stop wasting so much energy, and every single person in our Nation can help with that. Figure out in your own driving habits, the way you heat your home, the way you air-condition your home, the way you share automobiles, everything that you do, try to save as much energy as possible. And secondly, we need to increase the amount of energy that we produce in our own country—solar energy, increased use of coal, synthetic fuels, and the other kinds of things that we can do as a great nation.

We have now before the Congress proposals which will give us an opportunity both to save and to produce more in our

own country. It must be financed by the windfall profits tax, a tax on the oil companies so that they won't take the tremendous profits and keep it for themselves, but share it through your government with you so that we can weatherize homes, give us better transit systems, and so forth.

I hope that you will contact your own Members of Congress and ask them to support the windfall profits tax, because out of that tax can come enough money from the oil companies to help poor people, those with low incomes or moderate incomes, to pay for the increased cost of energy, to provide conservation encouragement, and also to produce more fuel for ourselves in our own country.

We've got about 25 percent of the total energy reserves on Earth in our own Nation—all the OPEC countries put together only have less than 5 percent—but we need to use our energy more effectively. So, if you'll help me, I'll help you, and we'll make the greatest nation on Earth even greater in the future.

Will you help me? *[Applause]* Good.

NOTE: The President spoke at 1:55 p.m. at the docking site of the *Delta Queen*.

Minnesota City, Minnesota

*Informal Exchange With Reporters at the Docking Site of the Delta Queen.
August 18, 1979*

Q. Learned anything today? *[Laughter]*
Seriously—

THE PRESIDENT. Well, if I have a chance with the folks on the ship—*[inaudible]*. Well, I've learned that at the first stop with us in Wabasha, and I think it's obvious they are genuinely interested in saving energy and in proving that our country can be unified and that there is

a good harmony among those who have different backgrounds and different interests. I think the turnout here shows a great deal of interest obviously in the office of the Presidency, and I consider it to be a nonpartisan sort of expression of support for the President himself and for this Nation's strength.

Q. Did it seem to you that people were a little bit more upbeat than you might have expected?

THE PRESIDENT. Yeah, they really are. It's been surprising. I thought in St. Paul last night the genuine excitement that they showed in that city in putting together a very far-reaching kind of a complicated approach to the energy question was also inspiring to me. And I think the general tone of the response and the attitude of people toward one another, toward our country is one of great patriotism and strength. I've been very pleased.

Q. Are you getting any rest?

THE PRESIDENT. Enough. This has just been really exciting to me.

Q. One final question. We're standing on the wet bank of the Mississippi here.

THE PRESIDENT. I noticed that. *[Laughter]*

Q. A question someone in the crowd asked, but I didn't hear you answer it. Wouldn't it be fair to call this campaigning?

THE PRESIDENT. Well, I—you know, I want the people to be reminded of the Nation's energy problems and the fact that we can solve those problems. And so, it's a vacation for us. We're enjoying every minute of it, and I think for me to give that message as we go along is very important. So, we're campaigning for a good energy program, but not on a partisan basis. I think the people that come here—I don't know whether they're Democrats or Republicans—they come because I'm President. It's not a partisan

campaign for Democrats or for me. It's a campaign for a stronger country and a comprehensive energy policy.

Q. What do you think of this boat?

THE PRESIDENT. I like it. Don't you?

Q. The boat's leaving.

THE PRESIDENT. I can't believe it. The boat's going to leave me. The boat's leaving. I've got to get on board.

NOTE: The exchange began at approximately 4:30 p.m.

As printed above, the item follows the press release.

Prairie du Chien, Wisconsin

Remarks at a Picnic Sponsored by the Minnesota Mining and Manufacturing Company. August 19, 1979

THE PRESIDENT. Hello, everybody. I'm really proud that all of you came to the picnic that Rosalynn and I and Amy have put on with you, along with 3M Company. We're glad to be your cohosts and also the guests of a very fine example of the free enterprise system of our country.

3M was the first company in our Nation that was given the national award for conserving energy. And I think what they have done is typical of what has been done throughout the State of Wisconsin.

When your former Governor, Pat Lucey, who's now a very distinguished and able Ambassador to Mexico, was in office, he initiated some conservation measures in Wisconsin which have been good as an example for the entire Nation. You as a people in Wisconsin use 20 percent less energy per person than the average throughout our country, in spite of the fact that you rank 12th in industrial production and in spite of the fact that on normal days you have cooler weather than we do in Georgia—but I think today you've equalled the Georgia climate and temperature.

But you haven't done well enough. And neither has anyone in the United States done well enough in saving energy.

Our country has a great challenge before us at this time. There is no conflict between the two things that we must do. One is to conserve energy, to stop waste, and secondly, to produce more energy in our own Nation.

Our Nation's security is threatened because we're too dependent on foreign oil. So, everyone in the United States must do as we have done in the past when our country was in danger or when it was threatened—unite with one another, instead of being divided one from another, and realize that every single American is important, cut back on waste of energy in your driving habits, obey the speed limits, join in the vanpool system that 3M is doing in other parts of the country—will soon be doing here—make sure that you don't waste energy in your home, do everything you can to save precious energy. And secondly, we'll have to use more solar power. We'll have to use more coal from within our own country, and we'll produce more oil and gas and synthetic fuels. If we do those things, there's no doubt in my mind that we can meet this present challenge.

Our country, as you well know, is the greatest nation on Earth. We're the strongest nation politically; we're the strongest nation economically; we're certainly the strongest nation militarily. And we've got something else as well. God has blessed us above all other peoples with natural resources, not only a great river, one of the best avenues for traffic and also freight and also passengers in the whole world—one of the most enjoyable trips, I think, imaginable anywhere—but, of course, we've also been blessed with energy reserves.

In our Nation we've got 25 percent of all the energy reserves in the whole world.

All the OPEC nations in the Mideast put together only have 5 percent. So, God's blessed us with a strong nation and with a nation that has enough natural resources. It's up to us.

And I've come here this afternoon to remind you that sometimes we do get too discouraged. We ought to inventory what we've got. We ought to count our blessings and figure out how you as citizens of our country, how I as the highest elected official in the greatest nation on Earth, State officials, local officials, the Congress can all work together, not separated one from another, not criticizing one another, not looking for scapegoats, but how we can make the greatest nation on Earth even greater in the future. That's what I've pledged to do. If you'll help me, we'll do it together.

Thank you very much. God bless all of you.

MRS. CARTER. And I want to thank you for the wonderful welcome too. I've enjoyed shaking hands with you, some of you two and even three times. And thank you for the birthday wishes too.

We've had a wonderful trip down the river. The countryside is so beautiful, and the people all along the way, you have made it very special for us. We care for every one of you, and we're pleased and proud to be here.

Thank you very much.

NOTE: The President spoke at 2:25 p.m. at the picnic grounds near the plant.

McGregor, Iowa

*Remarks on Arrival at the Town.
August 19, 1979*

We're all delighted that we finally got to Iowa.

This last day and a half, coming down our great Mississippi River on the *Delta*

Queen, has been an inspiration for our family. And we've become convinced anew, the same as I'm sure all of you have, that we live in the greatest nation on Earth. Do you agree with that? [Applause]

Our country has always been blessed by God with every possible advantage that we could desire—military strength, economic strength, political strength; natural resources; basic freedoms; the cherishing of an individual human being; our right to be different; our right to speak our own voice; the right for farmers and business leaders, working people, employers, blacks and whites, those who speak different languages, Protestants, Jews, Catholics, those who have no organized religious belief, in our great country, have a right to be different. But there are times when Americans feel the necessity to put aside differences and to bind ourselves together in the common purpose.

In front of me is a distinguished veteran of the First World War, with two Silver Stars and a Purple Heart, symbols of heroism and a willingness to offer his life, if necessary, for the preservation of our Union. When we have identifiable threats to our country, we always bind ourselves together. Families, communities, local, State, Federal officials, we respect one another and we try to overlook differences. We don't try to find someone to blame for a mistake or for a problem.

These days our country is threatened. But it's a different kind of threat from what we experienced in the First and Second World War, even the Great Depression. Our Nation's security is threatened because we've become too dependent on oil from foreign countries. We must restore our Nation's energy security.

We can do it in two ways. They're not incompatible; they support one another. The first is to save energy, to conserve energy, to stop wasting energy. And every single American can do this and must do

this within our own homes, within our own automobiles, at our own business or workplace, on our farms. And the second thing we can do is to increase the production of energy in our own country—oil, gas, coal, synthetic fuels, and especially solar energy, which we are enjoying today. We have tremendous opportunities for this.

I proposed to the Congress a comprehensive energy policy, long overdue, dependent on the windfall profits tax on the oil companies. It's not right for the oil companies to take enormous profits and keep them for themselves. Through the windfall profits tax, those profits must be shared with all Americans to help us with conservation, solar power, and to become energy independent. I need you to help me with that. Will you do it? [*Applause*] This is a time for unity.

The last thing I want to say to you is that Iowa is blessed especially by God's blessings—rich soil, enormous productivity, a low unemployment rate, the kind of unity of purpose that stands our Nation in good stead. And you're also blessed with one of the finest public servants I have ever known—a man who does a great job for our country, but a man who especially has his roots deep in Iowa and who represents you every day, fighting for your rights, fighting for a better life for Iowans. And I'm especially grateful to be in the hometown of John Culver, the man I'm talking about. You're lucky to have him.

Let me say this in closing. Rosalynn and Amy and I have been inspired by the friendship shown us in this first part of our Mississippi River voyage. We'll be going all the way from St. Paul to St. Louis, meeting literally thousands and thousands and thousands of people along the riverbanks, both when the ship doesn't stop, when we go through locks, and when we have a brief stop like this to visit and shake hands directly.

It's been an inspiration for us; we're grateful for it. If you'll stick with us, stick with each other, have confidence in yourselves, in your neighbors, in your communities, and in our Nation, and revere the opportunities of a free nation and a free government, the truest democracy on Earth, then there's no doubt in my mind that we can make the greatest nation on Earth even greater in the future. That's what I want; that's what we must do together.

Thank you very much.

NOTE: The President spoke at 3:10 p.m. at Triangle Park. Following his remarks, he went to the home of Senator Culver for a private luncheon. He then boarded the *Delta Queen* at Prairie du Chien.

Dubuque, Iowa

Remarks on Arrival at the City.
August 20, 1979

Mayor Wertzburger, Congressman Tauke, our good hosts yesterday, John and Ann Culver:

I wish you could have been with us for lunch. We had enough, I believe, to feed the whole crowd, but there wasn't enough left to feed two people. We had Iowa corn, we had Iowa beef, we had Iowa ham, we had Iowa apple pie, we had some homemade ice cream made out of Iowa milk. And just so I don't use all my time up, I won't tell you about the rest of the menu, but it was just great.

One of the things that has been the best for Rosalynn and me and Amy has been to meet the people who have come out along the banks of the Mississippi to express your friendship toward us personally and your respect for the office of President of the greatest nation on Earth. I'm particularly grateful to John Culver, who saw that we were not originally scheduled to

stop in Dubuque, and I think he talked to Captain Martin on the *Delta Queen*, and the first thing we knew, John Culver said, "I'll meet you in Dubuque."

I have to admit that this Midwest country is just as beautiful as Georgia, and you've got the Mississippi River as a bonus. And it's really been wonderful for us.

Every time we've been through one of the locks, we've had a large crowd of people. Night before last, we got to Lock 8, I believe it was, at 3 o'clock in the morning, and there was a large group of people there to meet us—it was almost an emotional thing. And then yesterday morning at 8 o'clock, we arrived at a lock, and it was pouring down rain. And there were several hundred people there in the rain—I think there were four umbrellas with several hundred folks with little babies and children and very senior citizens who had been waiting there several hours to pay their respects to the President of our country. And I deeply appreciate the friendship you've shown us.

We've got a wonderful country. God's blessed us in every possible way. And I know that the outpouring of friendship that has been exhibited on this trip is a true indication of your respect and your thanks for the many blessings that God's given us in the United States of America. He's given us great productive land. The number one farming State in the country, as you know, is Iowa. If anyone disagrees with that, speak up. [Laughter] If you agree with it, speak up. [Applause] I believe you have the highest percentage of productive land in the whole country. And I'm very grateful to be here with you.

I want to say two things. One is that we have a very serious problem. And the second thing I'm going to say is that we have the ability to overcome it.

The problem is with energy. Our coun-

try is too dependent on uncertain foreign oil. We've now got to the point where we are importing one-half of all the oil we use. And you've seen, back in 1973 and '74, what happened to our country when that supply was interrupted from just a few countries. And you've seen this year, when the prices have gone up 60 percent in 6 months, what can be done with prices over which we have no control. We are importing inflation and we are importing unemployment every time we import foreign oil. My preference is, instead of importing a barrel of foreign oil, is to produce a barrel of gasohol in Iowa. I believe that's a better approach to our energy problem.

We've already taken action since I've been in office, with the help of the Congress, of course, to cut our dependence on foreign oil by 4 million barrels every day. We've now proposed to the Congress a way to cut another 4½ million barrels a day by 1990. But the whole process depends upon the passage of a windfall profits tax on the oil companies. The choice is whether the oil companies keep the enormous profits that come from increasing prices of oil, or whether a part of those profits shall be taken through a windfall profits tax and distributed among the people of our Nation to conserve energy, to cut out waste, to save energy, to produce other forms of energy like gasohol, solar power, and so forth. This is the important task that we have.

Every one of you can help—in your habits, driving to and from work, whether you share your automobile with others, whether you walk sometimes instead of ride, how you handle the use of heat in your homes—there are hundreds of things, literally, that you can do to cut down on the waste of oil. And I need your help and your support with the Congress to pass the windfall profits tax and give us a chance to protect our Nation's security.

So, that's one message I want to give to you. We must have a secure nation by cutting down on waste and producing more American energy.

And the second thing I want to say is that our country is strong enough to accomplish this task. Down through history—and you're part of history, right here in Dubuque—every time our Nation has had a serious problem or a challenge, we have been strong enough and united enough to meet that challenge, to overcome that problem, to answer that question. But almost always in the past, we've been able to identify the problem, like in the First World War, we knew our Nation was in danger, the Second World War, the Great Depression. And recognizing the danger to our country, we bound ourselves together. Our families became stronger, our communities became stronger, we had respect for and we supported our local officials, our State officials, our Federal officials. We didn't let a chasm open up between ourselves and the Federal Government. We felt that it was our government, and we cherished it. If we didn't like something it did, we changed it at election time, but between elections we gave it our support and our respect.

Now with the energy shortage and 12 years of inflation, Americans have tended to get discouraged. We've kind of lost confidence in ourselves and lost confidence in one another. We've tended to become divided; we've got too many special interest groups grasping for some advantage. Now's the time for us to unite again and face this serious energy problem, which directly threatens our Nation's security, together, in an unselfish attitude.

There is no doubt in my mind that we can do it, and if you will help me, I will

help you to make the greatest nation on Earth even greater in the future.

And now I'd like to come out and shake hands with as many of you as I can reach. And I thank you for coming out to meet us.

BYSTANDER. Jimmy, I've been waiting since 5 o'clock!

THE PRESIDENT. I'll be right there.

NOTE: The President spoke at 9:25 a.m. at the docking site of the *Delta Queen*.

Women's Equality Day, 1979

Proclamation 4674. August 20, 1979

*By the President of the United States
of America*

A Proclamation

On August 26, 1920, fifty-nine years ago, the 19th Amendment became a part of the United States Constitution, guaranteeing women the right to vote.

As we celebrate the anniversary of that victory for all Americans, we applaud the courage of the women and men who struggled for generations to achieve it. But the 19th Amendment was only one step on the long journey toward full equality for women.

Through persistent and dedicated effort, women have made great strides toward achieving that equality in recent years. But the need for the Equal Rights Amendment is still compelling. Today, I reiterate my continued commitment to make the ERA a part of our Constitution.

The ERA does not legislate that men and women are the same. It simply says that the law cannot penalize women because they are female. Nor does the ERA impose new, unwanted roles on women.

Rather, it safeguards their opportunity to develop their full potential in the directions they choose. As women are freed from arbitrary barriers and stereotypes, men are liberated as well.

When passed, the ERA will provide a single, clear, comprehensive standard against which discrimination can be measured. Legal equality for women must be made a part of the Constitution.

The ERA is not a recent idea. It was first introduced in Congress in 1923. After lengthy and careful debate, Congress submitted it to the States for ratification on March 22, 1972. Now all but three of the necessary thirty-eight states have ratified it. The deadline is June 30, 1982.

The ratification of the ERA may be the single most important step in assuring American women their full equality. Gaining ratification in the remaining states will not be easy—but it will mean our country can tap the full resources and abilities of all its citizens.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim August 26, 1979, as Women's Equality Day and do hereby urge all Americans to work to guarantee full equality for women before the 1982 deadline.

I hope that, as a part of future celebrations for Women's Equality Day, we can celebrate the passage of the 19th Amendment and the passage of the Equal Rights Amendment.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Fifteenth Anniversary of the Signing of the Economic Opportunity Act

Proclamation 4675. August 20, 1979

*By the President of the United States
of America*

A Proclamation

On August 20, 1964, our Nation embarked upon its most altruistic enterprise since the Marshall Plan. President Lyndon B. Johnson signed into law an Act "to mobilize the human and financial resources of the Nation to combat poverty in the United States."

The ideal envisioned in the Economic Opportunity Act of 1964 was a Nation in which "every individual has the opportunity to contribute to the full extent of his capabilities and to participate in the workings of our society."

The proud litany of bold innovations which this legislation introduced into the Nation's vocabulary included Community Action, Head Start, Job Corps, Legal Services, VISTA, New Careers, Foster Grandparents, Upward Bound, Follow Through, Emergency Food and Medical Services, and Senior Opportunities and Services.

The experimental concepts tested in these many programs have long since left the laboratory. Along the way, we have made some important discoveries—about poverty, about ourselves and about our country. We have learned from these programs that poverty is not an isolated problem that can be overcome without changes in the larger economy. We have learned that the poor of America are by no means alone in their deep-seated desire for institutional change; in their de-

sire for government responsiveness at all levels; in their desire for opportunities for genuine participation as members of our society. We have discovered along the way that poor and non-poor alike long for a sense of community, a share in decision-making, a feeling that the individual can be heard—in the councils of government, in corporate meetings, and in the marketplace.

All Americans should have learned in these 15 tumultuous years that changing circumstances may place any one of us in the path of common enemies: obsolete skills in an age of technological revolution; the danger of disability through injury or disease in a hazardous environment; mutual vulnerability to shrinking energy, housing, and food resources. All of us have learned that our country cannot afford to allow differences—in income, in social status, in geography, in age, in intellect or health, in color, accent, or religion—to divide and polarize us.

This generation has learned also that poverty is not a question of income alone—we can be energy-poor, even though wealthy as a Nation; we can be spiritually impoverished, even when we are materially satiated.

Let us take this occasion, then, to rededicate ourselves and our country to the ideals of the Economic Opportunity Act with a renewed commitment to our Nation's goal of securing the opportunity for every individual to "attain the skills, knowledge, and motivations . . . to become fully self-sufficient."

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim and designate the next 12 months as a year of rekindled effort to open to everyone in our land "the opportunity to live in decency and dignity."

IN WITNESS WHEREOF, I have hereun-

to set my hand this twentieth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America, the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register, 4:48 p.m., August 20, 1979]

Davenport, Iowa

Remarks on Arrival at the City.

August 21, 1979

Good morning, everybody. Good morning. Did you enjoy the music? Doc Hathaway, wasn't he great? We're really excited coming back to Davenport, and thank all of you for coming out to welcome us.

This last 3 days have been very exciting for me and for Amy and for Rosalynn—to see the beautiful Midwest, to enjoy the Mississippi, and above all, to see the wonderful people that have made us feel so welcome. Thank you very much. God bless you.

We believe that we live in the greatest country on Earth. Do you agree with that? *[Applause]* Our Nation is so strong and so good to all of us. And, as you know, God's blessed us with personal freedom, a chance to live in a democracy where we can choose our own government, solve our own problems, meet our own challenges, answer our own questions, if we as Americans can be unified, can see a common problem and work together to solve it.

We do have one serious common problem—and I'm going to talk to you about that on the telephone this morning in just a few minutes. But I think that with this tremendous crowd, I would like to say that we can solve our energy problem if we work together. It's serious enough to challenge our Nation's security. And shortly

before I left Washington, I took the last action that's available to me as President by decontrolling the price of heavy oil, very heavy oil. This will add about 500,000 barrels of oil to our Nation's supply in the future without having an adverse impact on inflation.

Now the other action that can be taken by our Government must be taken by Congress. And I want all of you to help me convince the Congress—I might say John Culver is already convinced, and he's helping me—that we need to put a windfall profits tax on the oil companies. This must be done.

The choice is, do we let the oil companies keep enormous profits or do we tax them and use that money to conserve energy, to shift towards solar power, to have more gasohol made in Iowa, and to have a nation strong and free and independent of dependence on OPEC prices and OPEC oil. Will you help me with the Congress to have an independent nation? [Applause] Right on.

We will soon have a very fine energy experiment work—that I'll describe to you on the radio this morning—that will let our entire Nation have advice on all 50 States about how we can conserve energy. We've tried it out now for 2 years in 10 different States throughout the country. It has worked very well. And we'll have several hundred thousands of dollars available in Iowa, beginning next year, to help us plan in every local community like Davenport how we can conserve energy, eliminate waste, and make sure our Nation is better able to meet this challenge. This is a very important program that in the long run will not cost anything—it will save much more than it costs.

So, I hope all of you will work with me and the Congress to make the greatest nation on Earth even greater in the future. I'm very glad to be back in Davenport.

You were wonderful to me a couple of years ago, and as President, you've been even nicer to me. And I believe that all of us working together can make sure that our Nation stays strong, stays happy, stays united, and that we will have indeed in the rest of our lives and for our children the greatest and the strongest nation on Earth.

Thank you very much. God bless all of you.

We'll be on the radio at 9:30. Listen in, call if you can. We'll see you later.

NOTE: The President spoke at 9:10 a.m. at the Lake Davenport Sailing Club dock.

Davenport, Iowa

Remarks During a Radio Call-Out Program on KSTT/WXLP Stations. August 21, 1979

MR. JACKSON. Good morning. I'm H. L. Jackson, news director of KSTT and WXLP. Good morning, Mr. President, and welcome to the studios and the Quad Cities.

THE PRESIDENT. Good morning.

It's really a great occasion for me to be back here in the Quad City area. I've been here several times before, but I have to say that this is the biggest and most enthusiastic crowd I've ever seen around Davenport and Moline.

This is a fine opportunity also for me as President this morning to get questions from the listeners in this Quad City area, and I'm looking forward to trying to explain as best I can what our Nation is doing now and what we can do in the future with the help of all Americans to remove this threat to our Nation's energy security. So, I think this will be a good session for me to express my views, and I'm looking forward to the questions very, very much.

MR. JACKSON. Very good. Mr. President, many people have sent in postcards, wanting an opportunity to talk with you this morning.

During the next 45 minutes, we will get as many calls in as possible. All calls have been preplaced. A reminder to those who will be talking with the President: Be sure all the radios in the vicinity of your telephone are off while you're on the phone with the President. We're using a tape delay system that may tend to be confusing to you.

Now, in order to get as many people on the air as possible we will go straight to the telephones.

Mr. President, the first caller is Mr. Carl Ferrell of Rock Island, Illinois.

MR. FERRELL. This is him. Mr. President, how are you today?

THE PRESIDENT. Just fine, Carl. It's good to hear from you.

MR. FERRELL. Well, it's good to talk to you.

NATIONAL MORALE

I just want to say I think you're doing a pretty good job, and I think it's time—energy is a problem, of course, but I think a bigger problem is the morale of the American people. I think what they should be doing is concentrating and channeling their energies to conserving energy and working with the government, rather than spending all their time working against it.

THE PRESIDENT. Carl, that's a very wise analysis. The main question that we face now is how our Nation can be unified in the face of this energy threat.

In the past, in the history of our country, when we've had a serious challenge like this, it's been easy for us to see it and to recognize it, like in the First World War, the Second World War, or even the Great Depression. But with this energy threat to our basic national security,

caused by our excessive dependence on foreign oil, it's hard for the average American to see it or to understand it.

We import, as you know, about half all of our oil, and there are two things we can do about it: One is to save energy, to eliminate waste, to conserve all we can, and every American can help there. And the other one is to increase American production of energy. Oil, gas, coal, geothermal—gasohol obviously would be very important to Iowa and to Illinois—and the increasing use of solar power.

These are the basic things that must be done, but you're absolutely right that people must be determined to do it. They must be unselfish, and they must work closely with local, State, and Federal Government officials and with each other.

MR. FERRELL. Well, we've got a great nation, and the American people is a large family, and that's what they've got to realize. We have to work together to survive.

THE PRESIDENT. That's a very good statement. I agree completely with you. Thank you, Carl, very much.

MR. FERRELL. Okay. I'll let you go. I know you've got a lot of people to talk to you, okay?

THE PRESIDENT. Thank you.

MR. FERRELL. Okay. Have a good trip. Bye now.

THE PRESIDENT. Goodby.

MR. JACKSON. The next caller is Debbie Brown of Davenport. Debbie?

MS. BROWN. Yes?

THE PRESIDENT. Go ahead, Debbie.

MS. BROWN. Oh, hi. Who is this?

THE PRESIDENT. I think you're Debbie Brown.

MS. BROWN. I am.

THE PRESIDENT. My name is Jimmy Carter.

MS. BROWN. Hi.

THE PRESIDENT. Do you have a question, Debbie?

DAVENPORT

MS. BROWN. Yeah. One, I'd like to know how you like Davenport.

THE PRESIDENT. Well, Davenport is just one of my favorite places. When I was campaigning for President, I came into the Davenport Airport, and I remember we only had about 15 or 20 people there to meet me.

This morning, we had thousands of people here to meet me as President. And I've always found, whether there was a small group or a large one, that the people in Davenport are very enthusiastic and very friendly and very patriotic.

One of the most important things, though, is that Davenport seems to be a very unified community. You've never been afraid to face difficulties. And I think that you're living in one of the most productive areas of the entire world as far as farmland is concerned, has given you a sense that you contribute to a worldwide, beneficial life for other people. So, there's an unselfishness here and a friendship here and a spirit of unity here in Davenport and a spirit of patriotism that makes your community really a good place to live.

And I might say that you've got the Mississippi River as a bonus. So, you couldn't have it better.

MS. BROWN. That's Davenport.

THE PRESIDENT. Thank you, Debbie.

MS. BROWN. You're welcome.

MR. JACKSON. The next caller is Mark Larson in Milan, Illinois.

MILITARY PAY INCREASE

MR. LARSON. Hello.

THE PRESIDENT. Good morning, Mark. Go ahead.

MR. LARSON. Thank you, sir.

My question has to do with a subject that's a little off from the energy problem,

although I am behind your proposals and I hope Congress gets behind you as quickly as the Quad City people have.

I'm on leave from the military right now. I'm in the Navy, sir, like you were. And before I left I heard that the military was going to get a 5.5-percent pay raise. Is this true, sir?

THE PRESIDENT. Yes, that's true, Mark. We will have a 5.5-percent pay raise for the military. It's a little bit less than the inflation rate, but I think it's enough to get us by. And we hope that in a very short time, we'll be able to turn this 10- or 12-year inflation rate around and let us have a more stable cost of living.

As you know, when we import too much oil we also import unemployment and we also import inflation. So, the economic situation in our country is very closely tied in with the energy situation. One of the best things about our Nation is, however, that we have such tremendous productivity in our farming areas. We now are exporting more farm products overseas than we ever have before in history. In 1978 we also set a world record, and in 1977 we also set a record. So, each year we're exporting more farm products, which helps us control inflation, and of course, dealing with the energy question will help it as well.

But the pay increase for the military will be as you described, and I think this is certainly well deserved by all of you who serve in the Navy and the other branches of the Armed Forces.

MR. LARSON. Well, we're behind you, sir.

THE PRESIDENT. Thank you, Mark. That means a lot to me.

MR. LARSON. Well, thank you, sir. Have a good day.

MR. JACKSON. The next caller is Chris Swanson from Tipton, Iowa. Chris, go ahead.

DECONTROL OF OIL PRICES; NUCLEAR
POWER

MR. SWANSON. Good morning, Mr. President.

THE PRESIDENT. Good morning, Chris.

MR. SWANSON. How are you this morning?

THE PRESIDENT. I'm just great. Good to hear from you. Do you have a question or a comment?

MR. SWANSON. Yes, kind of a mixture of a comment and a question. My comment is on, I think that oil and natural gas should be decontrolled immediately, all oil and natural gas. And the reason I say this—even though it might be inflationary and maybe even cause a recession immediately—wouldn't it be better to get the transfer of American dollars from the Arab countries back towards the United States? And this flow of dollars, wouldn't it offset recession by increasing jobs and reducing unemployment and plowing \$40 billion back into our economy?

THE PRESIDENT. Well, obviously the increase in American production is a very good approach, but I think an immediate decontrol of oil and natural gas would not be well-advised.

The Congress has passed legislation that would let natural gas prices be decontrolled over a fairly long period of time, 7 or 8 years. And as a result of that legislation, we've already had a tremendous increase in both the amount of natural gas produced in the United States and also the amount that's transported outside the oil-producing States to States like Georgia, Iowa, and the others further north.

So, I think that the gradual decontrol of natural gas and oil is a better approach. The main thing is to let the oil companies and the American people know that it

will be done in a carefully planned fashion.

We have other forms of energy also to increase. I've mentioned gasohol already, synthetic fuels. We need to increase the use of coal, and we can make it clean-burning. And in addition to that, of course, a much heavier dependence in the future on solar power.

I hope that by 1990—well, by the year 2000, we'll have 20 percent of all the energy being consumed in our Nation coming directly from solar power.

MR. SWANSON. You're not ignoring nuclear, are you?

THE PRESIDENT. No. We have a place for nuclear power. As you know, we now have a study going on with the Three Mile Island incident. That report should be to me in the next few days, and then I will assess, as President, what we can do to make the existing nuclear plants and those being designed be safer and better operated and, obviously, better designed as well.

I might say that the whole range of energy supplies is important, but the most important facet is to conserve energy, not to waste it. I think the consumption of increasing quantities of energy in our country is not good for us, but whatever we do consume we want as much as possible to be from our own Nation.

MR. SWANSON. That's a good idea.

MR. JACKSON. The next caller is Clark Scott from Moline, Illinois. Good morning, Clark.

MR. SCOTT. Hello.

THE PRESIDENT. Clark, go ahead.

NUCLEAR WASTE DISPOSAL

MR. SCOTT. I didn't really have a question for you as much as I'd like to voice my opinion on something.

THE PRESIDENT. Fine.

MR. SCOTT. I think what really made this country great are the natural resources that were here when it was settled, and that my major concern about the future is our, what I think, our abuse of the country by dumping toxic wastes. And my major concern is the dumping of nuclear wastes, and I read the other day that you were thinking about importing nuclear wastes from foreign countries to be dumped here.

THE PRESIDENT. No. I'm not thinking about that at all. We are thinking about presenting to the Congress for the first time in 35 years a proposal on how we can more safely dispose of nuclear wastes.

I know there have been some rumors around here that toxic or nuclear wastes were being brought into Rock Island, for instance, to the arsenal. That's not true. The toxic wastes that are produced on Rock Island have been handled very carefully. And we've had a reassessment made of that situation recently, and they are being taken care of properly and taken off the island for proper disposition.

But we do not intend to import nuclear or toxic wastes from foreign countries. We're trying to make sure that when we dispose of those produced in our own country, that it's done safely and wisely.

MR. SCOTT. Well, I don't see how that can be done, though, because how long do they last?

THE PRESIDENT. Well, we've been producing nuclear wastes now for 35 or 40 years, ever since we've had nuclear powerplants. They last, as far as radioactivity is concerned, for thousands of years. The problem is to try to dispose of them so that they won't have an adverse impact on our environment in the future.

And as you know, toxic wastes or toxic materials and also nuclear materials exist in very large quantities in a natural state in the ores from which uranium is de-

rived, and also from which radium and other radioactivity is derived.

So, we're trying to straighten out a toxic waste and a nuclear waste mess that I inherited 2½ years ago. We have proposed to the Congress new legislation that requires that the manufacturers of any toxic materials would have to pay a small amount of money into a reserve fund, like an insurance fund, and after those toxic wastes are used, then that fund would be tapped to dispose of the toxic wastes properly. And if a mistake was made in their disposition in the future, that any damage that was done to an American or to a community would be paid for out of the insurance fund that would be accumulated from the toxic wastes manufacturers.

As you know, many toxic materials have to be used in our country for herbicides, insecticides, and other reasons, and we want to make sure that when they are finally disposed of, that nobody gets hurt because they are disposed of wisely, and if any damage takes place, then the damages can be paid for by those who manufacture the toxic wastes in the beginning.

MR. JACKSON. Mr. President, we have Jaye Zessar of Rock Island on the line.

MR. ZESSAR. Good morning, President Carter.

THE PRESIDENT. Good morning, Jaye.

GOALS FOR THE NATION

MR. ZESSAR. My family and I want to welcome you and your family to the Quad City area. We realize that all of you are making great sacrifices in order for you to serve as President of our country, and we appreciate your efforts and dedication and wish you success with all the issues you must deal with for the sake of our country and the world's future.

My question is, if you were granted the power to independently do three things to improve the country or the world, what three things would you consider the most important to do?

THE PRESIDENT. Okay. Let me say first of all that it's not a sacrifice to serve as President. It's gratifying and it's a great honor for me, obviously. And the support that I've had from the American people since I've been in office has made the job not a burden, but an enjoyable experience for me. It's the greatest nation on Earth, and to occupy the highest elective office in the greatest nation on Earth is really a wonderful position for me to hold.

I think the first requirement, Jaye, for any President is to guarantee the security of our Nation, and I have done what I could and will continue to make sure that our Nation's defenses are adequate to discourage any possible threat to our Nation's safety or its existence. That's the number one consideration that any President must face.

Secondly, I would like to go out of office with the same record that I've got now, that is, that no American citizen in combat would ever be endangered or lose their lives. It's been a long time since this happened, that a President could serve an entire term or a time in the White House without having any service men or women have to endanger their lives in combat. So, the peace for our own Nation is also as important as protecting its own security, to avoid war.

And the third thing, of course, I'd like to have is peace in other parts of the world. This obviously goes along with our own. And I'd like to see our country have its spirit revived. We don't need to deplore what we have now, but there is a sense in our country of disunity and kind of a loss of confidence, that I described in my Sunday evening speech.

We ought to remember as Americans—and part of my responsibility as President is to remind people—that our country is the greatest on Earth. We're the strongest country in the world—militarily, economically, politically. God's given us almost unbelievable blessings as far as natural resources are concerned.

In a democracy like ours we have freedom, the right to speak as we choose, to select our own officials, to be an individual, to be different, to meet challenges using the initiative and the innovation that comes from a free enterprise system.

So, I would say that to defend our country, to have American and world peace, and to restore and to enhance the spirit of both confidence and self-sacrifice and patriotism, those are the three things that I believe are very important.

MR. ZESSAR. I think those are three very good things, and I agree with you that this is the greatest country in the world. I think that all Americans should remember that. And it's been a privilege for me to speak with the President of the United States. Thank you.

MR. JACKSON. The next caller is Leon King in Burlington, Iowa. Mr. King?

THE PRESIDENT. Leon, go ahead.

MR. KING. Good morning, Mr. President.

THE PRESIDENT. Good morning to you.

INFLATION

MR. KING My question is, I wondered, I had some property acquired through urban renewal, and I was wondering what your plans are for lower income people as far as upgrading their standards. I know I've had an awful lot of problems with it, because of the reason that the law was made in 1972, I believe. And at that time, the price of living was lower than what it is now. And they haven't up-

graded the law. So therefore, when my property was acquired, I was forced into an economic situation that I was not prepared for. And I wondered if you have any feelings along these lines or thoughts in the future.

THE PRESIDENT. Yes, Leon.

MR. KING. I can't get it across like I'd like to, Mr. President, but I sure would like to spend some time with you. I have a lot I'd like to tell you.

THE PRESIDENT. Well, as you know, we'll be in Burlington later on this week, and I'll have a townhall meeting there and be able to answer some questions for a large audience in public, and perhaps I will have a chance to see you there.

MR. KING. I sure hope so.

THE PRESIDENT. We have had this problem with inflation now for 10 or 12 years. And I think most of the programs that we've got for very poor people or for retired people through social security have had a compensation built in so that as inflation goes up rapidly, the payments for the very poor, for medical programs, and for the elderly have gone up as well.

Another thing that should be remembered about inflation, which is almost all bad, is that if you did buy property in the past and now are paying for it, then the value of your property has gone up since you bought it. And in general, the interest rates several years ago when you may have bought your property are perhaps lower than the interest rates are now.

The government, including the President, must be constantly aware of ways to meet new problems. One of the new problems is the unexpected increase in the inflation rate brought about by the OPEC oil nations increasing the price of oil more than 50 percent in the last 6 months.

With the windfall profits tax that we're

trying to get the Congress to pass to put on the oil companies, we will have a reserve fund adequate to make the low- and middle-income families' pressures from increased oil prices easier to bear.

We'll also have money derived from the oil company profits to have a better transportation system in our country. And the third thing, of course, is to produce more energy for our people and also to let us conserve energy by more efficient automobiles, weatherization of homes, and so forth, so that the poor family won't be wasting heat, but on the other hand, saving it.

A lot of people don't understand how this would work. And so, 2 years ago, just after I became President, we initiated an Energy Extension Service similar to the Home Demonstration Agent in every county, and the Agricultural Extension Agent. This is an Energy Extension Service. We tried it out for 2 years in 10 different States around the country. And early in 1980, this program will be instituted in all the States in the country.¹

¹ On the same day, the White House released the following information at Davenport.

The President today announced a nationwide Energy Extension Service (EES) program that will provide Federal grants to 57 States and territories to help families, owners of small businesses, and local government officials take practical steps to save energy and switch to renewable energy sources.

The program would be administered under the Assistant Secretary for Conservation and Solar Applications in the Department of Energy.

Funding for the program includes \$27.7 million in grant funds and \$2 million for administrative costs, subject to final congressional approval.

State energy offices are encouraged to immediately begin the 180-day planning process. All States are expected to have their EES program operating by early 1980.

As a result of a highly successful 2-year pilot program in 10 States, the EES is being ex-
(Continued)

There will be an adequate amount of money allotted to each State. I think Illinois will get about \$430,000—Illinois will get about \$930,000, Iowa about \$430,000. It's based on population. And out of this money will come advice for you and for other families on how you can save more energy and meet this increased financial burden if it's not handled wisely.

So, in many ways we're trying to make the burden on the poor families easier in spite of inflation. And I hope that at the end of this year, we'll see the inflation rate turning around and start down again. I believe we'll see that happen, Leon.

Thank you very much.

MR. KING. Thank you, Mr. President.

(Continued)

panded to all 57 States and territories and will provide a Federal/State partnership to give personalized information and assistance on energy conservation to small-scale users of energy.

The 2-year EES demonstration began under the National Energy Extension Service Act of 1977. The 10 demonstration States—Alabama, Connecticut, Michigan, New Mexico, Pennsylvania, Tennessee, Texas, Washington, Wisconsin, and Wyoming—each received \$1.5 million. The other 47 States and territories received \$45,000 each to follow and learn from the demonstration.

As a result of the demonstration program many recipients have made and are planning to make more energy conservation improvements than people who were not contacted. The EES program is cost effective, because the value of the energy saved exceeds the participants' investment and the Federal costs of the program. Under the EES grant program each State decides which small-scale energy users need the most information and assistance on energy conservation, what types of services they need, and what institutions in the State can best deliver those services.

Each State plan will be designed and implemented by the State. Those interested in participating in their State Energy Extension Service program should contact the State energy office for details.

MR. JACKSON. The next caller is Nita Eagle Frink.

MS. FRINK. Yes, this is she.

THE PRESIDENT. Do you have a question, Nita?

MS. FRINK. Hi. Good morning. How are you?

THE PRESIDENT. Good morning to you. Where you from?

MS. FRINK. And I'm from Rock Island. I just saw you down at the dock, and it was wonderful.

THE PRESIDENT. That was a very large crowd and a very excited crowd.

EQUAL RIGHTS AMENDMENT

MS. FRINK. Oh, we were, really, believe me. I do want to tell you that all of us who want the equal rights for all appreciate the fact that you have always supported the equal rights amendment. And my question is, what do you intend to do to ensure ratification of the ERA before 1982?

THE PRESIDENT. We have been working on that; not only myself but my wife and my oldest son's wife works almost full time at it. We've called the members of the legislatures in the States where equal rights has not yet passed, and we very eagerly hope that it will become part of our Constitution. We've also tried to correct some of the very misleading statements that have been made against equal rights for women by those who oppose it. This is obviously a subject of intense debate.

We are now on the border between a State that has ratified equal rights—that is, Iowa—and a State that has not yet ratified the equal rights amendment, that is Illinois. We hope it will be passed, and I think questions like yours and maybe answers like mine show people that we have established equal rights for almost

every other citizen in the Nation—not yet for women. And there's no doubt in my mind that the women deserve this protection under our Constitution.

Ms. FRINK. Thank you, Mr. President. We've worked very hard, and we'll continue to do so. I hope you do, too.

Mr. JACKSON. The next caller is Cindy Wolf in Davenport.

THE PRESIDENT. Cindy, good morning. Go ahead.

ENERGY CONSERVATION

Ms. WOLF. Good morning, Mr. President.

I'd like to change the focus a little bit. We're talking mostly about what happens on a very large scale, and I know that's what you're concerned with. But I'm just a little person, and OPEC to me is simply a four-letter word that we talk about at the dinner table, and that's all. I need to know something that I can do very specifically. When we talk about the economy having trouble, that will affect me. But I think we will be in more trouble, the generation of today will be in more trouble, because we can't do the things that our heritage has given us because we've let it slip through our fingers.

THE PRESIDENT. Okay. I think that's a very good approach, and it's always good for us to get down to practicalities.

I think the first thing that an American citizen could do, Cindy, in one's own life and within one's own family and within one's own community is to count our blessings and to say something good about our country and, in between elections, to try to support our government officials at the local, State, and Federal level. The sense of unity and a common purpose is often missing in a nation. We have blessings in our own standard of living, the quality of our lives, that are as high or higher than

any other nation on Earth. Also when a country has a problem like we have now with energy, each family should decide what it can do and each person what he or she can do.

There are many things that I can do and you can do to save energy, first of all, I think, in our driving habits. I like to walk and in fact I run every day for exercise. We can ride bikes. We can eliminate excessive trips. We can always obey the speed limit. We can share our automobiles or perhaps small vans with neighbors going to shop or going to work every day. We can try to set aside one day in the week where we don't drive at all.

There are hundreds of things that can be done around a home to make sure that a house is efficient, to eliminate the waste of heat in the winter and to eliminate the waste of air-conditioning in the summer. These things can be not only effective in helping our country, but they can be an enjoyable experience and also save us a lot of money, help to overcome the impact of inflation.

One of the great things that we can do is to increase the productivity of our farms and factories. Each American worker, whether you're on a tractor or whether you're manufacturing a product to be sold, can do just a little bit better job during the day to have the productivity of our own lives higher.

And I think the last thing, to try to abbreviate an answer that could go on for several hours—

Ms. WOLF. Right.

THE PRESIDENT. — is to have a renewed sense of the history of our country. Morality, ethics, the standards of our own lives, deeper commitment to our religious beliefs—these kinds of things also are very important. So, you could inventory your own life, realize it's different from everyone else's, and use your own

initiative instead of waiting for a public official, even a President, to tell you or others what must be done.

Presidents learn more from people than people learn from Presidents.

MS. WOLF. As mothers do from children.

THE PRESIDENT. Absolutely. So, we're all in it together. We've got a great country. We can make it even greater.

MS. WOLF. That's true. And I feel like I am part of the greatest country in the world. But it's gotten its greatness from my ancestors, from my very recent ancestors, because we're a young country. And I want to be part of that greatness; I want my grandchildren to say we live in the greatest country on Earth. And we waste so much. I think that's more of a problem, one of the basic problems, rather than more specific things like energy, although that is a big problem.

THE PRESIDENT. Amen. Thank you very much.

MS. WOLF. Thank you, Mr. President.

MR. JACKSON. The next caller, Mr. President, is Mrs. Owen Gardner, and she lives in Davenport, Iowa.

THE PRESIDENT. Luella, go ahead.

MRS. GARDNER. Good morning, sir. How are you?

THE PRESIDENT. Just fine.

FOREIGN IMPORTS

Q. So nice to have you in Davenport, and we want you to know that we think you're doing a good job.

I want to get a different kind of a question in this time. We want to know if there are any new laws in—import laws—in progress that will curb so many foreign items coming in.

You know, you can't go to the store and buy American-made sweaters or shoes or TV's or cars or anything, and

we'd like to go back to buying American again. Is that going to be possible?

THE PRESIDENT. Yes, of course, it is. One of the things that the Congress has just done is to pass a Multilateral Trade Negotiation bill which helps to reduce the obstacles to international trade, and it makes the competition more efficient.

We have—just take automobiles, for instance. Your first name is Luella, is it not?

MRS. GARDNER. Right.

THE PRESIDENT. Just take automobiles, for instance, since you mentioned that. We have tried in the years gone by—before I became President, of course—to encourage American automobile producers to make cars that were more efficient, smaller, lighter, safer, and also that had cleaner exhausts.

Some of the foreign nations got ahead of us, because American customers demanded the large and very expensive, very heavy, inefficient automobiles. It was a matter of customer demand, not something that was decided for us by the automobile manufacturers.

This was when oil was selling for \$2 or \$2.50 a barrel. Now it's almost 10 times that high. There's a rapid transformation taking place in the automobile production industry of our country, to make automobiles not only more efficient but also safer and almost equally as convenient.

So, I think that the rapid change in the buying habits of Americans to accommodate changing circumstances is going to make your wish come true. Every American who goes into a store to buy products will have a choice. And I think it would be good for us to choose American products whenever they are of high enough quality and reasonably competitive on price.

Sometimes you can buy something a little bit cheaper from a foreign country.

But I think it's good for us to try to buy American when we can. There's no doubt in my mind now that the automobiles made by American manufacturers are as good a quality and at this point are actually cheaper than some of the foreign manufactured automobiles.

That's a good point you've made. I hope everybody listening will try to buy American whenever we possibly can.

MRS. GARDNER. I hope so, too, because it would help us all in so many ways. And I thank you, and God bless you.

THE PRESIDENT. Thank you. The same to you.

MR. JACKSON. Our next caller is from Moline, Illinois. This is Oscar Zepeda.

THE PRESIDENT. Oscar, go ahead. Good morning.

MR. ZEPEDA. Good morning, Mr. President.

THE PRESIDENT. You have a question?

MR. ZEPEDA. Yes.

THE PRESIDENT. Ask it.

SUPPORT FOR THE PRESIDENT

MR. ZEPEDA. Okay. I just wanted to say that I believe in you—and—

THE PRESIDENT. That's good enough. Thank you very much.

You know, the important thing in our country—whether you're a Democrat or a Republican, or black or white, or speak English or speak a foreign language, or whether your family has been over here for 300 years or 3 years, is to recognize that public officials in our government need our support. We're all in it together. The challenges that come before us face all of us, and the opportunities for resolving those problems and meeting those challenges must include us all.

And it's very encouraging for a President to come to a place like Davenport and to Moline, the Quad City area, and

have someone like you express your confidence in me. I thank you very much. I'll try to do you a good job.

MR. ZEPEDA. I believe you, Mr. President.

Is it all right if my wife and my little girl say hi to you?

THE PRESIDENT. Of course.

MISS ZEPEDA. Hello.

THE PRESIDENT. Hello, good morning to you.

MISS ZEPEDA. Hello, Mr. President.

THE PRESIDENT. Good morning. I'm glad to talk to you. What's your name?

MISS ZEPEDA. Mary.

THE PRESIDENT. Mary. how old are you?

MISS ZEPEDA. Three.

THE PRESIDENT. That's great. Well, I wish you could come and see Amy before we leave here. Good luck to you. Is your mother there? Is your mother there? Can I speak to your mother?

MISS ZEPEDA. Yes.

THE PRESIDENT. Okay.

MRS. ZEPEDA. Yes, I am.

THE PRESIDENT. Good morning to you. You must have a wonderful family, and I thank all of you.

MRS. ZEPEDA. Thank you.

THE PRESIDENT. Good luck, have a good day.

MRS. ZEPEDA. You too.

MR. JACKSON. The next caller, Mr. President, is Teresa Shima from Eldridge, Iowa.

SOLAR HEATING

MS. SHIMA. Morning. Morning, Mr. President.

THE PRESIDENT. Good morning.

MS. SHIMA. Okay, first of all, I'd just like to say that I think you're doing a very good job, and I'll be voting for you in the next election.

And my question is, do you think that in the future there will be Federal aid for the installment of solar heating in homes like there was for the insulation?

THE PRESIDENT. Yes. There already is, as a matter of fact—and I'm glad you asked that question. We have a very good program already passed by Congress that gives those who install solar heating or other solar uses in their home a tax break. And all you have to do is—you can get up to \$2,200 in tax credits for the installation of solar heat or other solar uses in your home.

Ms. SHIMA. Thank you.

THE PRESIDENT. In the future, by the way, when we get the windfall profits tax passed, we'll have additional programs that would do things like let your utility companies, either those who sell you natural gas or electricity, provide for each family home a long-term loan at reasonable interest. And you could take that loan and weatherize your house, make it more efficient, do other things that would help with the energy problem, and then the loan would not have to be repaid until the house was actually sold.

Obviously, this costs a little money, and that money would come from a tax on the oil companies. The choice is, should we let the oil companies keep all that enormous profit that comes from higher prices for oil, or should we tax part of it with the windfall profits tax, and let the money be used for Americans for more solar energy, for better and more efficient homes, and for a better quality of life?

I think we ought to get the windfall profits tax passed, and I want all of you to help me get the Congress to pass that tax so we can have a better and more energy-secure nation, including the use of gasohol from Iowa and Illinois, as well as solar power.

Ms. SHIMA. Thank you. Have a nice trip back to Washington, D.C.

THE PRESIDENT. Thank you very much.

Mr. JACKSON. The next caller is Keith Royal in Davenport, Iowa.

ENERGY LEGISLATION

Mr. ROYAL. Yes. Hello, Mr. President.

THE PRESIDENT. Good morning, Keith.

Mr. ROYAL. Since I'm a high school debater and last year's topic was the energy crisis, I'd like to ask you two questions.

THE PRESIDENT. Okay.

Mr. ROYAL. First, of all, why do you feel that Congress has delayed so long on your energy proposals? And secondly, if Congress is the major blame, why do you feel that's the problem—like, is it a problem within the party, or something like that?

THE PRESIDENT. Well, we've had a very severe energy problem, as you know, since 1973—when we had the OPEC embargo, where they stopped shipping oil to us completely, and the price went up.

We really live in two nations here as far as oil goes. One is the oil-producing States—they derive a great deal of benefit from producing oil and distributing it to the rest of the country—and the other States, of course, or the other kinds of people, are the oil-consuming people of our country.

In the past, in the Congress, the oil companies have had a tremendous influence in the Congress. Since I became President, I have tried to build up an opposing force, made up of the consumers of our country, to meet, for the first time, this oil lobby in Washington, and it's been a very difficult thing to do.

When we passed the energy bill of 1977 last November, the votes were almost exactly even in the House and the Senate.

But for the first time the oil lobby was successfully challenged by those interested in the consumers of our country.

Now we've got another major test this year. Are we going to have a windfall profits tax on the oil companies or not? If the consumers of the country, including people like you, Keith, will speak up and let your voice be heard with your own Member of Congress and with others, then we'll have the windfall profits tax, and we'll have an able country to meet the energy challenge.

This will leave, by the way, adequate amounts of money for the oil companies to go ahead and explore and produce new oil supplies and natural gas supplies in the United States. But this is the first time in the last couple of years that anyone has ever challenged the enormous authority and influence of the oil companies in the Congress of the United States. And I believe we've made good progress so far.

But this year is going to tell the tale, and if you'll help me, along with all those who are listening to my voice, it'll pick up some extra votes, we'll get the windfall profits tax passed, leave the oil companies enough profit, and have a better life for all of us in meeting the energy challenge.

MR. ROYAL. Thank you, Mr. President.

MR. JACKSON. Mr. President, we have no further time for callers. We will open our microphone for any final comments you'd like to make.

THE PRESIDENT. I want to say that it's been a real pleasure for me to be with KSTT and WXLP here in Davenport and Moline to talk to roughly six or seven hundred thousand listeners of these two stations. The questions have been very good. It's given me a chance to talk about the basic strength of our country, the individual responsibility that falls on

the shoulders of every American, how serious our energy problem is now, and what we can do about it. If the Congress acts effectively this year, we will have made a major stride forward in meeting a problem that has not been faced in previous years.

And I might add that the government can't do it alone. There must be a dedication and a determination on the part of every single American to do one's part.

The last thing I'd like to repeat is that our country is the greatest on Earth. We've been given enormous blessings by God in every possible way. And this is one of the richest and the most blessed parts of a great nation. So, if we can all work together, there's no doubt in my mind that our greatest Nation will be even finer in the future.

I see Amy peeping in through the door. And we're all glad to be here—Amy, Rosalynn, and I—and I might say that the trip down the Mississippi so far has been an exciting part of our lives, and I want to express my thanks to everyone listening to my voice.

MR. JACKSON. Mr. President, we at KSTT and WXLP thank you very much for being with us. The Quad Cities, of course, thank you for taking this time from your day. It is most important that the people have access to their leaders, and today we've had exactly that. I'm H. L. Jackson, KSTT/WXLP News.

NOTE: The program began at 9:43 a.m.

Following the program, the President attended a private reception for community leaders at the home of Mr. and Mrs. Lynne Chamberlin, early supporters of President Carter's 1976 campaign.

The President then went to the John Deere Administrative Center in Moline, Ill., to view an energy biomass project. Following his visit to the center, he returned to the *Delta Queen* at the Lake Davenport Sailing Club dock.

Muscatine, Iowa

*Remarks on Arrival at the City.
August 21, 1979*

Don't we live in a great country? [Applause] Good music, beautiful rivers, lovely women, rich land, democracy, freedom, unity—we've got a lot to be thankful for.

This last 3 or 4 days has been as nice as anything we've ever done in our lives, because we have seen some of the most beautiful country in the world, we've met a lot of wonderful people, both on the river in boats and on the shore, who've come out to see us, and we are deeply grateful for the hospitality and the friendship and the welcome that the people in the Midwest have given us. We thank you, very, very much.

Thank you. Is anybody here from Muscatine? [Applause]

I'd like to say just a couple of things to you—and we don't have much time to stay, but Rosalynn is going to go down one side and I'll go down the other, and Amy in the middle, and we'll kind of shake hands with as many folks as we can reach after I say a few words.

Don't leave. Don't leave. We're not going to go far down the fence. So don't leave. You have to hear a speech first. [Laughter]

Tomorrow we're going to have, in Burlington, Iowa, a townhall meeting, and there will be several hundred people there who will ask me questions, I guess for about an hour, and I imagine it'll be broadcast and telecast so you can watch and hear it. And we'll be talking about some very serious questions and issues that affect a President of a great nation.

We'll be talking about agriculture and how farmers can be made more productive, how farm income can go up, how

exports of farm products can reach an alltime high year after year after year—how the quality of our land has given us a great strategic advantage to be used for peaceful influence around the world. We'll be talking about adequate farm prices, and we'll be talking about controlling inflation, and we'll also be talking about peace.

I'm very grateful that since I've been in office not a single young American has had to endanger his or her lives in any sort of combat overseas. And I want to keep it that way.

And we'll also be talking about the control of nuclear weapons. I'm determined that as long as I'm in the White House we'll do everything we possibly can to control and eventually to eliminate nuclear weapons from the face of the Earth. That's my ultimate goal.

As you know, we now have before the U.S. Senate the SALT II treaty, which has been negotiated over 6 years under three different Presidents to put new and expanded controls over nuclear weapons. That's one of the important issues that the Senate must address this year. And I need your influence in the Congress to make sure we take this major stride forward toward peace, toward enhancing our own Nation's security, and toward controlling nuclear weapons.

The other issue is equally as important for us economically, and that is the handling of another threat to our Nation's security—that is energy. We have become too dependent on the importing of oil from foreign countries. We now import about one-half all the oil we use. We not only import enormous quantities of oil, but we import inflation and we import unemployment.

We've made some progress the last 2½ years, but we still have a long way to go.

What I've asked the Congress to do—and here, again, I need your help—is to pass a windfall profits tax on the oil companies, to give us the financial resources to conserve energy, to have more efficient vehicles, to help people weatherize their homes, to expand our production of oil, gas, coal, geothermal supplies, solar energy—which is really a great need for our country—and, of course, in Illinois, and in Iowa we want to produce gasohol as well.

We need a better transportation system. We need to help the low- and middle-income families to pay for the increasing cost of energy put on us by the OPEC oil nations in the Mideast. None of this will be possible unless we have the windfall profits tax passed by the Congress this year.

I hope you'll help me with this issue before Congress.

The other thing that we can do, of course, in addition to producing more energy in our own country, is to save energy, to eliminate waste, to conserve every way we can. This cannot be done by the government, by the Federal, State, or local governments. It can only be done when millions of Americans individually resolve that you will help to save energy.

There are many dozens of ways that you can do it—in your transportation, on your jobs, in your homes, in your living habits. Figure out every way that you use energy of any kind and see if you can't save energy in the future.

So, saving energy and producing more energy in our own Nation will help to eliminate this threat to our own Nation's security, because we are too dependent on foreign oil.

The last thing I want to say is don't ever forget, any of you, that we do live in a country where we've been blessed by God with almost every possible human

need and every human advantage. We do have rich land. We do have freedom. We have a good free enterprise system. We've got a democracy. We can be individuals. We can argue and debate. We can make our own voices heard. We can be different if we choose. But when a threat comes, Americans have always united.

Lately, we have not been united. We've not had as much confidence as we ought to in the strength of our country. We've got the strongest nation on Earth economically, politically, and militarily. And I want to be sure that if you will cooperate with me in solving these problems of peace and energy, then we will make the greatest nation on Earth, the United States of America, even greater in the future.

Will you help me with that? [*Applause*]
Thank you very much.

And now we'll come down and shake hands as long as we can. Thank you very much.

NOTE: The President spoke at 7:30 p.m. from the deck of the *Delta Queen*.

Burlington, Iowa

Remarks on Arrival at the City.
August 22, 1979

Good morning. I didn't know you had this many people in Burlington. I'll see most of you in a few minutes at the town-hall meeting. I will see a lot of you later on at the townhall meeting, and I hope if you can't be there, that you'll listen to what is asked me and what I say.

This morning we will be discussing some matters that are very important to you and to me, indeed to all people in our country and around the world. We'll

be talking about issues of peace, controlling nuclear weapons. We'll be talking about the strength of our country, the unity which, when it binds us together, has always been enough to meet any challenge or to overcome any problem or to answer any question.

In the past when our country has been challenged, almost always it's been obvious to everyone. We could understand the First World War or the Second World War or the Great Depression, and we recognized that our country was in trouble, in danger, and we all worked together—our families, our communities, our Nation was unified.

Now we have a serious problem because we rely too much on foreign oil. We import about half of all the oil we use. We need to become more energy-secure, because our Nation's security is threatened. Everyone can help. We have to do two things: One is, save energy, don't waste energy. Every American can decide how to accomplish this goal in your driving, at your home, at your job—how to save energy.

And the other, of course, is to produce more energy in our own country—oil, gas, coal, geothermal supplies, gasohol in Iowa. We can also use more solar energy. These are the kind of things we can all do.

Farmers have a great opportunity to help with the energy problem, and, of course, no one can come to Iowa without realizing that you have the most wonderfully productive land on Earth and one of our greatest blessings that God's given us in this Nation, this beautiful land to produce food and fiber for ourselves and for all the world. I'm very happy to be back. I'm very happy to be back at Burlington.

Thank all of you for coming out. We love every one of you.

We have the greatest country on Earth,

and together we can make it even greater in the future.

Thank you very much. Thank you.

NOTE: The President spoke at 8:55 a.m. from the deck of the *Delta Queen*.

Burlington, Iowa

Remarks and a Question-and-Answer Session at a Town Meeting. August 22, 1979

THE PRESIDENT. First of all, I want to thank my good friend, Senator John Culver, one of the greatest representatives in the Senate, and a man who, every day, every minute of his life, is concerned about carving out a better life for the people whom he represents here in Iowa. John Culver, thank you very much.

I also want to recognize a man whom I believe to be the finest Secretary of Agriculture this country has ever known, Bob Bergland. Bob, thank you for coming.

And this will be a surprise to him, but I have to say that Burlington, Iowa, is especially blessed to have one of the finest newspapers in the United States, and one of the greatest editors, John McCormally, with the Hawk Eye.

This last 3 or 4 days has been a period in my life and in the life of Rosalynn and Amy which we will obviously never forget. It's been an inspiration to us, not only to see the beauty of the Midwest and the majesty of the Mississippi River, but also the friendship and the commitment and the interest and the unity and the dedication of the people who've come to the banks of this great river to make us feel welcome, and to express your appreciation for the Government of our country. We do, indeed, have a great nation, the greatest nation on Earth. I hope you agree with that statement. *[Applause]*

And I've been re-inspired, as the highest elected officer of our country, as I've seen and met and talked to and listened to the crowds that have come down to the banks of the river to welcome us.

ENERGY

Our Nation has never been afraid to face a challenge. We have never been unable to overcome an obstacle or to meet a problem and solve it. And our country has always been able, when we were united, to answer any difficult question.

God's blessed us in many wonderful ways, with rich land, a democratic, free government, a pride in the individualism of each person, the right to be different, the right to speak our minds, the right to control our own Government, the right to unify ourselves in times of challenge—and I have to say that this is one of those times when our people must be unified.

We are seeing our country threatened, our security threatened by an excessive dependence on foreign oil. We now import about one-half all the oil we use. We must conserve energy. We must save energy. Each American can do this in our own particular way, in our transportation, our jobs, in our home. And I hope that all of you, without being told how to do it, will search out the dozens of different ways that you can eliminate waste of energy in your own lives. And the second thing we must do is to produce more energy in our own country.

The basis of this increased production and also increased conservation is the passage of a windfall profits tax on the oil companies in our country to make sure they don't keep all these enormous profits, but those profits are divided among the American people to give us a better life. And if you'll help me, we'll get that legis-

lation through Congress and preserve our Nation's security.

This will help to guarantee that our farmers have enough fuel for tractors and homes have enough fuel for heat in the winter. It also will guarantee us that we increase production of oil and gas and coal and geothermal supplies, solar power, learn how to use it more effectively. And of course, we've got to produce more gas-ohol in Iowa. That's very important, too.

The last thing I'll say before I will take questions is this: It's an inspiration to anyone to see the beautiful and productive land in your part of the country; to know that we now and in the past and increasingly in the future will have a wonderful strategic weapon for peace—not only for ourselves but for the entire world—by having the breadbasket of the world here in the heartland of our country. Your productivity is increasing almost every year, and our exports of farm products set world record the first year I was in office in '77; another world record last year; another world record this year. And next year we anticipate an even greater increase in the export of corn and wheat and other farm products from Iowa, which bring a better life for you, a better, stronger economy for our Nation, and a better life for all people on Earth.

So, I particularly want to thank, as a farmer, the farmers of Iowa and those of Illinois and others around this country for the wonderful job that you do. Thank you, farmers, from the bottom of my heart.

And now I'm eager to answer questions about any matter that might be important to you or of interest to you. I've already made arrangements with Bob Bergland and John Culver to help me out if I have a question that I can't answer, and they volunteered to do it. So, I'm ready for the first question, I think on this microphone.

QUESTIONS

GRAIN PRICES AND FUEL SUPPLIES

Q. I'm Lawrence Rowe from Grandview, Iowa, and I'm a Pioneer seedcorn salesman, and I carry a lot of interest with the farmers. Now, is there going to be plenty of fuel for the farmers for this fall and next spring? And also, will the price come down to help the farmers out, along with their price of grain?

THE PRESIDENT. The answer to your first question is that there will be enough fuel if American people, including farmers, are careful about how much you use, don't waste fuel, and if we have a success in the Congress in getting our energy program through. My guess is that both these questions will be answered yes. So, my answer to you is there will be an adequate supply of fuel for the farmers in the harvest season this fall and the planting season next spring.

The answer to your other question—will energy supplies be cheaper—the answer, unfortunately, is no. It's not good for a President to mislead the people. And I cannot tell you that now or in the future that the price of oil or other energy will be going down. Inevitably, the price of fuel in the future is going to go up, because the demand is growing and the supplies are becoming more scarce.

You'll have the fuel if you conserve it. You'll probably have to pay more for it. But I hope that we—John Culver, Bob Bergland and I and others—can make sure that the income for the American farm family continues to rise because your productivity goes up. And we'll try to hold prices as strong as we can, and particularly with the Grain Reserve program that has been implemented since I've been in the White House, with Bob Bergland's help.

The farmers need to have a greater

share of the prices charged for products when they get to the consumers. In the past, the middleman and the distributor has gotten too much. We want to see more of that money go into the pockets of the American farm families.

1980 PRESIDENTIAL CAMPAIGN

Q. My name is Scott Kelsay. I'm from Burlington, and I'm a student at the University of Iowa. Mr. President, wouldn't it be appropriate for you to announce your candidacy for reelection here today, since Iowa was a stronghold for you in 1976 and your first endorsement came from our local Hawk Eye editor, John McCormally?

THE PRESIDENT. That sounds like a wonderful idea—[laughter]—which I will consider very carefully. Thank you very much.

Q. Thank you.

THE PRESIDENT. I haven't forgotten, by the way, what Iowa did in '76. So, I'll be thinking about that question very carefully. [Laughter]

OIL AND TOXIC WASTE POLLUTION

Q. My name is Jean Funck, and I'm from Burlington. I'm a housewife. Recognizing the fact that the United States is a great power and as a result must use a great deal of diplomacy, what is being done to hold Mexico responsible for harming wildlife and ecology and a regional economy in south Texas? Were the situation reversed, I am sure the entire world would be chastising the United States.

THE PRESIDENT. We do not yet have an international agreement on how to handle pollution in the high seas. And as you all know, only in the last few years—really the last few months—has the world

become interested in having both ships that carry oil be made safer so that the disasters don't take place nor to control the pumping of oil from the wells in the offshore regions. So, we have no way at this point of requiring another country—Mexico or others—to pay for damage that might occur from an oil spill carried to our shores.

We are discussing with other nations means by which we can control these oil spills, first of all, and make a reserve supply of funds for damage to private individuals. It hasn't happened yet.

The other part of this, of course, is the control of the spills from our own toxic materials that in the past have not been covered at all. I have sent to the Congress now a proposal which would mean that every producer of a toxic material—which would include those that we have to use every day, like herbicides and pesticides—would have to put a small amount of money into an insurance fund so that later on, maybe many years later, when a dump near a city which contain toxic materials did damage a person's property or a person's life, that they might be paid for that damage out of the reserve fund. And part of that money would be used to ensure that those toxic materials are placed so that the spill would not occur.

This is an area of government that has just begun to be explored. But we are pushing for that agreement among nations. It hasn't been reached yet.

Q. Thank you.

THE PRESIDENT. Thank you. It's a good question.

John, it's one that we need to pursue a little further.

SOUTHEAST ASIA REFUGEES

Q. Mr. President, my name is Phillip Good. I'm from Burlington, Iowa, and

I'm a student at Southeastern Community College and also a part-time employee at the Hawk Eye. You said that when we import oil, we also import inflation and unemployment. Well, I'll agree with that, but isn't it also true when we bring in the boat people, we're also bringing in unemployment and inflation?

THE PRESIDENT. Thank you, Phil. That's a good question and I'm glad you asked it.

How many people here have ancestors that were Native Americans? I see two or three hands back there whose parents were Indians.

Let me remind you that the United States is a country of immigrants. We are a country of refugees. Whether your parents came here 300 years ago or whether your parents came here one generation ago or whether you've only been here a few months, the United States has always been a nation with an open heart and with open arms to receive those people who were seeking for religious freedom or seeking for a better way of life.

The refugees who are now leaving Southeast Asia were our allies in the recent Vietnam war. They are now being persecuted by a Communist government in Vietnam, which has taken away from them their basic rights. They leave that country; almost half of them drown in the ocean before they can find a place of safety. Our Nation has joined in with other nations throughout the world to receive these refugees. We've now received, I think in all—those that are here and those that are being processed—about 220,000. That is 1 refugee—man, woman, child—for every 1,000 Americans. And we are very carefully placing those refugees, when they come into our country, in areas where the unemployment rate is low.

They are entrepreneurs; they're the kind of people that work hard under the form of free enterprise system that existed in Vietnam before it was taken over by the Communists. One of the reasons they're being pushed out of Vietnam is because they believe in individual work, individual initiative, personal freedom. They are more philosophically attuned to us than they are to the Communist regime that's taken over.

I believe that a thousand Americans can support, for just a few weeks, one refugee searching for freedom, particularly when those people have proven already that they are eager to learn our language, they are eager to be self-supporting, they are hard-working, dedicated, honest people.

So, I hope that all Americans, no matter how you might feel, will realize that your family came here in generations gone by, looking for exactly the same thing that the Vietnam refugees are looking for now. There are very few of them. And I think our country ought to be proud that we still are the land of the free and the home of the brave, with an open heart and open minds and open arms to take them in.

ENERGY LEGISLATION

Q. Mr. President, my name is Linda Larkin, and I'm from Fort Madison. And my question to you is, now that you've been in office for about 3 years, and you've seen that Congress hasn't done that much to help you, what do you think you could do to improve your working relationship with them, especially with the energy legislation?

THE PRESIDENT. Last week I took the last action that I can take to improve the production of energy in our own country by moving to encourage the production of

very heavy, very thick oil. It costs more to produce it. And in the past, Government redtape and regulations and low prices have kept us from producing about half a million barrels per day of that heavy, unconventional oil.

The next steps must be taken by Congress. I might hasten to add that Senator Culver's been very helpful in trying to move toward a comprehensive energy policy. So far, we've passed about 65 percent of the energy proposals that I made to the Congress in April of 1977, the first year I was in office.

The other part that hasn't been passed relates to oil. The Congress has not yet passed a single line of legislation about oil. And it's not an accident, because for many years the oil companies have had a tremendous, effective lobby in Washington to protect their interests. You can't much blame them.

But in the last couple of years the consumers of this country have got a new voice. And now it's a very close match between the oil companies on one hand, wanting to keep all the profits that they get that they do not earn, and the consumers on the other hand, that are struggling to see the Congress pass a windfall profits tax, so that those excess profits can be shared among the American people.

I can't force the Congress to take action, but all of you, and people like you around the Nation, can force the Congress to take action.

I was just informed a few minutes ago that all the members of the United Automobile Workers in the Nation are going to take 6 minutes and write a postcard to Congress supporting the energy proposals that we have made. And I hope this will make a lot of impact on the Congress.

So, Linda, I'll have to say this to you: It's not an accident that as we've drifted

down the Mississippi River, having a good time, almost every time I've stopped I've talked about the need for American people to do two things: save energy in your own life, and help me induce the Congress to pass the windfall profits tax so we can have a comprehensive energy program to make our energy security guaranteed.

That's an excellent question. And I hope everybody will listen to my voice and let your Congress Member know we need to have that energy policy passed through the Congress.

CHRYSLER CORPORATION

Q. Mr. President, my name is Jim Paul. I'm a teacher and a coach from the West Burlington School System. First of all, I'd like you to equate your concept of the free enterprise system with the application of the Chrysler Corporation to the Government for a billion dollars worth of aid. And would you support the program, the aid, if Chrysler could be forced to manufacture public transportation equipment?

THE PRESIDENT. We are approaching the Chrysler question, Jim, very cautiously. And the approach that I have approved personally has a heavy dependence on the free enterprise system.

It requires Chrysler, first of all, to reconstitute their management so they can be more effective and more efficient in the future than they have been in the past. It also requires that Chrysler go, first off, to private sources of financing to get the loans that they need. The only thing I think the Federal Government ought to do is to provide some guarantee for those loans that are obtained in the private sector, but let the Federal Government in effect hold the first mortgage.

I think we ought to protect the public

interest as we help Chrysler tide themselves over a difficult time. Chrysler must change, as the other automobile manufacturers must change in our country, to make automobiles that are more fuel-efficient and also that meet our pollution standards. They are changing now as fast as they can. In the last few years, even since—since 1973, when we had the oil embargo, the American consumers have often demanded the very large, inefficient cars. Now they must make the change.

So, I would say a shared responsibility between the employees and employers of Chrysler, a heavy dependence on the private enterprise system, a minimum involvement of the Federal Government, and a maximum security for any loans that the Federal Government guarantees—that's a package that I think would be acceptable. It would keep Chrysler operating, maintain more competition in the automobile industry to hold prices down, and it would keep about two or three hundred thousand UAW workers employed who now work for Chrysler.

That'll be a good investment, I believe, if we do it that way.

TRANSPORTATION FUNDS

Q. Good morning, Mr. President.

THE PRESIDENT. Good morning.

Q. My name is Jerry Rigdon. I live here in Burlington, Iowa, and I am a professional window cleaner. Do you have any dirty windows in the White House? [Laughter]

THE PRESIDENT. There's a lot of—we need a lot more light in Washington. I'll say that for you. [Laughter]

Q. The motto of my company is: "We brighten your outlook."

Mr. President, in lieu of the fact that our counties and cities depend on road-use tax to build new streets and new

roads, it is not—with road-use taxes directly related to gasoline sales—it is not in the best interest of cities or counties to develop bikepaths, efficient mass transit systems, force carpooling, and other means that would mean tremendous gasoline savings to—in our energy program—can other revenues be released to particularly aid in these efforts of the counties and the cities?

THE PRESIDENT. I don't want to claim or leave the impression that everything a city or a county or a family does in saving energy must be with the help of the Federal Government. A lot of the initiative has got to come from individuals and from local communities.

My wife recently visited a small—well, a fairly good-sized town named Davis, California. Right, Rosalynn? That community, on its own initiative, with some already prescribed Federal programs, put in biketrails and helped people to decide how they could save energy in many different ways.

They gave Rosalynn, for instance, a free gift, which she's authorized to keep, of a solar clothes drier. It was a 20-foot rope with five or six clothespins. [*Laughter*]

I try to run 4 or 5 miles every day. I did this morning, I think at Lock 18, before I came up here. And I think a lot of people would enjoy the beauty of a place like Burlington if a few times a week or maybe every day, instead of riding a half mile or a mile to work, you'd walk there and back, or ride a bike. And this kind of approach would be very helpful as an inspiration to others if it was adequately publicized.

The Federal programs are being designed more and more in housing and urban development, in community planning, in transportation, in agriculture, in almost every aspect of American life, to conserve energy. This is an area where we

are just beginning to scratch the surface. This has not been part of our lives, as you know, in our country with \$2-a-barrel oil. Now with \$20-a-barrel oil becoming increasingly scarce, we've got to do this together.

I think one of the best things is for local communities to take the initiative and to let that lesson be learned at the State level, and then at the Federal level, instead of depending on the Federal Government to tell you all what to do.

Your question, though, about how Federal transportation funds can be better designed to help conserve energy at the local level is a very good one.

The new Secretary of Transportation, Neil Goldschmidt, is a former mayor of Portland, Oregon. He has a special interest in transportation, and he's also done one of the best jobs in the whole country in Portland in conserving energy in the transportation area. So, I would guess that his new approach will be very beneficial to all the country and would also help to answer your question that you've raised, which is a very good one for the whole world, our whole country to know about.

We'll try to make sure the Federal programs in the future do a better job of saving energy, even at the local, county, and city level.

SYNTHETIC FUELS; FOOD PRODUCTION

Q. Mr. President, I'm Leo Talbot from Mount Union, Iowa. I'm a farmer. Part of my question was answered by the first gentleman, but I would still like to ask this question concerned about our product that we have out here with God's help and willing, we'll have for the next thousands of years as a synthetic fuel. We raise corn, and I wondered what the Government was doing, how much emphasis they are putting upon this corn product,

that we can put into ethanol to make a synthetic fuel. Are they really into it great now? We've been working at it out here for several years. Are they into it great?

And the last part of my question was, of course, are you going to put the farmers on a number one priority this fall to harvest our crops?

Thank you, sir.

THE PRESIDENT. The answer to your last question is yes. Bob Bergland is nodding his head even before I had a chance to answer. And obviously from one season to another, we have varying needs for distillate fuels, which are in relatively short supply.

During the planting season, we were putting in as many as 5 million acres per day, were we not, Bob?—one of the highest rates of planting that our Nation has ever seen. We were able, with the cooperation of farmers and the ASCS Offices, Governors, and everyone else, to get enough fuel to the farmers during the planting season so there were no long delays.

We'll do the same thing in the harvest season in the fall and also in the planting season in the future, because the production of food in our country is a top priority, along with fire protection, police protection, and emergency vehicles, both the production of food on land and also the fisheries off the shores.

As far as the production of gasohol is concerned, we are now exploring every possibility for putting into operation both the very small gasohol plants that can be put on a large farm or those that are much more costly and much more extensive. We now have two major pilot projects already underway. We are preserving the exemption of the 4 cents per gallon on gasohol to encourage its production. That amounts in total to about \$60 per barrel that we are helping with gasohol use.

Third, we've done all we can so far—

but we will do more in the future—to make sure that there's an extra investment tax credit of 10 percent for people who invest in a gasohol-producing plant.

Yesterday at the John Deere international headquarters in Moline, I saw a new machine that's still in the experimental stage, where they burn corncobs—where they take corncobs and burn them and they make a gas which has about 15 percent of the energy as natural gas. And then they burn that gas and make electricity, either to pump water or to provide electricity for a farm. So, the use of farm products, cornstalks, corncobs, perhaps just as important, peanut hulls, different things—[laughter]—can be used now to make gas.

On gasohol, the Congress, particularly including the Congress Members from Iowa, have proposed that we make available low-interest, direct loans to farmers who will put in the very small gasohol-producing plants. I have not announced this before publicly, but I would like to announce it to you—Mr. Talbot, right?—that my administration will support this move. And I believe that Congress this year, before it goes home, will have low-interest, direct loans for people who will put in small gasohol-producing plants on farms in Iowa.¹

¹ On the same day, the White House Press Office released the following information at Burlington.

The President today announced support for new legislative authority to assist in the construction of small- and intermediate-scale plants for the production of alcohol fuel. He indicated that alcohol made from agricultural and forestry residues and commodities can play an increasingly important role in our fight for energy security.

An alcohol-gasoline mixture is already being marketed through more than 800 retail outlets in 28 States. President Carter noted that alcohol fuels would be especially important over the coming decade, a period of intensive research and exploration for alternative energy

(Continued)

If you think of anything else I can do to help gasohol production, you let me know and I'll do it.

Q. I'll meet you afterwards.

(Continued)

sources. One of the great advantages of this fuel is its already proven technology, although research into improved production methods will also be undertaken.

Noting the strong interest among many Members of Congress, the President indicated that he is anxious to work with them to enact new authority to promote the further development of alcohol fuels through small- and intermediate-scale plants.

He proposed a 2-year direct or guaranteed loan program to be administered by the Department of Agriculture, with a limit of \$3 million per project. The loan program would be supplemented with a program of technical assistance and research and financed from the energy security trust fund. With the help of this program, individuals or groups of individuals could play an active role in lessening our Nation's dependence on foreign oil.

The President's support of this measure is the latest in a series of steps the administration has taken to further the development, production, and use of alcohol fuels, including:

- Presidential directives to:
 - use gasohol in Federal vehicles, whenever feasible;
 - simplify and reduce Federal reporting requirements for alcohol fuel producers.
- Presidential recommendation that the current 4-cent-per-gallon excise tax exemption for gasoline-alcohol (10 percent) blends be extended permanently.
- Implementations of a 10-percent investment tax credit for facilities that convert alternative substances or feedstocks into synthetic liquid fuels, including alcohol fuels.
- Loan guarantees of \$30 million by the Department of Agriculture for two innovative pilot projects for the production of alcohol.
- An \$11 million loan and grant program by the Department of Energy, the Economic Development Administration, and the Community Services Administration to assist in the construction of 100 small-scale alcohol production plants.
- Increased funding of DOE research and development of alcohol fuels from \$3 million in FY 1977 to \$25 million in FY 1980. Also, the USDA is programing nearly \$6 million in FY 1980 for this purpose.

THE PRESIDENT. Thank you. [Laughter]

THE PRESIDENT'S TRIP

Q. Mr. President, I am Gertrude Gerdom from Burlington, Iowa, and I'm a housewife. And I want to tell you I think you're doing a real good job and also ask if you've caught any fish since you've been on your trip.

THE PRESIDENT. I think I've done a better job of being President than I have catching fish this trip. But we're going to try again this afternoon, and I believe we're going to catch some.

Q. Good luck. God bless you.

THE PRESIDENT. Gertrude, that's the kind of question I never get from the Washington press corps. Thank you very much. I love you. [Laughter]

SIZE OF THE FEDERAL GOVERNMENT

Q. I'm Emerson Cordes from Evergreen Park, Illinois. I'm retired. Many of us were heartened recently when you gave your Sunday night speech, especially setting forth two objectives that we could all get behind that would really help our country, that of controlling inflation and attacking the energy problem in all the many ways you suggested. But to reach these objectives, you're going to need all of our help and our support. And right now, we've lost an awful lot of confidence in that Washington establishment. We just don't feel it has the capability or the willingness to respond to the people's needs and expressed feelings.

And I'm wondering if you've ever thought of setting an objective, perhaps, for your administration of reducing the size of that Washington establishment by, say, 10 percent, just to show that the people still own it and that they don't own us.

THE PRESIDENT. Yes. I've thought about it a lot, and we have made some progress.

As you know, each year, the services of the Government expand. Five years ago, there was practically no bureaucracy for the energy question. Now we have a very large department, the Department of Energy, that must administer programs that encourage gasohol and encourage the weatherization of homes and design better ways of transportation and monitor more efficient automobiles and distribute scarce supplies of fuel to farmers. That kind of service is demanded by the people. It's passed by the Congress and goes into effect. In spite of that, though, since I've been in office, we've had a reduction in the number of Federal employees, just a small reduction, 2,000. And I hope that I can finish this term and not have any increase at least in the number of Federal employees.

When you start asking Americans where do you want to cut, it's a very difficult question to answer. I would hesitate, for instance, as a farmer to eliminate either the Home Demonstration Agents or the County Agents or the ASCS Office employees who do a good job on a routine basis—and 3 or 4 months ago during planting season, we had to call on them almost full-time, 24 hours a day, to give us an inventory of where distillate fuels were and where the supplies were needed.

So, there are some requirements of the Government that must be carried out: the improvement of cities with HUD and the administering of programs for the poor through HEW, increased health for our people, the elimination of cancer, the control of these kinds of diseases must be carried out. So, I don't want you to feel that just because the Government is often insensitive that it's completely

wasteful. There is waste there. There was waste in my farm in Plains. And there was waste in Carter's Warehouse, and there's probably waste in all of your businesses as well. But we are doing the best we can to hold it down.

We have now put into effect, with the Congress help, the first complete revision of the Civil Service in the last 100 years. That's just gone into effect, but I believe that in the future, you'll see some great benefits flowing from it.

So, in spite of the increase in services being demanded and being delivered, we are holding down the number of Federal employees. Maybe we're not doing a good enough job, but we're trying. And I would like to emphasize one more time what's come up two or three times already, that the initiative must come from the individual American and from the individual family and individual community. And the more you do for yourselves, within a family or within a community, the less will be demanded from the Government and the more we can save taxes and the more we can have a better life for us all, because that's where the enjoyment comes in.

I'm in favor of keeping the Federal Government as small as possible, but I have to be responsible for defending our Nation, keeping us strong, keeping us free, encouraging peace around the world, and meeting the legitimate needs of the American people.

So, don't curse your Government; just work with me to make it better.

NUCLEAR POWERPLANTS

Q. My name is Michael Lamb, Burlington, Iowa. I am an educator. Mr. Carter, if this community, in the future, could become the moral equivalent of cannon fodder and the moral equivalent

of war, my question regards the continued utilization of nuclear fission power.

The 1957 Brookhaven report indicated that in the event of a massive reactor catastrophe, agricultural restrictions could prevail over 150,000 square miles, an area equal to the combined areas of Iowa, Illinois, and Indiana. Now, with this, the possible consequence of a catastrophic reactor accident, why are we allowing any reactors to be built in America's farm-belt, when it seems that just one major accident at any one of these reactors could lead to us importing food as well as oil?

THE PRESIDENT. Thank you, Michael.

I don't believe you have any nuclear reactors operating in Iowa, do you, John?

SENATOR CULVER. Yes. Palo.

THE PRESIDENT. One operating.

SENATOR CULVER. Palo. But there are several along the Mississippi and Illinois, serving Chicago.

THE PRESIDENT. Right. Well, as you know, for the last 35 or 40 years our country has had a policy of producing part of our energy from nuclear reactors. We now produce about, I think, 13 percent of all the electricity in our Nation from atomic reactors. Communities like Chicago get 50 percent of all their electricity from nuclear reactors.

It would be a very serious blow to our country to close down all the nuclear reactors that we have. We do have a problem that's now being assessed, brought about by the accident at Three Mile Island, and I have asked Dr. Kemeny, who heads up this Commission, to give me a report on how the existing atomic reactors can be made more safe to operate.

I thank God that in the last 35 or 40 years we have never had a fatality or a serious injury in a commercial reactor in the United States. But I want to make sure that we don't have any in the future.

We also have not had enough attention given to the disposal of waste from the atomic reactors. Now, when this Kemeny report comes in to me—within the next few days, as a matter of fact—I will assess it and, working with the Nuclear Regulatory Commission and with the Congress, will take whatever action is necessary for better design, better training of personnel, and better operation of the existing nuclear plants to make sure that we do have as safe a nuclear program as possible.

I don't want to mislead you. Some people like Michael don't think that we ought to have any use of atomic power. I believe that it's inevitable that there will be a place for atomic power in the future in our country. But to the extent that all of us save energy, to the extent that we increase the production of oil and gas in our country, to the extent that we shift toward the plentiful supplies of coal and make coal clean-burning, to the extent that we have more efficient automobiles, that we take whatever action we can to make homes more savers of energy—to the extent that we do all these things to conserve and to increase production of other energy, we can cut down on the demand for atomic power.

During my campaign for President 2½, 3 years ago, I said that we ought to make atomic power a source of energy as a last resort. And what I mean by that is that as we conserve and produce other forms of energy, our Nation will need less atomic power.

As you know, we have not had atomic powerplants approved for new construction in quite a while. We're at a pause now, and with the Kemeny report—which I hope all of you will study—we'll see how to make atomic power, if it is used in the future, more safe for Ameri-

cans and protect both lives and the land that you describe, Michael.

Thank you very much.

Q. Mr. Carter?

THE PRESIDENT. Yes.

Q. You did still not address the fact of the farming. What happens if you have one accident in the American farmbelt?

THE PRESIDENT. Well, obviously, it depends on the kind of accident that you have.

Q. Right. A major catastrophic accident, one which on ABC News stated the odds in the next 30 years could be as high as 1 in 15.

THE PRESIDENT. The only way I can answer you is that if we have a catastrophic accident that would be a catastrophe.

Q. Mr. Carter, one more point, please. There's a great deal of talk in this country about energy independence for America. The Government should not forget that Americans need energy independence also.

AMY CARTER

Q. Mr. President, I'm Jean McKinney, an orchestra teacher from here in Burlington. And I was wondering if Amy's still making good progress with her violin lessons. [Laughter]

THE PRESIDENT. I think Amy plays very well, considering the talent that she has. [Laughter]

I think you would be proud to hear Amy play. She hasn't practiced much on this trip, I have to admit. She's been concentrating on the calliope. But she's doing very well and I'm very proud of her.

LETTER FOR THE PRESIDENT

Q. Mr. President?

THE PRESIDENT. Yes.

Q. This is really important to me. I

have a letter that I'd like to give to you. And I'd risk being arrested in order to give it to you, I think it's so important.

THE PRESIDENT. No, you're not going to be arrested. If you'll give it to my wife Rosalynn, right there in the green shirt, I'll get it.

Q. Thank you very much.

THE PRESIDENT. It's a pleasure.

SALE OF KEROSENE TO IRAN

Q. Mr. Carter, my name is Mary Beth Murrell, and I'm a math teacher at West Burlington. It's super-exciting to have you here, and I want you to know that we heartily support your energy program and we're doing everything we can do to help. We're biking to work and we installed a solar system in our home.

THE PRESIDENT. Very good.

Q. But my question is this: On the late news on the radio last night, they said something about that we were selling oil to Iran. Now, they didn't explain this at all. They were heavily critical of the fact that somebody was selling our oil while you were floating down the Mississippi. [Laughter] I would like for you to complete this report and explain to me why we are selling oil to Iran.

THE PRESIDENT. Okay.

We get from Iran, I think, about 30 million barrels of oil every month. I'm not sure about the exact figure, but that's roughly what we get. And a few months ago, because of some riots in Iran, they sabotaged a pipeline going to the refinery which makes kerosene for the Iranian people. They use kerosene in their homes like we did when I was a child to cook and for everything else. And they had a very severe shortage of kerosene. And they asked us to sell them back about two-thirds of one day's supply of kerosene to meet the needs of the families in Iran, and

since they sell us more than that every day, I personally approved the sale of that much kerosene to Iran.

But it's just a small amount compared to what we use and also a very tiny amount compared to what we get from Iran, about one-fiftieth of what we get from Iran every month. And it was just a one-time proposition.

Q. Thank you.

THE PRESIDENT. We're not going to shut down any tractors because of it.

ENERGY CONSERVATION TAX CREDITS

Q. Mr. President, my name is Dan Carlson, from Middletown, Iowa. I'm a student at Quincy College in Quincy. On the housing situation, by energy conservation, the only type of tax relief that I understand is basically solar heat that you're more or less giving a tax break to. We have several other types of energy conservation methods, such as underground living, which stays at a constant temperature, between 55 and 60 degrees a year, with no heat at all. And you can take it up to a comfortable 72 degrees by using about two logs a day in a fireplace. There's absolutely no oil use there at all.

Now, there's no tax relief for anything like that. If you have a stream that goes through your property, if you'd put a water generator on that, there's no tax relief for that or anything of that sort. Could you give me any idea on that?

THE PRESIDENT. Yes. As you know, Dan, the establishment of a program on a nationwide basis for 220 million Americans, maybe 50 million homes, is a very expensive proposition, whether it's with a tax credit or a direct loan, where interest is subsidized or sometimes a grant. It's not going to be possible for us to have a major expansion or encouraging people

to conserve energy without the windfall profits tax. That will be the source of enough money to take care of poor families, who are especially hurt by increasing prices of oil; secondly, to give us a better transportation system; and third, to encourage conservation and also the production of American energy.

We already have a tax credit for the weatherization of homes, where you'd take various means to cut down on the waste of heat. I'd have to look into the law to see if it covers the placement of a home down below the ground level.² But I was in Baltimore recently, where they are weatherizing this year 3,000 homes in the low-income area. Next year, they have a target of weatherizing 5,000 homes in the low-income area. It only costs them in that urban area about \$275 per home to make it energy efficient. They save more than that every 2 years in reduced costs of heating oil and natural gas, whatever they use.

We now are prepared to expand this program to encourage that kind of saving. But we have to have the windfall profits tax to do it. It applies not only to solar installations, which get a \$2,200 tax credit already, but also to the weatherization of homes and to the production of electricity from low-head dams.

One possibility that we are exploring and which will be pursued, by the way, is

² On the same day, the White House Press Office released the following information at Burlington.

The law, proposed by the President in April 1977 and passed by the Congress in 1978, provides a tax credit of 15 percent of up to the first \$2,000 of weatherization projects added to homes after April 1977. Weatherization projects are those such as insulation and caulking, and so forth. Homes, either below or above ground, are eligible for a tax credit, providing work was performed that meets the law's requirements. There is, however, no tax credit for building a home underground per se.

the series of locks and dams on the Mississippi River, some of which might be available for the production of electricity to be used at a very low additional cost. We now have pilot projects all over the Nation where a small community formerly had its own private source of electric generation, from a nearby stream that had been dammed up with a low-height dam, and we're going to put those back into operation. There'll be several thousand of those around the country.

So, we're expanding in every possible way the encouragement of the saving of heat in homes, transportation, and the cheap production of energy. But all of that program that's not already in effect would have to depend on the passage of the windfall profits tax.

At the end of this year, I believe that we'll have an adequate base for a long period of time in the future to meet the needs that you described. But there's already a tax credit available of about \$300 for homes like you described, and I'll have to find out for you, if you don't mind, whether it applies to putting the home partially underground.

Q. Thank you.

THE PRESIDENT. Thank you, Dan, very much. If one of my staff would get Dan's address, we'll send you the answer. Okay?

EMPLOYMENT

Q. Good morning, Mr. President. My name is Bonnie Wilson. I'm from Burlington, Iowa, and I'm a secretary. I'm wondering what you plan to do or what you have done to assist the middle-aged woman either entering or reentering the job market.

THE PRESIDENT. Okay.

Bonnie, it's hard to single out that particular age group and the fact that they

would be women. What I faced when I was running for President, when I first became President, was an unemployment rate above 8 percent. We've had a net increase in our country now of 8 million jobs, a net increase, just in the last 2½ years—those jobs being made available to young people and older people, middle-aged men and women. So, I'm sure that the middle-aged woman has benefited.

Also, in the Federal Government, for instance, we've tried to set an example for other employers in encouraging the employment of women. Although we've had a 2,000 reduction in total Federal employment, we've had a 26,000 increase in the number of women who are employed. Obviously, this is an area that can be expanded in the future.

I think Iowa now has an unemployment rate of like 4 percent. And I would guess that any able-bodied person, man or woman, that really wants a job in Iowa can get one now. But we've made good progress on the unemployment field with the help of many people.

The best place, obviously, to acquire jobs is not in the Government or even with government programs, but in the private sector. And I think a strong and dynamic economy is the best source for jobs in the future.

But I think we've made good progress in the employment field. We haven't reached our goal of no unemployment, but we are getting closer than we were.

Thank you, Bonnie, very much.

I don't think I've got time for another question. Everybody is motioning at me. But let me say this in closing. The questions that have been asked I think will help the whole country. They're the kind of questions that make me think more about what we are doing in Washington

and give me guidance for the future, both in domestic affairs, in meeting the needs of the average family on transportation and housing, agriculture and saving energy, but also in international affairs.

Jean Funck asked a question, for instance, about how we could make Mexico accountable for oil spills. This is an area that already we were exploring but we haven't yet solved.

So, I thank all of you for your questions and for giving me a chance to answer them.

Let me say this in closing: If you don't remember anything else from the town-hall meeting outdoors today, remember what a great country we have and how strong we are. Almost invariably we're inclined to think about the temporary inconvenience, the disagreements that are so highly publicized between the House and the Senate, or the Congress and the President, or the States and the Federal Government, or private citizens and others in our Nation. Those transient problems come and go very rapidly. Americans have always been able to face them and to solve them.

And I have no doubt in my mind that the present problems that our country faces can be solved, because our country is so great, because we have been so blessed with natural resources—but above all, because Americans are resilient, strong when we need to be, and unified when we see a common problem. So, I would like to ask all of you to do what I said in my Sunday night speech: Every day, say something good about America. We have the greatest nation on Earth, and if you will join in with me in the future, we'll make it even greater in years to come.

Thank you very much. God bless all of you.

NOTE: The President spoke at 10 a.m. at Crapo Park.

Following the town meeting, the President attended a private reception for community officials and area residents at the home of Mr. McCormally. He then returned to the *Delta Queen*.

Hannibal, Missouri

*Remarks at the Town Square.
August 23, 1979*

Mayor Herman, Congressman Volkmer, and my good friend, Governor Joe Teasdale, and all the people of Hannibal and the surrounding communities in Missouri, I guess on both sides of the Mississippi:

You have come here to make us feel welcome again.

I don't believe that any person lives in our country, and very few live throughout the world, who are not familiar with Mark Twain, Tom Sawyer, Becky Thatcher, Huckleberry Finn, and also Hannibal, Missouri.

Ours is a nation which has a source of strength and a source of greatness that's unshakable. And part of that strength comes from the memories of our boyhood and girlhood days in communities like Hannibal throughout the country—some smaller than Hannibal, like Plains; some much larger than Hannibal, like the urban areas of our country.

But the stability of a family life, the love of an Aunt Polly or a mother or a father or sisters or boyhood or girlhood sweethearts, live with us as long as we are on this Earth.

Ours is truly a great country. And I hope that Hannibal won't change very much, only in the number of people that can come here to witness and to be part of the life of Samuel Clemens, who spread the good news about America in many parts of the world.

We saw translations of "The Adventures of Tom Sawyer" in the museum that went to 50 different kinds of languages so that people all over Earth can know about you and about his boyhood and about the truth of America.

He was indeed a remarkable person who saw, with a remarkable insight, what made America great. Coming down the river, Amy has been reading "Tom Sawyer" for the second time, and I've been reading "Life on the Mississippi" for the second time, or third time, or fourth time as well. It's been part of my life as it has been part of many of you.

Mark Twain, or Samuel Clemens, had one of the greatest senses of humor, I guess, of anyone who's ever lived in our country. He always had a good thing to say about America. And I hope that's part of our own lives, to say something good about our own country. I jotted down a few things that he said, and I'll be very brief.

He had a lot to say about inflation. I don't know if you know it or not, but in "Life on the Mississippi" he said that when he was a young boy, he first saw St. Louis, he said, "I could have bought it for \$6 million, and it was the biggest mistake of my life that I didn't do it."

And then he commented on energy—I won't read the whole quote—but Mark Twain saw a tremendous change in the use of energy on the Mississippi.

When he was first training to be a pilot, as you know, the steamboats used wood, and the woodyards would go for miles and miles on both sides of the river near the towns. At that time there were 10,000 steamboats on the river system of our country. He was part of that life.

And the last thing I'd like to comment on is about the Federal Government. He had some good things to say about the Federal Government. And I particularly liked this because you don't hear that very much anymore. He went by one of the Federal projects, and he said, "Everything about it suggests the hand of the national government." Listen to this: "The government's work is always conspicuous for excellence, solidity, thoroughness, and neatness. The Government does its work well in the first place, and then takes care of it afterwards."

That's the good news. The bad news is this project that he was describing was a cemetery. [*Laughter*]

Well, we still live in a great country, as you well know, and times are changing, including energy. Last night, we came by one of the very few large electric powerplants on the Mississippi. We produce a very small amount of electricity now, with all this tremendous power going past Hannibal, about 165 megawatts. We have the capability already assessed to produce 2,400 megawatts of power, 15 times as much, just using the dams that are already constructed there for the locks. I'm going to instruct the Department of the Army to simplify the procedures so that these projects can be completed earlier without going through all the redtape and complication and delay that hold up such projects now.

There are so many ways in our country that we can take advantage of what we already have and have a better nation and a better life at the same time. Conserving energy or saving energy is not an unpleasant thing. It can be an exciting thing, an enjoyable thing, that saves us money, lets us be truly patriotic, lets us restore the energy security of our Nation, and binds us together in a spirit of common purpose.

So, I believe that in many ways the present crisis that we face with a shortage of energy, an overdependence on foreign oil, can be a blessing in disguise. It can give Americans a chance to prove that a tremendous challenge can be overcome, that a tremendous problem can be solved, that complicated questions can be answered by Americans who are unified.

We sometimes forget what a great nation we have. And I believe that in the solution of our energy problem, we can prove again that Americans have never faced a challenge to our country unsuccessfully. We are the greatest nation on Earth, and if we remember what we learned in our childhood, the truth that Mark Twain told to us with a great sense of humor, and remember how strong a family can be or a community can be or a nation can be when we face a problem together, there's no doubt in my mind that we can make the greatest nation on Earth, the United States of America, even greater in the future.

If we all work together, we cannot fail. I know we'll succeed. And I thank you for being so nice to us.

Thank you very much.

NOTE: The President spoke at 11:10 a.m. Before and after his remarks, the President toured historic sites in the area, including Mark Twain's boyhood home and attached museum, the Becky Thatcher Book Shop, and the Mark Twain Cave. He also watched a skit performed by the Clemens Amphitheatre Players outside Grant's Drugstore.

Hydroelectric Power Projects

Statement by the President. August 23, 1979

In the course of the time I will be traveling on the *Delta Queen*, we will go through 27 locks and dams on the Mississippi River. The water flowing over these dams and through these locks holds tremendous promise as a source of hydroelectric power. Of all the locks and dams on the Mississippi River between St. Paul and St. Louis, only five have installed capacity. Clearly some of the other existing locks and dams have hydroelectric potential. Other Corps of Engineers and Bureau of Reclamation existing structures around the Nation hold similar potential. We must move aggressively to begin to harness this power.

On the basis of the National Hydro-power Study now being undertaken by the Corps of Engineers, it is clear that various Federal dams, locks, and other water projects would be suitable sites to be harnessed to produce hydroelectric power. I am today directing the Department of the Army, in conjunction with the Bureau of Reclamation and the Department of Energy, to develop necessary legislation which would give those agencies clearer, simpler authority to exploit the energy potential of existing Federal projects without requiring them to go through the full, protracted authorization process necessary for new construction projects in cases where the addition of the necessary turbines is economically justified and would not have an adverse impact on the environment or on stream flows.

Recently, I took two other actions to greatly expand our hydroelectric activities across the country:

—At a ceremony in Des Moines, Iowa, on May 4, 1979, I announced a major

new coordinated effort to identify and develop hydroelectric potential at existing dams around the country. Under that program, for each of the next several years DOE will administer a program through which communities could conduct feasibility and engineering studies of potential sites. Following an onsite review process, including DOE, the Corps of Engineers, the Bureau of Reclamation, and the FERC, the most promising sites would be encouraged to submit applications for construction grants, loans, and loan guarantees from EDA, FMFA, REA, CSA, and HUD. Over \$300 million in resources have been reserved for this purpose through 1981.

The target goal of beginning construction on 100 rural hydro projects by the end of 1981 through the interagency effort will develop approximately 300 megawatts of additional capacity. Since I announced this program, several hundred local communities have expressed interest in participating. Federal field teams will be conducting onsite inspections at about 250 of the most promising prospects during August and September.

—At my direction the Bureau of Reclamation recently testified in Congress, seeking the authority for the Secretary of Interior to plan, design, and install hydroelectric facilities on 13 existing reclamation dams. This procedure will permit a much faster review for a project which is economically justified and which will not have significant adverse environmental or stream-flow effects.

The Corps National Hydropower Study included a review of thousands of Federal and non-Federal dams. Many of the more promising non-Federal dams are being subjected to onsite inspections as part of the program to reconstruct rural hydro sites, as announced in Des Moines.

Of the Federal dams included in the Corps review, many appear to be candidates for new or additional hydroelectric facilities. While the energy-generating potential of these sites varies dramatically, the total potential for increased low-cost, clean, available power through this resource at Federal sites is great. For example, the locks and dams on the Mississippi River between St. Paul and St. Louis have an installed capacity of only 165.6 megawatts, while a preliminary Corps of Engineers study suggests a potential capacity of about 2,400 megawatts. I intend to see that this great national resource is utilized.

NOTE: The statement was released at Hannibal, Mo.

St. Louis, Missouri

*Remarks on Arrival at the City.
August 24, 1979*

THE PRESIDENT. Good morning, everybody. Good morning. How many of you agree with me that we live in the greatest nation on Earth? [*Applause*]

For the last week, Rosalynn and Amy and I, along with the other passengers on board the *Delta Queen*, have had one of the most remarkable and enjoyable weeks of our lives. We've not only seen the beauty of the Midwest—the lovely land, the hills, the mountains—we've also seen one of the mightiest rivers on Earth that brings prosperity to this part of the country and gives us a reminder of what our history has been. But the most important thing to us has been to see the thousands and thousands of people who've come down to the banks of the Mississippi to make us feel welcome,

to express your respect for our great country, and to take us into your arms and into your hearts as the President and the First Family of our Nation.

Amy has had a good time. Rosalynn has had a good time. And so have I. We hate to see the trip end, but if it has to end somewhere, it could not possibly end in a more beautiful place and a more exciting place than under this tremendous arch here in St. Louis.

It's my privilege, by the way, to announce the 10 millionth visitor to the top of the Gateway Arch, who was selected this morning immediately before we arrived at this historic St. Louis site. His name is Bill Bund from Alton, Illinois, the 10 millionth visitor to your beautiful arch. I think Bill is here somewhere. Here is the 10 millionth visitor over here. Congratulations, Bill.

I'd like to say just a few words to you now about our country. We've got so much to be thankful for. Sometimes we forget how much God has blessed us in the United States of America. He's given us some of the richest land on Earth, and we've seen it on both sides of the Mississippi River during the last week. This is indeed the breadbasket of the world. And if there's one tremendous, strategic advantage that our Nation presently has and which will always be a weapon for peace and for the good will and the well-being of people in our own country and throughout the world, it's the food and the fiber produced in this tremendous Mississippi River basin because of the wonderful land that God has given us. I've had a chance to speak to a lot of farmers on the way down and to express my thanks to them from the bottom of my heart as President of our country.

We've also seen the tremendous ad-

vantages that we have of a good transportation system with the river, and I believe in the future we can, with a good energy policy, have a much better transportation system, no matter what kind of river we want to use for goods or for people.

We also have a nation in which we can enjoy individual freedom, the right to be individuals, to be ourselves, to be different, to make our own decisions, to control our own government, and to develop in the best way that we can according to our own abilities and our own talents. This is one of the things that we sometimes forget, but I believe it's very important for us never to forget the freedom and the democracy that we have; a free enterprise system which lets us compete and lets us have innovation and lets us have new ideas to overcome problems.

So, we are blessed with the greatest nation on Earth. Unified, nothing can stand in our way to resolving problems, overcoming difficulties, and answering serious questions.

In the past our Nation has always been able to do this as we have been faced with serious trials and temptations that threaten our country. In the First World War, the Second World War, the Great Depression, Americans recognized the threat to our country. We united together and we overcame it.

Now we have a serious threat to our country that's not nearly so easy to understand and so far we've not united enough to overcome it. And that's the threat to our Nation's security brought about by excessive dependence on foreign oil. We import about half the oil we use, and along with oil that comes in from the Middle East, we also import unemployment, and we also import inflation.

We must do something about the energy challenge that faces us. There are two things that we can do. One thing is to save energy. Every American, every American can save energy in your own life, in your own family, in transportation, in your homes, on your job. This is something the government cannot do for you, but there are dozens of things that each one of you and each one of us can decide to do day in and day out that will be beneficial to our country, and will also give us, in the same process, a better life. It doesn't make it good for us or more enjoyable for us when we waste what God has given us. So, I ask all of you to help us conserve energy.

The second thing I'd like to ask you to do is to join in with me in helping to produce more energy in our own country. The Mideast OPEC nations all put together have less than 5 percent of the energy reserves in our world. The United States has 25 percent of all the energy, energy reserves in the world. So, what we must do is to produce more of our Nation's energy—oil, gas, coal, geothermal, with our tremendous cropland for gasohol, use more solar power. This can make us secure in energy.

Now the Congress has before it a windfall profits tax, which is being opposed by the oil lobby and which must be passed. Oil prices are going up in the future, and the basic question is: Who is going to get the tremendous profits that come in that are unearned? The oil companies have not earned this profit, but they want to keep it. So, with a windfall profits tax we can take these profits and give them back to the American people for a better transportation system, to help the low- and middle-income families pay the increased cost of fuel, to insulate our homes, to have

a better way to produce synthetic fuels—all these benefits can come to us when the Congress passes a windfall profits tax.

We can have energy security. So, I want to ask you to do two things in summary: One is save energy, and the other one is work with me and the United States Congress to overcome the oil lobby, to pass the windfall profits tax, to make our Nation energy-secure.

With a strong nation we can stay at peace; we can keep our Nation secure. And if you'll help me, I will help you and the Members of Congress here with me to pass a windfall profits tax, to make the greatest nation on Earth even greater in the future. Will you do that? Will you help me? [*Applause*]

Thank you all very much, thank you.

Rosalynn, do you want to say a word? Rosalynn would like to say just a word.

MRS. CARTER. We've had a wonderful trip on the beautiful Mississippi River. The countryside is spectacular. I believe and I wish that every person in our country could take the trip that we have had and just see what we have in our country. It is so beautiful. We've enjoyed it. Amy has enjoyed it. The people along the way, you, too, have made it very special for us.

It's a week that Jimmy and I both will never forget. Thank you all for coming out today. We love you.

THE PRESIDENT. Amy? Say hi. All you have to do is say one word.

AMY CARTER. Hi. Hi.

THE PRESIDENT. How's that for a short speech? Thank you very much, everybody. We love every one of you. Thank you.

We'll come down and shake a few hands—the ones we can reach.

NOTE: The President spoke at 9:10 a.m. at the docking site of the *Delta Queen*.

Department of Energy

*Remarks at the Swearing In of
Charles W. Duncan, Jr., as Secretary.
August 24, 1979*

THE PRESIDENT. There's no way to over-emphasize the importance of this event, because of the significance to every American, in fact, every person, almost, throughout the world, accrued from the performance of duty as Secretary of Energy.

Fifteen years ago, the average American didn't think much about the problems that might arise from the energy question or the energy situation. But recently, in the last few years, this has become a burning issue for every person.

Our country has been well served, and I would like to ask James Schlesinger first to come to the stage.

No one who hears my voice could argue with the statement that Jim Schlesinger is a man of intelligence, competence, and also the utmost integrity. He's a man who served our Nation well in one of the most difficult jobs imaginable, that is, the formation of and the administration of the Department of Energy. He's done this to the credit of himself, my own administration, the United States Government, and the people of our country.

In addition to that, he has served well in other posts of extreme importance to our country. In time of peace and in time of war, Jim Schlesinger has always been available to a President who needed his superb capabilities to meet a difficult issue or to answer difficult problems or to solve difficult questions.

Jim has been the Secretary of Defense, as you well know, and his statements then and his actions, his recommendations

have proven in the last few years of recent history to have been wise and sound.

I particularly want to congratulate him for his service as our chief intelligence officer when he was Director of Central Intelligence.

In 1953, President Harry Truman initiated an award which I would like to make to Jim Schlesinger. This is the National Security Award, given to a person who has contributed notably to our Nation's security in the intricate, highly secret realm of intelligence. I'd like to read the citation:

"The United States of America to all who shall see these presents, greeting. This is to certify that the President of the United States of America has awarded the National Security Medal to James R. Schlesinger for outstanding contribution to the national intelligence effort. Given under my hand in the City of Washington, this 24th day of August, 1979." Signed Jimmy Carter, President of the United States of America.

Jim, congratulations to you.

I see an expression of approval and appreciation on the faces of those who observe the ceremony, and I see an expression of relief and anticipation on Jim Schlesinger's face—[laughter]—as we approach the next ceremony.

One of the very early acts of my unofficial life after I was elected President was to invite Jim Schlesinger to come down to Plains and talk to me about the very serious problem that our Nation was experiencing in not having a national energy policy, in having more than 50 separate agencies of the Federal Government responsible for the administration of various, sometimes conflicting energy laws. We didn't have a Department of

Energy, and I have to tell you that it was not Jim Schlesinger's first choice as a Cabinet officer to be the Secretary of Energy. He recognized the complexity and the challenge of it, and also the uncertainty of proposing to the Congress the creation of a major new Cabinet-level department. But he agreed to serve, and he has served well.

Last November after a year and half of intense effort in the Congress, we had approved about 65 percent of the energy legislation that had been proposed. At that time Dr. Schlesinger came and said that he thought it was time for him to step down since he had done that job, that he had scars on him from all directions and that he thought it was time for someone, perhaps, to take over with a fresh approach, and I asked him to stay on longer.

Last January, he came back to me at the beginning of the session and said, again, that he was ready to step down, that he thought he had done his job as well as he could. Since we had not passed any legislation then or even evolved a followup proposal concerning oil, I asked him to stay again until we could evolve a program concerning oil and avoid the increasing delay that was hurting our Nation at that time. He agreed to do so. And now that we've proposed to the Congress a very fine proposal for dealing with the oil issue, I have finally agreed to let Jim Schlesinger step down in this post.

Obviously the choice of his successor is one that has been a very important one for me, and I've chosen someone who fulfills every possible requirement for the job. This is an issue that is becoming of ever more important consideration for Americans.

When I made my Sunday evening speech July 15th, I said that the strength of America lay ultimately in the inexhaustible resource of the American people.

I've just finished a 7-day trip down the Mississippi River, and I have been re-inspired with the commitment of Americans to deal in a confident way with the future, to unite among themselves, to conserve energy to the utmost of their own ability and also to see hammered out here in Washington a comprehensive series of legislative proposals that will give us a sound basis for a complete energy policy in the future.

There is no limit, in my opinion, to what we in our country can do if our people are united. I've just written all 6,000 chief executive officers of the cities and towns and counties of our Nation. Many have acted on their own initiative; more will do so in the future.

Our energy security is threatened. As you know, we still import too much oil from foreign countries, about half the oil that we use. So, we must conserve; we must produce more oil and other forms of energy in our country—solar energy; we must also increase, as you know, the production of geothermal supplies, synthetic fuels, including gasohol; make sure that nuclear power is produced in a safe fashion; and insist upon a better transportation system and a means by which we can deal with the poor families, who are especially afflicted by the rapidly increasing and uncontrollable cost of oil.

The inflation figures issued just in the last few hours, when broken down by component parts, show that about one-half of the increase in our inflation rate is caused by increase in energy costs. This

is such a challenging and complex issue that we absolutely must have the finest possible administrator for this increasingly important position.

I think the prices of oil and gas must go toward the market price. We have taken steps in the Congress to decontrol the prices of both natural gas and oil in a carefully phased, predictable way. This has resulted and is resulting in a fairly rapid increase in the cost of energy to mirror worldwide considerations over which we have no control.

I know that many of you here today represent the energy industry, and I would like to call on you this afternoon to put aside differences and to join with me and with the new Secretary of Energy and with the Members of Congress in supporting the proposals that we have laid before the Congress for the benefit of our country. I would like to ask the representatives of the oil and natural gas industry, and others, to support the windfall profits tax, which has been carefully devised for equity and fairness, which will give us a basis for becoming more energy-secure.

I know that you have and all Americans have a great confidence in Charles Duncan, who will now be sworn in as Secretary of Energy. He has served in the most distinguished way in the private enterprise system of our country, a superb manager, sound judgment, great intelligence, a good educational background, one who understands the complexities of our social and economic system throughout this country. In addition to that, in Government, he has built an admirable record as a Deputy Secretary of Defense. His own boss, the Secretary of Defense, Harold Brown, has told me many times

that Charles Duncan was completely qualified to be the Secretary of Defense or for any other job including, he has told me, the President of the United States. [Laughter] I'm not sure which job Harold Brown placed on top. [Laughter]

But I am grateful to Charles Duncan, who is here this afternoon to be sworn in to this important position.

And now, Judge Patricia Wald will administer the oath of office to Charles Duncan as the Secretary of Energy for the United States of America. I'm very proud to participate in this ceremony. Thank you very much.

[At this point, United States Circuit Judge Patricia M. Wald administered the oath of office.]

SECRETARY DUNCAN. *Mr. President, Judge Wald, distinguished guests, and ladies and gentlemen:*

Thank you, Mr. President, for those very kind remarks, and I want to thank all of you for having joined my family and me on this most significant day in my life.

As I look around the room, I see so many people that I know so well that it's impossible to make the personal comments that I'd like to, but I'd be very remiss if I didn't say to my former colleagues in the Department of Defense, so many of whom are here, that the last 2½ years have been the most interesting that I've spent. The Nation is indeed fortunate to have so many capable and dedicated men and women, both military and civilian, managing our national defense. And I say to you, Harold Brown, my mentor and my friend, that my relationship with you and the personal pleasure of working with you has exceeded my greatest expectations.

And I would also be remiss if I didn't say to the many people here from the Department of Energy that I look forward to working with you and all of your excellent associates. I'm especially pleased to see Jim Schlesinger here. The President has articulated very well the American attitude towards Jim Schlesinger. Jim has done an outstanding job during a very difficult period. He has had to organize a complex new department while simultaneously attacking one of the most difficult problems facing our Nation. We're all indebted to Secretary Schlesinger.

There are also many of my personal friends here, and many of these people have traveled a long way. My family and I are most appreciative to all of you for being here.

Mr. President, I'm deeply honored to have been selected by you to be your Secretary of Energy. This is a terribly important responsibility, and I accept it with humility. The problems are enormous. We must reduce our dependence on imported oil. We must move forward aggressively on programs of conservation and energy efficiency. We must utilize the genius of American technology to make use of the Sun and other renewable resources, and we must and can find environmentally sound ways to utilize our tremendous domestic energy resources.

In trying to do these things, Mr. President, and implementing your energy policy, I plan to maintain an active and an open dialog with all elements of American society that have an interest in energy matters, with public interest groups, consumer groups, environmental groups, labor groups, industry and business groups, all interested publics.

This is an effort that cannot be accomplished by the Secretary of Energy alone or by any single department of government. This is an effort that requires the closest possible cooperation within your total Administration, with the Congress and, most importantly, it requires the continuing cooperation and support of the American people.

The energy problems directly impact all Americans. They affect the very fabric of our economic structure. The successful management and resolution of these problems requires the involvement of individual Americans making millions of individual decisions, to understand the importance of conservation, the importance of energy efficiency, and the importance of developing alternative energy sources.

The problems and the responsibilities are huge, but I want you to know, Mr. President, that I approach my assignment with a sense of optimism, dedication of purpose, enthusiasm, and with a commitment to do my very best. I'm convinced that we can find the right balance in our answers to these problems to assure all Americans a safe and secure energy future.

And lastly, Mr. President, I thank you for giving me this opportunity to serve my country. Thank you very much.

THE PRESIDENT. And now since we've had the thermostat turned so low for this ceremony, we can turn it back up. *[Laughter]*

All of you are welcome to come over to the reception, where you can personally shake hands with Charles and Anne and his family.

Charles, if you don't mind, you might follow me through the door so that you can stand in place so that all of you can

express your congratulations and your pledge of support to him.

Thank you very much.

NOTE: The President spoke at 3:39 p.m. in the East Room at the White House.

Id al-Fitr

Message of the President. August 24, 1979

On this joyous holiday of Id al-Fitr, ending the fast of Ramadan, Rosalynn and I extend our warmest good wishes to all of our fellow citizens of the Muslim faith.

The observance of your traditional religious ceremonies strengthens the moral and spiritual values of your Faith and thereby deepens our nation's commitment to our highest principles.

At this critical time, we join together in praying for a lasting peace that will bring justice and freedom to all people.

JIMMY CARTER

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

August 20

The White House announced that the President will answer questions from the public in a live, 2-hour radio broadcast from the Oval Office on Saturday, October 13. The program will be produced by National Public Radio and will be heard

on most NPR member stations from 1 to 3 p.m. (EDT) on October 13. Anyone who wishes to talk with the President is requested to send a postcard to: "Ask the President," P.O. Box 19369, Washington, D.C. 20036, listing name, address, and telephone number. The questions a caller would like to ask should *not* be given on the card. Just prior to the broadcast, NPR will choose callers at random from the postcards and connect the persons selected with the President as lines become available. Susan Stamberg, cohost of "All Things Considered," will anchor the program for NPR and will introduce each caller to the President and the radio audience.

The White House announced that Ray Jenkins, editor of the Montgomery Advertiser and Alabama Journal, will join the White House staff in early September as a Special Assistant to the President. He will work in the Press Office and will assist the President and the Press Secretary in the full range of responsibilities of the Press Office.

August 24

The President returned to the White House following his trip down the Mississippi River. Later in the afternoon, the President went to Camp David, Md.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted August 20, 1979

PAUL A. VOLCKER, of New Jersey, to be United States Alternate Governor of the International Monetary Fund for a term of 5 years, vice G. William Miller.

Administration of Jimmy Carter, 1979

NOMINATIONS—Continued

Submitted August 20—Continued

STEPHEN LOW, of Ohio, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Federal Republic of Nigeria.

CHECKLIST—Continued

Released August 21, 1979

News conference: on the Middle East trip of Ambassador Robert S. Strauss, Personal Representative of the President to the Middle East peace negotiations—by Secretary of State Cyrus R. Vance and Ambassador Strauss

Campobello Conference on Peace and Human Rights

*Message Accepting the Conference's Human
Rights Award Medal. August 25, 1979*

I am deeply honored to accept this fine medal and regret that I cannot greet each of you in person who are participating in the Second Annual Armand Hammer Conference on "Peace and Human Rights—Human Rights and Peace." There is no cause with which I am prouder to be identified than that of fostering human rights for all people. I accept this honor not as a personal tribute, but as an affirmation of our effort to support the brave and decent people everywhere who struggle for human dignity, often against daunting odds.

It is especially fitting that your meeting this year is on a beautiful island, forever associated with Franklin D. Roosevelt and his wife Eleanor. Their lives and works embodied a selfless quest for peace and human rights, not only for their fellow Americans, but for all humankind.

Last December, the month of the first Armand Hammer Conference in Oslo, we celebrated the 30th Anniversary of the Universal Declaration of Human Rights, the work of the United Nations Commis-

sion on Human Rights chaired by that great humanitarian, Eleanor Roosevelt. On that occasion I described the Universal Declaration as a beacon—a guide to a future of personal security, political freedom and social justice. The Universal Declaration remains, as Mrs. Roosevelt said, "a common standard of achievement of all peoples of all nations."

Organizations such as the International Institute of Human Rights have helped to ensure that this beacon has remained an undimmed source of hope and inspiration of our fellow humans suffering deprivation and repression. No group of individuals has contributed more to the achievement of these standards over the years than the men and women participating in this Campobello Conference. Nobel Prize winners, distinguished statesmen and women, parliamentarians, scholars, international civil servants—all have been tireless participants in the struggle to achieve the great dream of universal human rights.

But human rights cannot flourish in a world at war or threatened by war, and so peace remains a crucial goal for all who seek human rights for all people. Last June in Vienna President Brezhnev and I signed the second Strategic Arms Limitation Treaty. This is a key instrument for

strengthening the prospects for peace and for increasing the vitally important understanding between the nuclear superpowers. Doctor Hammer and others have worked arduously for many years to foster that understanding.

You have my warmest good wishes for a successful conference. I know your deliberations will do much to advance both human rights and international peace, and I salute you for your devotion to these noble causes.

JIMMY CARTER

NOTE: The conference was held at the International Peace Park on Campobello Island, New Brunswick, Canada. On August 25, Dr. Lincoln Bloomfield of the National Security Council staff read the President's message to conference participants and accepted the medal on the President's behalf.

Death of Lord Louis Mountbatten

Statement by the President. August 27, 1979

I am profoundly shocked and saddened by the tragic and violent death of Earl Mountbatten. In peace and in war, he was a leader of monumental ability.

Here in the United States, his memory is enshrined for the paramount role he played in achieving victory for the Allied Forces during World War II. We mourn his passing and that of the two youngsters who died with him this morning.

I have expressed my sincere condolences and those of the American people to Her Majesty the Queen, to Prince Philip, and to Prime Minister Thatcher in this time of great loss.

NOTE: Earl Mountbatten of Burma, military strategist, statesman, and member of the British Royal Family, was killed when his fishing boat was blown up off the coast of northwest Ireland by members of the Provisional IRA. His grandson and another youth were also killed in the explosion.

Budget Deferrals

Message to the Congress. August 27, 1979

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report three new deferrals of budget authority totalling \$30.1 million. These items involve human development services in the Department of Health, Education, and Welfare, emergency refugee and migration assistance in the Department of State, and the National Commission on Social Security.

The details of the deferrals are contained in the attached reports.

JIMMY CARTER

The White House,
August 27, 1979.

NOTE: The attachments detailing the deferrals are printed in the *FEDERAL REGISTER* of August 30, 1979.

United States Citizens Living Abroad

Letter to the Speaker of the House and the Chairman of the Senate Foreign Relations Committee. August 27, 1979

Dear Mr. Speaker: (Dear Mr. Chairman:)

The enclosed report, prepared in compliance with Section 611 of Public Law 95-426 identifies six Federal statutory and regulatory provisions which discriminate against United States citizens living abroad. The Executive branch has evaluated those provisions and has concluded that changes are warranted in order to resolve certain inequities involving citizenship and veterans and social security benefits. The report also reviews twenty-eight other issues raised by some Americans living abroad concerning their rights and obligations as U.S. citizens.

This report is the result of a painstaking and earnest review of the many legal provisions affecting our citizens residing abroad. The test for discrimination used was to compare the effect of those provisions on U.S. citizens residing abroad with U.S. citizens living in the United States.

I believe the report responds in a responsible manner to the concern about the situation of Americans residing abroad. I am aware that section 407 of H.R. 3363 just recently enacted, broadens the scope of the report to include the "competitive disadvantage" of Americans abroad compared to nationals of other major trading partners and extends the report's transmittal date until January 20, 1980. Because this report was completed and awaiting my transmittal at the time section 407 was enacted, I believe it best to transmit it now to the Congress for its consideration. I have, moreover, requested the Secretary of the Treasury to prepare an additional report on the taxation of American citizens living abroad compared to the treatment by our major trading partners of their citizens living abroad and to identify any competitive disadvantages that may ensue.

The Administration will continue to work to resolve discriminatory provisions in regulations and in agency procedures affecting Americans living abroad; I am hopeful that inequities which are subject to legislative remedy will likewise be resolved.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Frank Church, chairman of the Senate Foreign Relations Committee.

The 27-page report is entitled "Equitable Treatment of United States Citizens Living Abroad."

Employment and Training Report of the President

Message to the Congress Transmitting the Report. August 27, 1979

To the Congress of the United States:

I am transmitting to you the 17th annual report pertaining to employment and occupational requirements, resources, uses, and training, as required by section 127(a) of the Comprehensive Employment and Training Act (CETA) Amendments of 1978.

This *Employment and Training Report of the President* also includes a report on how social services, vocational education, and other programs administered by the Secretary of Health, Education, and Welfare are being integrated into State and local CETA activities, as required by section 127(b) of the 1978 CETA Amendments; a number of special reports that respond to additional reporting requirements in the amended CETA; a report on services for veterans, as required by the Vietnam Era Veterans' Readjustment Assistance Act; and a response to the requirements of section 4(f)(2)(B) of the Full Employment and Balanced Growth Act of 1978.

JIMMY CARTER

The White House,
August 27, 1979.

NOTE: The report is entitled "Employment and Training Report of the President" (Government Printing Office, 398 pages).

United States Ambassador to the Kingdom of Tonga and Tuvalu

*Nomination of John P. Condon.
August 28, 1979*

The President today announced that he will nominate John P. Condon, currently

U.S. Ambassador to the Dominion of Fiji, to serve concurrently as Ambassador to the Kingdom of Tonga and to Tuvalu.

Department of State

Nomination of Thomas M. Tracy To Be an Assistant Secretary. August 28, 1979

The President today announced that he will nominate Thomas M. Tracy, of Fort Lauderdale, Fla., to be Assistant Secretary of State for Administration. He would replace John M. Thomas, resigned.

Tracy is currently counselor for administration at the American Embassy in Bonn, Germany.

He was born July 8, 1936, in Great Barrington, Mass. He received a B.A. from Colgate University in 1958, an M.A. from Stanford University in 1959, and an M.B.A. from Columbia University in 1973.

Tracy joined the Foreign Service in 1960 and was posted in Juarez, Birmingham, London, and at the State Department. From 1973 to 1975, he was administrative officer in Brussels. He was counselor for administration in Moscow from 1975 until 1978, when he became counselor for administration in Bonn.

National Advisory Council on Adult Education

Appointment of 10 Members. August 28, 1979

The President today announced the appointment of 10 persons as members of

the National Advisory Council on Adult Education. They are:

LILY LEE CHEN, director of special projects and resource development for the Los Angeles County Department of Public Social Services;

REVA CRAWFORD, of Tahlequah, Okla., director of adult education for the Cherokee Nation;

ANDREW G. DONALDSON, associate director of the State University of New York Educational Opportunity Center in Manhattan;

DON DUTTON, professor and coordinator of adult and continuing education at the University of Arkansas;

MAXIE C. JACKSON, JR., director of the Center for Urban Affairs and assistant professor in the department of urban and metropolitan studies at Michigan State University's College of Urban Development;

MILDRED T. NICHOLS, supervisor of the Career Counseling Service of the Rhode Island Department of Education;

BERNADETTE PARDO PHILLIPS, public affairs producer for WPLG Television in Miami, Fla.;

LEONARD SCHNEIDERMAN, dean of the school of social service at Indiana University;

BOBBIE L. WALDEN, director of the Community Education Project and In-Service Training in Adult Competency Education for the Alabama State Department of Education; and

JAMES A. WOODS, dean of Boston College Evening College of Arts, Sciences, and Business Administration.

Advisory Panel on Financing Elementary and Secondary Education

Appointment of 15 Members and Designation of Chairman. August 28, 1979

The President today announced the appointment of 15 persons as members of the Advisory Panel on Financing Elementary and Secondary Education. They are:

- CHARLES S. BENSON, a professor of education at the University of California at Berkeley, an expert on the economics of education;
- THEODORE M. BLACK, SR., a retired Army lieutenant colonel who serves on the New York State Board of Regents;
- JOHN E. COONS, a professor of law at the University of California at Berkeley, and co-principal investigator on the Childhood and Government Project at Berkeley;
- JOSEPH O. GARCIA, director of the California School Finance Reform Project at San Diego State University School of Education;
- ROBERT GRAHAM, Governor of Florida, who was chairman of the Florida Senate's education committee from 1972 to 1975 and has also served as a member of the National Commission to Reform Secondary Schools;
- TERRY HERNDON, executive director of the National Education Association;
- EDWARD T. HUGHES, auxiliary bishop of Philadelphia, Pa., and former chairman of the Association of School Superintendents of the U.S. Catholic Conference;
- VICTORIA LEDERBERG, a professor of psychology at Rhode Island College and member of the Rhode Island General Assembly (also designated Chairman of this Panel);
- DOROTHY L. MATTISON, a public school music teacher with the Sullivan County (Tenn.) school board and a member of the Bristol, Tenn., city council;
- JAMES A. McDERMOTT, a Seattle, Wash., psychiatrist and consultant to the Washington State Department of Social and Health Services Division of Juvenile Rehabilitation and King County Juvenile Court;
- ALBERT SHANKER, president of the American Federation of Teachers and a vice president of the AFL-CIO;
- CARL SHARIF, assistant to Mayor Kenneth Gibson of Newark, N.J., a former consultant on the development of Neighborhood Education Development Centers (storefront schools);
- WILLIAM SIMMONS, superintendent of Wayne County (Mich.) Intermediate School District, and an adjunct professor of education at Wayne State University;
- MARGARET C. SIMMS, chairman of the economics department at Atlanta University and director of the Institute for Urban Affairs;
- CAROLYN WARNER, State superintendent of public instruction for the State of Arizona.

International Exposition on Energy

Message to the Congress Transmitting a Proposal for Federal Participation.
August 28, 1979

To the Congress of the United States:

In accordance with statutory requirements, I am transmitting to you my proposal for Federal participation in the International Exposition on Energy to be held in Knoxville, Tennessee from May through October 1982. The Congress has already received an FY 1980 budget amendment request, in the amount of \$20.8 million, to support Federal participation. The Department of Commerce is submitting the authorizing legislation as well.

It is my determination that Federal participation is in the national interest. The Exposition will provide for an international exchange of ideas on energy development, innovative energy technology, energy conservation, solar energy, synthetic fuels and other subjects important to the national interest. Moreover, the Exposition will stimulate tourist travel to the United States, thereby improving our balance of trade, promote international cultural exchange and accelerate capital growth and investment in the Knoxville area.

My proposal includes all statutory requirements:

- (1) assurance that the Exposition meets all criteria for recognition and has been recognized;
- (2) a statement that the Exposition has been registered by the Bureau of International Expositions on April 27, 1977; and
- (3) a plan prepared by the Commerce Department and other interested

departments for Federal participation.

The plan for Federal participation provides for construction of a pavilion and preparation of energy-related exhibits.

I urge that this plan be given prompt and favorable consideration by the Congress.

JIMMY CARTER

The White House,
August 28, 1979.

Death of Samuel I. Newhouse

Statement by the President. August 29, 1979

With the death of Samuel I. Newhouse, this country has lost a dedicated and enterprising publisher whose work in the business of news spanned most of his 84 years.

He was born in a tenement to parents who were immigrants to this country, but created one of the largest publishing and communications organizations in the United States. He exemplified those qualities which make this country great.

Rosalynn and I extend our sympathies to his wife and the other members of his family.

Columbus Day, 1979

Proclamation 4676. August 29, 1979

By the President of the United States of America

A Proclamation

Four hundred and eighty-seven years have passed since an Italian navigator in the service of Spain left the Old World to

find the New. Christopher Columbus was determined to test an audacious theory: to reach the East, sail west. On the morning of October 12, 1492, with ninety men in three small ships, he sailed into immortality.

The voyage of this intrepid explorer marked the convergence of American and world history. His discovery opened a new age—an age that gave the world a new center.

We are the inheritors of Columbus' legacy. As a nation which has always striven for the same qualities as the Great Navigator, we must continue the search for new horizons.

It is fitting that, on the observance of this October 12, we once again recall to mind Columbus' extraordinary voyage and, in the spirit of that undertaking, rededicate ourselves to that which is best and most courageous in us.

In tribute to Columbus' achievement, the Congress of the United States of America, by joint resolution approved April 30, 1934 (48 Stat. 657), as modified by the Act of June 28, 1968 (82 Stat. 250), requested the President to proclaim the second Monday in October of each year as Columbus Day.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Monday, October 8, 1979, as Columbus Day; and I invite the people of this Nation to observe that day in schools, churches, and other suitable places with appropriate ceremonies in his honor.

I also direct that the flag of the United States of America be displayed on all public buildings on the appointed day in memory of Christopher Columbus.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-ninth day of August, in the year of our Lord nineteen

hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register,
12:08 p.m., August 30, 1979]

NOTE: The text of the proclamation was released on August 30.

Leif Erikson Day, 1979

Proclamation 4677. August 29, 1979

*By the President of the United States
of America*

A Proclamation

From time immemorial, explorers have sought new frontiers to explore and new worlds to conquer. Their insatiable curiosity, their willingness to face new challenges remain inspirations to the modern world.

Few people can surpass the courage and accomplishments of Leif Erikson, a remarkable representative of a remarkable people. His voyage west to uncharted waters epitomized the virtues of bravery, skill and imagination.

In honoring this great Norseman, we honor the representative of a people whose respect for law and whose early devotion to representative government mirrors our own commitments. We honor, too, Americans of Scandinavian descent, who have made such notable contributions to the development of the United States.

To express our respect for the accomplishments of Leif Erikson and his followers, the Congress of the United States, by joint resolution approved September 2, 1964 (78 Stat. 849, 36 U.S.C. 169) design-

nated October 9 in each year as Leif Erikson Day.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim Tuesday, October 9, 1979, as Leif Erikson Day, and I direct the appropriate government officials to display the flag of the United States on all government buildings that day.

I also invite the people of the United States to honor the memory of Leif Erikson on that day by holding appropriate ceremonies in suitable places throughout the land.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-ninth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register,
12:09 p.m., August 30, 1979]

NOTE: The text of the proclamation was released on August 30.

White Cane Safety Day, 1979

Proclamation 4678. August 29, 1979

*By the President of the United States
of America*

A Proclamation

Most of us take it for granted that we can walk unaided through a crowded store or street. We give little thought to our freedom to come and go as we please, yet there are over six million Americans whose vision is so impaired that every corner is a place of danger.

For many of these people, help comes in the form of a white cane. This eight-

ounce, long white stick is as useful as it is simple. For a blind person, it is a kind of beacon. In the hands of someone trained in its skillful use, the white cane becomes an extension of the body, providing assurance that the path ahead is clear.

Upon encountering someone using a white cane, those of us who are fortunate enough to see well should slow our pace for a moment to notice if the person seems to need assistance. Offering an arm to a blind person crossing the street or guiding him or her around a barrier requires only a few moments. Indeed, just yielding the right of way to a blind person can make the difference between a pleasant and safe excursion or a frustrating and possibly hazardous one. Motorists, cyclists, and joggers should be especially alert to the person with a white cane.

To heighten public awareness of the importance of the white cane to the independence and safety of blind and visually handicapped Americans, the Congress, by a joint resolution approved October 6, 1964 (78 Stat. 1003; 36 U.S.C. 169d) has authorized the President to proclaim October 15 of each year as White Cane Safety Day.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim October 15, 1979, as White Cane Safety Day.

On this occasion, I urge all Americans to consider the needs and accomplishments of those who successfully overcome the difficulties imposed by visual disability and blindness. Such individuals merit recognition and respect for the special efforts they must make to function independently in a world where the ability to see is taken for granted.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-ninth day of August, in the year of our Lord nineteen hundred seventy-nine, and of the

Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register, 12:10 p.m., August 30, 1979]

NOTE: The text of the proclamation was released on August 30.

Labor Day

Statement by the President. August 30, 1979

Labor Day has traditionally been a time of rest and relaxation, the last long week-end of summer. But it is also a time to reflect on our accomplishments and challenges.

We can be thankful and proud of the hard work that has built the most productive economy in world history. We can be thankful for the brave men and women in American labor whose past struggles won fundamental rights for American workers. They strengthened our democratic system and enlarged the freedom of opportunity for succeeding generations.

Today is an appropriate time to acknowledge our recent accomplishments. This is the third Labor Day of my Presidency. In these years, we have strengthened important health, safety, pension, and minimum wage protections for American workers.

Today, almost 100 million men and women have jobs in our Nation—8½ million more than when I took office. This dynamic expansion of our economy has made a crucial difference for those who suffer most from unemployment—minorities, women, and young people.

Nonetheless, we still face difficult challenges that threaten to erode some of these hard-won gains. The most serious challenge is inflation—which erodes the pay-checks of all working Americans. Working

together, we can forge a long-term partnership that will reduce inflation and keep it down. We must also face our energy challenge, conserve the energy we use now and develop new supplies of energy to fuel our farms and factories, to move our goods and people, to provide the warmth and light for our homes.

Our Nation can surmount these problems. Throughout our history, American workers have overcome challenges in ways that brought new progress and prosperity. By confronting our current challenges we can provide better lives for all Americans.

Americans value work and the opportunity to contribute to their communities and their Nation. Let us pause today to give thanks for the abundance of our blessings and to rededicate ourselves to meeting the challenges of our time.

Federal Civilian and Military Pay Increases

Message to the Congress Transmitting the Federal Pay Comparability Alternative Plan. August 31, 1979

To the Congress of the United States:

Under the Pay Comparability Act of 1970, an adjustment in Federal white collar pay will be required on October 1, 1979.

I have reviewed the report of my Pay Agent and recommendations of the Advisory Committee on Federal Pay relative to a pay adjustment. Their findings indicate that an average 10.41 percent increase, at a cost of about \$6 billion, would be required to achieve full comparability with the private sector.

However, pay comparability for Federal civilian employees and the military

must be viewed in the light of the current economic situation. Inflation continues to be the single greatest threat to our economy and is a national problem of foremost concern. In considering last year's Federal pay increase, I relied heavily on the pay standards the Administration was considering to guide decisions of all employers in determining pay increases. I am continuing that practice for this year's increase.

Accordingly, under the authority given to me by the Pay Act to propose an alternative pay adjustment which I consider appropriate in the light of "economic conditions affecting the general welfare," I have determined that an alternative plan consisting of an overall 7 percent increase and a partial exemption from the full effect of the limitation for the lowest-salaried civilian employees is appropriate for the Federal increase. This increase will be within the pay standard being developed by the Council on Wage and Price Stability that will apply to all employees in the country for 1980. It is somewhat higher than the increase anticipated by my 1980 budget. However, last January when my budget was submitted, we expected significantly lower rates of inflation than we have actually experienced. I believe that the loyal and outstanding service given to the country by the Government's civilian and military personnel warrants recognition of that changed circumstance and of the new pay standards for 1980.

Accordingly, I strongly urge the Congress to support the alternative plan which is attached.

JIMMY CARTER

The White House,
August 31, 1979.

FEDERAL PAY COMPARABILITY ALTERNATIVE PLAN

Because of economic conditions affecting the general welfare, I hereby transmit to Congress the following alternative plan, in accordance with 5 U.S.C. 5305(c) (1) :

The adjustment in rates of pay of each Federal statutory pay system to become effective on the first day of the first applicable pay period that begins on or after October 1, 1979, shall be limited to a 7 percent increase at each grade in lieu of the adjustment determined under the comparability procedure set forth in 5 U.S.C. 5305(a)-(b) ; *Provided, however*, that the full adjustment determined under the comparability procedure shall take effect to the extent it does not increase any rate of pay to an amount of more than \$8,902 per year.

In accordance with 5 U.S.C. 5382(c), and subject to any applicable statutory restrictions on the availability of appropriated funds, the following rates of basic pay for the Senior Executive Service shall become effective on the first day of the first applicable pay period that begins on or after October 1, 1979:

ES-1-----	\$47, 889
ES-2-----	49, 499
ES-3-----	51, 164
ES-4-----	52, 884
ES-5-----	54, 662
ES-6-----	56, 500

Federal Civilian and Military Pay Increases

*Announcement on the President's Proposal.
August 31, 1979*

President Carter proposed to Congress today a pay increase of 7 percent affecting

3.5 million military and civilian employees. The President's proposal would raise the pay of 1.4 million Federal civilian workers and 2.1 million members of the armed services.

The law governing Federal civilian white-collar pay requires that the Bureau of Labor Statistics conduct an annual nationwide survey of salaries paid private sector employees who hold jobs similar to their Federal counterparts. This private sector salary data is then compared with Federal salaries by a body called the President's Pay Agent: the Secretary of Labor and the Directors of the Office of Management and Budget and the Office of Personnel Management. This year the Pay Agent found that an average increase of 10.41 percent would raise Federal white-collar salaries to the level of private sector counterparts.

The law provides the President authority to propose the lower increase because of "national emergency or economic conditions affecting the general welfare."

The President believes strongly that a 7-percent increase is required this year. The 1980 budget had provided for a 5.5-percent increase. The President recognizes, however, that employees are faced with a higher cost of living than when he submitted his 1980 budget. For example, current forecasts of CPI increases have risen 3.2 percentage points for 1979 and 2.0 percentage points for 1980 over those used in the budget.

By recommending 7 percent instead, the President's action will add a little less than \$1 billion to the \$60 billion that the budget already provides for these workers' annual salaries.

"Inflation continues to be the single greatest threat to our economy and is a national problem of foremost concern," the President said in his message to the

Congress. The average 10.41-percent increase that would be required under the comparability act is far beyond the standard of the Council on Wage and Price Stability for this year, and exceeds any standard under consideration for the coming years.

The President's proposal recognizes that low-paid employees have felt more than others the impact of inflation and provides that employees earning less than \$8,900 per year will receive larger increases. Further, to ease the burden of the limitation on the military, the President has decided that there will be no reallocation of the increase from basic pay into the allowances for quarters and subsistence.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

August 28

The President transmitted to the Congress and the Comptroller General the reports of the United Nations Joint Inspection Unit during 1978.

August 29

The President returned to the White House in the afternoon, following his stay at Camp David, Md.

August 30

The President left the White House for visits to Atlanta, Ga., and Tampa, Fla. In the evening, he went to Plains, Ga., for the Labor Day weekend.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted August 27, 1979

JAY JANIS, of Florida, to be a member of the Federal Home Loan Bank Board for the remainder of the term expiring June 30, 1981, vice Robert H. McKinney, resigned.

Submitted August 28, 1979

THOMAS M. TRACY, of Florida, a Foreign Service officer of Class one, to be an Assistant Secretary of State, vice John M. Thomas, resigned.

JOHN P. CONDON, of Oklahoma, a Foreign Service officer of Class one, now Ambassador Extraordinary and Plenipotentiary of the United States of America to the Dominion of Fiji, to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States of America to the Kingdom of Tonga and as Ambassador Extraordinary and Plenipotentiary of the United States of America to Tuvalu.

THOMAS A. CLARK, of Florida, to be United States Circuit Judge for the Fifth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

NATHANIEL R. JONES, of Ohio, to be United States Circuit Judge for the Sixth Circuit, vice John W. Peck, retired.

ARTHUR L. ALARCON, of California, to be United States Circuit Judge for the Ninth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

HARRY PREGERSON, of California, to be United States Circuit Judge for the Ninth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

STEPHANIE K. SEYMOUR, of Oklahoma, to be United States Circuit Judge for the Tenth Circuit, vice a new position created by P.L. 95-486, approved October 20, 1978.

ALCEE L. HASTINGS, of Florida, to be United States District Judge for the Southern District of Florida, vice a new position created by P.L. 95-486, approved October 20, 1978.

SCOTT E. REED, of Kentucky, to be United States District Judge for the Eastern District of Kentucky, vice a new position created by P.L. 95-486, approved October 20, 1978.

**CHECKLIST OF WHITE HOUSE
PRESS RELEASES**

The following listing contains releases of the White House Press Office which are not included in this issue.

Released August 28, 1979

Announcement: nomination of Thomas A. Clark to be United States Circuit Judge for the Fifth Circuit

Announcement: nomination of Nathaniel R. Jones to be United States Circuit Judge for the Sixth Circuit

Announcement: nomination of Arthur L. Alarcon to be United States Circuit Judge for the Ninth Circuit

Announcement: nomination of Harry Preger-son to be United States Circuit Judge for the Ninth Circuit

Announcement: nomination of Stephanie K. Seymour to be United States Circuit Judge for the Tenth Circuit

CHECKLIST—Continued

Released August 28—Continued

Announcement: nomination of Alcee L. Hastings to be United States District Judge for the Southern District of Florida

Announcement: nomination of Scott E. Reed to be United States District Judge for the Eastern District of Kentucky

Released August 31, 1979

News conference: on the President's proposal for a 7-percent increase in Federal civilian and military pay—by John P. White, Deputy Director, Office of Management and Budget, and Alan K. Campbell, Director, Office of Personnel Management

**ACTS APPROVED BY
THE PRESIDENT**

NOTE: No acts approved by the President were received by the Office of the Federal Register during the period covered by this issue.

Editor's Note

The President's Trip to Georgia and Florida

On Friday, August 31, the President was in Plains, Ga. Releases and announcements issued during his visit to Georgia and Florida will be printed next week.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, September 7, 1979

Atlanta, Georgia

Remarks at the Presidential Energy Technology Seminar. August 30, 1979

THE PRESIDENT. Thank you, everybody. It's good to be home.

SUMMARY OF FIRST SESSION

DR. PRESS. Mr. President, we have convened this energy technology seminar at your request. We've gathered the Nation's leading experts to brief you on how American science and technology can contribute in the years ahead to help alleviate our energy problems. The Government research and development budget in energy is of the order of \$4 billion per year, and the energy security trust fund will increase this substantially. Industry, universities are making substantial investments in energy research and development.

This, then, is a report on what the dividends of these research and development investments are likely to be. I believe you will see that domestic sources of energy can become available in the years ahead that will help reduce our energy dependence on foreign imports, will strengthen our economy, and will improve our national security.

So far, we've been running some 2 hours

in these energy briefings, and I would like to spend a few minutes summarizing what has already been said this morning.

Energy conservation plays a key role in our energy strategy. It reduces our dependence on imported oil. It is cost-effective. It yields results more quickly than developing new energy supplies.

Dr. Edward Jefferson, who's the vice president of duPont Company—Dr. Jefferson, would you stand?—gave us a presentation this morning on the remarkable progress in conservation by American industry. In the past 4 years, there has been a saving of some 1 million—the equivalent of 1 million barrels of oil per day due to industrial conservation. And the chemical industry has one of the best records in conservation.

This is important, because the chemical industry uses some 8 percent of our total energy consumption. In 1978 alone, that industry has saved 130 million barrels of oil through conservation, and their goal is to effect a 30-percent reduction in energy required per pound of product by 1985.

And Dr. Jefferson described some of the measures that that industry has taken to achieve this goal; for example, the co-generation of power and steam. In the generation of electric power, there's been a lot of waste heat. That waste heat is

now converted into steam and used by the industry. They have better instruments to control the generation of power. And with more research and development, they will be able to substitute raw materials derived from coal and shale oil to replace as the feedstock for that industry the oil that is currently being used.

Our second speaker was Dr. Henry Linden, who's president of the Gas Research Institute. The U.S. energy consumption is of the order of 80 quads, and one-quarter of that today comes from natural gas. Dr. Linden suggested that the contributions of natural gas will grow in the next 20 years from 20 quads to 30 quads, and that's equivalent to an addition of 5 million barrels per day.

The largest source of this growth will come from the so-called unconventional natural gas. These are resources that are plentiful, perhaps as plentiful as the conventional gas that we've been used to, but they haven't been tapped in the past because of technological or economic reasons. Much of this gas occurs in tight formations, formations which are so impermeable that the gas doesn't flow readily to the producing wells. As a result of research and development programs, methods have been developed to fracture rocks, to make rocks more permeable so that the gas is more readily available in the future.

Dr. Linden estimates that there may be as much as 1,200 quads of natural gas, conventional and unconventional, available to us, and this is of the order of 40 to 50 years of supply at the current rates of usage.

Our third speaker was Dr. Lawrence Ybarrondo, who's Director of Water Reactor Research at the Idaho National Engineering Laboratory of the Department of Energy. He is an expert on nuclear reactor safety.

Nuclear energy accounts for some 13 percent of our electric power generation. And in some places, such as Chicago, 50 percent of the electric power comes from nuclear energy. In 1978 this was equivalent to about 1.6 million barrels of oil per day. However, nuclear reactor safety is the key element to the future of nuclear power. And Dr. Ybarrondo described how science and technology can further increase the safety of existing reactors and facilities. For example, he proposes to implant more sensors in the reactor and in the plant so that we can have better knowledge of the state of the facility on a continuing basis. These larger numbers of sensors, measuring the physical properties, the temperatures, the pressures, and the flow rates and so on, will be monitored by computerized systems which collect, organize, and display the data instantaneously on the state of the plant.

The computers can verify the plant readiness to cope with any potential emergency. In the case of an emergency, this system would allow the operators to make constructive choices of what to do, and the computer would predict the outcome of all of these various choices.

This technology is actually state of the art; it's being done today in other industrial sectors—the aerospace industry and so on. It's being done today on test reactors in Idaho. So, this is certainly an important avenue for improving our reactor safety.

The fourth speaker this morning was Dr. Douglas Balcomb, who is in charge of solar programs and conservation at the Los Alamos National Laboratory. Some 30 percent of our energy use goes to heat and cool residential and commercial buildings and to provide hot water, so conservation and the use of the Sun in this area is extremely important.

Dr. Balcomb showed us some remarkable examples of residences in which conservation and the use of the Sun in a passive way has led to clean, cost-effective energy use. These technologies, he points up, are available now. They make use of all sorts of new materials and devices and new design concepts in building homes. The investments in conservation and passive solar can lead to extremely attractive residences, and these investments will save sufficient energy to pay the homeowner back in 10 years.

The fifth speaker, and the last speaker in the morning session, was Dr. Norman Hackerman, who's president of Rice University and Chairman of the National Science Board. He spoke about enhanced oil recovery.

Some 450 billion barrels of oil have been identified in place in the United States, but only one-third can be recovered by present technology. We leave two-thirds of it behind in the ground by present methods. That's 300 billion barrels of oil that's left behind. That's more oil than Saudi Arabia possesses, and that's all in the ground in this country. If we can find ways to produce this oil, to induce it to move through the ground to the producer wells, we would gain an enormous additional source of energy. Dr. Hackerman believes that research and development will enable us to recover perhaps 10 percent of this immobile oil. And if we do this well—and that's only 10 percent of what we leave behind—this would be equivalent to three to four Alaskan oil fields.

And he told us about the different techniques we might use; for example, the injection of water and gases, such as carbon dioxide, increasing the temperature of the rock formations to make the oil flow more readily, and then injecting chemicals to loosen this immobilized crude oil so that we could pull it out.

This is a brief summary of the papers that have already been presented, and if you want to question or if any of the panelists or recipients of this briefing want to question some of these speakers, now would be an appropriate time.

INDUSTRIAL ENERGY CONSERVATION

THE PRESIDENT. I'd like to ask Dr. Jefferson how the other industries are doing in our country? I know that you spoke for the chemical industry, but is this a unique achievement, or are the other generic types of industries doing an equivalent job?

DR. JEFFERSON. Well, Mr. President, most of the industries have met or surpassed the goals that were set in the program developed by the Federal Energy Administration and the Department of Commerce 4 years ago. So, in essence, most industries are doing well.

THE PRESIDENT. Do you think the 30-percent goal by 1985 is the optimum that you all can achieve? Is that goal high enough?

DR. JEFFERSON. Well, that goal relates only to energy conservation. As you know, the chemical industry uses a great deal of petroleum and natural gas as raw material. The savings that can be achieved in the raw material area are additive to this as are, also, savings that would accrue from moving away from the scarcer petroleum and natural gas over to more plentiful fossil fuels. And all these three are getting attention.

THE PRESIDENT. I presume, since you've been so enthusiastic about it, that one of the motivations is cost-effectiveness and it has been a matter of saving for you in production costs and—

DR. JEFFERSON. Yes, sir.

THE PRESIDENT. It's been a profitable thing?

DR. JEFFERSON. Yes.

THE PRESIDENT. Thank you very much. I might have some other questions later.

UNCONVENTIONAL GAS

Dr. Linden, one of the most doubtful issues that I had to face a few months ago when we were putting together our energy proposal for Congress was the unconventional gas production. We had estimates all the way from half a million barrels a day by 1990, up to 2½ million barrels a day by 1990.

Within the constraints of predictable cost for production, compared with present projections, what would be your best estimate of how much we might realize from the unconventional gas sources by 1990? My parameters may not be good ones.

DR. LINDEN. The two resources, Mr. President, that are the most immediately developable are the Devonian shales in Appalachia and the tight sands in the Western Rocky Mountain States. Nearly all estimates that have been made indicate that there are on the order of 200 trillion cubic feet or quads of gas in these two sources, available at prices somewhere between \$4 to \$5 a million Btu at the wellhead and—which is equivalent to something like \$24 to \$30 a barrel, which is a price which we are afraid will soon be reached in terms of OPEC oil imports.

Several studies done for DOE and for us have indicated that somewhere between 5 and 8 trillion cubic feet from these sources alone could be produced as early as 1990 and, perhaps, as late as 2000. So, we're talking about supplements in the 2½-million-barrel-a-day to 4-million-barrel-a-day range. Your particular initiative, the oil import reduction program, calls only for ½ to 1 million barrels a day equivalent by 1990.

I am very confident that we will meet

this goal, in view of the legislative actions and regulatory actions that have been taken or proposed by you. So, we are quite confident that this will be exceeded under current conditions.

THE PRESIDENT. That was the most conservative estimate that we made, and it was done deliberately because of the doubt about the effort that would be underway. What is the degree of effort now being explored in getting these unconventional gas sources realized?

DR. LINDEN. We have large well drilling programs, wells of opportunity, and, actually, research wells in all of the four resources.

In the Devonian shale, there is a large drilling program jointly by industry, DOE, and my own organization. In the western tight sands, some very extensive stimulation work, hydraulic fraction work is underway.

In the geopressed zone, gas in the gulf, we have a 10-well drilling program underway, and you, I think, participated in launching of a project to recover gas from coal seams for rural development. So, we are making good progress. And DOE is currently spending on the order of \$65 million a year on unconventional gas R&D, and we have proposed that it should be boosted to something on the order of \$100 million.

But with these initiatives and the very heavy involvement of industry, as well, on a cooperative basis, I think we are well launched to realizing these targets.

THE PRESIDENT. So, to summarize, you would say that by 1990 we have an excellent chance to have, say, 2 million barrels of oil equivalent per day at prices at least competitive with synthetic fuel costs?

DR. LINDEN. Absolutely.

THE PRESIDENT. That's much higher than we had anticipated or projected.

DR. LINDEN. Thank you.

THE PRESIDENT. Thank you, Dr. Linden.

NUCLEAR SAFETY

Mr. Ybarrondo, I just had one question to ask. To what degree are you working with Dr. Kemeny and his committee? They'll be coming to me now, within the next month, with recommendations derived from the Three Mile Island incident about how nuclear power can be made more safe and operating and design features might be incorporated. Are you, or others associated with you, working with them on it?

DR. YBARRONDO. Indirectly, Mr. President. Some of the technical staff members to the Kemeny Commission have contacted us, and they have asked us to examine various options, for example, that the operators took during the course of the Three Mile Island incident.

Primarily, they're addressing the what-if questions—"What if the operator did this in lieu of something else?" And we have been asked to make some computer code calculations for them. Those calculations are in process.

THE PRESIDENT. Is the computer control technique cost-effective? Does it replace enough personnel so that a power company looking for cost savings would initiate it?

DR. YBARRONDO. I'm not sure that it would specifically reduce the personnel enough to result in significant cost savings. But the use of the computer to look at potential defects and to allow them to operate the plant more efficiently, to decrease the downtime of plants due to mechanical failures or human errors would certainly be cost-effective.

THE PRESIDENT. One of the major problems with nuclear power now is the percentage of downtime, is it not?

DR. YBARRONDO. Yes, sir. It is.

THE PRESIDENT. What does that run—30, 40 percent, that high?

DR. YBARRONDO. On the order of that. The availability of the plant is not as high as it could be.

THE PRESIDENT. So, if the Kemeny report should recommend—I'm not anticipating—increased personnel from which could be derived increased safety, then the computer use would be more attractive under those circumstances, would it not?

DR. YBARRONDO. I believe so.

THE PRESIDENT. Thank you very much.

DR. YBARRONDO. You're welcome.

ENERGY CONSIDERATIONS IN BUILDING DESIGN

THE PRESIDENT. I'd like to ask Mr. Balcomb one question. I'm not putting all the burden on you, but it seems that one of the major unfulfilled opportunities is to get the AIA—with all the architects in the Nation and the major builders—to commit themselves in just standard designs of homes and public buildings to incorporate energy-saving features. To what degree is this being done? It's one of the things that I advocated in, I think, a national meeting of the architects in Atlanta when I was Governor. But I just wonder if the architects as a group are pursuing this without the customer asking for it necessarily. Can you answer that for me?

DR. BALCOMB. The AIA themselves have instituted a small program of seminars, directed specifically at their members, to teach them about passive solar design and energy conservation options. There are other signs. The recent April issue of *Progressive Architecture*, which is the leading magazine in that field, was

entirely devoted to energy-conscious design, both related to energy conservation and solar applications.

In looking at the response to other seminars and information, instructional media and so forth, the response of the architects has been very good. A lot of this is coming from public demand. They are getting a lot of people walking in the door who want to do it. So, I think it is happening, yes, sir.

THE PRESIDENT. Well, there's no question that the customer is well served with an increase in insulation or decrease in window space or thickness of walls and so forth, with increasing prices of energy, right?

DR. BALCOMB. No, that is certainly not questioned. I have not seen an example where it's been done where it was not cost-effective.

THE PRESIDENT. That's one of the things that I and other public officials might do, including yourself, is to get this to be just a routine sort of thing for new building designs, instead of it being a hit-or-miss proposition. I may be underestimating what's already been done, but it seems that that's the right field for initiating these kinds of energy savings in buildings—at the initial stage of design and construction.

DR. BALCOMB. A survey of current practices done in '75 indicated that there is quite a good response—and everyone was surprised at the extent to which there is an increase in the standards which buildings are being built in response to the situation.

THE PRESIDENT. Thank you very much.

ENHANCED OIL RECOVERY

Mr. Hackerman, I had one question. I'm sorry I came in late. I probably would have gotten this from you if I had been

here. You said that—part of Dr. Press' summary—that 10 percent of the oil could be recovered. Is that 10 percent of abandoned fields or is that an increase of 10 percent in a field that's under productivity?

DR. HACKERMAN. Well, either way, it's 10 percent of what would be left after full depletion.

THE PRESIDENT. Could you go back into an abandoned field and then still get that 10 percent?

DR. HACKERMAN. That's right, Mr. President.

THE PRESIDENT. Would that be cost-effective?

DR. HACKERMAN. Yes, at the way things are going, it would be cost-effective.

THE PRESIDENT. I see. [Laughter] That's the good news and bad news in one sentence. [Laughter]

Thank you.

COAL SYNTHETICS

DR. PRESS. The first speaker of this second half of our seminar, Mr. President, is Dr. Lawrence Swabb, who's vice president of the Exxon Research and Engineering Company and is one of the experts in our country on synthetic fuels derived from coal.

DR. SWABB. *Mr. President, Secretary Duncan, Dr. Press, ladies and gentlemen:*

I will discuss the technology for converting coal to synthetic fuels. And I also have some good news and some bad news. The good news is that the technology for commercial-size plants is available to change coal to gaseous products, such as synthetic natural gas, and into liquids, such as gasoline and fuel oil. In addition, research is moving ahead to develop even better technology.

The bad news is that the cost of these synthetic fuels will be higher than the prices we are now paying; just how much higher is uncertain.

Direct burning is the most efficient way to use the energy in coal, but gaseous and liquid fuels are cleaner and much more convenient to use. Our modern society has a large demand for these kinds of fuels—for transportation, for heating our homes, and for industry. With the large reserves of coal in the United States, coal synthetics represents a potentially large contribution to supplying these needs over the next 50 to 100 years.

Research on coal synthetics has increased dramatically in the 1970's. In my talk, I will cover the objectives of this research. These are: one, to lower the cost of making synthetics; two, to increase our ability to use most U.S. coals; three, to produce the products needed by consumers. In dealing with this third objective, I will briefly describe how coal synthetics are made. The fourth research objective is to ensure that environmental standards can be met as the synthetics industry is built. My final remarks will include an outlook for the impact of new research results.

Coal synthetics will be expensive. A typical commercial-size plant would cost one-and-a-half to three billion dollars if it were built today. A coal liquids plant of this size would be capable of supplying the gasoline and home fuel oil needs of a city of about 1 million people. The estimated cost of the products can vary over a wide range, depending on a number of factors such as plant size, the type of coal, financing method, and many others.

It appears that synthetic natural gas would cost much more than today's maximum price for new natural gas. If produced today, synthetic gas from a rela-

tively low-cost western or gulf coast coals would be 15 to 30 percent higher than the price of imported crude. Methyl alcohol made from these coals would be in the same cost range, and the cost of other coal liquids would be higher.

About half of the cost of the synthetics is related to the large investment for facilities and equipment. About 20 to 25 percent is the cost of coal. Another 20 to 25 percent is the cost of other expenses such as wages, utilities, and supplies.

One item that contributes to the operating cost is the fact that one-third to one-half of the energy in the coal is used in the operation of the plant. Now, these costs are only estimates. The actual costs of synthetics will not be known until specific plants have been designed, built, and operated. Obviously, the high estimated costs are a barrier to building these plants.

Coal is located in many places in the United States, and almost every deposit is unique. Bituminous coals, shown in red, are found in Appalachia, the Midwest, and the Southern Rocky Mountain regions. Sub-bituminous coals, shown in blue, are found primarily in the West. Lignite, indicated by the green areas, are in the West and the gulf coast. One of the technical challenges is to be able to convert this wide variety of differing quality coal into synthetics. To do this, we need to learn more about the chemical structure of the coal and how it reacts to form gases and liquids. Coal scientists are learning more about these areas by using modern, sophisticated research equipment and techniques.

In gasification, coal is reacted with oxygen and steam at high temperatures. The products are carbon monoxide, hydrogen, and some methane and other gases. After removing impurities, the gas can be used directly as fuel or raw mate-

rials for industry. To make synthetic natural gas, the carbon monoxide and hydrogen can be reacted together in an additional step to make more methane. This then can be mixed with natural gas for home heating.

Coal can be gasified either underground, where the coal naturally occurs, or on the surface after the coal is mined. In underground gasification, oxygen and steam are compressed and injected into the coal deposit. The product gas finds its way to a production well, and it flows to the surface where it is purified. Underground gasification will be most useful for deep coal deposits which cannot be mined by conventional methods. This technology is still in a very early stage of development.

Surface gasification is being used on a commercial scale in other countries. Several different types of gasifiers are used. Each has its own set of advantages and disadvantages. For example, some will work better with certain coals and not with others. In general, all of them gasify the coal with steam and oxygen in specially designed reaction vessels, and the coal ash is discharged either dry or as a molten slag. Product gases are purified before they can be used as fuel. Gasification research is aimed primarily at improving these gasifiers by various techniques and approaches.

In coal liquefaction, there are two types of processes. They are called indirect and direct. Both will produce either all liquids or a mixture of gaseous and liquid products.

In an indirect process, the coal is first gasified, then some of the product gases are reacted to form either liquid hydrocarbons or methyl alcohol, also known as methanol. The liquid hydrocarbons make good diesel and jet fuel, but the gasoline component is low in quality. Methanol is

a potential transportation fuel. To use it widely, however, would require changes in engines and fuel supply systems. Therefore, a new process is being developed to convert methanol into gasoline. Methanol would also be an excellent fuel for gas turbines used to generate electricity. The technology for commercial-size plants is available today to make both indirect liquids and methanol.

Direct liquefaction is not fully developed. But progress is being made in several large research projects. Direct liquefaction involves grinding coal to a small size, mixing it with oil from the process, and reacting it with hydrogen at high temperatures and pressure. The liquid products make an excellent gasoline component and acceptable heating oil and fuel oil. Direct liquefaction also requires gasification of the residue to make the hydrogen needed for the process.

The samples in the bottles illustrate the quantity of gasoline and fuel oil that can be obtained from this amount of bituminous coal in the direct liquefaction process. These liquids were actually obtained as products from a small pilot plant.

Overall, about 100 gallons of liquids can be produced from 1 ton of coal. Both indirect and direct liquefaction processes will be needed in the future to use the various kinds of coal and to produce different kinds of liquid products.

Synthetic fuels plants will be large and complex installations. In many respects, they will be similar to petroleum refineries. Plants producing either liquids or gas will likely be located near coal mines to minimize the cost of moving the coal from the mine to the plants. However, air quality, water supply, ash disposal, and physical size requirements will also play a major role in determining where these plants will be located.

The technology to meet today's environmental standards is available for cleaning up the gas in water discharge streams, also for controlling dust, and for disposing of the solid waste. This technology is already in use in refineries and electric powerplants and improved technology is the subject of a number of research programs. We've estimated that the cost for environmental protection would be roughly 15 to 20 percent of the total synthetics plant investment.

Finally, I would like to comment on the outlook for new technology. At the present time there is a substantial research program in this country on coal synthetics. A large program will continue to be needed because of the diversity of the coals, the locations, and the products. The primary target will continue to be cost reduction. Realistically, I believe a 20- to 30-percent lower cost, exclusive of inflation, can be expected over the next 20 years. This will not be easy to achieve, but improvements in gasification and liquefaction technology as well as in the purification steps can be expected.

New catalysts are the best hope for these improvements. Also, we can expect gradual improvements in equipment design, materials of construction, and process control systems as coal synthetics plants are built and operated. The best technology available will be used in a never-ending striving for lower costs.

In summary, coal synthetics are costly, but they are an important option for high-quality fuels, particularly for transportation and home heating. Large coal resources have the potential to supply U.S. needs for synthetics for many decades. Costs can be reduced through advancing technology, and progress is being made.

Thank you, Mr. President.

THE PRESIDENT. I think it might be better for me to wait until after the presentations.

BIOMASS

DR. PRESS. Shall we move next, then, to Dr. Thomas Stelson. Dr. Stelson, whom you know, is vice president of research at Georgia Tech, and he will tell us about biomass and its contribution to our energy needs in the future.

DR. STELSON. *Mr. President, distinguished guests, ladies and gentlemen:*

I'm delighted to have this opportunity to speak a little bit about the energy potential of biomass. Even though oils and gases and coals vary in character, biomass varies even more. It's a general name for a complex and diversified group of materials that are produced by living organisms. And these organisms have the capability of converting solar energy and other materials into forms of stored energy. In fact, on a geologic timescale, biomass is the source of coal and oil and gas as well.

On a short timescale all biological materials can be converted into energy, and they can be converted into all forms of energy—gas, liquid, or solid. So, the possibilities are enormous. There are literally millions of materials and many possible projects that could convert them into useful energy forms.

The two characteristics that are probably different is that biomass, like solar, is a renewable energy source. But it's a little better than direct solar in that it's stored in biological form, and it can be used without the daily or annual cycles that create problems in solar energy utilization. The other thing that's, I think, very interesting about biomass possibilities is that it's very small-scale in its opportunities, and it can be very labor-intensive and can contribute more than any other form, except possibly

conservation, to job opportunities and employment.

First slide, please.

Any material—wood, grass, grain—can be converted to energy and generally can be converted fairly efficiently. So, biomass is energy stored in living organisms that then die, and can be used. And it's a very distributed source; it's not like certain highly localized sources where you have to drill or mine the material. It's generally distributed across the country and is similarly correlated with agricultural production opportunities or forestry production opportunities.

Next slide.

Typical examples are agricultural residues. In the harvesting of grain, the straw or the stalks and leaves are potential biomass energy sources. Forest residues are particularly fruitful opportunities, because in typical harvesting in a forest, about one-half of the material is left as residue on the forest floor.

There can also be developed specialized energy crops, woody materials, that have particularly good and desirable energy characteristics. And specific crops can be developed for specific types of energy products, just like specific crops are developed for specific grains.

The opportunities for research and science and technology here are enormous, because there are great unknowns.

Next slide.

This is what I'm talking about with respect to residues. Many people immediately assume when you talk about biomass that the Earth is going to be completely denuded, and particularly they might fear a similar occurrence to what has happened in the sub-Sahara area. But, for example, in the State of Georgia, where there is fairly good data, we grow here about 6 quads of biomass per year. The State uses in all forms of energy—coal,

natural gas, hydrofuel oil, and wood—about 1 quad of energy a year.

Our goal in the near term in this State is to develop about one-quarter of a quad from biological materials or biomass. This would only be about 4 percent of what's grown. So, it would be a very small portion of the total growth.

Next slide.

There are very good near-term possibilities. Probably the best is forest residue, and that is where the greatest success has been achieved so far. The agricultural wastes are also a very good opportunity, and particularly damaged material—spoiled grain, grain that is damaged in any form by vermin or by chemicals—is essentially the same as a feedstock for energy.

So, there is a national estimate that about 20 percent of all grain is damaged to the point where its use is reduced, and this is a great opportunity for utilization.

Next slide.

One of the characteristics of biomass is just like agriculture and forestry. It's very regional, and the solution for one section of the United States is probably not going to be a good solution for another section. Thus, national programs that would be uniformly applied across the country probably aren't useful.

There is a great need for fine-scale technological development that accommodates the peculiarities of each region.

Next slide.

To illustrate the two—the secure and the labor-intensive characteristics of biomass, the State of Georgia again, where we have fairly good data, imports about \$3 billion of energy a year. By “import” I mean across State boundaries—coal, oil, natural gas. If we could displace within 5 years about one-quarter of this with biomass, this would be a new industry in this

State having a value of products of \$750 million with a very large employment possibility.

This we consider a big new industry, one that has a \$30 million annual activity. So, the economic possibilities on a local scale are tremendous.

Next slide.

Currently about 1½ to 2 quads of biomass are being utilized by industry. Quite a bit more is being used in residential energy development, but there's not really a good data base for that. It's probably around a half a quad. So, on the total there would be something like 2 to 2½ quads currently in use.

Almost all of the industrial use is in forest-based industries, where they use much of their own waste material on where they have large acreages of forest materials.

Next slide.

THE PRESIDENT. Would that include wood-burning stoves?

DR. STELSON. This does not include wood-burning stoves or any residential utilization; only industrial. The residential is probably somewhere around another half quad.

Biomass can be converted probably most easily into space-processed heat or for direct combustion for power or any other purpose or in the gasification of it.

Now, generally when you gasify biomass you cannot ship it long distances in pipelines, because it has in it heavy constituents that would condense and gum up the pipeline. So, typically we're talking about gasification at the point of use. Also, of course, biomass can be and is a very good source of liquid fuels for transportation use; that is, ethanol and methanol. And gasohol is now a very popular development.

Next slide.

This is just an illustration of what can be done. This is a textile mill in Alexander City, Alabama. It converted from fuel oil to wood, wood chips. And even though, because of unknowns in the technology, they essentially converted coal equipment to wood use and they way overdid the air pollution control system, so that the actual effluent is below 10 percent of allowable standards—in spite of some of these difficulties, the full capital cost was recovered in about 4 years. And there are literally hundreds of thousands of opportunities like this that could be repeated across the country.

Next slide.

This shows you the delivery of wood chips. This mill uses about 400 tons a day. They come in in a truck like this, which is tilted into their supply bin.

Next slide.

In the near term, in 5 or 10 years, the potential from wood—and that's the highest potential area—is from about 3½ to 5 quads. And from grains, which is more limited and which provides also competition with food sources, the potential is about ½ to 1½ quads, and that is more uncertain, because it depends upon the price of grain which fluctuates more.

Next slide.

The long-term—and by that I mean approximately 20 years—the wood potential is—these are what I would call reasonable, conservative estimates—is about 5 to 7 quads, grain about 1 to 2 quads, and others. By others, I mean aquatic biomass, special plant material, energy plantations, and things of that type. And that's perhaps 2 to 4 quads.

So, you can see the potential in 20 years is about 8 to 13 quads. And if the national use were 100 quads, this would be 8 to 13 percent, which is quite a significant development in the energy picture.

Thank you.

THE PRESIDENT. In general, I'll defer questions, but what's the estimated cost in barrels of oil equivalent? I know it varies widely, but what kind of range—say, the plant in Alabama?

DR. STELSON. It would be, right now in that plant—the cost was less than half of the cost of oil. Now, of course to the owner of the plant, he was interested in the rate of return on his capital investment, because he had to add capital to get that, so on and so forth. But in terms of fuel—gasification of wood, for example, in the southeastern part of the United States is probably competitive with natural gas right now.

THE PRESIDENT. What's the holdup?

DR. STELSON. Well, it's sort of a chicken-and-an-egg situation, in that if you're an industry that doesn't have a lot of wood, you're rather hesitant to invest capital to put in a wood-utilization facility, because you don't know if the supply system is going to be there. And if you're in the supply business, you're not going to invest in a lot of delivery mechanisms if you don't have any customers.

And so, I think it's got to be worked up at a fine scale, where you start plants like this and you build a supply-and-demand system that then escalates into a big energy industry.

THE PRESIDENT. Don't hesitate to let Charlie Duncan know what we can do to help. *[Laughter]*

DR. STELSON. Thank you.

FRONTIER OIL REGIONS

DR. PRESS. Our next speaker, Mr. President, is Dr. Bill Menard, who is Director of the United States Geological Survey and one of the world's leading marine geologists. He will describe some new frontier oil regions.

DR. MENARD. Thank you.

Good morning, Mr. President, ladies and gentlemen. I'd like to speak to you about the contribution that can be made to our oil problems by the discovery of what might be called unconventional oil fields. They're just unconventional because they're in places we haven't drilled. And one of the reasons we haven't drilled is that many of them are much deeper, in fact, than we can drill at present.

Of course, any energy scenario assumes that we will find more oil. It's assumed that we will find thousands or tens of thousands of tiny oil fields within the contiguous 48 States, where we've explored so much. It's assumed that we will find larger fields in the overthrust belt in the Rockies that's now opening up. It's assumed that we'll find giant fields in the Continental Shelves and in Alaska.

You'll notice that the less we know about the area the greater the fields you expect to find. And the reason for that, in fact, is that when you begin to explore an area, you find the big fields early. And as time goes on and you explore more, you find smaller ones.

Well, those assumptions are made. I want to talk to you about a region that isn't included in the energy scenarios, a region that nonetheless offers great promise. The region is the oil potential of the deep sea beyond the Continental Shelf. Hollis Hedburg, a distinguished oil geologist, and colleagues have recently summarized their estimates, and I think there's a growing consensus to this effect of the potential of this region.

They find in a general way that there is about the same amount, the same area, the same amount of potential oil-bearing sediments in the deep sea in the adjacent Continental Slope as we have in the oil-bearing basins of the United States.

Estimating how much oil is in a region you haven't drilled yet is a very chancy

business, which I'll touch on when I try to make a more detailed estimate. But in a very general way, the best you can say is that one volume of sedimentary rock that is known to have hydrocarbons in it has as good a chance as another. If you were to make the only kind of guess you could make about what's out there, there's probably as much in the deep sea in the adjacent Continental Slope in the way of oil as there is in the areas we've already explored in the United States. Now, that doesn't mean you can get it out, because of course it has to be in very large fields to have any potential for economic development.

How do we know very much about this region? It's because for the last 30 years, the United States and other countries, the United States oceanographers funded by the Office of Naval Research and the National Science Foundation have been out making sub-bottom profiles of the sea floor with increasing degrees of sophistication and penetration. In addition, for the last 10 years, we've been drilling, through the JOIDES program and its followups, down through several thousand feet of sediment in the deep sea. So, we know something about the potential source rocks out there, and we know a great deal about the sub-bottom structure.

The oceanographers drilling out in the deep sea have never drilled in the regions where the greatest oil potential exists, the edges of the Continental Margin. They haven't drilled in the deep Gulf of Mexico, except one preliminary hole. They haven't drilled in the promising places where the sediment is thickest and the oil potential is great. That might seem irresponsible of the oceanographers, and as one of them I would have to accept that. But it really isn't. The reason they haven't drilled is that the deep sea drilling ship, the *Glomar Explorer*, does not have a

potential to drill safely in places where you expect oil and gas. They don't have blowout preventers, they don't have the risers and so on.

So, the region is unexplored by scientists for the very reason that they think there is some potential for oil and gas there. The advisory committees won't permit drilling. At the same time, industry has been extending out from the Continental Margin from the very shallow water out deeper and deeper, and it can now drill out in depths of—there's drilling right now off New Brunswick at a depth of 4,875 feet, I think it is, varying with the tide. And it has a potential to go out even greater.

We have reached a point now where the oceanographic information about the potential of the deep sea is overlapping the potential to develop that industry has brought out at increasing cost into deeper water. What would be ideal now would be to find a potential site for drilling, a prospect which would give us opportunity to evaluate the entire deep sea in a way that would encourage us to go out at greater cost into deeper water.

Ideally for our country, such a prospect would be clearly under U.S. jurisdiction. It would have the characteristic that it could be explored by existing commercial equipment, it could be explored relatively quickly, if we wanted to, and it could be explored at reasonable cost. And if the exploration was promising, it should have the characteristic that it's capable of very large yields at reasonable prices, and within a decade.

Now, there appears to be such a prospect in the area of the mid-Atlantic region which is off the—or the so-called Baltimore Canyon. I'll show you some illustrations in a moment—not quite yet—show you what this prospect is like.

The prospect is a giant reef. Now, there isn't any reef in the area now, but there used to be. There used to be a reef in this area at the same time that there were reefs in the Reforma and the Campeche bank areas off of Mexico, the same general period which we can sum together as the Mesozoic period, which, for those of you who aren't geologists, is more or less when there were dinosaurs around. A hundred to 140 million years ago is this particular period. At that time, there was a reef that ran along the edge of the Continental Shelf, just as it does now in the Great Barrier Reef off Florida.

That reef is not known to have been continuous—because we don't have that much data, because the oceanographers weren't looking for this. They just found it while studying the general characteristics of the Continental Margin. There may be gaps. In fact, there certainly are gaps we don't know about in Central Mexico. But where we do have the information, it looks as though a reef extended from these highly petroliferous new discovery areas in Mexico, around through the Gulf of Mexico, and up the Atlantic Coast.

It comes up in the mid-Atlantic region, the Baltimore Canyon region, into water that's only 6,000 feet deep. It lies there under sediments that are themselves about 6,000 feet deep. The reef is about 20,000 feet thick in the region, which means, of course, since the reef always forms at sea level, that while the reef was forming, the sea floor sank by 20,000 feet, and the sediment accumulated as it did so. The reef is about 15 miles wide in this area; it's 150 miles long, and of course, it keeps going out of the area in both directions, since it runs intermittently all the way down from Mexico to Canada.

The oil-bearing potential we do not know for sure. If the reef was elevated at

any time so that it was deeply weathered, cavernous channels were cut into it, then the oil potential would be very high. There's no evidence that the area was elevated due to plate tectonics or the movement of the continents. So, if it was elevated, it was because sea level sank, and that means that the whole reef that existed at that time was exposed and the whole thing at that time would have been eroded. And you would have had a vast cavernous system as a potential storage place for oil. But we don't know that happened. Since it's at sea level and sea level does go up and down, it's reasonable, but we don't know that it happened.

We don't know that the temperature of the potential source beds, which have been discovered by the oceanographic drilling, ever got high enough to mature a large quantity of the oil. On the other hand, we do know from the drilling that has gone on in the Baltimore Canyon area that oil and gas are present there, and so we know that the temperature somewhere in the region got high enough to be productive.

Now, I'd like to show you a series of five slides, and then try to give you some evaluation of the prospect for the site. The first slide will show you the North American Continent and how the sea floor would look if you took the water away. Actually, it wouldn't be these colors on the sea floor, because mapmakers tend to make everything out there blue. Parts of it would be red and parts white, but the relief would look the way this shows.

I think North America looks clear enough. The great deposits of sediment that Hollis Hedberg and the other oil geologists and the oceanographers have identified lie—the ones we're particularly interested in, in here, and a great thickness in the Gulf of Mexico because of the sediment, the mud and sand that pour out of the Mississippi River and have done

so for the last 140 million years. The little bumps out here are salt domes, they occur out in the deep sea, as well as in Louisiana and Texas, and other regions, and, of course, they are the sites of a great deal of production of oil.

This is the Baltimore Canyon area in here, the mid-Atlantic region. We're going to focus on it.

Next, please.

Just to show you what a modern reef looks like—this is in the Bahamas, actually—the Great Barrier Reef would extend on in a straight line much farther, but this is the shallow reef. Waves are breaking. Just about at sea level, you find an occasional gap, a pass where water goes in and out, deep on this side, shallow here. And in ancient reefs comparable to this one in almost every way, except that there were different animals living in them, and plants, large oil fields have been discovered in association with the crest of the reefs on the deep side and on shallow side.

Next, please.

This is the leasing area, the mid-Atlantic region. The blue areas show areas that we've already leased, tracks. The line running down here is the edge of the Continental Shelf, where the sea floor begins to—instead of being almost flat, begins to slope off in the Continental slope.

The Continental slope will look quite steep in the next illustration I'll show you, which is the profile along here, but that's because there's vertical exaggeration. The actual slope is a matter of 2 to 5 degrees in most places. You wouldn't have any trouble walking up it.

These COST holes—they do cost, but that stands—it's an acronym for Continental Offshore Stratigraphic Test—and these are holes where oil companies band together. They get permission from the Government to drill. And anyone who

wants to get the information that's acquired can do so, and if a discovery is made of oil or gas, why, then we make an announcement of it. If there isn't a discovery, why then, only those who bought the information get to know what's in there.

A discovery was made here. Now, that's rather strange, because these holes are drilled away from structures where you expect to find oil and gas. It's only after the oil companies and the geological survey have agreed that that's about the last place you'd find oil or gas that you're allowed to drill. *[Laughter]* And nonetheless, gas was found here in more than measurable quantities. So, it does look to be quite a promising area.

Of course, there was gas announced by Texaco and by Tenneco here—and oil by Tenneco. The yellow is this Mesozoic reef. The first figure we saw that had yellow on it, we tended to call it the yellow reef. But it sounds a little too much like the yellow road in the Wizard of Oz. So, we took to calling it the Mesozoic reef.

Next please.

This is a profile, an actual geophysical record showing the sub-bottom, and it's one of thousands of such records we have around the continental margins. The oil companies must have tens of thousands. The characteristic of these records is every year they get better and every year you wish that all the old ones you had were capable of showing you what the new ones do. By this time you acquire the information in a very complicated way that gives you a lot of signals at once, and then you do signal processing and computer enhancement and a lot of things that nobody could dream of very long ago.

With these records, you can see these lines in here and they are reflectors, and some of them, Cretaceous and Jurassic together, are just more details of the Meso-

zoic. So, this is what I'm talking about, this period in here when all these rocks were deposited. This being a reef, this yellow area, this means since the reef animals grow only at sea level, this used to be at sea level. It's down 20,000 feet now. The top of it, as you can see, is about 10,000 feet. The sea floor here is about 6,000. Over here it's 4,900, and that's about the depth that is now being commercially drilled. This is where the same drilling apparatus is capable of drilling right now.

This is how deep it can drill—in fact, a little farther out with small modifications which are in the mill at present.

Next, please.

This shows the reef that I told you about. It extends from—this is the Campeche region, where the offshore discoveries are going on one after another with what the Mexicans must look upon as quite satisfactory monotony—another oil field is discovered every time you drill.

This is the Reforma area, and the reef in fact splays out in here. The reefs aren't all at the same time, mind you, some are—we've got from 100 to 140 million years—is a 40-million-year span. But the reef we just looked at in that profile was around for a large part of that time. And then here are the Golden Lane fields, of some of the first fields discovered in Mexico. The most productive wells ever known were in this area—240,000 barrels in 1 day. Of course, they didn't last forever.

Then there's a gap in here, and then we can trace the reef—fair continuity, it goes out here and it's lost. And here it is off the east coast of the United States and is last seen going off Canada.

That's the end of the slides. Thank you. Lights, please.

How do we evaluate this track? Well, let me say, to begin with, that the art of evaluating—or again, that the art of eval-

uating is fairly poor. In the best known area of the United States, the chances of finding an oil field, a commercial oil field, with an exploratory wildcat drill is now 1 in 7. That's the area we really know a lot about. The chance of finding a field that has 100 million barrels in it is 1 in 2,000. It might sound as though oil finders aren't very confident, but the reverse is true. It's because they've been exploring the region for 100 years and they've found everything that they now have such difficulties. If they didn't have difficulties now, they would have been incompetent for 100 years.

So, the odds of finding something out in deep water, even though unexplored, may be considerably better than that, and especially the odds of finding a giant field, because the odds of finding a giant field in the dry United States, 48 States, are very close to zero. These may be high odds, but they must be acceptable. We don't hear very much about oil companies going broke. [*Laughter*]

The only way we can guess what's in that reef, evaluate it, is to compare it with regions that have been drilled, such as the ones in Mexico and Texas and the other giant reefs around the world. We have done that recently, and it's our estimate that in the yellow area, the Mesozoic reef that you saw off the Baltimore Canyon region, there is something like 1 to 6 billion barrels of oil, produceable oil; that is, we heard earlier you leave half to two-thirds of the oil in the ground, and so we assume there's twice to three times that much. But produceable oil, 1 to 6 billion barrels.

DR. PRESS. Dr. Menard, one more minute, please.

DR. MENARD. Yes, I know. For the whole region along the Atlantic Coast we estimate 2 to 15 billion barrels. If it's elevated, the amounts would be larger.

If the oil was never mature enough, there may be none. But those are the best estimates we can give. We estimate the cost of producing, if you could do it right now, would be \$15 to \$20 a barrel. Tests can be made within 12 to 15 months if rigs are available, the rigs exist.

It costs twelve to fifteen million dollars a well. The exploration can be done by industry in a program comparable to the COST well program drilling cooperatively by industry. And we're offering the area for lease almost immediately, or it can be done by a consortium of universities and the Government in the way it's been done in the deep sea. Or, of course, it can be done in some combination.

Thank you.

THE PRESIDENT. Is it going to be done? You said it can be. Are the plans made for the exploratory wells to be drilled?

DR. MENARD. It will take—we cannot do it with the existing oceanographic equipment. The oil companies can do it right now. They have the option of doing it. But whether they will or not is their option. If the Government chooses to pursue it by itself, it could be done either by leasing the same drilling ships that industry would use, the entire area could be tested in a matter of a few years, with the first holes, 10 holes, something of that sort, or you could modify the *Glomar Explorer*, a ship which the U.S. Government already owns. It's lying idle for lack of a suitable project. At a cost of about \$70 million, the ship could be outfitted, refitted and outfitted in something in 2 to 4 years. So, it could drill indefinitely at almost any depth you would want in the ocean. It could test the Gulf of Mexico as well as this reef.

THE PRESIDENT. Is the technology available to control ruptures at that depth?

DR. MENARD. Yes.

THE PRESIDENT. Spills?

DR. MENARD. There is not technology to produce below about 5,000 feet yet, but with the decade—after the initial discoveries, with a decade to extend out from 5,000 to greater depths, I'm sure that could be developed.

THE PRESIDENT. Thank you, sir.

DR. PRESS. Mr. President, we are working with the Department of Energy and the National Science Foundation, with OMB, and investigating seriously the possibility of converting the *Glomar Explorer* for this kind of a drilling.

AUTOMOTIVE ADVANCES

Our next speaker will be Dr. Dale Compton, who's vice president for research of the Ford Motor Company, and he will tell us about automotive advances.

DR. COMPTON. *Mr. President, Secretary Duncan, Dr. Press, and ladies and gentlemen:*

I'd like to cover three main topics in my discussion with you this morning: First, a brief review of what has already been accomplished by the domestic automobile manufacturers in terms of reducing the energy of their products; second, some of the technical developments that should make further vehicle fuel efficiency improvements possible; and third, a quick look at some questions that must be answered if we're going to accomplish that.

Could I have the first slides, please?

During recent years substantial improvements have been made in the efficiency of the power trains used in our motor vehicles. At the same time, the average weight of domestically produced cars has been reduced by about 650 pounds.

The combined effect of these two actions has produced the improvement in

the fuel economy shown on this slide, a dramatic increase of over 40 percent. The use of these vehicles by the American public has already saved over 500 million barrels of oil. Of course, this saving will continue to grow as new fuel-efficient vehicles replace older cars and as even more fuel-efficient cars are introduced in the years ahead.

Frankly, I believe no other industry in the world has yet demonstrated such exceptional energy-saving progress. Before considering the opportunities for further improvement in vehicle fuel economy, I'd like to comment briefly on what I think is a common misconception, namely, that foreign-built cars are technically ahead of U.S.-built cars in terms of fuel economy.

This chart, which plots the combined city urban cycle fuel economy, the so-called metro highway fuel economy, as a function of vehicle inertia weight. You will note that—and this is EPA data for the year 1979, as published by them—note that the dotted curve representing imports lies below the line for the American-built cars, except at one inertia weight where they are essentially equal.

Let me now turn to a consideration of the technical opportunities that may exist for further improvement in fuel economy. As a basis for this discussion, I will use plots similar to the previous one of fuel economy versus vehicle inertia test weight.

The line represents the average fuel economy of the 1979 U.S.-made gasoline-powered cars, as published by the EPA. A change in weight moves one along the line, a change in power-train efficiency moves one vertically away from the current technology line. And thus a new power-train technology that works for all engines in all inertia weight vehicles would move us above the current line.

Please note that a point on this line gives the fuel economy of a vehicle at a specified

weight. This graph cannot be used to determine or project corporate average fuel economy, because the sales mix of small, medium, and large cars is such a dominant force in determining this.

Now, several technical changes can be expected to provide improvements in the average overall efficiency of the present power train. For example, better fuel control, better combustion chamber design, increased use of electronic control systems, turbocharging with reduced engine displacement while maintaining constant performance, and improved transmissions through the use of torque converter lock-ups in overdrive will also contribute. And if these improvements could be used for all vehicle weight classes, this would lead to fuel economy improvements shown here by the upper curve—an increase of about 15 percent over current power trains. Of course all of these improvements will not be possible on every weight class, and neither is it likely that all of these improvements could be introduced simultaneously.

I've carried forward to this plot the dark line from the earlier side and have marked it "current conventional." Now, there are two other piston engine technologies that may become available in reasonable quantities by 1985—the diesel and the stratified charge gasoline engine. In both of these engines, the fuel is injected into the combustion chamber. The first of these I will discuss is the gasoline version of the stratified charge engine, which at Ford is called PROCO, for program combustion. The slide shows this, and my associate is presenting you with a model of this combustion chamber.

You'll see that there is an injector for the fuel at the center, for directly injecting the fuel into the combustion chamber; you see that the piston has a unique cup design; you see that there are two spark

plugs per cylinder. The process is controlled in such a way that the combustion is initiated in the cup, and then spreads out into the total chamber.

A higher compression ratio and a very lean air-fuel ratio provides a 15- to 20-percent improvement in fuel economy over the current conventional engine. This is indicated by the upper curve. This engine type also has the capability of meeting the 1981 Federal statutory emission levels for hydrocarbons, carbon monoxide, and oxides of nitrogen, and it has a particulate emission level below the proposed 1983 standard. The earliest practical introduction date by Ford is '84, assuming a successful pilot production run in 1980.

The second piston engine technology is the diesel engine. This slide shows the combustion chamber of the Oldsmobile 5.8-liter diesel engine that is just now going into production. In this case, the fuel is injected into a prechamber down into the combustion chamber, which will ride below here. The model will show that a bit clearer.

This is a high-compression engine, of course. In terms of its fuel economy, the middle line on this chart indicates the fuel economy that present diesel engines achieve, assuming that the vehicle has the same performance as a gasoline-powered vehicle at the same inertia weight.

The line is essentially the same as the line shown on the previous slide for PROCO fuel economy improvements in the range of 15 to 20 percent. But many of the diesel-powered vehicles available today do not achieve the same performance as their gasoline-powered counterparts. And the top line represents the fuel economy achievable by some currently available diesel-powered vehicles whose performance, as measured by acceleration, is 50 percent worse than a comparable gasoline-powered vehicle.

You see the improvement in fuel economy that's achieved by the reduction in the performance. It should be noted that diesel engine manufacturers have testified that current diesel engines cannot simultaneously achieve the '81 Federal statutory emission levels for hydrocarbons, carbon monoxides, and oxides of nitrogen, and also meet the proposed levels for particulates in all weight classes.

Unless new control technology can be developed which does not have a major effect upon fuel economy, diesel usage may be restricted to vehicles of very low inertia weight, in this region and to the left. It can be expected, however, that the excellent fuel economy of both PROCO and diesel can in time be further improved through many of the same actions mentioned in conjunction with the improved conventional engine that we discussed earlier.

THE PRESIDENT. Dr. Compton?

DR. COMPTON. Yes, sir.

THE PRESIDENT. Is the reduction in performance so onerous or unpopular that the motorists would not buy it at this time? That's one part of the question. Is that how the so-called Moody Mobile gets its increased performance, or is it a different change?

DR. COMPTON. Well, there are two parts to that question, Mr. President. These four points represent the vehicles that are being sold in the United States today. And so there is a market for them, and people are buying them. Whether that is a performance level that the average consumer will accept, I think, is unclear.

THE PRESIDENT. Well, is that just low acceleration?

DR. COMPTON. Low acceleration, yes, sir.

THE PRESIDENT. I see.

DR. COMPTON. In the case of the Moody Mobile, there is an additional

change that's made in that. That is a turbocharged engine, and it's down-sized. As a result, it will get somewhat better fuel economy than this. I might just add, though, that in our studies and as reported by the EPA, we have been unable to meet the emission standards with that type of vehicle. We call it the 3,000-pound vehicle, and we have not been able to reduce the emissions to the level that it could be certified.

THE PRESIDENT. Is that apparently an insurmountable obstacle or something that—

DR. COMPTON. We continue to work on it. It is not clear to us, though, that it is possible within the current levels, within the current restrictions imposed by the certification process.

Now, beyond these versions of the piston engine, several alternative powerplants are under development. The nearest term prospect appears to be the electric. While currently available batteries severely limit the size and range of such vehicles, extensive research programs are underway that have the prospect of providing a much improved range under reasonable driving conditions. Vehicles with a range between 70 and 100 miles may be available by the late 1980's. Cost, durability, and safety of electric vehicles are all issues that must be resolved.

Other alternatives include the high-temperature gas turbine and the Sterling. And both are currently under development with the assistance of funds from the Department of Energy.

This is a slide of the Chrysler automotive turbine engine that's been jointly developed with the Government—and while we have a model, it's very difficult to carry that to you for you to examine, but you can see the principal elements of it, there's a compressor, there are turbine wheels, there are diffusers.

The next generation of such turbines, if they are to find extensive usage in automobiles, will require ceramic components. We have a couple examples of those. These are the stator turbine wheel, made from ceramics. Of course these are in the very early stages of development and are far from ready for consideration for production. While progress is being made on both of these engines, it appears unlikely that either can be in large-scale production before the late 1990's or the early 2000's.

But we recognize that vehicle weight is as important to fuel economy as is power-train efficiency. This is the trend that can be expected to occur in the use of materials. Note the increases expected in plastics, aluminum, and high-strength steel. This, coupled with some further vehicle down-sizing, will probably reduce average vehicle weights by another 500 pounds by 1985 for a further increase in fuel economies of about 10 percent. We believe that weight reductions beyond this level, beyond the 1985 level, will not be possible using conventional materials unless the utility of the vehicle is very seriously reduced. Therefore, space age materials are being investigated that may allow further reductions without a change in utility.

Prominent in this research is the study of graphite fiber reinforced plastics, and here are two examples. The first example—I'll show you another in a moment—demonstrates the potential weight savings of these compounds, 73 percent in this one case. Presently the cost of these materials is prohibitive, and the available supply is insufficient to allow consideration for large-scale use. But if these and other problems can be solved, the use of this material could allow several hundred pounds more weight to be removed from a vehicle, thus allowing further weight

reductions while maintaining utility. It appears unlikely, however, that the graphite fiber reinforced materials can achieve significant usage before the year 1990.

THE PRESIDENT. Because of cost or what?

DR. COMPTON. Because of cost and availability.

Now, there are many substantial technical and economic questions that must be answered as we proceed to improve fuel economies. First and foremost is cost. Ford estimates that the cost of the average vehicle will have to increase by \$600 to \$800 just to incorporate those technologies that we think can be in production by 1985, and that's in '79 dollars. Investments totaling many billions of dollars will be needed.

Equally important is functional utility. We must not destroy the vehicle characteristics that make the cars and trucks useful to people. We must not reduce the size to such an extent that the utility suffers. Then there is the continuing concern over the health effects of engine emissions, especially those from diesel engines. Will certain engines be precluded from use or will controls be needed whose cost and fuel economy penalties make those engines unattractive? Ways must be found to ensure vehicle safety without increasing vehicle weight, for as I've said repeatedly, increased weight reduces fuel economy. Concern also exists about the maintenance and serviceability of the power train, the increased complexity could further raise the cost of maintenance.

And finally, there's the question of timing. It has been Ford's experience that 5 to 7 years is the minimum time needed to put a new engine or transmission of reasonably conventional design into production. Further, if each of the automobile manufacturers in the country were to de-

cide today to replace all of its engine and transmission facilities, it would take about 10 years to accomplish this task because of the very real capacity limits of our machine tool suppliers.

The availability of alternative fuels deserves special mention. In reducing national dependence upon imported petroleum, fuel economy improvements must be coupled with a vigorous program to increase the availability of liquid fuels from alternative sources. While other speakers have addressed this issue in some detail this morning, I want to emphasize that a specific synthetic fuel may be best suited to a particular engine, and the sooner that we know what fuels will be available and in what timeframe, the better each vehicle manufacturer will be able to do its job of having the proper engine available for the use of that fuel.

It is also important to come to grips with the issue of how to measure energy efficiency of cars and trucks. Since various fuels have energy contents per gallon that are greatly different from gasoline, the simple measure of miles per gallon will not continue to be an adequate measure of efficiency. For example, we may need to use something like Btu's per mile.

Lights, please.

What is the fuel economy future? Customer demand for good fuel economy stimulated by rising and realistic energy prices and availability concerns will keep fuel economy at the top of our product priorities. And over the longer term, continued efforts in basic research related to automotive technology, hopefully, will increase the opportunity for major improvements in vehicle efficiency.

This of course is the basis on which we and others in the industry and Dr. Press' office are working together in an effort to formulate an industry-government automotive research program that will con-

centrate on some of these fundamental research issues.

To conclude, our industry's products will have achieved a 100-percent improvement in efficiency by 1985. I believe that significant improvements in fuel efficiency will indeed continue beyond that. But we must recognize that the gains will probably be gradual, that there are some high technical risks, and that progress will be increasingly expensive.

Thank you, sir.

THE PRESIDENT. I know we're running a little short of time, but is there any work being done on what are the possibilities for the burning of gases that are presently emitted?

DR. COMPTON. There has been research. You are speaking of the exhaust gases or gases as a fuel?

THE PRESIDENT. Both. I was particularly thinking about the correlation between cutting down emissions, undesirable emissions.

DR. COMPTON. The problem with using gases as a fuel, such as hydrogen, is not so much with the vehicle as it is with providing a distribution and storage facility nationwide. There are also weight penalties associated with carrying it on board the vehicle.

The combination of those appears to us to make it unattractive as a mobile source of fuel.

THE PRESIDENT. Theoretically, it's possible.

DR. COMPTON. It is certainly possible. There is not a theoretical limit to burning hydrogen on board a vehicle. It is a question, though, of whether the overall system is better served to use the hydrogen in other ways than for the vehicle.

PHOTOVOLTAICS

DR. PRESS. Our last speaker this morning, Mr. President, is Dr. John Goldsmith,

vice president of the Solarex Corporation, and formerly in charge of solar photovoltaics research at NASA's Jet Propulsion Laboratory, and he will tell us about photovoltaics.

DR. GOLDSMITH. Good morning, Mr. President, ladies and gentlemen. It is indeed a pleasure to be here this morning. In my presentation this morning, I'll try to brief you very quickly on the status of photovoltaics, where it is at the present time—technologically, economically, in the world, and what might be done in terms of improving that technology so that it might in the future become a contributor to our national energy needs.

To get into the topic, I'd like to very briefly describe for those in the audience who may not be familiar with photovoltaics. If one takes a very common material, which is—what is made up of this particular wafer that I have in my hands, you note that it's about 3 inches in diameter and about ten thousandths of an inch thick. This is made of silicon, the second most common element in the crust of the Earth. If impurities are placed in this, tiny amounts of phosphorous and boron, this material becomes electrically active, that is, that when photons, light is emitted and is impinging upon this piece of material, it activates the electrons inside of this silicon, and the solar cell becomes an energy producer, it converts the sunlight into electricity. And it does it directly, which is very different than any other form of solar energy conversion technology that certainly we talked about today.

Now, that principle of direct solar energy conversion means that it does this without any moving parts, without any emissions, without any pollution, without any vibration, and because it does it electronically, meaning that there is no chemical reactions going on within it, its life-

time is indefinite; it can go on for many, many years.

I have a very brief demonstration of what photovoltaic technology may be. This is a very simple illustration of this principle. This material has now been made into a solar cell by the addition of those impurities. It's placed in the top of this cube, and wires have been now placed from the top and the bottom of the solar cell to a little electric motor inside the cube. And if we turn on the light, which would simulate the Sun, we see that there is a direct conversion that goes on. And by simply cutting off the light, the electricity stops.

This principle has been developed, it's very modular in nature—the more solar cells we add together, the more power we derive. There is no complex interaction between the solar cells, which makes it look like as we increase the number of solar cells, we're going to get less power than you would anticipate; quite simple, electrical summations of these solar cells together.

Now, I have some slides I'd like to very quickly show you to further develop this thesis.

In this first slide we see a cutaway of what a solar cell really is. This is a very simple, thin piece of material covered with a window in order to protect the surface of it from contamination, dust, and make it easy to clean. A solar cell by itself, as we have seen, is not in itself able to sustain a complete system, that is, that when the Sun goes away. Of course, we must have energy in order to provide the energy in the evening, for instance. And this is done by a conventional technique such as a storage battery.

A solar cell, such as this, plus some means of controlling the amount of energy which is coming out to charge the battery, is something that we would conventionally

be able to use, for instance, in our home. And this is one of the very interesting aspects of what photovoltaics may offer. That is the distributed form of energy conversion that people may put on to their houses. It would take, for instance, about 500 square feet of a solar array on a south-facing roof in order to provide enough energy to power a typical American home.

At present cost today, it costs on the order of around \$50,000 for that size of a power system, and therefore, in today's technology and today's economics, that's, of course, quite impractical. But it doesn't have to be there, and we'll develop this thesis further.

The technology of solar cells became quite developed during the space age, and one of the best examples of that technology was in the use of solar cells in powering our Skylab space station. This was nominally a 24-kilowatt power system. It was in orbit for over 6 years, and in that period of time it was the only source of power for the entire Skylab—a much more complicated kind of a power system than ever we would need in our home.

In that 6 years, there was unmeasurable degradation of that power system in the hostile environment of space.

Solar cells since 1973 have had a great interest in its application relative to terrestrial purposes, and here we see it being used on a tower in the Gulf of Mexico for navigation aids in order to operate lights, to blow horns, and to warn oncoming ships about its presence.

It's used frequently in isolated areas, such as this particular system which is in the Mojave Desert, which is used by the California Highway Patrol for radio relay purposes. It is being used quite successfully. It is being used now in developing countries. In this particular application, it is being used in Senegal in order to pump water, where people in the past

have had to carry the water on their heads many miles to the village.

It's being used in the United States for water pumping—in this particular case, on a Navajo Indian reservation in Arizona. An even more sophisticated application of photovoltaics is coming along again on an Indian reservation in Arizona, the Papico Indian reservation, in which a photovoltaic array is providing a great deal of the energy requirements of this particular Indian tribe, not only for water pumping but, as indicated here, for refrigeration, for operating lights, for their communications, and so forth.

Progress in the use of photovoltaics has been very good and has been stimulating a great deal of interest in terms of looking at it for near-term types of needs when the price comes down further than it is at the present time. We'll talk about that price in just a minute. Such things, for instance, as large irrigation purposes. This is a 25-kilowatt system which is being studied in Meade, Nebraska, in order to irrigate these cornfields, which are immediately behind this photovoltaic array.

I'd like to now talk a little bit about what has happened in terms of photovoltaic technology and begin to develop a dialog associated with why we believe that that technology can be improved and why it may eventually reach a point where it might be useful for large scale terrestrial applications.

To summarize, however, before we get to that one point. This generally tells us about the major characteristics of what photovoltaics are. It's the direct conversion of Sun's radiation to electricity. Its intrinsic reliability seems to be very well demonstrated by the many applications that it has been experiencing over the past 20 years since it became of very serious interest. That it is modular, as we have indicated, that there is a relative absence

of environmental impacts, in fact, particularly a silicon photovoltaic array would be amongst the most benign of all types of power systems that we could consider. It has a large technology base, it has based a lot of its technology on the billions of dollars which have been developed and invested in the semiconductor industry over the past 30 years.

What has happened as far as price is concerned? And what we see is a very complex type of a graph. It is what we call, in engineering terms, a log-log plot. It's something that we have to be very careful about interpreting, but it's plotted in order to try to show what kind of relationships have existed between the price of the product and the quantity of the solar arrays which have been produced and commercially sold in the United States. And when we plot them on a log-log plot, we see that there's a relatively straight line being formed. The question, of course, is can that line continue?

We note that this is now a number when it is plotted in constant 1975 dollars, it is a cost now which has gone from the space type solar array systems which were greater than maybe \$300 per watt, to prices now less than \$10 per watt. But the question is, is how far down can you extrapolate that kind of a technology. Do we really believe that it can go much further than it is at the present time? And I think that the likelihood that it can with existing technology is not good.

That things have progressed greatly because of the advent of mass production, larger quantities of sales have indicated the value of significant investments in mass production kinds of equipment and those things have been primarily responsible for the kinds of improvements that we've got. But in order for us to go much further, we're going to have to bring on new technologies, technologies which are

not at the present time extrapolations from the semiconductor technology which has been the base of this thing up to the present time.

Another important and interesting point about this is that in the United States we have, or we are dominant in both the industry and the technology, and of the market of solar arrays being produced and sold in the world, the United States exports 50 percent of all those uses of photovoltaics around the world. Let me rephrase that.

Of the total number of sales of photovoltaics which are primarily made in the United States, 50 percent of them are outside the United States, which then gives us some additional incentives in terms of this technology relative to our balance of payments.

I'd like to very simply try to utilize the basic information that's on this graph, but plot it in a different way in accordance with a time base.

Now, we see here a plot of the reduction of solar power or solar photovoltaic power to the present time. And we are going to use that same extrapolation down to a continuum. That curve, which I have indicated, is the learning curve that has been developed so far in photovoltaics, is very analogous to the learning curve that has been used in the electronics industry.

There's a good likelihood that that kind of a learning curve can be sustained. And if we do continue along that kind of a path and we plot against that the utility price for energy which would be derived from a utility system for a distributive-like power system, like for a particular home, and put it in the context of what a photovoltaic array might have to be in order for it to be competitive with that utility power, we find that our most optimistic curve intersects that line around 1986.

So, when might photovoltaics become a significant contributor? When might it reach a point where it might compete with utility power? We believe the optimistic curve, the fast-growth curve for that. We may begin to be able to see it around this 1986 time period. Certainly not everyone agrees with that kind of a number. I think that there is very good agreement that the likelihood for continued reduction of photovoltaic prices is very good. When it will reach this particular point in competition with utility power, it certainly could be sometime longer than that, and it will depend upon the innovation and the invention of American industry, I believe.

Now to try to understand very quickly why I believe that the technology can be improved, I will in a very short manner try to acquaint you with the way that photovoltaics are made at the present time. Those wafers that I had indicated in my earlier remarks are made in a very tedious kind of way. One takes very highly pure silicon and melts it at 1,600 degrees Fahrenheit. Then one drops a seed of silicon into that molten silicon and begins to withdraw it with a meniscus of that silicon attached, and then very slowly, at the rate of around 2 inches per hour, one withdraws the seed and rotates it in one direction while you rotate then the pot of molten silicon in the opposite direction.

So, after several days of growth perhaps, one has several feet of ingot of silicon that one then takes and very carefully cuts wafers from it.

Now, that particular technology can be significantly improved, we believe. There are ways of pulling faster. There are ways of growing the ingots larger. There are ways of cutting much more efficiently; in fact, even with this technology, it may be

possible to even reach the goals that we're talking about.

But suppose instead we are able to cast the silicon as a brick, as one would cast in a foundry, or instead be able to pull a ribbon of silicon directly out of the melt. Or perhaps, even better than that, suppose we are able to make a photovoltaic material that we could spray, literally spray on to low-cost, perhaps a glass substrate, and that in itself could make a photovoltaic device.

In fact, all of those technologies are viable, and they're all being demonstrated in various ways, and they're all being worked on in many programs throughout the United States.

In this last viewgraph, I have tried to indicate the various kinds of what I will call the leading technologies that we're investigating as far as photovoltaics is concerned. The bellwether is the Czochralski technology, showing an 18-percent commercial approach which is presently commercialized.

The next one in terms of its commercial readiness is what we call an uncrystalline or semicrystalline ingot, which is a cast technology, where we literally cast bricks. That has just been newly commercialized. There are some cadmium sulfite technologies which are potentially going to be commercialized in the near future, which are thin, film-spray types of approaches.

The potential of having so many approaches all pointed towards our same goals, all having the viability, many of them having the viability of reaching our objectives, gives us some confidence that we may be able to get photovoltaics into the ballpark of being a competitive energy system for our long-range electrical needs.

So, in conclusion, photovoltaics continues to look promising as a possible alternate energy source. Perhaps as early as 1986, some impact may begin to be seen.

And, in the meantime, it is finding a growing world commercial application. It works; it's reliable, particularly in areas where utility power has not yet penetrated, photovoltaics is finding its greatest interest.

Thank you, Mr. President.

THE PRESIDENT. Dr. Goldsmith, there's been a lot of publicity this past week—and I'm sure you noticed—about the chemical process for producing the silicone single crystal. I understand that it's been done from several sources, but it didn't show up on your last chart. Does it have a breakthrough potential, or is it just one of many with approximately equal potential?

DR. GOLDSMITH. Well, the process, I believe, that has been given the most publicity during the past week was the process which was reported by the Stanford Research Institute.

THE PRESIDENT. Yes.

DR. GOLDSMITH. I personally am not that familiar with that particular process to be able to comment that it really offers the breakthrough potential that we're looking for. However, there are other very interesting technologies which are very similar in nature, that is, that it has great breakthrough potentials coming from other organizations that I do know about that look quite encouraging.

For instance, the Union Carbide approach looks to me to be a very interesting, and an approach that deserves a great deal of attention, as well as a similar kind of a technology at the Tell Memorial Institute.

So, I don't think we're hurting for techniques for purifying silicon, which is the Stanford Research Institute technology.

THE PRESIDENT. Is the purification of silicon in the production of the crystal the most expensive part of the process? Is

that where the breakthrough on price is likely to come?

DR. GOLDSMITH. It's one of the most important—when we try to do an analysis of where the cost elements are in growing or making a solar array, we would find that about one-third of the price will be wrapped up in this—when we get to the point where it's a competitive alternate system—that one-third of the price will be wrapped up in that purified silicon material.

DR. PRESS. Mr. President, the report had indicated that silicon accounted for 20 percent of the material cost of solar cells now, and with this, the new development that you were referring to, it would be reduced from 20 percent to 2 percent.

THE PRESIDENT. Thank you very much.

My first reaction is one of appreciation to Dr. Press for setting this seminar up, for Joe Pettit and those at Georgia Tech, for making it possible for us to assemble here, for Charles Duncan, who has enormous new responsibilities, for promising me that he'll carry out all the opportunities that have been presented, and especially for the panelists, who've given what I consider to be an exciting and extremely interesting presentation of some of the possibilities in resolving our energy problems.

I don't think there's any argument with the fact that the cheapest and best way to meet our goals of reduced dependence on imported oil is through conservation, and this is an area that has not been adequately explored.

The technology is present, the primary obstacle has been convincing people that it's a worthy effort. I've spent a good bit of time the last 2 or 3 days talking to Members of Congress, who are home in their districts or in their States all over the Nation, and almost invariably, when I've called the Members of Congress in

the House and Senate, they say that there's sometimes a startling new realization and interest on the part of the American people that we do have an energy problem and that it can be solved if we all work together.

It's not been possible in the last 2 years to convince American people that it's a worthy subject for them to explore and for which they can make a contribution. So, I think conservation is something that we need to emphasize, first of all. There's obviously an exciting possibility that within existing natural resources that our Nation possesses, that we can increase productivity both in the percentage of the materials that we extract in coal mining, oil production, natural gas, geothermal, and also in new methods of producing materials which, in the past, have not been economically feasible, but with the new higher prices of energy on an international basis, that they are, indeed, competitive and which can use technologies long extant.

We also, of course, are interested in, and I think the public is completely sold on, the possibility for solar energy use and that of replenishable supplies. One of the most intriguing to me was that Georgia now produces 6 quads of energy in biomass. And I've got several acres of—[laughter]—of scrub oak trees that I would like to contribute to the process at a minimum cost. This is the kind of thing that I believe is worthy of greatly escalated exploration.

New England, obviously, has done a great job in publicity surrounding the use of wood-burning stoves, which is one use of biomass, but the conversion of waste products is an exciting possibility.

I was given some data the last time I went up to New England that just the waste from their forests that's left on the ground could meet a substantial portion

of their energy requirements in New England. And, as you know, they are very heavily dependent on imported oil at a rapidly increasing cost.

There is no way that I can see that many of these possibilities can be explored—ranging all the way from biomass, the insulation of low-income families' homes, the scientific and research developments that must be a prerequisite for advances in new techniques, the promotion of these procedures in the public's mind—without the passage of proposals to the Congress for financing. The windfall profits tax, which would leave an adequate reservoir of funds for the oil companies to explore for conventional gas and oil, has to be the basis for these scientific and other opportunities. And I hope that all those who are interested, including the oil companies themselves, other producers of energy, the consumers, the Members of Congress, interested public officials, will join in without further divisive debate or delaying tactics, and get the energy package passed. We've been long overdue on it.

And my own belief is, my conviction is that our Nation has the scientific and technological ability. Our free enterprise system, with its innate competitiveness and innovation, is ready, and I think we can forge a very enlightened relationship between Government, with the initiative of guaranteed prices, guaranteed markets, for new synthetic fuels that would be very productive.

The proposals that we've made to the Congress would involve a minor Government involvement, for instance, in the production of new kinds of fuel, synthetic fuels. I think out of 80 possible projects that would be included in the new energy production corporation, a maximum of 3 out of the 80 would be operated potentially by the Federal Government, and if

any of those 3, or all of the 3, were viable projects for the private sector, then the Government would defer to the private sector for the production of those synthetic fuels. The reason for including just that small number was that some are likely to be so experimental in nature and so distant from cost-effectiveness, if they are even successful, that there must be some limited Government role.

But the desire that I have as President to see government and private industry, scientists, technicians, engineers, our free enterprise system, both in production and experimentation, working with an enlightened American public is very important.

I hope that the press, who are represented here today, will make a maximum effort to report to the American public what has been delivered to us.

Many of these reports are fairly basic. I was acquainted with some of the data before I came, but it's very important for the American people in general to be well educated on what the possibilities are.

There's no reason for discouragement. I'm convinced that our Nation has the capability of overcoming the energy challenge, and to the extent that we can succeed with conservation, with solar energy of all kinds, with the extraction of existing American supplies of natural gas and oil, increased use of coal in an environmentally acceptable fashion, we can minimize our dependence on those technologies that might have potential adverse economic effects—synthetic fuels, nuclear power, and so forth.

So, I think the ordering of priorities and an enlightened public, a comprehensive energy policy approved by the Congress, and the cooperation of all Americans, particularly between the private sector and government, in my opin-

ion, are a very hopeful prospect for the future.

I'd like to again express my thanks to the distinguished panelists who have been so kind as to acquaint us with some few facets of energy technology potentials for the future and also to express my thanks to all those who participated with this.

I will personally follow up with Dr. Press, my science and technology adviser, with Charles Duncan, the new Secretary of Energy, the other members of my administration, in the ideas that have been presented here, and others that come to me.

And I'm very grateful for the chance to live in a country that's been so generously endowed with natural resources and with the free enterprise system, and a system of society that lets the innovation of individuals contribute collectively to reaching an exalted and very important goal.

The rest of the world is watching us. I think many of the less developed nations and even the advanced Western nations will naturally defer to us in some of these areas, and when I meet with other leaders, in economic summit conferences and on a bilateral basis, I always explore the possibility for cooperation. There's no restraint on the exchange of basic research data even when it applies to automotive design, for instance, which is a highly competitive field. And I found them to be very excited about it.

The solvent refining processes for coal that might be explored in the near future in West Virginia and Kentucky, for instance—at least in West Virginia—will be jointly financed by Japan and Germany. This shows that there can be an exchange of both financing and scientific and technical data across international boundary lines. So, the possibilities are broad, and I think we can legitimately keep our hopes

up that we will triumph in this very challenging test of our Nation's will and capability.

Thank you all for letting me be part of it. I've learned a lot. I know everyone here has, too.

Thank you very much.

NOTE: The portion of the energy seminar which the President attended began at 10 a.m. in the Fred B. Wenn Student Center ballroom at the Georgia Institute of Technology.

Following the seminar, the President met with the executive committee of the National Conference of Democratic Mayors at the student center.

Atlanta, Georgia

*Remarks at Emory University.
August 30, 1979*

As I'm sure all of you have surmised, coming back to Georgia and to this setting returns to me overwhelming memories of my past. As I sat here on this delightful day, I was reminded of the cottonfields in Sumter County during August when I was a boy, but Emory has added a new dimension—I particularly appreciate this delightful, insulated robe that they've provided for me to give this speech. [*Laughter*]

President Laney, I'm delighted to be here on your campus and the campus of the faculty and students and the alumni of a great university. It's always good to go to a college campus and know that the president is popular. I was overwhelmed with the degree of popularity when, at the luncheon which I attended—not quite long enough to eat—President Laney got almost as much applause when they mentioned his name as when they mentioned the name of Coca-Cola. [*Laughter*] That is my tribute, indeed.

My good friend Chairman D. W. Brooks reminded me of my stature as President. He talked about fishing, and then he was kind enough to mention rabbits in the same comment. [*Laughter*]

He joined with Chairman Henry Bowden in pointing out that when he had been to have lunch with me at the White House, that he had always had just a sandwich. And Henry Bowden pointed out that I had not changed my habits, that when he had lunch with me the last week that I was Governor, he also had just a sandwich. [*Laughter*]

Bishop Cannon did much better. As you can well imagine, being the gracious man of God that he is, he did not overlook an opportunity to pay true tribute to the highest elected officer of our land. He carefully chose, among all the events of my past, my interview with *Playboy* and described it—[*laughter*—with some degree of relish and enthusiasm. It was indeed a delightful lunch for me.

I'm truly honored by Emory, an institution which, to a Christian, cannot fail but have a special meaning, an institution which is great in its own right, which is dynamic in its attitude toward the present and the future, an institution which, in a modern, fast-changing, technological world, would set aside the time and invite the President to a special occasion, that is, the dedication of a church, a place to worship God.

I'm going to make my speech brief. Former Attorney General Griffin Bell has given me a report, which may be apocryphal, about an event in the life of John Wesley. When asked what estate he would leave for posterity, he replied, "Just four silver teaspoons, and the Methodist Church." One of the persistent and most difficult challenges in our lives is to balance values, the transient against the permanent, and the less important against

those which are vital.

In breaking ground for the William R. Cannon Chapel and Religious Center, we honor the things in life that are most precious, things that cannot be seen and which cannot be measured. We can measure the grandeur of a person's house or the size of a bank account or the acreage of one's land, or how fast one's net worth increases each year. We tend to dwell too much on such things, for they tell us very little about the real meaning of life. For that, we must turn to things which cannot be seen or which cannot be measured, to things like honesty, integrity, the strength of conscience, the love of God, service to others, humility, wisdom.

These things are invisible. They're beyond measurement, but they comprise life's true wealth. In these things, Bishop Billy Cannon is a very rich man, and his life has also brought richness and meaning to the lives of thousands of others, including my own.

I happen to be a Baptist, but I've been surrounded by Methodists all my life—my mother, my wife, some people. And when I was enjoying the highest official day of my life, being inaugurated as President of the United States of America, I chose, to give the invocation, a Georgian, Bishop Billy Cannon.

What's true in measuring values for an individual is also true for a nation. We can measure gross national product, imports and exports, the growth of industry and manufacturing. We can see with our own eyes how many tanks we have, how many nuclear warheads in our arsenal. We can be thankful for such strength and grateful for material blessings. But we know that these are not the most important characteristics of a nation's life. They do not hold us together as a unique people. They

are not the essence of what makes us Americans.

The real meaning of America is not encompassed in the material wealth and the military power of our country, for we know that wealth and power can be a potential for evil as well as for good. We measure the real meaning of America, as in a human life, in our intangible values, values which do not change—our care for one another, our commitment to human freedom, our search for justice, our devotion to human rights and to world peace and the patriotism and the basic goodness of the people of our Nation.

These qualities cannot be measured. They're invisible. Yet, these are the true strengths of America which channel our wealth and our strength, not for evil, but for good.

These are the things that have drawn so many oppressed and friendless people to our shores and that have made America a beacon of freedom for millions of people around the world who have never met an American face to face. And these are the qualities that give hope and moral sustenance to many here at home in our own country for whom the ideals of America are still imperfectly realized—the poor among us, the minorities, those who may not speak English, those who lack proper education or adequate health care or who have talents which are yet unawakened.

We are the greatest and, I believe, the most free nation on Earth. Yet all of us know that we still have a long journey ahead before the powerful, transcendent ideals of America are fully translated into reality in the daily lives of all people in our country.

But if the history of America shows anything, it shows that America is capable of change. America is capable of change

because we have the courage and because the conscience of America is strong.

All of the great movements of American history, from the Revolution to the abolition of slavery, from the struggle for women's suffrage to the peaceful crusade for civil rights in our own generation, all these movements and others like them have called upon the conscience of America. And we have found that because of that conscience, America changes, America makes progress, America comes ever closer to the realization of the majestic ideals on which this country was founded.

The conscience of America is rooted in its institutions and it's rooted in the ethics of the Judeo-Christian tradition. That tradition has many expressions, but within our religions, it's not enough. It's also rooted in our secular life as well, and that gap can constantly be bridged by human beings who search for the correlation of the two. It's varied expressions are as diverse as we American people ourselves, but underlying that diversity is a basic unity of belief and purpose.

I've spoken recently of a crisis of confidence in this country and a need for unity. Of course, we are proud of our diversity. Our pluralistic society is an important source of vitality and creativity of American life. And I would guess that the American society is the most diverse in the entire world. But we must not permit diversity to degenerate into division.

In a time of trial, we must not permit the legitimate contest of competing views to become a war of group against group, special interest against special interest, and finally, each of us against all the others.

The motto of our country, as you know, is "E Pluribus Unum"—"Out of Many, One." We must, of course, continue to cherish the many—but the multifaceted

nature of our people is exemplified in many. But in this time of crisis, both material and spiritual, we must learn to place greater emphasis on the "one"—on the shared values and the shared interests that unite us. For in a varied nation like our own, those transcendent values and that concern for the common good are the sole and indispensable basis for harmony and social cohesion.

In international councils, we can share with others this vision of a common humanity based on humanistic views.

I'm very sorry that Andrew Young, as President of the United Nations Security Council, was called back today to New York and was not able to be with us. He went to the United Nations 2½ years ago at a time when many countries, especially in the developing world, looked upon the United States with fear and mistrust. His work has helped millions of poor and oppressed people throughout the world to understand that we support their longing for justice and for a better life.

He speaks from the heart, he speaks out of a deep commitment, he speaks out of religious conscience, and he speaks with a preacher's eloquence. The commitment to social justice and human rights that Andy Young has brought to his work as an American diplomat will continue to guide us in the months and years ahead.

As Andy leaves the United Nations, our common task as Americans is to look ahead with a sense of caring and concern for the social fabric of our own Nation and for the more peaceful, more fair, and more just world around us.

Controversial and sensitive issues must continue to be addressed with courage by our Government. Every American has a right, even a duty, to debate all public issues, including issues of foreign policy. Open debate and the free exchange of ideas are the heart and the soul of our

political system. But differing political views, when and if they do exist, must not become the occasion for deep and damaging divisions between groups of citizens in our country.

Black Americans and Jewish Americans have worked side by side for generations in the service of human rights, social justice, and the general welfare. Both groups have a particular call on the conscience of each other and on the conscience of all of us. Both groups have suffered too much pain, too much persecution, too much bigotry to compound that suffering in any way. And both groups are part of something larger—the totality that we call America.

I spoke earlier of the need for unity, for a greater emphasis on the oneness of our Nation. Many nations today, as we well know, are in danger of being torn apart by ethnic divisions, by political rivalries, and by religious conflicts. We must seek resolution of differences, and we must stand with each other to prevent all these quarrels of the world from being imported into our own national life.

With the guidance of God we can be successful in this search for the accommodation of differences. We in the United States have learned to accommodate the diversity of our people, because all of us hold fast to our common identity, our identity as Americans. It's especially important to do that today, for we live in a time of wrenching change.

As we strive to meet the challenges of the energy crisis and of inflation, as we search for peace in a nuclear age, we must shape our national life in the light of those fundamental principles which do not change.

The well-known historian Arnold Toynbee teaches that civilizations grow in a rhythm of challenge and response, challenge and response. When civilizations reach their highest goals, he said,

it's difficult decisions, difficult conditions rather than easy conditions that produce great achievements. And Toynbee further holds that great nations most often fail and fall not because of material weaknesses, but because of complacency and a failure to meet new challenges creatively.

I do not fear for the future of the United States. If there is one thing we are not, it's complacent. If sometimes we are confused, if sometimes we think we may have lost our way temporarily, it's because we are struggling to apply our transcendent values to new challenges of awesome complexity which no other peoples on Earth have been able to meet successfully. We are most likely in the forefront. The basic strength and creativity of our values remain undiminished, and as long as our national roots are imbedded in that rich soil, we prosper and we will triumph.

Throughout our history—I would like to say in closing—crisis has been the occasion for rethinking, for redirection, and resurgence. In the early and middle years of the 1700's, much of Western civilization languished in a crisis of the spirit. War and social upheaval had robbed many people of both will and purpose.

In the midst of that widespread moral depression came an international spiritual revival lead by men like John and Charles Wesley and George Whitefield. The subsequent moral upsurge began in the churches; they spilled over into the streets and found lodging in political movements in Europe and here among the American colonies.

Out of that movement of the spirit, based on spiritual things in the colonies, came our independence. The effect was so profound that years later John Adams would write, and I quote from him, "What do we mean by the American Revolution? Do we mean the American war? The Revolution was effected before the war commenced. The Revolution was in

the minds and the hearts of the people—a change in their religious sentiments of their duties and obligations This radical change," he said, "in the principles, opinions, sentiments and affections of the people—that was the real American Revolution."

That crisis brought awakening; awakening brought creative and fresh directions. I pray that from our present material and spiritual crises, which are well recognized, that there may come a new sense of awakening and a new pursuit of more fulfilling ways to live and to work together as Americans.

Let us confess our failures; let us marshal our inner resources and move on, upward. If we are guided by the best of our common mandates, renewal of American spirit will come.

We in America will find a way to solve our material problems, and as we do, we can rejuvenate the spirit and the confidence of our country. And then may history record that our generation of Americans heeded the words that you have just heard in Isaiah 61—that we brought good tidings to the afflicted, proclaimed liberty to captives and comfort to all who mourn, that we repaired the ruined cities and the desolations of many generations, and that through us the Lord God will cause righteousness and praise to spring forth before all the nations.

That's my prayer. I know it's yours.

Thank you very much.

NOTE: The President spoke at 2:14 p.m. at the groundbreaking ceremonies on the Quadrangle. In his remarks, he referred to James T. Laney, president of Emory University, D. W. Brooks, chairman of the Emory Committee of One Hundred, and Henry Bowden, chairman of the board of trustees of Emory University.

Prior to the ceremony, the President attended a luncheon in Cox Hall on the university's campus.

Tampa, Florida

*Remarks and a Question-and-Answer Session
at a Town Meeting. August 30, 1979*

THE PRESIDENT. During 1975 and 1976, my wife, Rosalynn, spent 75 days in Florida; and I spent almost as many, and I learned a lot about our country from you, because not only is Florida a dynamic and aggressive State with confidence and God's beauty, which attracts people from all over the world, but Americans from every State assessing our Nation very carefully to find the garden spot are inclined to move to Florida to spend their productive years after they become senior citizens.

ADMINISTRATION POLICIES

I had a chance during those months to listen a lot and to talk some. And I heard about the need for a social security system that was sound, and I heard about the fact that the unemployment rate was over 8 percent. But I also heard about the need to maintain peace and to make sure that no young American might lose his or her life in combat. And so far, God's blessed us, and I hope that when I leave the White House we'll still have that record.

And a lot of people here from Jewish families, and from others, said the most important single issue that threatens world peace is the Mideast conflict, where four wars in 30 years and hundreds of years of antagonism and hatred create a cancer and needs to be addressed. And we've made some progress there.

There have been many issues on which we have succeeded so far. There have been other issues that are too difficult to solve in 2½ years, and there have been other issues where one cannot find a solution until the American people get aroused and

committed to joining in an effort to find a solution to it. Obviously, we're trying.

We've now got a SALT agreement with the Soviets to put a very tight constraint over any increase in nuclear weapons that threaten the world; and the Soviet Union, if the SALT treaty is passed, will have to cut back their nuclear arsenal, their numbers of launchers by 10 percent. We won't have to cut back any. But this will lead to further progress in the future, and to constrain nuclear weapons is a very burning issue now before the United States Senate.

Inflation has been with us 10 or 12 years. It goes up and down, primarily because of the price charged for imported oil. We had a very high inflation rate, 12 or 13 percent back in 1973, 1974. We've got a very high inflation rate now, because the OPEC countries have increased the price of oil over 50 percent in the last 6 or 7 months.

Inflation is tenacious. It's got to be addressed. We're doing the best we can. We're holding down Federal spending. We've already cut the budget deficit more than 50 percent. We're going to have tight management of the Federal bureaucracy. We've got civil service reform, but the key issue on which inflation depends is that excessive importing of foreign oil.

We now import 50 percent of all the oil we use, and we not only import oil, we import unemployment and we import inflation. So far, the Congress has acted on about 60 or 65 percent of the energy proposals that I sent to them in April of 1977, almost 2½ years ago, and we've already cut down our dependence on imported oil for the future about 4 million barrels a day.

Now we've got to take action to cut down 4½ more million barrels a day by passing a comprehensive energy policy through the Congress, based on the wind-

fall profits tax. I'll be very quick to describe what it means.

The price of energy—I don't want to mislead you—the price of energy is going to go up, because the world is demanding more and more, and the world is producing not much more or even less. We have very little control over the price of energy, and as it goes up, enormous profits are going to be realized. The question is, should those unearned profits stay in the hands of the American oil companies, or should we have a windfall profits tax and let those profits be used to produce more oil and gas, yes, but also to insulate homes, to provide solar power, to have new kinds of energy, to help poor people and low- and middle-income families bear the increased cost of energy, to give us a better rapid transit system and transportation system? That's the basic question.

And I want to ask all of you to join in with me and encourage the United States Congress to pass a windfall profits tax to give our Nation energy security in the future. Will you help me do that? [*Applause*] Very good.

I want to say two other things very quickly. The first thing is this: We're all in it together—Democrats, Republicans, southerners, Yankees. I don't care who it is, we're in it together.

And the second thing is that no matter how difficult the problem, our Nation is strong enough and great enough and courageous enough and blessed by God enough to meet the energy challenge successfully if we unite and if we work together. And I have no doubt about the future of this country if we tap the tremendous strength that we have within us now.

I came here because you've already done a good job on energy conservation. The Thomas Jefferson High School has saved, just since last October, \$40,000 in

energy bills because of effective conservation programs; and Hillsborough County, I understand, has cut energy consumption by 15 percent. If everybody in the United States would do as well as you have done, we would have a great blessing for all of us in this country.

Now I want to answer your questions. I had the pleasure of reading the front page of, I think, the Tampa Tribune today, and the editorial page, and they said that I was welcome—almost welcome—[*laughter*]—and that the questions ought to be tough. And I'm ready for some tough questions. And I'll start with you.

Thank you very much.

QUESTIONS

KEROSENE SALE TO IRAN

Q. Hello. My question pertains to Iran.
THE PRESIDENT. Good.

Q. Thank you. The Iranian officials say that they don't need the oil that we sell them. Do you think that they'll sell the same stuff back to us at a higher price, or by doing this gesture of friendship, will they lower the prices of oil in the future?

THE PRESIDENT. That's a good question, and it's one that's been highly publicized around the country. Let me give you the facts.

We buy from Iran about 750,000 barrels of oil every day. We're heavily dependent on Iranian oil. The reason for the gas lines in California and on the east coast earlier this year were because the revolution in Iran interrupted supplies, and we lost about 100 million barrels of oil that ordinarily we would have bought from Iran. So, we have a good relationship with Iran as far as buying oil is concerned.

About 2 months ago—I don't remember the exact date—the Iranian officials sent word to our Government, and it eventually got to me, that they had had sabotage

in a plant that makes kerosene. When I grew up on a farm during the Depression, about everything we had was kerosene. We cooked with kerosene or wood, and we used kerosene lamps. A lot of the Iranian families do this. And the Iranian Government asked if we would sell them back a million barrels of kerosene, because they had run out of refined kerosene. You take crude oil to make kerosene out of it. I agreed to do it. That's as much oil as they sell to us, like every day and a half. It was a one-shot proposition.

I don't know whether Iran needs that oil or not. It was done through a company, an American oil company, a refinery. And they told me, the company sent me word that if we had a shortage of kerosene or home heating oil in the winter, that that company would buy extra kerosene or heating oil in other markets around the world and replace it for Americans.

So, there's no chance that we'll come up short. The oil was sold to Iran, I understand, at the market price, and if Iran should not need it, then it would probably be sold right at the market price.

I have not known about that statement until it happened today. But I will be sure that Americans don't come up short on kerosene or home heating oil, and the company that sold the oil to Iran has pledged to help me with that.

We sold it to Iran because they said they had a hardship case. And I think it was a good investment, because had we not cooperated with them—I can't claim that Iran would have cut off all oil sales to us, but they sell us a lot of oil every day.

This is a one-shot proposition amounting to about a day and a half of the oil we get from Iran.

WAYS TO CONSERVE ENERGY

Q. Welcome to Tampa, Mr. President.

I'd like you to know that I've heard a lot of people say that they don't plan to cut back on energy consumption because they don't want to be the first ones to make the initial sacrifice. Until they see everyone else doing his part to conserve energy or until they're somehow forced to, they won't take action. How do you as leader and President plan to impress upon each and every individual of our country the importance and the real need to rally behind you and your energy guidelines? Thank you.

THE PRESIDENT. Let me say, first of all, that it's absolutely imperative that we do two things. One is for all Americans to save; there's no way that the Government can save for you. That's got to be something that 220 million Americans join in doing.

The second thing is that energy saving is not a sacrifice. For a family to drive the speed limit not only saves energy, but it saves lives and it's in accordance with the law. For a family to take a little money, either through a government loan or, if they can afford it, out of their own money, and insulate their homes so it doesn't take as much to cool it in the summer or heat it in the winter is an excellent investment, because you get back what you invested in less than 2 years and your home still maintains the same temperature; you just don't waste as much heat.

For a family to use a bicycle, if that's convenient, or maybe to walk sometimes. I jog every day for exercise. You know, I think it's a very good and pleasant thing to do.

A business has a tremendous cost-effectiveness; in other words, it's a profitable thing to save energy. I had a seminar this morning at Georgia Tech—and the chemical industry has already cut about

20 percent the amount of energy that they use to produce 1 pound of chemicals, and that means, in effect, 19 percent of their energy savings is going in to increase profits for them.

So, I think that a proper conservation effort, either in the proper design of a building, driving habits, habits around the home or around your job, is not a sacrifice. It can be a very pleasant thing to do, and it saves you money, because wasting energy costs money.

The cumulative effect of American savings can be a tremendous benefit to us all. In California, for instance, when they had the very serious gas lines, in just a few weeks the Californians changed their driving habits. And I would like to ask you when you drive home from this meeting today if you're in a car, see how many cars you meet only has one person or, at the most, two people. And, you know, for people to join together in going to work 5 days a week, 50 weeks a year, obviously saves money if you share an automobile.

So, I think it's something that everyone has got to do. This problem is not going to go away. And for everybody to sit back and say, "I'll wait for my neighbor to do it," is not only improper for your own life and costs you money, but it's unpatriotic. And this is the cheapest and easiest and most pleasant way to be a patriotic American I can think of. I hope everyone here will help me.

ENVIRONMENTAL STANDARDS

Q. Mr. President, recently Florida Power and Light was allowed to begin the use of high-sulfur fuel at the Parish plant in Manatee County with the permission of our Governor and the White House, over objections from residents and governments of Sarasota County. Florida Power and Light was trying to threaten us

with blackouts, and I think with the recent fuel adjustments that we may have already had our blackout in a way, because fuel bills for many of our retired citizens are so high.

Also soon to be considered by the Senate, of course, is your energy and water development bill, H.R. 4388, which would exempt certain energy projects from environmental regulations and the Tellico Dam, which will, of course, undermine our Endangered Species Act.

In light of these, do you think we really need an energy mobilization board to further exempt energy projects and projects such as the Tellico Dam? How can we really preserve high environmental quality with the development of oil shale and synthetic fuels when we can't even preserve the present environmental standards with the present use of nuclear power, oil, and coal?

THE PRESIDENT. The Environmental Protection Agency has not lowered air pollution standards for Florida Power and Light, to my knowledge. They would be violating the law if they did. They have now set standards of 1.2 pounds of sulfur emissions per million Btu's, which is a very strict standard. Florida, when I was Governor—Florida derived about 85 percent, I think, of your electricity from oil. Georgia, which went to coal much earlier, derived about 85 percent of our electricity from coal.

It's important now that there be a shift away from oil toward natural gas in some instances—and we're trying to negotiate with Mexico to get more natural gas from them—and coal, providing it is burned under circumstances that it can meet environmental standards set by law and rigidly enforced.

I do not approve of an energy production board law that would let that production board violate or change the pro-

visions of law. The reason for the energy production board is to expedite a decision, one way or the other.

Instead of waiting 4 or 5 years to decide whether a refinery should be built or whether a gas pipeline should be built, or whether an electric power company generating plant should be built, that decision ought to be made expeditiously. And I don't want the law changed so that it can be built when it violates the law. So, I'm very insistent on the fact that environmental laws will be followed.

Now, I know that you are concerned about the quality of life here in Florida. So am I. And I can assure you that I will not do anything to lower the environmental standards in order to permit the burning of dirty fuel. I've been to a plant that burns soft coal just recently in Bardstown [Louisville],¹ Kentucky. And they've got scrubbers there that work. And we've authorized in the burning of low-sulfur coal the use of dry scrubbers. But with the use of scrubbers, which clean up the exhaust, I think that we can shift to coal without violating legal standards, EPA standards, or your standards on what the quality of the air should be.

You mentioned the Tellico Dam. I would not favor the passage of a law on the energy production board that would let them authorize a dam, through their action, that the law specifically prohibited.

Q. Right. Yes, sir. Also, sir, would you approve the Northern Tier pipeline proposed from Washington to the Midwest if that was exempted from environmental regulations?

THE PRESIDENT. Well, as you know, that pipeline is now prohibited from being constructed because of an amendment that won't let oil be unloaded in Puget Sound. And I am not in favor of the pro-

duction board being able to change the law.

I am in favor of giving the production board adequate authority to expedite a decision and to shorten the procedure through which either a "go" or "no-go" questions. I think I have one.

DEFENSE BUDGET

Q. Mr. President, we're glad to have you here, and I know you like tough questions. I think I have one.

THE PRESIDENT. Right on.

Q. In the spirit of your 1976 campaign statements and, I think, almost pledge to transfer some of the billions from defense to meeting human needs, I wonder if it wouldn't be a good idea to urge Congress now to take, say, 10 percent of the defense budget and transfer it to government research in solar energy so that we might develop a true public utility that would uncover and make available at minimal cost to the public, solar energy resources, so that we'd be less dependent on foreign oil or nuclear power, which might lead to cataclysmic holocaust of war or nuclear accident?

THE PRESIDENT. Let me be really frank with you about this question. The windfall profits tax, if passed—and I believe it will be passed—will give us over the next 10 years an average of \$14 billion that we can spend for solar power, the insulation of homes, the caring for poor families, better mass transit, synthetic fuels, and so forth. Combined with what we already have committed to solar power and other sources, my belief is that that will be adequate.

Our target is to have 20 percent of all the energy that we consume in this Nation come directly from the Sun by the year 2000. And with the windfall profits tax passed, there will not be financial limits on how fast we move to solar power.

¹ Printed in the transcript.

The other part of your question: We have cut considerable fat and waste out of the Defense Department budget. But let me say this: The most important single responsibility that I have on my shoulders, above energy, above inflation, above anything else, is to guarantee the security of our Nation. And I cannot promise you that a single dollar that I spend on defense will ever be used—will ever be used—in combat.

I pray that our Nation will stay strong enough so that any potential adversary who might want to challenge us in a war would refrain from doing so. And I hope that the tanks and the submarines and the nuclear missiles and the airplanes that we produce for our Defense Establishment will never be used in combat and that we can stay at peace. But I want everybody to know that our Nation not only has the will and the unity and the strength and the commitment to protect freedom, to protect our own people, to protect our principles, but also that we have the military power that if anybody should challenge us, they would be committing suicide.

ENERGY PRICES

Q. Good evening, Mr. President. With the price of energy going up—²

THE PRESIDENT. Go ahead.

Q. Mr. President, with the cost of energy going up and the economic plight of the poor, especially as reflected in the very high unemployment rate of blacks going down, what, sir, do you plan to do to help the poor of this Nation cope? And, finally, sir, if part of that plan depends on the passage of the windfall profit tax measure, do you have a backup plan if that should fail?

THE PRESIDENT. It's a free country.

² The speaker was interrupted by a disturbance in the audience, which continued throughout his question.

The question is—I had a little trouble hearing—but I believe that the question was, what plans do I have to help the poor families as the energy costs go up, both to pay for the cost of heating and air conditioning and also to provide better transportation?

Q. The question was that, and also, if part of your plan depends on passage of the windfall profit tax measure, do you have a backup if that should fail?

THE PRESIDENT. Okay. The primary hope that we have adequately to meet the increased cost of energy for the poor families and the low- and middle-income families is with the windfall profits tax, because it's going to take a good bit of money. We have proposed \$2.4 billion per year for 10 years to cover those costs and also a special allotment of a little over a billion dollars a year to improve metropolitan transportation systems. If the windfall profits tax does not pass, then we would not have nearly that much money to take care of those needs.

In the last few winters since I've been President, we've allotted about between \$100 million and \$200 million every winter to meet the special needs of very low income families, those that qualify for food stamps, if they had a very high cost of energy. And, of course, we've probably done more since I've been in office than any other administration in improving the quality of the rapid transit or mass transit systems.

But I don't want to mislead you. If the windfall profits tax does not pass, my answer is we will not have an adequate amount of money to take care of the families about whom you are concerned. We need the windfall profits tax.

MEETING WITH THE PRESIDENT

Q. Mr. President—

Q. [*Inaudible*]—

THE PRESIDENT. Now, I'm not going to referee about who has the next question.

Q. I wasn't chosen to speak, but I've been trying to get to you since March of '77.

THE PRESIDENT. Why don't you—I will be glad to see you after the meeting's over if you let the lady ask the question.

Q. Yes.

THE PRESIDENT. Fine. Check with one of my staff members. Stu,³ would you let one of the staff members bring the lady around, and I'll be glad to see her after the meeting.

FOOD PRICES

Q. President Carter, we're glad to see you. I want one thing to say is, and I'm sorry we had such rude people that had to come here to do this to your program. Second, I'd like to say, personally I'd like to thank you very highly for the pictures that you sent to our home of you and Rosalynn. They're on my TV set, and they'll stay there. And I know that you're here to talk about the energy crisis. And I cannot talk very much about that in the way that you talk about it. But I got one thing I want to say.

Will you please do something about our food prices, because every time us ladies go to the store, they're higher this week, next week they'll be higher than next week. And I would like to see you do something for us about our food prices. Can you or will you be able to freeze those prices so they will not go up any higher than they are today?

THE PRESIDENT. I think I can tell you that the last few weeks, for the first time, the retail food prices have begun leveling off, and the projections are that they will go down. We've got a very high production of pork and poultry, and those two

meat supplies will help to force the price of beef down.

About 2 or 3 weeks ago, I met with the meat processors and distributors—as a matter of fact, pork prices peaked; they got to their highest point in February. Beef prices got to their highest point in April, to the farmer. But the people that process that meat and distribute it to the stores have been making too much profit. They have not passed on those low prices to the consumer.

They told me there was always a lag between the time the farmers' price dropped and the time they could pass it on to the consumers. But I think 4 months is too long a lag. Also, last winter when the price of pork and beef was going up, there wasn't much lag. I mean, they passed those prices on to the consumer pretty fast. But I can predict to you that the price of food is leveling off and will begin to go down shortly.

I'm not in favor of putting price controls, mandatory price controls on. It's been tried in the past with farm products. It has never worked. But we've got a tremendous production in this country of food. One of your biggest export items, as you know, is food. And I think that we'll see, with the increasing production on the farm, a moderation in food prices.

Our main concern now is the rapidly increasing price of energy. Food's going to get better.

Q. May I say something else, please?

THE PRESIDENT. Yes, ma'am.

Q. I'd like to say I think it's wonderful for the turnout that you have here today—

THE PRESIDENT. I do too.

Q. —not of only the older people, but I think you should give a little credit to these young generation that we have here, because one of these days they're going to be standing where you are and talking about things like they are to energy, the welfare, the schools, and everything else. But Tommy and I say God bless

³ Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy.

you, and thank you for coming and being here with us.

THE PRESIDENT. Thank you, ma'am.

I might say the young people in the back that had the banner which I couldn't read—it was already torn when I saw it—you know, this is a free country. And I'm President, and I think it's very good—even when people express themselves that way—I'm not embarrassed by it. I think the reaction of all of you, because you were disturbed, did its job. There's no need for me to embarrass them. So, I think it's a proper place in our country for people to raise a banner or to ask the President a difficult question or to shout out a criticism.

I don't have any problem with that. It's a free country. I want to keep it that way.

SOLAR ENERGY

Q. President Carter, first I'd like to say I'm getting a little tired of everybody giving you such a hard time in the press, you know. I think they need to—I think you've been doing a great job, and if you just hang in there, I think things will be a lot better for you.

THE PRESIDENT. Thank you.

Q. But one of the things—

THE PRESIDENT. You don't have to ask a question. That's good enough. *[Laughter]*

Q. No, I have to.

One of the things I'd like to show you that I did read in the paper was that you declared war on energy. What I've been doing with a few people—Warren Wether, Steve Cook, Mike Flanders was in 1976, these two architect students at Florida University developed a passive solar house that won the State of Florida competition and went to the finalist position in the United States. We've been working on that project for 3 years. We've done numerous things and talked to nu-

merous governmental agencies. I went to Washington with a friend of mine, and we gave a piece of paper that I have here, I want you to read also—I have a little something I want you to take home, I think you'll find interesting to read. *[Laughter]*

I went to Washington and I went to 220 Congress and Senate offices, and I gave a piece of paper to each one, each aide or representative or someone. And out of 220 people that promised to write me a letter asking for more information about my solar houses, it was people like Congressman Gibbons and Senator Stone that wrote. Senator Stone and Congressman Gibbons have been doing a lot of help, but I'd like to know why, if we have these 220 people who are so concerned, why they don't even write me a letter to find out about this house that was the finalist position we've been working on for 3 years?

I think that we have a solution, a major solution to the energy housing problem. I've spent hundreds of dollars on phone calls. I've talked to numerous agencies. Everybody passes a buck; it's a total run-around system. I went to the Small Business Administration here; they told me they wouldn't even give me an energy-related loan. The man further suggested that I take my project to Saudi Arabia and sell it to Saudi Arabians.

Not only that, when I was in Washington, I talked to a few aides—which I won't ever name. They suggested that I don't fool with the Government—the Government's a waste of my time, it's too much redtape—and I go out and find private investors. Well, you need money for private investors, because I don't want to go to jail with the SEC problems. We have spent \$9,000 in 6 months on this project. The project is completed. We are ready to build the first prototype. We have no funds to build it.

You declared war on energy, and I

agree it is a very big problem. Anytime—my feelings are when somebody declares war on energy, you put all the money and all the effort into solving that immediately. We have right now a solar house. I won't quote anything on it, but I believe that I have the best design for a passive solar house that had so many things to offer people. Nowadays, people my age can't even dream of buying a house.

That I was on TV, we got 15 calls; people wanted to buy our house. I had to tell every one of them, "I'd like to sell you a house, but I can't sell it to you because we don't get any Government support." The governmental agencies pass the buck, the people want the house, and I—you know, it's gotten to the point where the project is ready. Today we can start on the prototype; next year we can offer passive solar houses using the greenhouse effect. That was a finalist position. So many wonderful things that I just don't understand what's wrong. *[Audience reaction]* Well, I'm sorry. I've worked so long on this project, and it's very depressing.

And it's gotten to the point where I'm beginning to wonder exactly what is happening in the Government when we can't even offer something to the people; when billions of dollars are spent on research and all we're talking about is just a very small amount of money to build our first prototype.

THE PRESIDENT. Let me ask you one question.

Q. The question is—

THE PRESIDENT. Let me ask you one question, and then I'll give you an answer. Do you think it's a good idea?

Q. Yes, sir. I do. The American Institute of Architects judged it a winner in the Florida competition and a finalist in the United States.

THE PRESIDENT. If you will come to the White House, I will look it over myself. And then I'll try to use my influ-

ence—*[laughter]*—to get you an appointment with the Secretary of Energy, Charles Duncan.

Q. Yes, sir.

THE PRESIDENT. And then I'll ask him to refer you to the Small Business Administration. *[Laughter]* I don't think you're going to have to go any further. If you've got a good idea, I guarantee you that you will get every hearing, including from me.

Q. When can I be up there to see you? *[Laughter]*

THE PRESIDENT. Whenever you want to come. Keech ⁴ right here will make an appointment for you. Okay?

Q. I'd like to give you also something to take with you, if I could.

THE PRESIDENT. I will also read your material on the way home tonight.

Q. Thank you.

ENERGY CONSERVATION

Q. Hello. Mr. President, with regards to the energy problems that we're facing today in America, I don't feel that the problem is in the quantity, but rather in the attitudes of the American public. I feel that no matter how much energy sources we have available, if they're not used wisely, we'll always be wanting. And my question to you is, what can be done, short of expensive advertising, to help the American public see the true cost of energy? And when I say the true cost, I'm not speaking only of the dollar amount but of the—as far as conservation, as far as to our wildlife, to the resources, to the air, to everything.

What can be done short of advertising, the way that we've been doing before, to push different things that are very worthwhile? What can be done to help the American public see that this is a worthwhile effort and if we don't take steps today, the few people that do have energy today because they can afford it, won't

⁴Keech LeGrand, White House staff advance person.

have energy tomorrow, because they will have wasted it all?

THE PRESIDENT. That's good.

In addition to advertising, there are many other things that can be done. I spent yesterday and the day before yesterday on the telephone calling different Members of the Congress around the Nation, just to see how they had spent their home working vacation, talking to people and listening. And for the first time in the history, I guess, of our Nation, the people believe that there is an energy problem. In the past, it's been very frustrating, because as you probably know, I've been on television, I made speeches to the Congress, and it was hard to get people to realize or to believe that we ought to do something. Now people believe it.

When I went down the Mississippi River the other day, I made, I think, 48—somebody said—little short speeches on energy to let people know that we have a problem and that doing something about it can be productive and pleasant and good for an American.

The reason I came to Tampa was because in Hillsborough County there are many buildings that have been designed in a very efficient way to save energy, including this school building and others that I won't name. The whole county has saved energy, and I wanted the American people, through the national press that's covering this meeting, to know that some communities in our Nation are already doing a good job.

The President's voice in a forum like this can convince people that every one of you ought to go home and sit down with your wife or your husband or mother, father, children, and say, "What can we do in our family to save energy and also, at the same time, to save money and also, at the same time, to help my country?"

The first and easiest way to cut down on oil imports, which rob us all, is to

save. Then, the next thing is to turn toward the kinds of energy that never give out. The most obvious is solar power. Another one is derived from solar power. That's the production of energy from growing crops or from lumber or waste timber products.

We had a session this morning at Georgia Tech, all morning. People came there from all over the Nation, about 400 people, to describe to me new ideas about energy. And Georgia grows three times more energy in our woods every year than we use in the whole State, and if we just took the pine tree tops and the pine needles and the bark and changed that into energy, we could more than meet that we waste—I mean the waste part. We'd have more energy than we need, and the same with animal products. So, I think the thing is to, secondly, turn toward renewable energy supplies.

The third way to turn is to energy supplies that we have an awful lot of. We've got enough coal to last us 600 years, and we're now finding ways to burn coal cleanly so it doesn't mess up the air. And we ought to turn to coal. We've got additional supplies of oil and natural gas that we've not yet found in our country, so we don't have to import. We need to turn to those. Geothermal supplies—underneath the ground itself there's extremely hot steam and water. We can tap that. We're already doing that. So, that's the next thing to do.

The last way to do is to turn toward things that cost a lot but that might be used to fill in the gap, like synthetic fuels. It costs a lot of money. You can make oil out of shale rock and make oil out of coal, but to the extent that we save and use solar power and turn to our renewable supplies, we can cut down on the amount of synthetic fuels we use.

But for the American people to get educated and to believe we've got a problem is the first major step. But we will do

what you say, but we'll also advertise and not only voluntary public service advertising that the radio and newspapers and television might do as a public service, but also we'll have some paid advertising to tell you and your families specifically this is what you can do.

I might add one other point. Almost every agency in the Federal Government now and many local governments are sending out little pamphlets like in welfare checks or social security checks, saying, "These are the things that you can do in your own home to save energy."

And last week—week before last—I sent every chief executive, every mayor and every chairman of every county commission in the whole United States, 6,000 of them, a letter, and I gave them ideas on what they could do in their own county to save energy. I used a few examples of people that are already doing a good job. And one of those few examples that I used was this county, because the leaders have already done it.

We've got a long way to go. We can get there.

SUPPORT FOR THE PRESIDENT

Hello.

Q. Mr. President, I voted for you in 1976. I campaigned for you, and I'm going to vote for your reelection in 1980.

THE PRESIDENT. Thank you. No answer yet.

Thank you.

WAYS TO CONSERVE ENERGY

Q. You see, I ride my bicycle to school every day. I was wondering, how else can we conserve energy?

THE PRESIDENT. What's your name?

Q. Patricia Kirby.

THE PRESIDENT. Okay. How old are you, Patricia?

Q. Eleven and a half.

THE PRESIDENT. Eleven and a half.

I hope you all heard. Patricia rides her bike to school every day, and she wants to know what other ways she can save energy. Well, I think you can talk to your parents and make sure that your mother and father—do you have any brothers and sisters old enough to drive?

Q. No.

THE PRESIDENT. Well, encourage them all to obey the speed limit.

Also, I think you might plan 1 day a week, the whole family get together, and say, "What can we do 1 day a week when we don't even use the automobile?," like going on a picnic, you know, or doing something—the whole family together—taking a hike, or maybe get your mother and daddy to go on a bike ride with you, like on a Saturday, instead of driving all over the place.

Another thing that you can do is to make sure that the lights in your home are turned out when they're not being used. And encourage your folks to set the thermostats as they should be—in the summertime not any lower than 78 degrees, and in the wintertime not any higher than 65 degrees. We've been doing that in the White House ever since the first day I got there.

And you can tell your mother and father that if they want to insulate their home that there's a tax credit that they can get to help them pay for that cost of making their home, your home, more efficient. And if they want to put in a solar heating unit to heat water in your house, then there's another tax credit of \$2,000 that you can get for that.

So, there are a lot of little things that you can do around the house. One thing that you might do instead of using an electric clothesdrier, you might rig up a clothesline in the back of the yard and let the Sun dry the clothes, see?

So, I think the best thing for a family

like yours to do is just to sit down some night and just go down and see who can think of the best ways in your house to save energy. And you can say, "The President told me to do these things." But see if you can come up with a better idea than the ones I've given you. Okay?

Thank you.

You're the same age as Amy. She'll be 12. She's a little more than 11½. She rides a bike. *[Laughter]*

Thank you very much, Patricia.

Q. Well, there's one other thing I was—

Q. Mr. President—*[inaudible]*—very poor situation. Then they ask, after me. My question is not—*[inaudible]*. I'm not going to take the whole time. *[Inaudible]*—of vital importance to me and my friends.

THE PRESIDENT. Why don't you—Phil?⁵ We're almost out of time, and, Patricia, can I let the lady in the back ask another question, because she hasn't had one yet and she's been waiting. Thank you, beautiful.

Yes?

CONGRESSIONAL ACTION ON ENERGY

Q. Thank you, Mr. President. I'd like to welcome you to our State and to our city, and to tell you that I am also a native Georgian. And I am a Carter before I married. Glad to have you here.

THE PRESIDENT. I'm always glad to meet my kinfolk. *[Laughter]*

Q. I want to compliment your staff. I have met with some of them. I see Keech over there. And they are a wonderful advance staff, and I was greatly pleased to have met with some of them.

Now, first, I'll make a statement, and then my question.

THE PRESIDENT. Okay.

Q. Since most Congressmen have been

⁵ Phillip J. Wise, Jr., Appointments Secretary to the President.

into Washington much longer than you have, and our problems have not arisen in the last 2 or 3 years, it seems we should start placing the blame for our problems on the shoulders of those who have helped create them.

Ever so many of our problems have been created by the lack of self-serving Congressmen sitting in Washington for many, many, many years.

Now, our question, Mr. President. Since oil and natural gas are finite elements, do you think you and we, the people, can get the Congress to listen to you and to us and help get us an energy program that will keep us the richest and the greatest and the freest nation on Earth?

Thank you.

THE PRESIDENT. First of all, let me say that there's enough blame to go around—the American people, former Governors, like I was during 1973 and 1974, Presidents, the Congress, the oil companies—there's enough blame for all of us. But I think the time has come for us not to throw rocks at each other and not try to find a place for a scapegoat, but to see what can we do in the future.

The House of Representatives, for instance—the Members of the House of Representatives have already passed the windfall profits tax. Now it's in the Senate, and it's up to the Senators to decide. But in the Senate the oil companies are concentrating an enormous lobbying effort.

In the past, the oil companies have had pretty much a free ride in Washington, because there never was a voice there of consumers, of average Americans. For the first time in the last 2½ years, there's been an intense struggle, with my proposals on one side, which I think represent what the consumers need, and the oil companies on the other. The Congress has not yet been able to pass a single line of energy legislation concerning oil.

To answer your second question, I be-

lieve that before the Congress adjourns this year, they will pass the windfall profits tax and they will pass a law setting up a production corporation to produce synthetic fuels and others that we need, and also the production board that will make the decisions quickly on major energy projects.

So, let's don't blame one another now. Let's look to the future, and I believe the Congress will act this year, provided, *provided* all of you let the Members of Congress know how you feel.

I don't have time for another question.

Q. I want to give you something to take back. I've mailed them to the White House twice.

THE PRESIDENT. And they sent them back to you?

Q. And nobody will take them over there. May I give them to someone?

THE PRESIDENT. Of course.

Q. You should have them, believe me.

THE PRESIDENT. Yes, I'll be glad to take them.

Let me say this in closing. This has been a good session for me. I've learned from you, and I hope you've learned a little from me. And I think the main feeling that I have is that there's a belief that if we all act together, we can have a better life, a happier life, a more productive life, our country's security can be greater, our Nation can be unified more, families can be closer together.

So, it may be that facing this particular crisis or challenge of energy can go a long way toward healing some of the problems that our Nation has had too long.

I think for us to recognize that we've got to save and not waste is really compatible with what the Bible teaches. God doesn't want us to waste what He gives. I think the fact that we have to now share with each other is a very good principle on which to base a family's style of living.

And I believe that Florida will prosper. I was talking to your Governor, who rode

down with me in the plane from Atlanta, he and his wife, Adele. And the tourist industry, I don't believe, will suffer, because people know that with more efficient automobiles and better transportation systems and more care in preserving what we do have, that we can have that enjoyable life. And my guess is that over a period of time, work habits and work hours will be modified to give us more leisure time.

So, it may be that out of all of this struggle and strain and debate and argument and casting rocks at one another, we'll come up with an energy policy that will be adequate, that will give America a better life, and make—as I said many times on the river—and make the greatest nation on Earth, the United States of America, even greater in the future.

NOTE: The President spoke at 5:36 p.m. in the Thomas Jefferson High School gymnasium.

Following the town meeting, the President met privately with two of the questioners.

Tampa, Florida

Question-and-Answer Session With Florida Newspaper Editors. August 30, 1979

THE PRESIDENT. I think I will wait to the end of the session to shake hands with everybody.

You say you may not want to? [Laughter]

Let me say first of all that I am thankful that all of you would come here to meet with me this afternoon. This has been one of a series of visits that I have made to different communities outside of Washington in the last 6 weeks or 2 months. The main purpose of the visit is to dramatize the need for citizen interest in and understanding of the energy question, particularly the aspects that are part of their own lives and also, of course, legislation before the Congress.

I think that the present awareness by

the public that we do have a problem in energy is welcomed and also a recent development. For a year and a half, in spite of numerous TV appearances and addresses to the Joint Session of Congress and all the publicity that I could arouse about legislative proposals, the public still didn't show, in public opinion polling, that they believed there was a problem and didn't accept the fact that we imported any oil, a majority of them. So, I think it has been productive.

I thought the session today was perhaps the most enthusiastic, most exciting that I have had. There was a lot of spirit there. I don't know if you all had a chance to watch it on television.

But I will be glad to answer any questions you might have on any subject that you choose.

ENCOUNTER WITH RABBIT

Q. Mr. President, I am fascinated by the amphibious attack by the rabbit. [Laughter]

THE PRESIDENT. Are you? Okay.

Q. I wish you would tell us about what happened, if you would. I would appreciate it.

THE PRESIDENT. I will try to say this without castigating the press. [Laughter] I have lived all my life on the farm, except when I was in public office recently or in the Navy, and I have grown up with wild animals, including rabbits. I was out fishing on a small pond in Webster County, I think in April. I am not sure about the month. I was by myself in the boat, and I saw this animal swimming across the pond toward me. I thought it was a beaver at first, since there are beaver and otter in that particular pond. And when it got closer, I saw that it was not either one of the two animals, but it was what appeared to be a rabbit.

When it got close enough that I could

see that the rabbit was going to come in the boat with me, I took the boat paddle and hit water at the rabbit, and he eventually and reluctantly turned away and went to the shore.

And to be frank about it, I didn't think about it anymore until the Secret Service said, "What was that animal that was trying to get in the boat with you?" I said, "It was a rabbit." Immediately all my Georgia friends said rabbits don't swim, it is impossible for it to be a rabbit.

About a week or two later, it appeared that a White House photographer who was on the bluff overlooking the pond had taken a photograph. When we looked at the photograph, I knew it was a rabbit, but it was hard to tell in the photograph. So, I had him blow the photograph up. It was plainly a rabbit.

The rabbit, I don't think, was trying to attack me. My guess is that the rabbit had been startled by some dogs or something and had jumped in the pond and was just looking for a dry place to crawl.

PALESTINE LIBERATION ORGANIZATION

Q. Mr. President, if we can turn the conversation to a lighter topic. [Laughter] This business of not talking to the PLO is not your policy, and yet you are following it. We have seen that that policy has caused the departure of one of your most devoted and apparently an official to whom you are most devoted.

THE PRESIDENT. Yes.

Q. How long are you going to continue observing this policy, and does it make any sense in a country which prides itself on open discussion of all issues with all parties that you are continuing to ban from negotiation with the PLO?

THE PRESIDENT. Our commitment, made by Secretary Kissinger, as you know, to the Israelis at the time they were negotiating Israeli withdrawal from Egypt, was that we would not recognize nor negotiate

with the PLO until they did two things. One was to acknowledge Israel's right to exist and secondly to espouse U.N. Resolution 242. We will stick to that commitment. It was made when Nixon was President. Ford, when he was in office, reconfirmed our national commitment to the Israelis, and when I became President, I also committed our Nation to adhere to this commitment.

I have met with the leaders of Jordan, Syria, Saudi Arabia, Egypt, and in every instance when I have met with them, at least on my initial meeting with them, I have asked them to induce the PLO to recognize Israel's right to exist and to recognize 242. In most instances those Arab leaders said they thought they could accomplish that. They have not been able to.

So, we will not negotiate with nor recognize the PLO until after they recognize Israel's right to exist and the efficacy of U.N. 242.

Q. This is not your policy, but you apparently think it is a proper policy.

THE PRESIDENT. It was not my policy. I have endorsed the policy, and I will carry it out.

TOURISM AND ENERGY

Q. Mr. President, back to energy for a second, sir. Some people, after one of your speeches, got the idea, seemed to get the idea that even vacation trips would not be patriotic—to tour States like Florida, California, Arizona, others we could name. What is the proper role of tourism in society that is no longer energy rich?

THE PRESIDENT. I think it is very important. I think the last answer I gave to the group at the townhall meeting, I tried to emphasize then that there was a very important role for vacations in an energy-conserving society. I think the structure of our lifestyle, as it does change, with, for instance, a 10-hour work day with 4 work-

ing days, that's the kind of thing toward which we might move, would enhance the possibilities of tourism and recreation, give us more time, more days to enjoy life.

Also, the development of more efficient automobiles would make vacations possible under the same level of an individual family budget—and the improvement of transportation systems in general, particularly mass transportation systems, which let vacations and tourism be a greater part of American life. So, I consider a vacation to be a very important part of my existence, and I would hope the energy shortage would encourage people to conserve enough so that vacations in an individual family's life would be appropriate.

WHITE HOUSE STAFF

Q. Mr. President, you are engaged in a tough campaign to try to get America to tighten its belt. You're asking business to take fewer profits; you're asking labor to accept lower wages. How do you reconcile that symbolism with the \$56,000-a-year staff chief for Mrs. Carter? Isn't that a problem for you in image?

THE PRESIDENT. I can't claim that any part of the White House staff would not be a problem. The totality of the White House staff under my administration is considerably below what it was in previous administrations. I think 25 to 28 percent fewer people work in the White House for me and Rosalynn combined than worked for, say, President Ford and Betty Ford, or Nixon and Pat, and so forth.

There is a tremendous responsibility on not only a President but, of course, the First Lady. I would guess that Rosalynn gets 3,000 letters a week which have to be answered, some by her personally, some by her staff. She has a heavy responsibility for taking care of the visitors that come to the White House, not only state visits, but we have large numbers of groups that

come into the White House every week to talk about SALT, to talk about inflation, to talk about hospital cost containment, different issues that are important. Rosalynn doesn't arrange those meetings in the initial stages, but she is responsible as the hostess to make sure that when they are there that they have maybe light hors d'oeuvres or some lemonade or tea or something of that kind.

She has under her all of the persons who take care of the official visits. The State Department pays for the actual cost of a state banquet, for instance, but Rosalynn's staff members are the ones that arrange the banquet, decide on the menu, arrange for entertainment, and so forth.

We have picnics on the grounds for all the Members of Congress on occasion, or for certain other groups. For instance, Monday we will have between 1,000 and 2,000 labor representatives who will come there to celebrate Labor Day. It will be a picnic type. Her staff has to do all of those things in addition to taking care of her travel and other minor things of that kind. So, she needs somebody that is competent.

I think if you would compare—and I wish you would take the occasion to do it—if you would compare the size of her staff with her predecessors, you would find that it is modest. It is probably smaller than any recent First Lady's staff in spite of the fact that she is probably the most active of the ones who have served there in the last 12 or 15 years. So, I don't have any apology to make for it. The pay scales are set, as you know, by civil service and Government standards. But we have cut the staff considerably.

Q. Do you think that level job is the same as Hamilton's and Brzezinski's—I mean, that's the same pay as Hamilton Jordan?

THE PRESIDENT. That is correct. That is the top-level staff. I have a certain number of assistants.

SENATOR EDWARD M. KENNEDY

Q. Mr. President, Ted Kennedy has never said that he wanted to be President, and for 10 years the country seems to have had a fascination with him in the White House. He insists he is not running for President, and still he leads in all the polls. When you see all of that, read that in the newspaper, what do you think the country's fascination with him is?

THE PRESIDENT. I have heard Senator Kennedy say that his avowed commitment not to run was one of the things that made him attractive—being reluctant to be a candidate is an attraction in itself. I have heard him say that if he should announce as a candidate—which he doesn't intend to do—that his standing in the polls would undoubtedly drop a good bit.

There is also a great admiration and appreciation and respect throughout this country—particularly among Democrats, but I think among all Americans—for what the Kennedy family has done, with their older brother being killed in the war and with President Kennedy being assassinated in office and with Robert Kennedy being assassinated in the last stages of the primary campaign in 1968. And I think Edward Kennedy has done a superb job as Senator.

He is the last remaining brother, and I think all of these reasons—his own reluctance, the admiration and respect for his entire family, and his own competence and attractiveness as a political figure—would accrue to his benefit. I don't begrudge him that admiration and that respect.

1980 PRESIDENTIAL CAMPAIGN

Q. Mr. President, you have been reported as making a statement saying quite explicitly what you would do to Senator Kennedy if he should run against you. I

am wondering if you have made the same statement in regard to Jerry Brown?

THE PRESIDENT. I can't deny I made the statement. I made it in a small group with five or six people sitting around the table with no intention for it to be publicized.

I have never let the identity of or the size of opponents in a political campaign deter me, and if I should be a candidate and if Senator Kennedy or Governor Brown or anyone else should decide to run against me, then I believe that I would triumph, to express it in more diplomatic terms.

I have no concern about that. I made my plans to run for President originally beginning early in 1972, and at that time, my presumption and my conviction was that I would be running against Wallace and Kennedy. And it was not until November of 1974 that Senator Kennedy announced that he would not be a candidate. And I had no fear then of running against those two very popular men, and now I would have no fear of any group of opponents or any single opponent if I should decide to run again.

Q. Senator Kennedy not only could certainly discourage these draft movements in Florida but in other States?

THE PRESIDENT. I can't answer that question.

FLORIDA AND THE 1980 PRESIDENTIAL CAMPAIGN

Q. Mr. President, in 1976 campaign, Florida was a rather key State in your strategy. Would you foresee it to be equally critical in 1980 if you should be a candidate?

THE PRESIDENT. Yes. I don't think there is any doubt about that. The country's eyes will be on Florida for the same reasons that they were in 1976. Florida is a large State; it's a State within which

have been sharp contests in recent years, at least between Democrats and Republicans, the congressional seats are contested. It's a State that's looked upon as a blend of both cosmopolitan and parochial interests, rural and urban, and where people come from all over the country. It has a heavy population of senior citizens, a high population of minority groups, and issues are sharply drawn. I think just the nature of Florida and the character of the State makes it a highly interesting political location, and the early nature of the contest enhances all those factors.

So, yes, it will be important for any candidate for President as it was in 1976.

FOREIGN OIL SALES

Q. Mr. President, you got a lot of softballs in your town meeting tonight. One of the hardest, attempt to be hard, came in the matter of the kerosene to Iran.

THE PRESIDENT. Yes.

Q. I wonder why you don't simply admit that it's paid in blackmail?

THE PRESIDENT. I don't—

Q. My question: Aren't we going to have to pay more of it, and what if the Arab nations really put the squeeze on us, how much blackmail are we willing to pay? And will we go to more if necessary to get the oil that we need?

THE PRESIDENT. I don't know how to characterize that question.

Q. Soft.

THE PRESIDENT. Well, I think it's an extremely biased sort of question. I'm not going to sit here and acknowledge that our Nation has been blackmailed—

Q. You would not answer whether this country would go to war in order to get oil?

THE PRESIDENT. The basic presumption of your question is that our Nation and I personally have been blackmailed. That is not an accurate statement, and if

you remove that presumption, then I will be glad to answer the question.

We have not been blackmailed. There was no threat, whatsoever, issued to me or implied through the Iranians or any other intermediary. When they requested that we sell them from a private, free enterprise refinery that was located, I believe, in the Caribbean, at that time a million barrels of kerosene, they sent word to me through Jim Schlesinger—I was at Camp David at the time, it was during the period when I was preparing my energy speech. And he called and said that the Iranians had requested that we send them a million barrels of kerosene on a one-time basis, because through sabotage or other interruptions—I believe it was sabotage—a refinery in Iran, that produced kerosene from their unlimited supplies of crude oil, had been disrupted and that many of the people in Iran, relatively poor—

Q. Yeah, I heard your answer.

THE PRESIDENT.—depend upon kerosene as a fuel for their families. This was a problem Iran faced during the revolution—the most serious problem that Iran faced during the revolution, economically speaking, was a shortage of kerosene. And they asked me if I would supply them in effect about 1 day's worth of crude oil back in the form of kerosene. The company, which I think is—Rex,¹ do you remember?—Amerada Hess?

MR. GRANUM. It is.

Q. I have a feeling that you want to evade the question.

THE PRESIDENT. I am not trying to evade the question.

Q. The real part of the question—because most of us have heard your explanation—would you answer this question: It does seem to me that whether you call it blackmail or what, we are in

an extremely vulnerable position, and you have so said yourself.

THE PRESIDENT. I certainly admit that.

Q. That is the purpose, you say, of this visit. My question to you then is, are we willing to take the extreme measure of going to war if the Arab nations should cut off our supply, which they are perfectly capable of doing?

THE PRESIDENT. I am not going to answer your question directly, because it is too hypothetical in nature.

We had an Arab boycott, as you know, in 1973 and 1974. Our Nation did not have to go to war, because we got oil from other sources. We conserved and we got larger supplies of oil from places like Ecuador, Indonesia, Venezuela, Nigeria, and other sources.

I would take whatever action is necessary to defend the security of this country, but I would have to make a judgment if an interruption of the oil supplies from some of the Mideast countries was endangering the security of my country.

We have analyzed all options. If you study the straight military aspects of it—which has been done by my predecessors, and which I have reviewed—it is a very difficult military question. If a country, country X, said we will not send any more oil to the United States, and then if our country said we will go in and take the oil, to destroy those oil fields or to blow up a refinery would be so easy for terrorists or saboteurs, or for that government itself if they were threatened with invasion, that it adds a complicating factor to it that I cannot address right now.

But I am trying to get our Nation in the posture, first of all, with reasonable friendship toward the OPEC nations, including the Arab nations, which we have, including Iran, and secondly, to increase

¹ Deputy Press Secretary to the President.

production in our own country, and third, to conserve energy that we would be energy independent. But I cannot tell you that we would go to war in that case. I would do everything I could to avoid a war, but at the same time my number one responsibility is to protect the security of our Nation.

I can tell you this in addition. You keep using the word "blackmail." Since I have been in office, there has never been any allegation made to me or any insinuation made to me by an Arab or other foreign leader that "if you don't do so and so, we will cut off your supply of oil." I have never been the subject of a threat, and I have the same attitude now that we had when the Barbary pirates were in war: "Millions for defense, but not one cent for tribute." I wouldn't let you blackmail me, and I would not let an Arab country blackmail our Nation. We don't have to take that.

MIDDLE EAST OIL PRODUCTION

Q. Mr. President, a few months ago when the Saudis agreed to temporarily increase production of oil by a million barrels a day, is it your understanding that there was a linkage of that increase in production to a progress on the Mideast peace settlement, and might that production be backed off if there is no progress?

THE PRESIDENT. I can tell you that there was no linkage. I can tell you that there was no linkage ever mentioned with the Saudi diplomats in Washington or with our Ambassador in Saudi Arabia. And I might say that the increase in oil production was announced at that time to be a temporary increase.

There are two things that it is important to remember: Now the OPEC nations as a group are producing more oil than they

want to produce. The Saudi Arabians would be very pleased if I and Giscard d'Estaing and Helmut Schmidt and others would, say, "Why don't you lower your production, 9½ million barrels of production down to 4 million," because 4 million barrels a day is about all the income that they can possibly use. They would rather keep the oil in the ground. They are producing the extra oil in effect as a favor to the rest of the world, to provide world stability, which helps them.

Iran is the same way. They don't need 4 million barrels worth of oil income per day. And the same with some of the other countries like Iraq that have some very close relationship with France, no diplomatic relationship with us. Other countries are now producing oil at a rate that they cannot sustain.

So, inevitably OPEC oil production on a worldwide basis is going to go down. I cannot anticipate the Saudis doing anything in the future except having a lower production. We had hoped once they might go up to 12 million barrels a day. They don't want to. That is one thing.

The other thing is the price is going to be determined eventually by the price of alternate energy sources—synthetic fuel, photovoltaic cells supplying electricity, nuclear powerplants in most nations of the world, including our own. Competitive prices of energy is what is going to determine ultimately the level of oil prices. And I think they are going to go up in price until that stabilizing point is reached.

So, you know, we are dreaming when we think that there is some tremendous reservoir of oil out there in the OPEC nations that they are waiting to sell. Inevitably their production of oil is going to go down, either because they are running out of oil, which many of them are, or because they would really prefer to have less pro-

duction. There is no reason for the Saudis, to repeat myself, to produce 9½ million barrels of oil every day for 5 or 6 million people. You know, they know that the best investment they could have is to keep that oil in the ground.

Q. Isn't it being used as a political weapon to spur the Mideast peace talks?

THE PRESIDENT. No. I can't say that they don't want the Mideast situation—I have never met an Arab leader that in private professed a desire for an independent Palestinian state. Publicly, they all espouse an independent Palestinian state, almost all of them, because that is what they committed themselves to do at Rabat. But the private diplomatic tone of conversations is much more proper than is often alleged by the press and by others. Really, it would be a very great surprise to me for Crown Prince Fahd to send through our Ambassador, John West, to me a message: "If you don't expedite the resolution of the Palestinian question, we will cut off your oil."

There's a great stabilizing interrelationship between ourselves and the Saudi Arabians. They see us as their ultimate, not quite protective, but stabilizing factor, and they don't want to sever their relationships with us. They have an abhorrence of the Soviet Union because it's atheistic and because it's Communist and because they encourage, sometimes, radicalism and turmoil and violence. And they know that we are a religious nation, and they know we are a democratic nation; we know our attitude toward them is benevolent, and they know our basic policy is one of espousing stability. And all those factors, and others that I could name, are attractive to the Saudi Arabians.

So, they want our friendship and our good will just as much as we want theirs. I cannot imagine their ever coming for-

ward, "If you don't do this with the PLO we will cut off your oil."

Q. Mr. President—

THE PRESIDENT. I promised her.

OIL PRICES

Q. Mr. President, there has been a strong feeling that in addition to the shortage of oil, because of the import situation, that there are inhouse oil companies who were taking advantage of the situation just to raise prices. And all the time the oil at the gasoline stations was being raised in price, "Just wait until it reaches a dollar a gallon, there will be all the oil available you want." Would you care to comment on that?

THE PRESIDENT. I know. I hear all those allegations. The flow of oil from the producers to the ultimate consumers is a mighty tide that has an inexorability about it. It's a very large quantity, 52 million barrels a day. You can hold up that tide for a little while, perhaps like a few days. But it's got to move. What goes in one end of the pipeline has to go out the other.

I've had reports made to me that off the coast of the United States, there were hundreds of ships waiting until the price went up to unload. We had the Coast Guard make a survey of the coast. We sent helicopters out and airplanes; there were no ships out there. But it was a viable story that was reported in many news media, and many people believed it. I don't think that the oil companies, with the exception of small fluctuations, can hold back the normal flow of oil in order to wait until the price goes up.

My philosophy has been to get the Government's nose out of everything we possibly could when I feel that the free enterprise system and adequate competition can prevail. And I have induced the

Congress under the most difficult circumstances to deregulate the price of natural gas. It's a phased deregulation over a long period of time to deregulate the price of oil, and oil-controlled prices will be off in September of 1981, in 28 months after we initiated it.

We have deregulated the airline industry to the great advantage of Florida. You all have really benefited. The tourism rate has gone up, and a lot of people are using airplanes and so forth. We are trying to get the Government's nose out of business.

I think the oil companies have needed to have some predictability, because the darn thing was in a furor 2½ or 2 years ago. Nobody knew what was going to happen next. Now the oil companies, if they got natural gas, now know in 1984, January 15, that the degree of regulation and the price are going to be such and such, and they can make their plans accordingly.

One other point. I had the president of Atlantic Richfield Company come up to Camp David to give me advice on the energy speech I made that Sunday night. He said just the fact I had decontrolled the price of oil had encouraged that particular company, which is fairly large, to double their rate of exploration of oil above any level that they had ever had in the past. And that board of directors had met just before he came to Camp David. They had never spent more than a billion dollars a year for oil exploration. They decided for 5 years continuing they would spend \$2 billion per year on searching for oil.

So, I think just the predictability about what the price and the degree of regulation of oil is a very attractive feature, and I don't believe that the oil companies

can deliberately hold back large quantities from the market for a long period of time in order to wait for a higher price.

AMBASSADOR ANDREW YOUNG

Q. Mr. President, what is your reaction to the ABC News story that the Government bugged Andy Young's apartment?

THE PRESIDENT. That story is absolutely false. ABC came to the Attorney General, reported that story to the Attorney General, asked him if it was true. He gave them a flat statement on his word of honor that it was a false story. ABC then came to the White House, talked to Jody Powell, and Jody told them that it was a false story. They ran the story anyhow, which I thought was a very irresponsible demonstration of journalism.

I saw it on television. I was called about it, and I had it replayed so I could watch it. I then called the Attorney General last night and told him to get a direct written statement from every single intelligence agency about that subject. They all have assured me that there has been no electronic surveillance of Andy Young's apartment, no bugging of Andy Young's apartment, no tap on Andy Young's telephone by any intelligence agency of our country. And I don't know what ABC is going to do about it. They knew the story was denied by the White House and the Attorney General.

It is a serious crime, it is a felony to put a tap on an American citizen's telephone, to bug an American citizen without a written permission from the Attorney General or the President. Obviously there was no written permission.

So, it is a false story. I don't think any of it should have been published.

One other question.

STRATEGIC ARMS LIMITATION

Q. Mr. President, I would like to know what your response is to the statement from the Senators today about Russians agreeing to certain reservations of the SALT treaty? Do you think that the Russians actually have done this?

THE PRESIDENT. I don't know. If you studied the reservations which Senator Biden and others described, they consist primarily of the inclusion in the SALT treaty itself of agreements that have already been negotiated very carefully and accepted by both sides, plus an agreement that the Senate is certainly likely to request, that the protocol which is designed to last a limited period of time will not have any presumption of extension. Do you follow me? So, those are the kinds of things that have already been negotiated very carefully with the Soviet Union.

Some of them are not in the text of the treaty, and if the Senate should—I am not advocating this, but if the Senate should say in the ratification agreement, "We approve SALT II provided it is understood that the protocol will not be extended and that the production rate of Backfire bombers will not exceed $2\frac{1}{2}$ per month," which is 30 per year and so forth, then I think that the Soviets might accept it. But I can't speak for them. They were not willing during the negotiating phase to include those things in the document, in the treaty document itself. But they have agreed to those understandings, equally binding them.

Q. Your negotiators didn't get everything they could get?

THE PRESIDENT. We have the agreement from them, and if I discovered, for instance, through various means—aerial surveillance and other means—that the Soviets were producing four Backfire

bombers per month, I would consider that an adequate cause for abrogation of the treaty itself, because it would be a violation of the solemn commitment of the nations and its leaders.

I consider those ancillary agreements to be just as binding as the agreements within the text of the treaty. And Brezhnev does, too. You cannot imagine—I bet you we spent more time on the verbal agreement concerning the Backfire bomber than we did at any other single issue that is included within the SALT treaty. And it was at the last minute in Vienna when Brezhnev finally acknowledged that the limit was 30 Backfire bombers per year. They had not been willing to do that up until then, because Brezhnev himself had taken the position at Vladivostok, negotiating with President Ford, that the Backfire bombers were not a legitimate subject for negotiations, since it was not a strategic arms. It was a very sensitive thing to them. And we really had to go to the wall to get them to agree that they were producing at a rate of 30 and they would not exceed it.

AIRLINE MERGER

Q. Mr. President, would you permit a local question, please? On the merger of National Airlines, are you inclined now to permit such a merger? Do you have the final say in that, with either Pan Am or Eastern?

THE PRESIDENT. I can't respond to that until it comes to me. I have to let the CAB and the State Department and others assess the consequences of it. They make a recommendation to me, and then I make the final decision.

Q. There is only one recommendation made, I believe, by the CAB, recommending Pan Am. Eastern has not been heard yet. The question is in concept.

THE PRESIDENT. My point is I am not familiar enough with it now to answer your question. When I get it on my desk, then I will study it and understand it. But I am not familiar with it yet.

Q. Mr. President?

THE PRESIDENT. I have to go. I am sorry. Let me thank you all. I tried to answer all of your questions.

I am sorry but we didn't agree on the basic premise.

Q. You did very well after you got going. *[Laughter]*

THE PRESIDENT. After we got around the allegation of blackmail, we did pretty well.

But I would like, if you don't mind, to have a photograph made with each one of you, and it will take just about 5 minutes. Then I will be on my way to Georgia, to Plains for the first time in quite awhile. I thank you again.

Q. Mr. President, I understand this is all on the record?

THE PRESIDENT. Everything I said is on the record, yes.

NOTE: The question-and-answer session began at 7:35 p.m. in the Pinellas Room at the Host International Hotel. The transcript was released on August 31.

Prior to the meeting, the President attended a private reception at the hotel for Florida State representatives and officials of the Florida State Democratic Party.

As printed above, the item follows the press release.

United States Representative to the United Nations

*Nomination of Donald F. McHenry.
August 31, 1979*

The President today announced that he will nominate Donald F. McHenry to be United States Permanent Representative

to the United Nations. Ambassador McHenry previously served as U.S. Deputy Representative to the U.N. Security Council.

Coming from a background of extensive study of international law and organizations, he joined the Department of State in 1963. For 8 years, he served in various positions there that were related to U.S. policy on questions arising in international organizations. In 1966 he received the Department of State's Superior Honor Award.

In 1971 Ambassador McHenry went on leave from the State Department to serve as a guest scholar at the Brookings Institution and an International Affairs Fellow of the Council on Foreign Relations. During that period, he also was a professorial lecturer in the School of Foreign Service at Georgetown University.

Ambassador McHenry resigned from the State Department in 1973 and joined the Carnegie Endowment for International Peace in Washington, D.C., where he directed humanitarian policy studies. Also during that period, he was a professorial lecturer at American University in Washington, D.C.

Before coming to the U.S. Mission to the United Nations, Ambassador McHenry worked on the Carter administration's State Department transition staff. His international organization experience includes: serving as both an adviser and alternate representative to the U.N. Trusteeship Council, alternate representative to the U.N. Seminar on Apartheid and Racial Discrimination, delegate to the U.N. International Conference on Human Rights, and a consultant to the U.S. congressional delegation to the Interparliamentary Union in 1966.

Ambassador McHenry has also been the chief U.S. negotiator on the question

of Namibia, as a member of the U.N. Western Five Contact Group.

Prior to joining the State Department, Ambassador McHenry taught English at Howard University in Washington, D.C., from 1959 to 1962. At the same time, he continued to pursue postgraduate studies at Georgetown University.

He is author of "Micronesia: Trust Betrayed" (Carnegie Endowment, 1975) and has had numerous articles published in journals and newspapers.

Born in St. Louis, Mo., 42 years ago, Ambassador McHenry was raised in East St. Louis, Ill. He is a 1957 graduate of Illinois State University and received his master of science degree in 1959 from Southern Illinois University.

Ambassador McHenry is a single parent of one son, who recently completed graduate studies at Oxford University in Great Britain, and two daughters, who reside with him and attend school in New York City.

NOTE: The announcement was released at Americus, Ga.

Plains, Georgia

Informal Exchange With Reporters.
August 31, 1979

THE PRESIDENT. Good morning.

Q. Good morning, Mr. President. If you'd only let us know, we wouldn't have come out at 7 o'clock.

Q. Or woken up at 7 o'clock.

THE PRESIDENT. Did you wake up at 7?

Q. None of us.

Q. Close enough for me—for me it was close.

Q. Let me ask you a question. Does it concern us that there are the Russian troops in Cuba? What is your information?

THE PRESIDENT. Well, Secretary Vance is going to make a statement in Washington about that today. I've discussed it with him this morning. I think I'll let his statement stand.

Q. Is it a very serious matter?

THE PRESIDENT. Well, I'll let Secretary Vance's statement stand today, Sam [Sam Donaldson, ABC News].

Q. But, to, I mean, kind of forestall any other questions, you are making the decisions on this, though? It is not Secretary Vance—

THE PRESIDENT. That's right.

Q. —because that would be tomorrow's question.

THE PRESIDENT. I understand. Secretary Vance and I've discussed it, and he'll make a statement today for me.

Q. Do you have something to say about your new United Nations Ambassador, Mr. President?

THE PRESIDENT. Have they announced the—

Q. Eleven o'clock. Yes, several minutes ago in Americus.

THE PRESIDENT. Yes. I will say something about him. He's a highly qualified professional, thoroughly familiar with the major issues that confront the United Nations, and I have complete confidence in him.

I've consulted with a lot of people before making the selection, and Ambassador Don McHenry fulfills all the requirements, I think, for a superb appointment. He's been highly recommended to me by Ambassador Andrew Young and by Secretary Vance and many others. His whole life has been devoted to ambassadorial or diplomatic service. And I've had a thorough discussion with him earlier this week about the major issues that confront the United Nations—North-South relationships, southern Africa, Mideast, and

others—and I have got complete confidence in him.

Q. Let me try the Cuban thing from a different angle.

THE PRESIDENT. I'm not going to answer questions about Cuba. I'm going to let Secretary Vance make the statement.

Q. With regard to its potential impact on SALT, would you comment on that aspect of it?

THE PRESIDENT. No. Let's let the Cuban thing be handled by the State Department. I've instructed them what to say, and I think it's best to let them say it.

Q. What is your information about this allegation that Richard Harden may have perjured himself in the Vesco matter?

THE PRESIDENT. I don't know anything about it.

Q. There are stories to the effect that Phillip Heymann apparently told some members of the grand jury that he felt that was the case, although I think he has not commented on it.¹

Q. He apparently said this in July.

THE PRESIDENT. I don't know anything about it.

Q. Mr. President, I understand you gave some serious thought to Leonard Woodcock as U.N. Ambassador. Is that correct?

THE PRESIDENT. We considered a lot of people. Leonard Woodcock was one of them. But it's so important right now that we have a continuation of our present policy with the People's Republic of China

that I think he's better qualified to stay there for the time being.

Q. Did you make your decision before the Kennedy Airport confrontation this week,² and were you persuaded one way or the other by that?

THE PRESIDENT. Well, I made a final decision after I met with Ambassador McHenry in Washington a couple of days ago. But McHenry was recommended to me as the first choice of a lot of people, and he's a man that I have known very closely since I've been President—because of his work in southern Africa in particular. He's really an expert on the Far East, including the Pacific region, but he's acquired probably the best working knowledge of southern African problems of anyone we have.

Q. Was he Andy Young's first choice?

THE PRESIDENT. Let me not get into that.

Q. What effect will his appointment have on U.S. relations with Third World and developing countries, Africa particularly?

THE PRESIDENT. I think they would guarantee that our present relationships, which I consider to be an improvement over the past, will be continued.

Q. I hate to replot the whole ground at the risk of a second-day denunciation of ABC. Is it a possibility that the Israelis bugged Ambassador Young's apartment, or some other intelligence service other

¹ News reports had stated that Assistant Attorney General Heymann's remarks allegedly were made in connection with Special Assistant to the President for Information Management Richard M. Harden's testimony during an investigation into charges that White House aides had attempted to interfere illegally in U.S. efforts to extradite Robert Vesco from the Bahamas. The financier had left the United States to avoid facing charges of fraudulent business activities.

² Following the defection to the United States of her husband, dancer Aleksandr Godunov, during a tour of the Bolshoi Ballet, his wife, Lyudmila Vlasova, sought to return to the Soviet Union. Her flight was detained for 3 days at Kennedy International Airport, where she was eventually interviewed by U.S. officials, including Ambassador Donald F. McHenry, Deputy U.S. Representative in the Security Council of the United Nations, to determine if she was returning voluntarily. She then was allowed to depart the United States.

than the United States intelligence service?

THE PRESIDENT. There's no way for me to certify to that kind of thing, but in our key spots, like the Oval Office and the U.N. Ambassador's residence, there is a routine sweep of the premises designed to detect any sort of surreptitious listening devices. And my guess is that if any nation should try to bug the telephone or the premises of the U.N. Ambassador, it would be detected quite early. And there have been no detections of any such devices.

Q. Did you have an account of Ambassador Young's interview with Mr. Terzi³ before the State Department generated through Ambassador Young an account?

THE PRESIDENT. No.

Q. Did you have it?

THE PRESIDENT. No.

Q. In other words, our intelligence services from whatever source had not developed, to the best of your knowledge, an account of that meeting?

THE PRESIDENT. Well, I can't answer that question because I don't know. I haven't investigated that. But I did not have an account of it.

Q. In other words, if they did, then it had not been brought to you?

THE PRESIDENT. That's correct. And there are many ways to get a report of a conversation. It may be that one of the principals involved repeated it to many people, and those reports may have been collected in some fashion. I think the problem with the ABC report was that you all assumed that if a conversation was reported that it had to come from listening devices or bugging equipment, which is absolutely not the case.

³ Fehdi Labib Terzi, Palestine Liberation Organization observer at the United Nations.

Q. As I understand our story, we believe we had sources that told us this, rather than just assuming it. The sources may have been wrong. We may have gotten it wrong. But we didn't just assume it, sir.

THE PRESIDENT. I don't think there's much doubt about that. The thing that concerned us about it was that when ABC went to the Attorney General, he denied it absolutely with his word of honor at stake. ABC then checked with Jody Powell at the White House, and Jody said it was a story that was not sound and should not be reported. In spite of that, before the evening broadcast ABC went with it as though it was a fact, and that was the thing that concerned us.

Q. I was not aware of that. I had been told by my people—

THE PRESIDENT. I think the reporter was named O'Brien [Timothy A. O'Brien, ABC News], although I don't know that.

Q. —and I'd been told that in fact before the broadcast that the Attorney General had not spoken—I mean, Mr. Civiletti.

THE PRESIDENT. No. I believe that O'Brien met personally with Terry Adamson⁴ and Civiletti before the broadcast, and a flat denial was made about the accuracy of the story before the broadcast.

Q. All right. I will certainly not argue with you, but one of us has been misinformed about that.

THE PRESIDENT. That's fine. I can't certify that.

Q. What were your political soundings yesterday in Florida, in that that's an early primary State next year? How did you find your own stock?

THE PRESIDENT. Well, I didn't make any poll or anything, but I thought the

⁴ Director of Public Information, Department of Justice.

reception of the crowds and the public officials and others was very good.

Q. The Governor says that you're going to win that straw poll in November.

THE PRESIDENT. Oh, really?

Q. Now, he's a long-time supporter of yours, if I remember right. Didn't you support him also?

THE PRESIDENT. Not in the primary. I didn't take any position in the primary. But after he was nominated, of course we supported him as a Democratic nominee, and he is a fine Governor.

Q. Mr. President, one more question on the Vesco matter.

THE PRESIDENT. Yes, Bettina [Bettina Gregory, ABC News].

Q. What about the charges, that there has been some coverup, by the foreman of the grand jury who resigned? Have you spoken to the Attorney General or anybody about that?

THE PRESIDENT. No. But you know any allegation that the Attorney General of the United States would try to cover up a fact or a truth in the presentation to a grand jury is obviously false. There's no inclination to cover up anything. All we want in any case is to have the facts come out and to be presented in accordance with the law. There's too much at stake for a President or an Attorney General deliberately to try to subvert the legal system in our country, no matter who's involved. And that's obviously a false report.

Q. We've seen those things happen in past years. [Laughter]

THE PRESIDENT. I know that. I understand that. But, you know, it would be politically suicidal for me to permit anything of that kind or for Griffin Bell to have done anything of that kind or for Ben Civiletti to do anything like that. That's something that's inconceivable.

Q. I don't think a lot of people understand, if it was reported correctly, why way back then you wrote a note to Attor-

ney General Bell saying, "See Spencer Lee." Did you write such a note?

THE PRESIDENT. Yes.

Q. I don't think I know why you did that. Could you tell me?

THE PRESIDENT. I have a very hazy memory of it, and I've already given testimony to the law enforcement agencies about it. The report was made to me that Spencer Lee had a report concerning Vesco. We were trying to have Vesco extradited, and when I found that Lee had some information about it, I wrote a note to the Attorney General to see him.

Q. So, if there was some improper approach, you did not know about it?

THE PRESIDENT. No. No, I didn't.

Q. Harden did not come to you and say, "Mr. President, it's an improper approach here" or something?

THE PRESIDENT. No.

Q. Mr. President?

THE PRESIDENT. Yes?

Q. Thank you very much.

THE PRESIDENT. Okay. Now I can walk down the street. Thank you. I enjoyed it.

Q. Oh, by the way—the rabbits. Are you going fishing today, sir?

THE PRESIDENT. I might. [Laughter]

Q. Are you going to take an oar?

Q. Same pond?

THE PRESIDENT. Same pond.

Q. Can you give us your version of what happened?

Q. Yes, would you like to clear your good name? [Laughter]

Q. Have you talked to the rabbit and get his story?

THE PRESIDENT. I gave a report yesterday I think that was transcribed. I don't know if it's available to you all or not.

Q. Yeah, we got it.

THE PRESIDENT. Did you? Well, that's accurate.

Q. It said it was a timid rabbit or a—

THE PRESIDENT. It was just a fairly robust looking rabbit who was swimming

without any difficulty, and he was apparently disturbed by some predator, maybe dogs or a fox. And he jumped in the far side of the pond. I didn't know what kind of animal it was at first. I thought it was probably a beaver or an otter. We have seen beaver and otter in that particular pond. But as he got closer to me I saw that it was not either one of those kinds of animals. So, I had a paddle in the boat, and when the rabbit got close enough to the boat for me to recognize it and I saw that it was going to attempt to climb in the boat with me, I thought that that would be an unpleasant situation for me and the rabbit.

Q. One of you would have to get out.

THE PRESIDENT. That's right. [Laughter]

Q. Did you do him in?

THE PRESIDENT. No, I never did hit the rabbit. I just splashed water toward him, and he finally veered his course and went over to the bank and climbed up on the bank.

Q. We have a Freedom of Information Act going to get that picture, by the way. We have filed a suit. [Laughter]

THE PRESIDENT. This picture is very clear. A lot of people doubted my veracity when I came back from the pond that a rabbit was swimming. But rabbits swim, and that one was swimming without any difficulty at all. I could certify to that. [Laughter]

Q. Thank you.

Q. Well, will you catch more fish than rabbits the next time?

Q. I think being able to swim in ponds is a fine thing, don't you think?

THE PRESIDENT. I think so, yes.

Q. And on that note—we'll not cross that bridge today.

NOTE: The exchange began at approximately 11:15 a.m. during the President's walking tour of the town.

Labor Day

Remarks at a White House Picnic.

September 3, 1979

Rosalynn and I just came back from Georgia. We escaped from all the killer rabbits down there—[laughter]—just in time to join you for a delightful picnic and some wonderful entertainment.

We've had a good vacation. We have been down the Mississippi River. We had a few days at Camp David. We went down to Atlanta, to Tampa, to Plains. And everywhere I went, my confidence in this Nation was strengthened. I began to see more and more clearly that my basic belief in the strength of our country is well justified—not only our military and economic strength and political strength but our ethical and moral strength. The spirit of our country is still intact.

Every time we had a chance to talk to a few people, even some tonight as I came through the crowd, there was a hope that our Nation might be more unified. Sometimes when a country or a community or a family experiences a difficulty or an inconvenience, people try to grasp for some special advantage for themselves just to make sure they don't get left out. And in the process, we lose sight of the overall benefit to us if we work together, if we are just a little more unselfish during a time of trial or tribulation or test or doubt, as we are today.

We've got a great country, and part of that greatness has been that every time we've been tested in the past, we've been drawn closer together. And I can say that the working people of our country, the labor movement, the trade unions, have always been in the forefront when there was a dynamic struggle to make our Nation greater in time of peace, especially in time of war.

One of the most difficult peacetime struggles that ever took place in perhaps any country was the great civil rights movement in our own generation. And in the forefront of that movement, helping the minority groups, was the enlightened civil rights and labor movement, working together. And, of course, nowadays the labor leaders and the members of organized unions again are in the forefront of the changes that are dynamic and are difficult in our country.

Times are not easy. Neither our Founding Fathers nor our immediate mothers and fathers ever promised us that freedom would be easy. But they have told us that in a country like ours the struggle for freedom is worthwhile. Freedom itself, individual liberty, the strength of our country, the cohesion of our country, the progress of our country, the kind of life that we have, our individualism, the right to be free, the right to be different is worth whatever struggle it might require from us.

A few weeks ago I was at Camp David trying to decide in my own mind, as President of our country, what was the essence of the test put on us by the energy question. And Lane Kirkland¹ was sitting in a conference room at Camp David on my left, and he summed it up, I think, better than anyone that came to Camp David, about 150 people. He said, "Mr. President, the issue is freedom."

Our country now has its own basic security threatened because we have become excessively dependent on foreign oil. It's something that kind of happened. We didn't plan it that way. And we've now finally begun to face up to it. We get about half our oil from overseas. And you saw what happened to us back in 1973, 1974, when some of the oil-producing countries declared an embargo against us. And now

we're even more dependent on foreign oil than we were in 1973.

But the Congress has begun to act slowly, but I think with courage, and this year my hope is that the President and you and the Congress can prevail and that we can have for the first time in our Nation's history a comprehensive energy policy, one of which we can be proud, one that spells out a road down which we can march together, with our basic freedoms intact and our Nation's security restored.

We can do it in two ways, very simple. One is to save energy, to conserve, to quit wasting energy. And that's something that the Government can't do. We can help. But that requires every American figuring out in one's own mind, "What can I do in my life, in my transportation, in my home, in my job, to save energy?" And the other thing is to produce more energy in our own country—oil, gas, coal, solar energy, geothermal supplies, synthetic fuels.

The production of that energy in our country would let us cut down on the importing of oil from overseas. And in this effort the labor movement is increasingly involved and increasingly supportive, because we not only will become energy-secure but will have funds with the wind-fall profits tax to take care of those poor families or middle-income families that find the burden of increased energy costs too severe, and in the process we can have a better transportation system and a better life.

I don't look on conservation or saving energy as a burden or an unpleasant sacrifice. It can be an inspirational thing. It can be an enjoyable thing. It can bring families together. It can bring communities together. It can make us proud of ourselves. It can restore patriotism, because when we do this, we help ourselves, we save a lot of money, it requires cooperation, and it helps our Nation.

¹ Secretary-treasurer of the AFL-CIO.

We also have other things that I'll mention very briefly. We want peace. I thank God that in the last 2½ years we've not had a single American lose his or her life in combat anywhere in the world. And I would like to go out of office after I've served as President with that record still intact. We want peace.

We also want to control nuclear weapons. And I'm very grateful that the great labor organizations represented here have endorsed the SALT II treaty, which the Senate is now considering.

We also need a national health insurance program. And I know that you know that this has been something that every President has espoused or at least talked about since Harry Truman was in office. It hasn't yet come into being, but the Congress now has a proposal which, when passed, will have implemented by 1983 a national health insurance program, comprehensive health coverage for our Nation. It's a major social challenge.

Well, the point I'm trying to make is that there has to be a degree of harmony, a degree of cooperation. And in all the enlightened social progress for which we have struggled in the past and for which we are struggling now, none of which is easy, the labor movement has been in the forefront. I'm grateful for your help and grateful for your support.

I listen very carefully. A few minutes ago I was on the telephone with Mr. George Meany,² my friend. I wish he could be here tonight. He was planning to come, but he has just a slight virus attack. He had a little fever last night, and because it was threatening rain, he and I both agreed it might be better for him not to come out tonight.

But he's a fine man. He was kind of reading me my report card on the telephone. [Laughter] He said if I wouldn't

tell what was on it, he wouldn't tell either. [Laughter]

But there are three things that a President always has in mind, you know—national security, always present; the Congress, always present; President George Meany, that's the third one. [Laughter]

And I think he and the other great labor leaders have been a stabilizing and an inspirational factor for all the Presidents who have served, either Republican or Democrat. And I'm sorry he's not here tonight, but it is a great time, I think, for all of us maybe to express our admiration of President George Meany by a round of applause. And I'm sure that Lane Kirkland will tell him about it. [Applause]

Now I just want to introduce two more people. One is a great Secretary of Labor, Ray Marshall. Ray, we are proud to have you tonight.

And the other one is the young man who's going to entertain us tonight. I was in Hannibal, Missouri, with Rosalynn and Amy and a group of folks on the *Delta Queen* a couple of weeks ago, and we were watching a little skit put on by Tom Sawyer and Becky Thatcher and Aunt Polly and Huckleberry Finn. And one of the things that Tom Sawyer did was kind of philosophize. And he said that work was something that a body is obliged to do, and recreation is something that a body does when he is not obliged to do it.

Well, I think one of the great things about the trade union movement that has made you great are the things that you were not obliged to do. And I've been impressed with your unselfishness, the fact that many times you would take a stand or espouse a cause or fight a battle when there's not any direct benefit in it for you, but there's a benefit for others who are not quite so secure or quite so organized or quite so prosperous. But you

² President of the AFL-CIO.

fight those battles and join those struggles, because you know that it'll make our Nation even greater. And as President of a wonderful country, we wanted to have, Rosalynn and I, this picnic just to express the thanks of a grateful nation to you. Thank you and God bless you.

Now I know you're all going to enjoy hearing Stephen Wade, a fine young man, give us some entertainment, part of which is about Mark Twain and Huckleberry Finn or Tom Sawyer. I haven't seen it yet, but I hear he is really great, and we're all delighted to have him. Stephen Wade.

Thank you very much. Have a good time.

NOTE: The President spoke at 7:30 p.m. on the South Lawn of the White House to representatives of labor organizations.

Executive Schedule

Executive Order 12154. September 4, 1979

LEVELS IV AND V OF THE EXECUTIVE • SCHEDULE

By the authority vested in me as President by Section 5317 of Title 5 of the United States Code it is hereby ordered as follows:

1-1. *Executive Schedule Positions.*

1-101. The following positions are placed in level IV of the Executive Schedule:

(a) Senior Adviser to the Secretary, Department of State.

(b) Deputy Under Secretary for International Labor Affairs, Department of Labor.

(c) Administrator, Alcohol, Drug Abuse and Mental Health Administration, Department of Health, Education, and Welfare.

(d) Special Assistant to the Special

Representative for Trade Negotiations, Office of the Special Representative for Trade Negotiations.

(e) Deputy Adviser for Labor-Management, Council on Wage and Price Stability.

(f) Deputy Adviser for Congressional Affairs, Council on Wage and Price Stability.

(g) Deputy Adviser for Government Operations, Council on Wage and Price Stability.

(h) Deputy Adviser for Regulatory Policies, Council on Wage and Price Stability.

1-102. The following positions are placed in level V of the Executive Schedule:

(a) Deputy Assistant Secretary of Defense for Reserve Affairs, Department of Defense.

(b) Executive Director, Pension Benefit Guaranty Corporation, Department of Labor.

(c) Executive Assistant and Counselor to the Secretary of Labor, Department of Labor.

(d) Commissioner on Aging, Department of Health, Education, and Welfare.

1-2. *General Provisions.*

1-201. Nothing in this Order shall be deemed to terminate or otherwise affect the appointment, or to require the re-appointment, of any occupant of any position listed in Section 1-1 of this Order who was the occupant of that position immediately prior to the issuance of this Order.

1-202. Executive Order No. 12076, as amended, is hereby revoked.

National Grandparents Day

Proclamation 4679. September 6, 1979

*By the President of the United States
of America*

A Proclamation

As we seek to strengthen the enduring values of the family, it is appropriate that we honor our grandparents.

Grandparents are our continuing tie to the near-past, to the events and beliefs and experiences that so strongly affect our lives and the world around us. Whether they are our own or surrogate grandparents who fill some of the gaps in our mobile society, our senior generation also provides our society a link to our national heritage and traditions.

We all know grandparents whose values transcend passing fads and pressures, and who possess the wisdom of distilled pain and joy. Because they are usually free to love and guide and befriend the young without having to take daily responsibility for them, they can often reach out past pride and fear of failure and close the space between generations.

The Congress, by joint resolution (H.J. Res. 244), has authorized and requested the President to designate the first Sunday of September following Labor Day of each year as National Grandparents Day.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Sunday, September 9, 1979 and the first Sunday following Labor Day in each succeeding year as "National Grandparents Day."

I urge officials of Government at the national, State, and local levels, and of voluntary organizations to plan appropriate activities that recognize the importance and the worth of the 17 million grandparents in our nation. I urge all Americans to take the time to honor their

own grandparents or those in their community.

IN WITNESS WHEREOF, I have hereunto set my hand this sixth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Puerto Rican Nationalists

*Announcement of the President's
Commutation of Sentences.
September 6, 1979*

President Carter today commuted the sentences of four Puerto Rican Nationalists to time served. These individuals have been serving prison terms for Federal convictions stemming from their participation in shootings that occurred at the Blair House in 1950 and the U.S. House of Representatives in 1954.

The four individuals are Oscar Collazo, 67; Rafael Cancel Miranda, 49; Irving Flores Rodriguez, 54; and Lolita Lebron, 59.

Mr. Collazo has been eligible for parole since April 1966, and Mrs. Lebron has been eligible since July 1969. Both Messrs. Cancel Miranda and Flores Rodriguez became eligible for parole in July 1979. However, none has applied for parole because of their political beliefs.

The President based his decision on a favorable recommendation of the Attorney General to commute the sentences of these individuals to time served. The Attorney General's letter of advice to the President cited the following reasons in support of the recommendation:

1. Each of the four has served an unusually long time in prison, and the Attorney General believes that no legitimate

deterrent or correctional purpose is served by continuing their incarceration. Mr. Collazo has served over 28 years; Ms. Lebron and Messrs. Rodriguez and Miranda have each served over 25 years. Bureau of Prison reports show that in recent times only three inmates have served more time in Federal custody than these four.

2. Humane considerations militate against retaining in custody persons who have served (according to Bureau of Prison records) prison terms of far greater length than the terms normally served by those convicted of equally or even more heinous offenses.

3. It is the consensus of the law enforcement officials consulted that commutation would be appropriate and would pose little substantial risk of the defendants' engaging in further criminal activity or becoming the rallying point for terrorist groups. To the extent that clemency might, under other circumstances, be viewed as evidence of leniency toward terrorists, no such conclusion could be drawn here in light of the length of the sentences served.

In addition, the President concurred with the judgment of the Secretary of State that the release of these four prisoners would be a significant humanitarian gesture and would be viewed as such by much of the international community.

The four prisoners will be released from Federal prison immediately upon completing routine administrative discharge procedures for their release.

World Conference on Religion and Peace

Remarks at a White House Reception for Conference Participants. September 6, 1979

Let me say, first of all, that it's a great honor for me and my wife to have the

representatives from many nations here to visit us in the White House. Is there anyone here from Japan? *[Laughter]* Raise your hand if you're from Japan. Good. Very good.

Anyone here from India? Very fine. Canada? The Federal Republic of Germany? People's Republic of China? China. Very good. The Soviet Union? And 40 other nations, I understand.

Your organization and the purpose of it, the fact that you are meeting in the United States, warms my heart. Our Nation's motto is "In God We Trust." And we believe in separation of church and state. We don't permit our Government to dominate nor to interfere in the right of each individual person to worship as he or she chooses.

The Bible says, "Let me hear what God will speak, for He will speak peace to His people." And I would guess that each holy book or thesis or statement of ethical principles would encompass the same philosophy.

Our religion is based on peace. And the Bible also says, "Depart from evil, do good, seek peace, pursue it—pursue it actively, search for peace." This has not been a characteristic of all those who profess faith or all those who are related to or committed to a religion.

Many wars have been caused by and fought under the banners of religious beliefs. Suffering, divisions have occurred; sometimes with no noble purpose, often because people of slightly different religious beliefs were jealous of one another and struggled for dominance because they could not communicate, they did not understand each other, they were not filled with a desire for peace, there was no sense of love.

Even in our present time many nations are divided within themselves and against one another because of irreconcilable religious beliefs and a lack of a desire to

understand one another. Terrorism is the professed motivation for many with deep religious beliefs. Our country now sees throughout the world large numbers of refugees as a result of religious wars.

It's encouraging indeed to have people assembled here from 45 or so nations, worshipping God in many different ways, working together for peace, for the survival of human beings with noble purposes, one of which is to educate leaders—religious leaders, also government leaders. And I am grateful for it.

The control of nuclear weapons, the control of conventional weapons, the opening up of avenues of communication and understanding, the alleviation of hunger, suffering, poverty, disease, are all common purposes regardless of our particular religious commitment. And I believe that this conference—I believe your third; the first in Japan, the second in Belgium, you've honored us with your third—can have increasingly far-reaching beneficial effect throughout the world.

I know that in your own deliberations at Princeton you've reached a new level of humility, a realization that none of us knows all the answers, that we benefit from listening to one another, and that there is a place for us to become brothers and sisters without regard to national boundaries and without regard to religious differences. And this doesn't mean that we have to abandon or weaken our own deep faith or our own patriotism or our own love and affection for our own kind. We can be individuals, we can be proud of our country, we can be fervent believers in our own religion and still work for peace and harmony, good will, love, a sense of brotherhood throughout the world. And because of these noble aspirations that you have, I am very proud as the President of a great country, a country where many different faiths are represented—all of your faiths are represented among Americans—to welcome you here.

God bless you. I hope that in your own way that you will remember me and other world leaders, who are responsible for many of the world's ills and perhaps the future alleviation of those ills, that you will remember us in your prayers.

Thank you very much.

NOTE: The President spoke at 4:06 p.m. in the East Room at the White House.

MX Missile System

Remarks Announcing the Configuration for Basing the Missile System. September 7, 1979

Good morning, everybody. I have a statement to make about the new strategic deterrence system which I consider to be quite significant. Some analysts would equate it with two other major decisions made by Presidents in this century: The first, to establish the Strategic Air Command itself under President Truman, and the subsequent decision by President Kennedy to establish the silo-based Minuteman missile system.

For nearly 30 years now our Nation has deterred attack and has kept the peace through a complementary system of land, sea, and airborne nuclear forces, commonly known as the strategic triad. By maintaining the special strengths and the advantages offered by each of the three separate forces, we make it impossible for any enemy to counter all of them.

My administration is now embarked on a program to modernize and to improve the ability of our entire strategic triad, all three systems, to survive any attack. Our bomber force is being strengthened with nuclear-tipped cruise missiles. Our strategic submarine force is being upgraded by Trident submarines and Trident missiles. However, as a result of increasing accuracy of strategic systems, fixed land-based intercontinental ballistic

One of the most difficult peacetime struggles that ever took place in perhaps any country was the great civil rights movement in our own generation. And in the forefront of that movement, helping the minority groups, was the enlightened civil rights and labor movement, working together. And, of course, nowadays the labor leaders and the members of organized unions again are in the forefront of the changes that are dynamic and are difficult in our country.

Times are not easy. Neither our Founding Fathers nor our immediate mothers and fathers ever promised us that freedom would be easy. But they have told us that in a country like ours the struggle for freedom is worthwhile. Freedom itself, individual liberty, the strength of our country, the cohesion of our country, the progress of our country, the kind of life that we have, our individualism, the right to be free, the right to be different is worth whatever struggle it might require from us.

A few weeks ago I was at Camp David trying to decide in my own mind, as President of our country, what was the essence of the test put on us by the energy question. And Lane Kirkland¹ was sitting in a conference room at Camp David on my left, and he summed it up, I think, better than anyone that came to Camp David, about 150 people. He said, "Mr. President, the issue is freedom."

Our country now has its own basic security threatened because we have become excessively dependent on foreign oil. It's something that kind of happened. We didn't plan it that way. And we've now finally begun to face up to it. We get about half our oil from overseas. And you saw what happened to us back in 1973, 1974, when some of the oil-producing countries declared an embargo against us. And now

National Grandparents Day

Proclamation 4679. September 6, 1979

*By the President of the United States
of America*

A Proclamation

As we seek to strengthen the enduring values of the family, it is appropriate that we honor our grandparents.

Grandparents are our continuing tie to the near-past, to the events and beliefs and experiences that so strongly affect our lives and the world around us. Whether they are our own or surrogate grandparents who fill some of the gaps in our mobile society, our senior generation also provides our society a link to our national heritage and traditions.

We all know grandparents whose values transcend passing fads and pressures, and who possess the wisdom of distilled pain and joy. Because they are usually free to love and guide and befriend the young without having to take daily responsibility for them, they can often reach out past pride and fear of failure and close the space between generations.

The Congress, by joint resolution (H.J. Res. 244), has authorized and requested the President to designate the first Sunday of September following Labor Day of each year as National Grandparents Day.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Sunday, September 9, 1979 and the first Sunday following Labor Day in each succeeding year as "National Grandparents Day."

I urge officials of Government at the national, State, and local levels, and of voluntary organizations to plan appropriate activities that recognize the importance and the worth of the 17 million grandparents in our nation. I urge all Americans to take the time to honor their

Puerto Rican Nationalists

*Announcement of the President's
Commutation of Sentences.
September 6, 1979*

President Carter today commuted the sentences of four Puerto Rican Nationalists to time served. These individuals have been serving prison terms for Federal convictions stemming from their participation in shootings that occurred at the Blair House in 1950 and the U.S. House of Representatives in 1954.

The four individuals are Oscar Collazo, 67; Rafael Cancel Miranda, 49; Irving Flores Rodriguez, 54; and Lolita Lebron, 59.

Mr. Collazo has been eligible for parole since April 1966, and Mrs. Lebron has been eligible since July 1969. Both Messrs. Cancel Miranda and Flores Rodriguez became eligible for parole in July 1979. However, none has applied for parole because of their political beliefs.

The President based his decision on a favorable recommendation of the Attorney General to commute the sentences of these individuals to time served. The Attorney General's letter of advice to the President cited the following reasons in support of the recommendation:

1. Each of the four has served an unusually long time in prison, and the Attorney General believes that no legitimate

deterrent or correctional purpose is served by continuing their incarceration. Mr. Collazo has served over 28 years; Ms. Lebron and Messrs. Rodriguez and Miranda have each served over 25 years. Bureau of Prison reports show that in recent times only three inmates have served more time in Federal custody than these four.

2. Humane considerations militate against retaining in custody persons who have served (according to Bureau of Prison records) prison terms of far greater length than the terms normally served by those convicted of equally or even more heinous offenses.

3. It is the consensus of the law enforcement officials consulted that commutation would be appropriate and would pose little substantial risk of the defendants' engaging in further criminal activity or becoming the rallying point for terrorist groups. To the extent that clemency might, under other circumstances, be viewed as evidence of leniency toward terrorists, no such conclusion could be drawn here in light of the length of the sentences served.

In addition, the President concurred with the judgment of the Secretary of State that the release of these four prisoners would be a significant humanitarian gesture and would be viewed as such by much of the international community.

The four prisoners will be released from Federal prison immediately upon completing routine administrative discharge procedures for their release.

World Conference on Religion and Peace

Remarks at a White House Reception for Conference Participants. September 6, 1979

Let me say, first of all, that it's a great honor for me and my wife to have the

representatives from many nations here to visit us in the White House. Is there anyone here from Japan? *[Laughter]* Raise your hand if you're from Japan. Good. Very good.

Anyone here from India? Very fine. Canada? The Federal Republic of Germany? People's Republic of China? China. Very good. The Soviet Union? And 40 other nations, I understand.

Your organization and the purpose of it, the fact that you are meeting in the United States, warms my heart. Our Nation's motto is "In God We Trust." And we believe in separation of church and state. We don't permit our Government to dominate nor to interfere in the right of each individual person to worship as he or she chooses.

The Bible says, "Let me hear what God will speak, for He will speak peace to His people." And I would guess that each holy book or thesis or statement of ethical principles would encompass the same philosophy.

Our religion is based on peace. And the Bible also says, "Depart from evil, do good, seek peace, pursue it—pursue it actively, search for peace." This has not been a characteristic of all those who profess faith or all those who are related to or committed to a religion.

Many wars have been caused by and fought under the banners of religious beliefs. Suffering, divisions have occurred; sometimes with no noble purpose, often because people of slightly different religious beliefs were jealous of one another and struggled for dominance because they could not communicate, they did not understand each other, they were not filled with a desire for peace, there was no sense of love.

Even in our present time many nations are divided within themselves and against one another because of irreconcilable religious beliefs and a lack of a desire to

understand one another. Terrorism is the professed motivation for many with deep religious beliefs. Our country now sees throughout the world large numbers of refugees as a result of religious wars.

It's encouraging indeed to have people assembled here from 45 or so nations, worshipping God in many different ways, working together for peace, for the survival of human beings with noble purposes, one of which is to educate leaders—religious leaders, also government leaders. And I am grateful for it.

The control of nuclear weapons, the control of conventional weapons, the opening up of avenues of communication and understanding, the alleviation of hunger, suffering, poverty, disease, are all common purposes regardless of our particular religious commitment. And I believe that this conference—I believe your third; the first in Japan, the second in Belgium, you've honored us with your third—can have increasingly far-reaching beneficial effect throughout the world.

I know that in your own deliberations at Princeton you've reached a new level of humility, a realization that none of us knows all the answers, that we benefit from listening to one another, and that there is a place for us to become brothers and sisters without regard to national boundaries and without regard to religious differences. And this doesn't mean that we have to abandon or weaken our own deep faith or our own patriotism or our own love and affection for our own kind. We can be individuals, we can be proud of our country, we can be fervent believers in our own religion and still work for peace and harmony, good will, love, a sense of brotherhood throughout the world. And because of these noble aspirations that you have, I am very proud as the President of a great country, a country where many different faiths are represented—all of your faiths are represented among Americans—to welcome you here.

God bless you. I hope that in your own way that you will remember me and other world leaders, who are responsible for many of the world's ills and perhaps the future alleviation of those ills, that you will remember us in your prayers.

Thank you very much.

NOTE: The President spoke at 4:06 p.m. in the East Room at the White House.

MX Missile System

Remarks Announcing the Configuration for Basing the Missile System. September 7, 1979

Good morning, everybody. I have a statement to make about the new strategic deterrence system which I consider to be quite significant. Some analysts would equate it with two other major decisions made by Presidents in this century: The first, to establish the Strategic Air Command itself under President Truman, and the subsequent decision by President Kennedy to establish the silo-based Minuteman missile system.

For nearly 30 years now our Nation has deterred attack and has kept the peace through a complementary system of land, sea, and airborne nuclear forces, commonly known as the strategic triad. By maintaining the special strengths and the advantages offered by each of the three separate forces, we make it impossible for any enemy to counter all of them.

My administration is now embarked on a program to modernize and to improve the ability of our entire strategic triad, all three systems, to survive any attack. Our bomber force is being strengthened with nuclear-tipped cruise missiles. Our strategic submarine force is being upgraded by Trident submarines and Trident missiles. However, as a result of increasing accuracy of strategic systems, fixed land-based intercontinental ballistic

missiles or ICBM's located in silos, such as our Minuteman, are becoming vulnerable to attack. A mobile ICBM system will greatly reduce this vulnerability.

Therefore, I decided earlier this year to proceed with full-scale development and deployment of a new, large, mobile ICBM known as the MX. I made this decision to assure our country a secure strategic deterrent now and in the future. The MX will enable us to continue with a modernized, unsurpassed, survivable strategic deterrent ICBM, submarine-launched, and heavy bomber triad—ICBM's, submarine-launched ballistic missiles, and the heavy bomber triad, armed with cruise missiles.

Clearly, the way we base the MX to enhance its own security from attack is vital to the ability it has to defend our country. At the time that I made the decision to build the MX, I established five essential criteria which the basing system would have to meet. First, it must contribute to the ability of the strategic forces to survive an attack. Second, it must be verifiable so as to set a standard which can serve as a precedent for the verifiability of mobile ICBM systems on both sides. Third, it must minimize the adverse impact on our own environment. Fourth, its deployment must be at a reasonable cost to the American taxpayer. And fifth, it must be consistent with existing SALT agreements and with our SALT III goal of negotiating for significant mutual reductions in strategic forces.

In light of these criteria and after full consultation with Secretary of Defense Harold Brown and my other principal advisers, I've decided upon the following configuration for basing the MX missile system. The MX will be based in a sheltered, road-mobile system to be constructed in our western deserts, the total exclusive area of which will not exceed

25 square miles. This system will consist of 200 missile transporters or launchers, each capable of rapid movement on a special roadway connecting approximately 23 horizontal shelters.

Let me point out how this meets the criteria that I've established. First, it increases the survivability of our missiles by multiplying the number of targets which would have to be attacked, because not knowing in which of the 23 shelters the missile was located, all 23 shelters would have to be targeted in order to be sure to attack the missile.

The capacity of the missiles to move rapidly ensures that no attacker will be able to find out ahead of time where the missiles might be located and attack just those locations only. In fact, the missiles would be able to change shelters during the flight time of an enemy ICBM. Moreover, the system is flexible enough so that we can adjust the scale of deployment either up or down in response to a future enemy threat, or to progress on future SALT negotiations.

Secondly, the system is adequately verifiable. The special roadways will be confined to designated areas, and the associated missile transporters will be incapable of moving other than on those designated roadways.

The shelters will be designed so they may be opened in order to demonstrate that no extra missiles are hidden within them. These and other features will make this system adequately verifiable.

Third, the system minimizes the impact on the environment. The shelters are flush with the ground. The public will retain access to the area. Only the shelters themselves will be fenced off. The entire system, as I said earlier, will take only about 25 square miles of land out of public use.

Fourth, the system is affordable. The projected cost over the full 10-year period, total cost to develop, to produce, and to deploy, is \$33 billion in 1980 dollars. While this acquisition cost may vary somewhat as the program proceeds, it's important to recognize that the cost of this system, in constant dollar terms, will be no greater than the cost of any one of the original three legs of our strategic triad, either the B-52 force or the Polaris-Poseidon force or the Minuteman ICBM system.

Finally, this system is compatible with existing SALT agreements and with our objectives for SALT III. Deploying this system will make it clear to the Soviet Union that they will gain no strategic advantage out of continuing the nuclear arms race. This is a fundamental precondition to more effective arms control agreements. Equally important, this system points in the direction of reductions of strategic arms, because we are giving better protection with a force of fewer missiles. Without such a mobile shelter system, the only way we could maintain our deterrent would be to increase greatly the number of our strategic systems or nuclear missiles.

In the course of making the series of decisions that led to this announcement, I carefully studied the potential threat to our Minuteman force. That threat is real. The system I've outlined this morning does the best job of meeting that threat, while also fulfilling the conditions that I specified at the outset. The system is survivable, it's verifiable, it has a minimum impact on the environment, it's affordable in cost, and it's consistent with our SALT goal of deep reductions in strategic arms.

In sum, this system will enhance our Nation's security, both by strengthening our strategic deterrent and by offering the

prospect of more effective arms control. This system is not a bargaining chip. It's a system that America needs and will have for its security. I'm confident that the American people will support its deployment.

Unhappily, we do not yet live in the kind of world that permits us to devote all our resources to the works of peace. And as President, I have no higher duty than to ensure that the security of the United States will be protected beyond doubt. As long as the threat of war persists, we will do what we must to deter that threat to our Nation's security. If SALT II is ratified and SALT III is successful, then the time may come when no President will have to make this kind of decision again, and the MX system will be the last weapon system of such enormous destructive power that we will ever have to build. I fervently pray for that time, but until it comes, we will build what we must, even as we continue to work for mutual restraint in strategic armaments.

Secretary Brown is with us, and he is willing to answer your questions. Thank you very much.

NOTE: The President spoke at 10:51 a.m. to reporters assembled in Room 450 of the Old Executive Office Building.

Following the President's remarks, Secretary of Defense Harold Brown held a news conference on the President's announcement.

Federal Emergency Management Agency

*Nomination of Gloria Cusumano Jimenez To
Be an Associate Director. September 7, 1979*

The President today announced that he will nominate Gloria Cusumano Jimenez, of Durham, N.C., to be an Associate Director of the Federal Emergency Man-

agement Agency (FEMA). Her area of responsibility would be insurance and hazard mitigation.

Jimenez has been Acting Associate Director of FEMA since last April.

She was born July 1, 1932, in New York City. She received an LL.B. from Brooklyn Law School in 1954. From 1955 to 1966, she practiced law in New York, and in 1965 and 1966, she also served as district aide to Congressman Richard Ottinger. From 1968 to 1970, she was director of housing and urban programs for the North Carolina Department of Local Affairs.

From 1971 to 1974, Jimenez was a housing consultant and assistant director of the Low Income Housing Development Corporation in Durham, N.C. She was deputy commissioner and general counsel of the North Carolina Department of Insurance from 1975 to 1978.

In 1978 Jimenez was appointed Federal Insurance Administrator. She was appointed Acting Associate Director of FEMA after the Federal Insurance Administration's insurance and hazard mitigation functions were transferred to FEMA under Reorganization Plan No. 3 of 1978.

United Nations Children's Fund

Appointment of Marjorie Craig Benton To Be U.S. Representative on the Executive Board. September 7, 1979

The President today announced that he has appointed Marjorie Craig Benton to be the Representative of the United States on the Executive Board of the United Nations Children's Fund.

Benton, 46, of Evanston, Ill., is currently a member of the United States National Commission for the International Year of the Child.

Soviet Combat Troops in Cuba

Remarks to Reporters. September 7, 1979

I want to take a few minutes to speak to you about the presence of the Soviet combat brigade in Cuba. The facts relating to this issue have been carefully laid out by Secretary Vance, both in his public statement and in his testimony before the Congress. The facts, in brief, are as follows:

We have concluded, as the consequences of intensified intelligence efforts, that a Soviet combat unit is currently stationed in Cuba. We have some evidence to indicate that such a unit has been in Cuba for some time, perhaps for quite a few years.

The brigade consists of 2,000 to 3,000 troops. It's equipped with conventional weapons, such as about 40 tanks and some field artillery pieces, and has conducted training as an organized unit.

It is not an assault force. It does not have airlift or sea-going capabilities and does not have weapons capable of attacking the United States.

The purpose of this combat unit is not yet clear. However, the Secretary of State spoke for me and for our Nation on Wednesday when he said that we consider the presence of a Soviet combat brigade in Cuba to be a very serious matter and that this status quo is not acceptable.

We are confident about our ability to defend our country or any of our friends from external aggression. The issue posed is of a different nature. It involves the stationing of Soviet combat troops here in the Western Hemisphere, in a country which acts as a Soviet proxy in military adventures in other areas of the world, like Africa.

We do have the right to insist that the Soviet Union respect our interests and our concerns if the Soviet Union expects us to respect their sensibilities and their

concerns. Otherwise, relations between our two countries will inevitably be adversely affected. We are seriously pursuing this issue with the Soviet Union, and we are consulting closely with the Congress.

Let me emphasize that this is a sensitive issue that faces our Nation, all of us, and our Nation as a whole must respond not only with firmness and strength but also with calm and a sense of proportion.

This is a time for firm diplomacy, not panic and not exaggeration. As Secretary Vance discusses this issue with Soviet representatives in the coming days, the Congress and the American people can help to ensure a successful outcome of these discussions and negotiations by preserving an atmosphere in which our diplomacy can work.

I know I speak for the leadership in Congress, with whom I have met this afternoon, as well as for my own administration, when I express my confidence that our Nation can continue to show itself to be calm and steady, as well as strong and firm.

Thank you very much.

NOTE: The President spoke at 4:15 p.m. in the Briefing Room at the White House.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

September 3

The President declared a major disaster for the Commonwealth of Puerto Rico as a result of Hurricane David, be-

ginning on or about August 29, which caused extensive public and private property damage.

The President returned to the White House from Plains, Ga.

September 4

The President met at the White House with:

- Zbigniew Brzezinski, Assistant to the President for National Security Affairs;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- Vice President Walter F. Mondale.

The President participated in a briefing on hospital cost containment legislation given for community leaders in the East Room at the White House.

The White House announced that the U.S. delegation representing President Carter at the funeral of Lord Mountbatten will be headed by W. Averell Harriman. Ambassador Harriman will also serve as the personal representative of the President. Other members of the delegation, which departed for London this morning, are:

- PAMELA HARRIMAN;
- KINGMAN BREWSTER, JR., U.S. Ambassador to the United Kingdom of Great Britain and Northern Ireland;
- CLAIBORNE PELL, U.S. Senator from Rhode Island;
- ADM. THOMAS B. HAYWARD, USN, Chief of Naval Operations;
- JANE BYRNE, mayor of Chicago;
- ADM. JOSEPH P. MOORER, JR., USN, Commander in Chief, U.S. Naval Forces, Europe;
- GEORGE S. VEST, Assistant Secretary of State for European Affairs;
- DR. CORTES F. ENLOE, former flight surgeon, First Air Commando Force (CHINDITS), Annapolis, Md.;
- EUGENE HAYTOW, chairman of the board, Amalgamated Savings and Trust, Chicago, Ill.;

DR. RAJENDRA PRASAD, chairman of the National Council of the Associations of Indians in America, San Mateo, Calif.;

JAMES ROOSEVELT, business consultant, Los Angeles, Calif.;

ADM. ELLIOTT BOWMAN STRAUSS, USN, Washington, D.C.;

GEN. A. WEDEMAYER, USA, retired, Boyds, Md.;

WYNELLE WATSON WHITE, Washington, D.C.

September 5

The President met at the White House with:

- Dr. Brzezinski;
- Mr. Moore;
- the Democratic congressional leadership.

The White House announced that in keeping with the invitation from President Carter to President López Portillo of Mexico at their meeting in February, the two Presidents will meet in Washington on September 28 and 29 to review bilateral and international issues and to strengthen U.S.-Mexican relations.

The President transmitted to the Congress the Report to the President on Disease Control Programs, prepared by the Department of Health, Education, and Welfare in accordance with Public Law 94-317.

September 6

The President met at the White House with:

- Dr. Brzezinski;
- Mr. Moore;
- Dale Emmons, president of the Young Democrats of America;
- Mrs. Carter, for lunch;
- Stansfield Turner, Director of Central Intelligence, and Dr. Brzezinski.

In a ceremony in the Oval Office, the President was presented with the Special Conservation Award of the Florida Wildlife Federation by federation representatives.

The President participated in a briefing on the administration's programs and policies given for civic and community

leaders from Mississippi in the East Room at the White House.

September 7

The President met at the White House with:

- Dr. Brzezinski;
- Vice President Mondale, Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Hedley W. Donovan, Senior Adviser to the President, Hamilton Jordan, Assistant to the President, and Dr. Brzezinski;
- Mr. Moore;
- Charles L. Shultze, Chairman of the Council of Economic Advisers;
- a group of editors (transcript will be printed next week).

The White House announced that President Mobutu Sese Seko of Zaire will call on President Carter at the White House on September 11, in connection with his private visit to the United States. He will also meet with other executive branch officials and with Members of Congress to discuss a range of issues of mutual interest. President Mobutu will meet with American business executives in Washington and New York, and plans to visit Florida before returning to Zaire.

NOMINATIONS SUBMITTED TO THE SENATE

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted September 5, 1979

R. ROBERT RUSSELL, of California, to be Director of the Council on Wage and Price Stability, vice Barry P. Bosworth, resigned.

Submitted September 7, 1979

GLORIA CUSUMANO JIMENEZ, of North Carolina, to be an Associate Director of the Federal Emergency Management Agency (new position).

BERNARD DANIEL ROSTKER, of Virginia, to be Director of Selective Service, vice Byron V. Pepitone, resigned.

Administration of Jimmy Carter, 1979

**CHECKLIST OF WHITE HOUSE
PRESS RELEASES**

The following listing contains releases of the White House Press Office which are not included in this issue.

Released August 30, 1979

Advance text: remarks at groundbreaking ceremonies at Emory University, Atlanta, Ga.

Released September 3, 1979

Advance text: remarks at the Labor Day picnic on the South Lawn of the White House

Released September 7, 1979

Transcript: remarks to a group of editors and news directors on Soviet-Cuban relations—by Zbigniew Brzezinski, Assistant to the President for National Security Affairs

CHECKLIST—Continued

Released September 7—Continued

News conference: on the basing for the MX missile system—by Secretary of Defense Harold Brown

**ACTS APPROVED BY
THE PRESIDENT**

Approved September 6, 1979

H.J. Res. 244----- Public Law 96-62
National Grandparents Day.

S. 1146----- Public Law 96-63
An act to extend for three fiscal years the authorizations for appropriations under the Safe Drinking Water Act.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, September 14, 1979

Interview With the President

*Remarks and a Question-and-Answer Session
With a Group of Editors. September 7, 1979*

THE PRESIDENT. I'd like to spend a few minutes with you.

This is an interesting day for you to be in Washington. We have, as usual, an accumulation of both domestic and foreign issues to be addressed by me and by my associates, with whom you've met already.

It is a coincidence that we have already had a major announcement on the deployment of the MX missile in a mobile form this morning, and in just a few minutes, about 4 o'clock, I will make a statement to the Nation concerning the Soviet troops in Cuba.¹

I've talked to Dr. Brzezinski since he met with you and have read a transcript of his answers and your questions concerning those troops.

ADMINISTRATION POLICIES

At the same time, we are pursuing our goal of peace for our country, its enhanced security, the honoring of our commitment to our allies and friends, the mutual disarmament and the reduction of the threat of a nuclear confrontation, the control of the proliferation of nuclear explosives among nations that don't pres-

ently have them, our focused peace efforts in the Middle East, in southern Africa, and in other places, and also domestic issues that are well known to you and very important to me.

We've had excessive inflation in our country now for more than 10 years. This is a matter of constant concern to us. We are trying to address the basic roots of it with increased agricultural productivity and the other provision of goods for ourselves, more stable marketing techniques, the reduction of the Federal budget deficit, a constant policy on Government expenditure restraint, reduction of Government intrusion into business affairs, the elimination of unnecessary forms and Government regulation, the provision of a stable dollar.

We have a massive effort ongoing to establish an energy policy for the first time in our country, although it's long overdue. We've already had success in the Congress and with my own executive actions to reduce the projected importation of foreign oil by about 4 million barrels per day. Our presentations to the Congress will result in an additional saving of 4½ or so million barrels in the future.

I need not go into detail about that. I'll be glad to answer any questions for you.

At the same time, we have budgets, appropriations, authorizations of every facet of American life that all come to my attention and on which I have to make

¹ See page 1602 of this volume.

basic decisions, in addition to legislation that would enhance the control of hospital costs, give the mental health facilities in our Nation a boost, improve the relationship between the Federal Government and local and State officials, and deal effectively in strengthening our private enterprise system.

On occasion, we have a major event at the White House, both social and political meetings, and also we expect later on this winter to have a major White House Conference on Small Business.

It would be impossible for me to describe all the different responsibilities that a President has, and I think the best thing for us to do now is to let me answer your questions on these or other issues. I think it would probably save you time if you didn't repeat questions that have already been answered by my staff members, unless you were dissatisfied with their answer.

We have a very close and tight and, I think, well-organized interrelationship here in the White House. Dr. Brzezinski, for instance, on foreign affairs, and my domestic advisers can speak accurately for me. But I'd be glad to answer any questions.

Yes.

QUESTIONS

PUERTO RICAN NATIONALISTS

Q. Mr. President, I'm Jack Skelly of El Nuevo Día, San Juan, Puerto Rico. Your action yesterday in commutation of the four nationalists' prison terms was against the recommendation of the Governor of Puerto Rico, who had asked you in a letter to have them sign some kind of guarantee that they were sorry. My question has two parts: One, did you consult with the Governor at all before this decision was made—I mean, re-

cently? And, two, in view of the fact that they are part of some, what you would call terrorist movement, or have been in the past, do you plan to campaign in the primary down there next year? Have you been advised one way or another?

THE PRESIDENT. I haven't decided to announce my candidacy yet, so I won't comment on campaigning in the primary. *[Laughter]*

I have been thoroughly familiar with the attitude of the Governor on this issue, but also the attitude of other Puerto Rican leaders—his predecessors, the representatives in Congress, and political leaders in all factions and, I think, the sentiment of the Puerto Rican people. That was obviously assessed. And I regret that on this particular issue, the Governor and I don't agree. On most issues we do. I had to make the judgment on the basis of my best assessment of justice and the best interests of my country and, obviously, the best interests of the Puerto Rican people.

These persons had been adequately punished. They've been in prison longer than almost anyone in the Federal system. They've never asked for clemency, but their attorneys, with their knowledge, participated in the proprieties of making their views known. They have been model prisoners. And my own assessment, based on information derived from other sources through the Attorney General, is that they will not be a threat to the security of Puerto Rico and are highly unlikely to engage in terrorist activities there. I can't guarantee that—for them or any other person.

But I think the forces of justice were honored. And that's a decision that I had to make alone, after consulting with your Governor and with many other people. My decision, contrary to his inclinations, was no indication of my lack of respect for him or for his opinion. I had to assess

his opinion, among others, and made what I believe firmly is a right decision.

Q. Mr. President—

Q. Excuse me, could you answer the second one, Mr. President?

THE PRESIDENT. Well, if I decide to become a candidate, the decision on these released prisoners would not affect my presence in Puerto Rico. I would expect that among the majority of the people of Puerto Rico that the decision would be an attractive one, but I've not run a poll on it.

GRAIN INDUSTRY

Q. With two railroads in bankruptcy and one on strike, there's a definite feeling in the Midwest that we are going to have a real crisis this fall in the moving of grain. Are you doing anything to perhaps help head that off, say, move in, for example, on the Rock Island strike, or take any action to get them back to work?

THE PRESIDENT. Yes, I've talked to the Federal negotiator, Wayne Horvitz, since I've come back to Washington this week. I think to reveal my conversation with him or his plans or the prospects would not be conducive to helping resolve the strike.

I am completely aware of the high yield of crops this year and the need to move them to market. We're participating in some States with the Governors, and with secretaries or commissioners of agriculture through Bob Bergland, and through the Department of Transportation, to build up a reserve supply of transportation facilities to get grain both to elevators, to the barge system, when it's appropriate, and from the elevators to the international shipping points, if required.

I can't guarantee there won't be some bottlenecks—there always have been—but I hope that they can be handled both

with country elevator storage and with the substantially increased quantity of farm storage that we have put into effect.

Q. You're not considering, say, invoking the Taft-Hartley Act?

THE PRESIDENT. In my judgment, and in the judgment of the Attorney General and the Department of Labor, the Taft-Hartley Act is not appropriate in this case.

WINDFALL PROFITS TAX

Q. Mr. President, in regard to the important windfall profits tax measure—my name is Jim Barbieri from Bluffton, Indiana, by the way. I'd like to ask, in your talk since Congress has returned, can you give any indication of any timetable or any—what the potential is now on this legislation, toward getting it enacted in substance without being watered down too much by loopholes?

THE PRESIDENT. Well, as you know, the House has already passed an acceptable windfall profits tax. It deviated from my proposal in one important aspect, in that it terminates in 1990. I think it ought to be permanent.

I heard Senator Byrd say today that Senator Long intends to honor his commitment to me to have on my desk a windfall profits tax that would be "pleasing" for the President to sign. And I think that the goal of the Senate Finance Committee is still the first of October, although this information is best derived from Senator Long.

I don't think there's been any delay on the consideration of the tax bill. During the recess period, Senator Muskie, who's the chairman of the Budget Committee, specifically requested that the Congressional Budget Office and his committee staff be given time to determine the impact of the windfall profits tax on 1980 and subsequent years' budgets. So,

during the interim of August, the Senate Budget Committee and all the related staffs were working on this matter. And I don't see any reason for concern about delay.

I am concerned about the ultimate content of the tax. If it's watered down by any substantial degree, we will not reach our goals on energy, and our Nation's security will be damaged. And we just absolutely must have a way to reduce our dependence on foreign oil, and the windfall profits tax is a key to this assurance.

ENERGY

Q. Mr. President, before you announced your energy program, a consortium of five utilities have already spent \$4 million on the study of the possibility of a plant in North Dakota to convert lignite coal to gas. Secretary Andrus has endorsed this wholeheartedly as being in line with your energy aims. A judge of the Federal Energy Regulatory Commission has recommended that it be turned down, because the utilities plan on providing about 25 percent of the costs which would be assumed by shareholders.

Now, the decision comes before the full Commission sometime in October. Would this hinge on congressional action or could this proceed as a pilot plan under your energy program?

THE PRESIDENT. I don't know. I'm not familiar with their particular status. You're talking about the Federal Energy Regulatory Commission is considering it—

Q. Their decision on a go-ahead in October. There is a bill before the Congress on endorsing loans.

THE PRESIDENT. I see. I can't answer that question.

The energy production board* would, if passed into law—and I hope it will be—will expedite that kind of decision on powerplants, refineries, pipelines, synthetic fuel production plants, and cut through the redtape and the procedural delay which hamstring a great portion of our energy program. It wouldn't decide whether a plant was warranted or not or whether a site was proper or not. It would just ensure that that decision was made to "go" or "no go" without unnecessary delay.

If a plant is environmentally acceptable and is needed and is financially reasonable and is located properly, I'd like to see the decision made and get the plant built and operating. If it's not acceptable, let the people who propose it know. But I think that would be expedited by congressional action.

Q. Thank you.

THE PRESIDENT. And I'll check with Cecil Andrus about this. I think if the Secretary of Interior has endorsed the project—

Q. He's endorsed it—[inaudible]—

THE PRESIDENT.—this would probably remove most of the potential obstacles that I can envision.

I promised the gentleman on the end. I'll get you next.

STRATEGIC ARMS LIMITATION

Q. Dean Conklin from Racine, Wisconsin. Your National Security Adviser expressed concern about linkage of the SALT II consideration with other events. My question is, how can the American people be expected to separate Soviet behavior in Africa or with the Mideast or Cuba from its feeling related to SALT II?

*The President meant the Energy Mobilization Board. [Printed in the transcript.]

THE PRESIDENT. I'm convinced that SALT II ought to be passed on its own merits. I'm convinced that SALT II contributes to the security of our country, and I'm convinced that SALT II enhances the prospect for world peace. I'm convinced that the rejection of SALT II would cause each one of the inevitable, competitive interrelationships between ourselves and the Soviets in the future to be magnified in their importance and become a much more critical problem than would that same incident with SALT II.

There's no way that we can avoid peaceful competition with the Soviets as we deal with countries in Africa or Asia or the Mideast or Eastern or Western Europe. And without a SALT agreement limiting strategic nuclear weapons, each one of those differences, which are going to be with us for many, many years, is much more likely to become a major threat to our Nation's peace.

So, SALT II is so beneficial on its own merits—I think the Senate has accepted the basic proposition that it is adequately verifiable—to link it with some action or inaction of the Soviets, or for them to link it with some action or inaction of ours, I think, would not be in the best interest of the American people.

My own hope is that my own convictions, which are now being translated to the Senate after detailed hearings, will ultimately be accepted by the American people. But I don't presume to speak for them, and I certainly can't force the American people to accept the position.

It's so obvious to me that I don't have any doubt about it. I hope that obvious benefit of SALT II will become clear to the American people.

Q. But there was that same kind of expectation, I think, with the Panama Canal and—

THE PRESIDENT. Yes.

Q.—I think there are many American people who still react negatively to that.

THE PRESIDENT. I understand that they do.

Q. It's accomplished, but not accepted.

THE PRESIDENT. I understand. I think in the long run, though, it will be accepted.

As you know, it was difficult, almost impossible, to get two-thirds of the Members of the Senate to become convinced, on its own merits, that the Panama Canal [Treaty]² was in the best interests of our country, in spite of the fact that the overwhelming portion of our own constituents at home did not favor the Panama Canal Treaty. I think in the SALT case, a substantial majority of the American people basically approve the signing of a treaty between ourselves and the Soviets to limit nuclear arms.

So, you've got that difference. The American people are basically for SALT, they were basically against the Panama Canal Treaty.

I don't think we'll have as great a selling job in the Senate on SALT as we did the Panama treaty. But I don't underestimate the difficulty; I live with it every day.

FOREIGN POLICY

Q. I'm Bill Pace from Indianapolis. This is a general question about our overall defense posture. In this tug-of-war with the Soviet Union, it seems that their posture is one of aggressiveness and, generally, ours is one of a defensive posture.

In the belief that one of the best defenses is an offense, would it not be wise for us to try to counter some of their offensive moves psychologically, to try to balance the scales?

THE PRESIDENT. When I assess in my

² Printed in the transcript.

own mind the trends in Soviet influence the last 10 or 15 years, say—just to get out of my own administration and to make it a bipartisan thing—versus the Soviet Union, I'm very encouraged.

The Soviets did win an advantage in Afghanistan. That Soviet-endorsed government is in substantial danger, and that's significant. But when you compare that with our new relationship with India, compared to what it was 5 years ago, or our new relationship with Egypt, the strongest and most powerful Arab country, compared to what it was during the time of the Aswan Dam construction, when Egypt was absolutely committed to the Soviet Union and was dependent on the Soviet Union for military and economic aid, and now are completely friends with us and have prohibited Soviet technicians and others from coming into the country—that's a major change in the Mideast itself.

The People's Republic of China, a fourth of the people on Earth—it wasn't long ago that they were endorsed and supported by and were the closest of allies with the Soviet Union. Now we have a new and burgeoning friendship with the people of the People's Republic of China, and we have not lost our financial and economic and friendly relationships with the people on Taiwan.

I could continue to go, but those are major countries. There have also, obviously, been some setbacks. I don't deny that.

I think that the present commitment that I have given to defense has reversed a longstanding trend. For 15 years, our country was making no real increase in defense expenditures. In fact, when I came into office, our real commitment to defense was less than it was in 1963. This year, the current fiscal year, we have accommodated all the impact of inflation,

and we have at least a 3-percent growth in defense expenditures.

I think we have restrengthened NATO, which was very weak, not only militarily but politically. There's a new spirit and a new dynamism and a new cooperation in NATO that did not exist before.

On strategic weapons systems—if you take our sea-based missiles and you assess the dramatic progress being made with the Trident submarines and the new Trident missiles, that's a quantum step forward. The air-breathing leg of our triad, with the new generations of cruise missiles coming along—that's a major technological and strategic breakthrough. And with the MX missile that I announced this morning on land-based, silo-type missiles—this is the first time that we have ever seen a single missile acquire such a tremendous importance. And it not only gives our country a better defense or attack capability, it also contributes to stability, because you've got a lot more defense with a lot fewer missiles.

So, I think that if you look at other factors—our espousing human rights, the economic strength of our country, our overall trade relationships—in almost every measure, I do not see our country as being affected detrimentally, as contrasted with the Soviet Union.

We recognize that they are a military nation; they put a lot more emphasis on military weaponry than do we. And we are much more inclined to support the status quo, to put down regional conflagrations and conflicts than are the Soviet Union. They espouse a revolutionary political thesis, and to them the change of governments quite often is in their advantage. We generally are inclined to support the government that's in power, unless it is so obnoxious to our own standards and principles that we cannot accept it.

So, the Soviets are inclined to stir up

trouble; we're inclined to try to dampen trouble and to provide peace. That's one thing that gives them an advantage when there is trouble. But I think we have stood up well against them, and I think we can continue to do it in the future on a peaceful, competitive basis. There's no doubt in my mind that the ideals and the principles and the basic strengths of America can prevail and have prevailed.

Ms. BARIO. Thank you, sir.

THE PRESIDENT. One more question.

AMBASSADOR ANDREW YOUNG

Q. Mr. President, I'm from East St. Louis, Illinois. My name is Clyde Jordan. In view of the fact that Andrew Young has been credited with bettering our relationships with many countries in Africa and other Third World nations, do you have any plans to use him in any other governmental position?

THE PRESIDENT. I agree with your assessment that Andy has greatly enhanced our relationships. And one of the advantages that we've got over the Soviet Union in the less-developed world is because of Andy Young.

Andy hasn't made any plans yet about future governmental involvement. Andy left early this week to go on a seven-nation trip with the President of the Eximbank and also with about 20 top American business leaders to see about investments and to let the African nations which he will visit know that there is a continuity in our relationship with the less-developed countries of the world. Andy and his wife, Jean, and their little son both spent the night with me at the White House the night before he left, and I talked to him briefly about his future plans.

I think Andy intends, for the time being at least, to establish himself in private

life. He's never had an opportunity to have any income. He's been a very sacrificial person, as you know. I think he would like to let his influence be felt in the private sector of our country for a while. He's interested in politics; he's very supportive of me, and his voice will be heard. I think he's looking forward to his new role for the months ahead. What he will do after that, I have not heard him say, and I don't think he knows himself. But I would welcome Andy in any major position because I have such confidence in him.

Let me take this opportunity to thank you for being here, and I'd like to get a photograph with each one of you, if you'd permit me that pleasure. Let me stand over here and maybe if you come around this way and just let me shake hands and get a photograph, we'll send it to you.

And I'm glad you were up here today. It was kind of an exciting day for me; the decisions have been important ones for our country, and you've kind of seen how Government worked, a little more actively, at least in defense matters, than would ordinarily be the case. I hope you've had an enjoyable and a productive day.

Thank you.

NOTE: The interview began at 2:35 p.m. in the Cabinet Room at the White House. Patricia Y. Bario is a Deputy Press Secretary.

The transcript of the interview was released on September 8.

Home Heating Oil

Telegrams to the Heads of Major Oil Companies. September 8, 1979

I applaud your leadership in initiating Texaco's program to alleviate home heating oil prices and supply hardships this winter.

Members of my staff have already met with Texaco representatives to assure that federal and local activities are coordinated with Texaco's program. In addition, I have sent a telegram to other oil companies asking that they take similar action.

Sincerely,

JIMMY CARTER

NOTE: The telegram was sent to Maurice F. Granville, Jr., chief executive officer of Texaco Inc.

I commend to you the program one of the major oil companies (Texaco Inc.) announced yesterday on home heating oil prices, emergency supplies and credit terms. We are working to maximize the assistance this plan can provide to consumers, particularly the low-income and the elderly.

This program is: (1) holding the line on home heating oil prices; (2) providing emergency supplies of heating oil to needy households, whether or not they are regular Texaco customers; and (3) improving credit terms to wholesalers, who in turn are asked to ease credit terms to retail customers.

I applaud this initiative and urge you to take similar action to help keep heating oil prices stable and to assist in meeting emergency supply and credit needs. I assure you of my strong support in these efforts, and I will continue to work with Congress to make emergency funds available in time for this winter.

I have asked Secretary Duncan to work with you in every way possible to alleviate home heating oil price and supply hardships this winter.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical telegrams sent to: Richard I. Galland, director, chairman of the board, and chief executive officer, American Petrofina, Inc.; John E. Swearingen,

chairman of the board and chief executive officer, Standard Oil Co. (Indiana); Orin E. Atkins, chief executive officer and chairman of the board, Ashland Oil Inc.; Robert O. Anderson, director, chairman of the board, and chief executive officer, Atlantic Richfield Co.; Alton W. Whitehouse, Jr., chairman of the board, Standard Oil Co. (Ohio); William T. Smith, president, Champlin Petroleum Co.; H. J. Haynes, chairman of the board, Standard Oil Company of California; Robert V. Sellers, chairman of the board and chief executive officer, Cities Service Co.; Robert G. Reed, chief executive officer, Clark Oil and Refining Corp.; Oscar S. Wyatt, Jr., chairman of the board, Coastal States; R. E. Bailey, chairman of the board and chief executive officer, Conoco, Inc.; Henry A. Rosenberg, Jr., chairman of the board, Crown Central Petroleum Corp.; Clifton C. Garvin, Jr., chairman of the board and chief executive officer, Exxon Corp.; John F. Anderson, president, Farmland Industries Inc.; Harold E. Berg, chairman of the board, Getty Oil Co.; Jerry McAfee, chairman of the board, Gulf Oil Corp.; Leon Hess, chairman of the board and chief executive officer, Amerada Hess Corp.; McClaran Jordan, president, Kerr-McGee Refining Corp.; Charles Koch, chief executive officer, Koch Industries, Inc.; H. D. Hoopman, president and chief executive officer, Marathon Oil Co.; Rawleigh Warner, Jr., director, chairman of the board, chairman of executive committee, and chief executive officer, Mobil Oil Corp.; W. F. Martin, chairman of the board and chief executive officer, Phillips Petroleum Co.; John F. Bookout, Jr., chief executive officer, Shell Oil Co.; Theodore A. Burtis, chairman of the executive committee, chairman of the board, and president, Sun Oil Company, Inc.; James L. Ketelsen, chairman of the board, chief executive officer, and president, Tenneco, Inc.; Morton M. Winston, chief executive officer and president, Tosco Corp.; and Fred L. Hartley, president and chairman of the board, Union Oil Company of California.

Gospel Music Association

*Remarks at a White House Performance.
September 9, 1979*

Hello, everybody. How many of you know the significance of a fifth Sunday? Not many. Well, in country churches, as

you all may know, the preachers would preach four Sundays, but then once every quarter there was a fifth Sunday. That was the Sunday, particularly in the summer and fall, when people would get together for an all-day singing, and dinner on the grounds, and great local and even distant gospel groups would come, quartets and others, as a time to bridge the gap between churches and between denominations, between communities, and let people reach down, into down-to-earth singing and kind of lift the spirit up to heaven.

Rosalynn and I, when we came home to Plains from the Navy, always looked forward to the summer months, when we could visit different places around near our home and participate in those all-day singing events.

I'm particularly glad this afternoon that the Gospel Music Association, Jim Myers, president, was willing to put together what I believe will be a remarkable program. It's going to last 3 hours, which is going to seem like too short a time for you when it's over. And what we want you to do is just to relax here on the White House grounds, enjoy yourself, get to know one another, and listen to some of the most delightful music that anyone could hear.

Gospel music is really rural music from the country. It has both black and white derivations; it's not a racial kind of music. And this afternoon you'll hear remarkably talented groups who happen to be both black and white.

But I think it's important to recognize that gospel music is derived from deep within the heart of human beings—it's a music of pain, a music of longing, a music of searching, a music of hope, and a music of faith. And you'll hear all those expressions, I am sure, this afternoon in this remarkable performance.

I'm very proud that all of you could

come. We have been to Waycross, Georgia, where they have all-day singing; by that I mean 24 hours. We've been down to Bonifay, Florida, where they have 24-hour sings, and we apologize for cutting this one short. [Laughter] But we'll try to make up for it by the quality, and I'm sure that you will enjoy it very much.

I don't know who's going to introduce the first group. Am I going to?

The first group is the Archers. This is my next to the last performance; this is an afternoon of gospel music and not preaching. So, I'm going to end the preaching and turn you over to the Archers, the first group, who will give us a delightful afternoon of gospel music. I'm sure you'll all enjoy it. We're really looking forward to it and to having you here.

Thank you very much, and God bless you all.

NOTE: The President spoke at 2:11 p.m. on the South Lawn of the White House.

Academy of Television Arts and Sciences

Remarks Honoring Don Harris, Robert Brown, and Bill Stewart. September 9, 1979

Good evening.

Every citizen who carries into the world the standard of truth carries the banner for which this country stands.

For those who bring us the facts on which we make our judgments as a nation, pursuit of the truth is especially dangerous. Finding the center of the news was not only the profession of Don Harris, Robert Brown, and Bill Stewart—it was their passion. Their gift to us was knowledge.

They were killed by some who would suppress the truth and by others who were merely ignorant. But when all the dic-

tators and all the fanatics have come and gone, it's always the truth which remains.

It is no accident that the root meaning of the word "martyr" is "to witness." In Guyana and Nicaragua, these three men were our witnesses, and they were our martyrs. For as they died in the service of a free press, they died in the service of us all.

In this moment of remembrance, even as we are repelled by the horror of their deaths, let us recall the service of their lives.

Whatever differences that might exist within our own country, let us join together tonight in honor of Don Harris, Robert Brown, Bill Stewart, and their families, by renewing our pledge to the standard which they upheld—our common faith as Americans that it is the truth which sets all people free.

NOTE: The President spoke at approximately 9:13 p.m. from the Oval Office at the White House. His remarks were broadcast live during the Academy's Emmy Awards program.

Don Harris and Robert Brown of NBC were killed in November 1978 by members of the People's Temple, while accompanying Representative Leo J. Ryan on his investigation of the People's Temple commune in Jonestown, Guyana.

ABC news correspondent Bill Stewart was killed in June 1979 while covering the civil war in Nicaragua.

United States Ambassador to Botswana

*Nomination of Horace G. Dawson, Jr.
September 10, 1979*

The President today announced that he will nominate Horace G. Dawson, Jr., of Washington, D.C., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Botswana.

He would replace Donald R. Norland, who has been transferred to another post.

Dawson has been counselor for political affairs in Manila since 1977.

He was born January 30, 1926, in Augusta, Ga. He received an A.B. from Lincoln University in 1949, an M.A. from Columbia University in 1950, and a Ph. D. from the State University of Iowa in 1960. He served in the U.S. Army from 1944 to 1946.

Dawson was an instructor of English at Southern University from 1950 to 1953, and associate professor and director of public relations at North Carolina Central University from 1953 to 1962.

He joined the International Communication Agency (then USIA) in 1962, and was posted in Kampala, Lagos, and Monrovia. In 1970-71 he took the Senior Seminar in Foreign Policy at the Foreign Service Institute, and from 1971 to 1973, he was cultural affairs adviser in Washington.

From 1973 to 1977, Dawson was Deputy Assistant Director for Africa, then Assistant Director for Africa, at USIA in Washington.

United States Ambassador to Canada

*Nomination of Kenneth M. Curtis.
September 10, 1979*

The President today announced that he will nominate Kenneth M. Curtis, of Cape Elizabeth, Maine, to be Ambassador Extraordinary and Plenipotentiary of the United States to Canada. He would replace Thomas O. Enders, who has been transferred to another post.

Curtis is a Portland, Maine, attorney and former Governor of Maine.

He was born February 8, 1931, in Leeds, Maine. He received a B.S. from Maine Maritime Academy in 1952 and a J.D. in 1959 from Portland University School of Law (University of Maine). He served in the U.S. Navy from 1953 to 1955.

Curtis was assistant to Congressman James C. Oliver from 1959 to 1961, and was with the Legislative Research Service of the Library of Congress in 1961. From 1961 to 1964, he was State Coordinator for the Commerce Department's Area Redevelopment Administration.

From 1965 to 1967, Curtis was secretary of state for Maine. He was Governor of Maine from 1967 to 1975. From 1975 to 1977, he practiced law with the Portland firm of Curtis, Thaxter, Corey, Lipez and Stevens. From 1977 to 1978, he was director of the Democratic National Committee. Since 1978 he has returned to his law practice and has also served as United States Commissioner on the International Joint Commission—United States and Canada.

United States Ambassador to Guyana

*Nomination of George B. Roberts, Jr.
September 10, 1979*

The President today announced that he will nominate George B. Roberts, Jr., of Philadelphia, Pa., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Cooperative Republic of Guyana. He would replace John Richard Burke, resigned.

Roberts has been Deputy Chief of Mission in Vientiane since 1977.

He was born May 25, 1930, in Philadelphia, Pa. He received a B.A. (1952) and M.A. (1953) from Yale University. He served in the U.S. Navy from 1953 to 1957.

Roberts joined the Foreign Service in 1957. He took Thai language and area training at the Foreign Service Institute and was posted in Bangkok and Vientiane. He was at the State Department from 1962 to 1966, and took Swahili language training in 1966-67.

From 1967 to 1969, Roberts was political officer in Dar es Salaam, and from 1969 to 1973, he was Deputy Chief of Mission in Kingston. He was special assistant to the Deputy Secretary of State from 1973 to 1974.

From 1974 to 1976, Roberts was Director of Thai-Burma Affairs at the State Department. In 1976-77 he took the Senior Seminar in Foreign Policy at the Foreign Service Institute.

United States Ambassador to the Ivory Coast

*Nomination of Nancy V. Rawls.
September 10, 1979*

The President today announced that he will nominate Nancy V. Rawls, of Belair, Fla., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of the Ivory Coast. She would replace Monteeagle Stearns, resigned.

Rawls has been Deputy Assistant Secretary of State for Personnel since 1978.

She was born January 24, 1926, in Clearwater, Fla. She received an A.B. from Shorter College in 1947.

Rawls began her career at the State Department as a clerk in 1947 and then

served as administrative assistant in Vienna and consular officer in Hamburg, then Montreal. In 1957-58 she took economic studies at the University of Wisconsin, and from 1958 to 1960, she was a foreign affairs officer at the State Department.

Rawls served as economic officer in Hamburg from 1960 to 1963, supervisory commercial officer in Monrovia from 1963 to 1967, and economic and commercial officer in Nairobi from 1967 to 1970. She attended the National War College in 1970-71.

From 1971 to 1974, Rawls was Director of the Policy Planning Staff of the Bureau of African Affairs. From 1974 to 1976, she was Ambassador to the Republic of Togo. From 1976 to 1977, she was Alternate Representative of the U.S. for Special Political Affairs in the United Nations. From 1977 to 1978, she was a Foreign Service inspector at the State Department.

United States Ambassador to Switzerland

*Nomination of Richard David Vine.
September 10, 1979*

The President today announced that he will nominate Richard David Vine, of Santa Rosa, Calif., to be Ambassador Extraordinary and Plenipotentiary of the United States to Switzerland. He would replace Marvin Warner, who has resigned.

Vine has been Principal Deputy Assistant Secretary of State for European Affairs since 1977.

He was born December 10, 1925, in New York City. He received a B.S.F.S. from Georgetown University in 1949 and an M.A. from Yale University in 1960.

He served in the U.S. Army from 1943 to 1946.

Vine joined the State Department in 1948 and was posted in Bonn, Tel Aviv, and Paris. From 1960 to 1963, he was officer in charge of European integration affairs at the State Department, and from 1963 to 1965, he was political officer in Bonn. From 1965 to 1969, he was counselor for political affairs in Brussels (USEC).

From 1969 to 1972, Vine was Deputy Chief of Mission in Bern. From 1972 to 1974, he was Director of Western European Affairs at the State Department, and from 1972 to 1977, he was Deputy Assistant Secretary of State for European Affairs.

United States Ambassador to Tanzania

*Nomination of Richard N. Viets.
September 10, 1979*

The President today announced that he will nominate Richard N. Viets, of Hyde Park, Vt., to be Ambassador Extraordinary and Plenipotentiary of the United States to the United Republic of Tanzania. He would replace James Spain, who has transferred to another position.

Viets has been Deputy Chief of Mission in Tel Aviv since 1977.

He was born November 10, 1930, in Burlington, Vt. He received an A.B. from the University of Vermont in 1955. He served in the U.S. Army from 1950 to 1952.

Viets was a public affairs assistant at the International Communication Agency (then USIA) from 1955 to 1957. He was assistant exhibit manager for the

Department of Commerce from 1957 to 1960, and was with Mobil International Oil Co. from 1960 to 1962.

Viets joined the Foreign Service in 1962 and was posted in Tokyo, Madras, and New Delhi. From 1972 to 1973, he was an international relations officer at the State Department, and from 1973 to 1974, he was Director of the Executive Secretariat at State. From 1974 to 1977, he was Deputy Chief of Mission in Bucharest.

National Science Foundation

*Nomination of Francis Severin Johnson
To Be an Assistant Director.
September 10, 1979*

The President today announced that he will nominate Francis Severin Johnson, of Dallas, Tex., to be an Assistant Director of the National Science Foundation. He would replace John B. Slaughter, resigned, and his area of responsibility would be astronomical, atmospheric, Earth and ocean sciences.

Johnson is the Cecil H. and Ida M. Green honors professor of natural sciences at the University of Texas at Dallas and also serves as executive dean of graduate studies and research.

He was born July 20, 1918, in Omak, Wash. He received a B.S. in physics from the University of Alberta (Canada) in 1940, and an M.A. (1942) and Ph. D. (1958) in meteorology from the University of California at Los Angeles.

From 1946 to 1955, Johnson was head of the High Atmosphere Research Section of the U.S. Naval Research Laboratory. From 1955 to 1962, he was manager of space physics research at Lockheed Missiles and Space Co. From 1962 to 1964, he was head of the atmospheric and space

sciences division of the Southwest Center for Advanced Studies in Dallas. He was director of the Earth and Planetary Sciences Laboratory from 1964 to 1969.

Johnson has been a professor of natural sciences at the University of Texas since 1969. He has also served as acting president of the university from 1969 to 1971, and as director of the Center for Advanced Studies there from 1971 to 1974. From 1968 to 1972, he also served as director of the Space Sciences Center at Southern Methodist University.

Johnson's area of research is upper atmosphere and space physics, planetary science, solar radiation, and synoptic and physical meteorology. He has been a consultant to a number of NASA and NSF committees and has received NASA's Exceptional Scientific Achievement Medal.

National Science Foundation

*Nomination of William Klemperer To Be an
Assistant Director. September 10, 1979*

The President today announced that he will nominate William Klemperer, of Watertown, Mass., to be an Assistant Director of the National Science Foundation. He would replace James Krumhansl, resigned, and his area of responsibility would be mathematical and physical sciences and engineering.

Klemperer is a professor of chemistry at Harvard University and is known for his research in molecular spectroscopy.

He was born October 6, 1927, in New York City. He received an A.B. from Harvard University in 1950 and a Ph. D. from the University of California at Berkeley in 1954. He served in the U.S. Navy Air Corps from 1944 to 1946.

Klemperer has been on the faculty at Harvard since 1954 and has been a full

professor since 1965. He was elected to the National Academy of Sciences in 1969 and is a member of numerous professional associations.

National Lupus Week, 1979

Proclamation 4680. September 10, 1979

*By the President of the United States
of America*

A Proclamation

Lupus erythematosus is an increasingly serious connective tissue disease, affecting 500 thousand Americans, mostly young women. There are an estimated 50,000 new victims each year stricken by this disease.

In the systemic form, lupus attacks the entire body and its diverse organ systems, destroying connective tissue in the kidney, heart, and other vital organs. A major feature of the disease is redness of the skin, particularly the appearance of a butterfly-like rash that is often sensitive to light. Additional manifestations of lupus include fever, arthritis, pleurisy, pneumonia, blood abnormalities, heart disease, and central nervous system dysfunction. As its name suggests, this "lupine" disease ravishes the total body in a relentless clinical course and frequently costs its victims their lives in early adulthood.

Although the cause of lupus is not known, the prognosis for patients has vastly improved in recent years. In 1955 the survival rate for lupus victims was 50 percent four years after diagnosis. Now, more than 80 percent of lupus patients are treated successfully during the ten years after their disease has been identified. This increased survival is due to a number of factors including greater

awareness of the disease, better diagnostic methods, and development of more effective drug therapies.

The outlook is far from bleak, but greater awareness of the disease and new approaches for improved treatment and diagnosis are needed in order to eliminate lupus as a cause of human suffering and to improve the quality of life in our society for its victims.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim the week of September 16 through September 22, 1979 as National Lupus Week. I invite the Governors of the States, the Commonwealth of Puerto Rico, and officials of other areas subject to the jurisdiction of the United States to issue similar proclamations.

I urge the people of the United States and educational, philanthropic, scientific, medical, and health care organizations and professions to provide the necessary assistance and resources to discover the cause and cure of lupus erythematosus and to alleviate the suffering of all persons struck by this disorder.

IN WITNESS WHEREOF, I have hereunto set my hand this tenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register,
2:51 p.m., September 10, 1979]

Strategic and Critical Materials

Executive Order 12155. September 10, 1979

By the authority vested in me as President of the United States of America by the Strategic and Critical Materials

Stock Piling Act, as amended (50 U.S.C. 98 *et seq.*), and by Section 301 of Title 3 of the United States Code, and in order to provide for the performance of certain functions previously performed by agencies pursuant to their own authority, it is hereby ordered, effective July 30, 1979, as follows:

1-101. The functions vested in the President by Section 3 of the Strategic and Critical Materials Stock Piling Act, as amended, hereinafter referred to as the Act, (50 U.S.C. 98b), are delegated to the Director of the Federal Emergency Management Agency.

1-102. The functions vested in the President by Section 6 of the Act (50 U.S.C. 98e) are delegated to the Administrator of General Services.

1-103. (a) The functions vested in the President by Section 8(a) of the Act (50 U.S.C. 98g(a)) are delegated to the Secretary of the Interior.

(b) The function vested in the President by Section 8(b) of the Act (50 U.S.C. 98g(b)) are delegated to the Secretary of Agriculture.

1-104. The functions vested in the President by Section 10 of the Act (50 U.S.C. 98h-1) are delegated to the Administrator of General Services.

1-105. The functions vested in the President by Section 11 of the Act (50 U.S.C. 98h-2) are delegated to the Director of the Federal Emergency Management Agency. The Secretaries of the Interior and of Agriculture and the Administrator of General Services shall submit biannually a written report to the Director. The report shall detail their performance of functions under the Act and this Order.

1-106. Section 4-101 of Executive Order No. 12148 is revoked and the following new Sections 4-205 and 4-206 are added thereto:

"4-205. Effective July 30, 1979, the

functions vested in the President by Section 4(h) of the Commodity Credit Corporation Charter Act, as amended (15 U.S.C. 714b(h)), are hereby delegated to the Director of the Federal Emergency Management Agency."

"4-206. Effective July 30, 1979, the functions vested in the President by Section 204(f) of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 485(f)), are hereby delegated to the Director of the Federal Emergency Management Agency."

Federal Emergency Management Agency; Department of Energy

Executive Order 12156. September 10, 1979

CORRECTIVE AMENDMENTS

By the authority vested in me as President by the Constitution and statutes of the United States of America, and in order to correct references in two prior Executive Orders, it is hereby ordered as follows:

1-101. Section 5-211 of Executive Order No. 12148 of July 20, 1979, is corrected and amended to read:

"Section 1-102 of Executive Order No. 12083, as amended by Executive Order No. 12121, is further amended by adding in alphabetical order "(z) The Director of the Federal Emergency Management Agency".

1-102. Section 1(c) of Executive Order No. 12038 of February 3, 1978, is corrected and amended to read:

"(c) Executive Order No. 11912, as amended, relating to energy policy and conservation, and Proclamation No. 3279, as amended, relating to imports of petroleum and petroleum products, are further amended by deleting "Administrator of the Federal Energy Administration", "Federal Energy Administration", and "Administrator" (when used in reference to the Federal Energy Administration) wherever those terms appear and by substituting "Secretary of Energy", "Department of Energy", and "Secretary", respectively, and by deleting "the Administrator of Energy Research and Development" in Section 10(a) (1) of Executive Order No. 11912, as amended."

International Energy Conservation Month, October 1979

Proclamation 4681. September 10, 1979

*By the President of the United States
of America*

A Proclamation

The United States is the largest user of energy in the world and since 1978 has become increasingly dependent on imported oil to meet its domestic needs.

While considerable progress has been made in reducing the rate of growth in demand for energy, much more remains to be done if the United States is to meet its responsibility to reduce its demand for petroleum on the world market.

Energy problems facing us in the United States are similar to those facing other industrialized nations, as well as many of the world's less developed countries. The fundamental problem domestically and internationally is that demand for petroleum is increasing faster than the capacity to produce it.

As the world's major consumer of energy, it is essential that the United States become a leader in conserving energy by curtailing unnecessary and wasteful uses, by improving the efficiency with which we use energy for essential purposes, and by switching from increasingly scarce petroleum and petroleum products to more abundant alternate sources.

To this end, I have announced a program of import quotas to see that the commitment we made at the Toyko Summit will be achieved.

We must also reduce our imports through vigorous and sustained conservation of energy. This task has already begun. The National Energy Act I proposed, which was enacted last November, includes:

- a \$300 residential energy conservation tax credit, which the taxpayer can claim for the purchase of insulation and other energy-saving measures;
- a residential insulation service which local utilities must provide beginning in the fall of 1980, to provide energy evaluations of homes and to arrange loan financing for installation of insulation;
- a 10% investment tax credit for equipment used to conserve energy by improving the efficiency of industrial plants;
- weatherization grants for low-income households;
- a 5% reduction in annual energy use

by each Federal department, including mandatory building temperature standards and a 10% reduction in automobile fuels;

- a \$900 million grant program to provide 50% of the cost of energy conservation measures for schools and hospitals;
- a \$65 million grant program to provide technical assistance and energy audits for local government and other public buildings;
- mandatory non-residential building temperature restrictions;
- mandatory automobile fuel economy standards for each model year through 1985; and
- a “gas guzzler tax” on automobiles failing to meet fuel efficiency standards, beginning with the 1980 model year.

I also have proposed, and Congress will consider:

- a major program to make residential and commercial buildings more energy efficient;
- \$16.5 billion in new Federal funding over the coming decade for mass transportation systems and improved automobile efficiency. These latter programs will be funded by the proposed Windfall Profits Tax.

The effectiveness of our efforts to conserve energy in the years ahead will have substantial impact on both the Nation's ability to meet future energy needs at home and on the stability of social, political and economic institutions around the world.

In response to the recognized need to conserve energy, the 20 member countries of the International Energy Agency, including the United States, have designated the month of October 1979 as In-

ternational Energy Conservation Month. The objectives of International Energy Conservation Month are: 1) to provide an international focus for national efforts to stimulate greater public awareness of the continuing and long-term need for energy conservation; 2) to underline the extent to which industrialized nations are cooperating to conserve energy; and 3) to give member countries an opportunity to plan events which will either culminate during the month or use the month as a springboard for continuing programs.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, in full support of this international program, do proclaim October 1979 as International Energy Conservation Month in the United States and call upon all Americans to join me in observing it. During the month let us as a Nation focus our attention on energy conservation through our actions and deeds. Let us view that month as the springboard to a more energy-efficient, energy-reliable future.

I call upon State and local governments to join me in proclaiming October as International Energy Conservation Month and to undertake activities in support of its objectives.

I urge all citizens, corporations, labor unions, trade associations, the media, and groups and organizations of all types to participate in this international energy conservation program at home, at work, while traveling and in all daily activities.

IN WITNESS WHEREOF, I have hereunto set my hand this tenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Superior Court of the District of Columbia

Nomination of Henry Kennedy, Jr., and Frank Schwelb To Be Associate Judges. September 10, 1979

The President today announced that he will nominate Henry Kennedy, Jr., and Frank Schwelb to the vacancies on the District of Columbia Superior Court, caused by the resignations of Judges Joyce Green and William Pryor. Green was recently named to the United States District Court, and Pryor was elevated to the District of Columbia Court of Appeals.

Kennedy, 31, has served for the last 3 years as one of three Federal Magistrates on the United States District Court. Prior to that time, he worked for the United States Attorney's office in Washington. He attended Princeton University and Harvard Law School.

Schwelb, a graduate of Yale College and Harvard Law School, has worked in the Civil Rights Division of the Department of Justice since 1962, and for a number of years headed the Division's fair housing office. He is 47.

Independent Truckers' Strikes

Announcement of Followup Actions by the Administration. September 10, 1979

Following the negotiated end of the independent truckers' work stoppage 2 months ago, the President directed that the administration work actively with representatives of the independent truckers and State leaders to find solutions to serious and longstanding problems facing the independent trucker. The President also recently requested that as a follow-up, members of his administration report

to him on those actions. Based on progress reports prepared by Secretary of Transportation Neil Goldschmidt, Secretary of Agriculture Bob Bergland, and Interstate Commerce Commission Chairman Daniel O'Neal, Jack Watson, Assistant to the President for Intergovernmental Affairs, is issuing today the following summary of actions being taken to deal with independent trucker problems:

—The Interstate Commerce Commission (ICC) has notified each of the 17,000 regulated carriers of their obligation to pass through the fuel surcharge to owner-operators and to comply with leasing rules. The Commission has vigorously enforced these provisions in response to complaints from truckers. Several hundred carriers have been investigated and most are now complying.

—The Department of Transportation (DOT) and the Department of Energy (DOE) have set up a mechanism for locating fuel supplies and directing truckers to them. DOE's field staff also is able to arrange transfers of fuel to areas where shortages exist.

—The ICC continues to update its weekly fuel surcharge programs, begun June 15, to reflect escalating costs at the pump. The surcharge is now 9.5 percent, and the program will continue.

—Several States have put into effect temporary increases in allowable truck size and weight. When these approached their expiration dates, DOT urged State governments to extend them in view of the fact that Congress was considering enacting Federal legislation to provide uniform limits during a declared fuel shortage.

—The Department of Agriculture (USDA) is issuing weekly bulletins on rates paid to truckers for hauling produce and a monthly report on the cost per mile

of operating refrigerated trucks. Arrangements have been made to have both truck rate and cost information available by phone to truckers at 48 USDA Market News Service offices and posted at almost 1,000 truck stops.

—Legislation giving the President authority to mandate uniform size and weight standards for trucks on the Interstate System during periods of fuel shortage has been introduced in both Houses of Congress. The administration supports early congressional action. Secretary Goldschmidt, during his confirmation hearings on September 5, 1979, emphasized to the Senate Commerce Committee the need for this legislation. The administration will continue to push hard for its passage.

—The Bureau of Motor Carrier Safety is developing a way to respond to truckers' complaints about safety enforcement activities. The ICC has expanded its truckers' complaint hotline (800-424-9312), adding several more toll-free lines, and has satisfied hundreds of owner-operator complaints.

—The Bureau of Motor Carrier Safety has already begun considering changes in logbooks and hours-of-service regulations. The Bureau has promised to work with truckers to make certain that any complaints, suggestions, or opinions they have are formally considered during the rule-making process.

—USDA is developing legislation to standardize hauling contract provisions. Such provisions would end much of the uncertainty truckers now face and help safeguard their rights in the market. The provisions could also ease the problem of unfair unloading practices ("lumping") and increase truckers' available driving time by placing loading and unloading responsibilities on the shipper and receiver.

—A joint ICC-DOT-Small Business Administration (SBA) task force, in liaison with USDA, is developing literature and seminars to aid owner-operators in sharpening management skills, reducing maintenance costs, and increasing operating efficiency.

—The ICC is considering penalties for shippers who intentionally overload trucks.

—The ICC is considering permitting owner-operators to trip-lease in their own names, in order to gain greater revenues. The Commission also is studying the relationship between owner-operator costs and carrier rates, and has initiated a rule-making process to permit carriers hauling exempt agricultural commodities to backhaul regulated goods.

International Wheat Agreement, 1971

Message to the Senate Transmitting Protocols for the Fifth Extensions of the Wheat Trade Convention and the Food Aid Convention. September 11, 1979

To the Senate of the United States:

I transmit herewith, for Senate advice and consent to ratification, the Protocols for the Fifth Extension of the Wheat Trade Convention (WTC) and Food Aid Convention (FAC) constituting the International Wheat Agreement, 1971. The Protocols were adopted by a conference which met in London on March 21-22, 1979 and were open for signature in Washington from April 25 through May 16, 1979.

I transmit also, for the information of the Senate, the report of the Secretary of State with respect to the Protocols.

The WTC Protocol extends that Convention until June 30, 1981, maintains the framework for international cooperation in wheat trade matters, and continues the existence of the International Wheat Council.

The FAC Protocol extends until June 30, 1981, the parties' commitments to provide minimum annual quantities of food aid to developing countries.

Declarations of Provisional Application of both Protocols were deposited by the United States on July 15, 1979, thus permitting the United States to continue full and active participation in the International Wheat Council and Food Aid Committee. This step was necessary to reduce the risk of expiration of the International Wheat Agreement. The WTC Protocol requires deposit of instruments of ratification or declarations of provisional application by June 22, 1979, on behalf of governments of wheat-exporting member nations holding at least 60 percent of the exporter votes and on behalf of importing member nations holding at least 50 percent of importer votes for the extension to enter into force on July 1, 1979. The FAC Protocol requires entry into force of the WTC Protocol and deposit of instruments of ratification or provisional application by all Parties by June 22.

I hope that the Senate will give early and favorable consideration to the two Protocols so that ratification by the United States can be effected at an early date. Doing so will demonstrate our continued commitment to cooperation on international wheat trade matters and to providing food aid to needy developing nations.

JIMMY CARTER

The White House,
September 11, 1979.

National Hunting and Fishing Day, 1979

Proclamation 4682. September 11, 1979

By the President of the United States of America

A Proclamation

The millions of hunting and fishing licenses issued each year reflect a widespread appreciation of the healthy recreation, peaceful solitude and closeness to nature these pursuits offer.

America's hunters and fishermen have long been leaders in the conservation movement. They understand the importance of clean air, good water and adequate habitat for wildlife. They support those goals through the purchase of licenses and the payment of taxes on hunting and fishing equipment. They and the organizations that represent them are also effective leaders in the promotion of fire-arm and boating safety.

It is appropriate that we recognize all of these contributions by the observance of a National Hunting and Fishing Day.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Saturday, September 22, 1979, and the fourth Saturday of September in each succeeding year, as National Hunting and Fishing Day.

I urge all of our citizens to join with outdoor sportsmen in the wise use and management of our natural resources.

IN WITNESS WHEREOF, I have hereunto set my hand this eleventh day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Child Health Day, 1979

Proclamation 4683. September 11, 1979

*By the President of the United States
of America*

A Proclamation

For over 50 years, this Nation has observed Child Health Day. By setting aside this special day each year, we reaffirm our commitment to the improvement of the health of our children. Excellence is the only standard that is acceptable in our efforts to promote good health, prevent disease and disability, and improve conditions that interfere with the ability of each child to reach his or her potential.

In this International Year of the Child, we have accelerated our assault on infant mortality, childhood accidents, acute and chronic diseases and handicapping conditions. I am determined to assure that children receive the expert care they need and to which they are entitled. My goal continues to be excellence in providing for the health needs of our children.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim Monday, October 1, 1979, as Child Health Day.

I ask that you join me as we pledge our continuing attainment in the pursuit of excellence of health care for our Nation's children.

IN WITNESS WHEREOF, I have hereunto set my hand this eleventh day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Jewish High Holy Days

Message of the President. September 11, 1979

My Fellow Americans:

As you celebrate Rosh Hashanah, the beginning of the High Holy Days, Rosalynn and I send our warmest greetings to you as you gather together in homes and synagogues to welcome a new year.

I know that your liturgy for this sacred season includes prayers for reconciliation between neighbors and affirmation of life and recommitment, and at this time you reflect on eternal questions concerning life and death. The words of these services echo universal human concerns.

With you, we recommit ourselves to cherish the freedom of all peoples and to strive peacefully for its realization. With you, we pray, not for an escape from challenges, problems and decisions, but for the wisdom, insight and courage to choose wisely and bravely.

Let us strive to make common cause with decent people of all faiths and nations. Let us strive to preserve the values of our democracy and to broaden the areas of its blessings. Your religion, like mine, seeks to help all people learn to live in harmony with one another and with God. May the coming year bring us closer to the just and lasting peace for which we have yearned and prayed so long and bring to each of you new strength of faith and purpose.

JIMMY CARTER

Meeting With President Mobutu Sese Seko of Zaire

White House Statement. September 11, 1979

The President met this afternoon for 25 minutes in the Cabinet Room with Presi-

dent Mobutu Sese Seko of Zaire, who is in Washington on a private visit connected with meetings of the International Monetary Fund (IMF).

The two Presidents discussed the situation in Zaire. President Mobutu informed President Carter of the progress that Zaire is making in dealing with its economic and security problems. President Carter restated our strong support for Zaire and the importance that we attach to the ongoing process of reforms in Zaire. He welcomed President Mobutu's description of progress that is being made in these regards.

Also attending the meeting were Secretary of State Cyrus Vance; Under Secretary of State for Political Affairs David D. Newsom; Dr. Zbigniew Brzezinski, the President's National Security Adviser; Thomas Thornton of the NSC staff; Zairean State Commissioner for Foreign Affairs and International Cooperation Nguza Karl-I-Bond; and Ambassador of Zaire to the United States Kasongo Mutuale.

new partnership based on mutual respect between Panama and the United States. For that reason, he has asked the Vice President to represent him at these ceremonies.

National Advisory Committee on Oceans and Atmosphere

Designation of Evelyn F. Murphy as Chairman. September 11, 1979

The President today announced that he has designated Evelyn F. Murphy to be Chairman of the National Advisory Committee on Oceans and Atmosphere (NACOA).

Murphy has been a member and Vice Chairman of NACOA since 1978. She replaces the late Donald L. McKernan as Chairman. Murphy is a fellow at the Institute of Politics of Harvard's Kennedy School of Government. She is a former secretary of environmental affairs of the Commonwealth of Massachusetts.

Panama Canal Treaties

Announcement of Vice President Mondale's Trip to Panama for Ceremonies Marking the Entry Into Force of the Treaties. September 11, 1979

President Carter today announced that, in response to an invitation from President Royo of Panama, Vice President Walter F. Mondale will represent the United States at the ceremonies in Panama on October 1, marking the entry into force of the Panama Treaties of 1977. He will be accompanied by Secretary of State Vance and other distinguished Americans.

President Carter attaches great importance to this event, which will signify a

Defense Budgets

Message to the Congress on the Fiscal Year 1980 and 1981 Budgets. September 11, 1979

To the Congress of the United States:

I am sure you agree with me that we cannot effectively safeguard U.S. legitimate interests abroad nor pursue safely peace, justice and order at home unless our national security is protected by adequate defenses. The fundamental responsibility of the President—a responsibility shared with Congress—is to maintain defenses adequate to provide for the national security of the United States. In meeting that responsibility, this Administration moved promptly and vigorously

to reverse the downward trend in U.S. defense efforts. This is demonstrated by an examination of the trends in real defense expenditures since the mid 1960s. At NATO Summits in May 1977 and 1978 we persuaded our allies to join with us in endorsing a goal three percent real annual growth in defense outlays and an ambitious Long Term Defense Program for the Alliance. Together these represented a turning point, not only for the United States, but the whole Alliance.

For our part, we moved promptly to act on this resolve. We authorized production of XM-1 tanks; we greatly increased the number of anti-tank guided missiles; we deployed F-15s and additional F-111s to Europe, along with equipment for additional ground forces. We reduced the backlog of ships in overhaul and settled contractual disputes that threatened to halt shipbuilding progress. In strategic systems, we accelerated development and began procurement of long range air-launched cruise missiles, began the deployment of Trident I missiles, and have begun the modernization of our ICBM force with the commitment to deploy the MX missile in a survivable basing mode for it.

These and other initiatives were the building blocks for a determined program to assure that the United States remains militarily strong. The FY 1980 budget submission of last January was designed to continue that program. In subsequent months, however, inflation has run at higher levels than those assumed in the cost calculations associated with that defense program. Accordingly, I plan to send promptly to the Congress a defense budget amendment to restore enough funds to continue in FY 1980 to carry out the Administration's defense program based on our current best estimate of the inflation that will be experienced during the fiscal year. Although the detailed calculations

needed to prepare an amendment are still in progress, I expect that the amount of the amendment will be about \$2.7 billion in Budget Authority above the Administration's January 1979 budget request.

Correcting for inflation is not enough in itself to assure that we continue an adequate defense program through FY 1980. We must also have the program and the funds authorized and appropriated, substantially as they were submitted. Therefore, in the course of Congressional consideration of the second budget resolution, I will support ceilings for the National Defense Function for FY 1980 of \$141.2 billion in Budget Authority and \$130.6 billion in outlays. I will also request that the Congress support the Administration's FY 1980 defense program and, in particular, that the Appropriation Committees actually appropriate the funds needed to carry it out.

Furthermore, in FY 1981 I plan a further real increase in defense spending. The Defense Department is working on the details of that budget. It would, therefore, be premature to describe the features of that budget beyond noting that it will continue the broad thrust of our defense program, and that I intend to continue to support our mutual commitment with our NATO Allies.

While this defense program is adequate, it is clear that we could spend even more and thereby gain more military capability. But national security involves more than sheer military capability; there are other legitimate demands on our budget resources. These competing priorities will always be with us within the vast array of budget decisions both the Congress and the President are called upon to make. Defense outlays are actually lower in constant dollars than they were in 1963, and a much lower percentage of the gross national product (5% compared with 9%). There are those that think this has caused

a decline in American military might and that the military balance has now tipped against us. I do not believe this to be so, but I am concerned about the trends. I believe that it is necessary for us to act now to reverse these trends.

The Secretary of Defense will be presenting to the Congress over the coming months the highlights of our defense program in terms of the goals we think we should achieve and the Five-Year Defense Program we plan to achieve them. In this context he will point out, among many other items, how MX and our other strategic programs will contribute to the maintenance of essential equivalence between the central strategic forces of the United States and Soviet Union, how we plan to modernize theater nuclear forces in cooperation with our NATO allies, how our general purpose forces programs contribute both to our military capability to support our NATO allies and rapidly to deploy forces to defend our vital interests elsewhere. That presentation can serve as the basis for future discussions (including open testimony) that will allow us to build the national consensus that is the fundamental prerequisite of a strong and secure America.

JIMMY CARTER

The White House,
September 11, 1979.

Hartford, Connecticut

Remarks and a Question-and-Answer Session at the National Issue Forum of the National Retired Teachers Association and the American Association of Retired People. September 12, 1979

President Johnson, President Hughes, Governor Grasso, Senator Weicker, Congressmen Cotter, Dodd, and Ratchford:

It is a distinct honor for me to be here

with these two combined distinguished groups of retired Americans. As much as I admire you as retired Americans, I must admit that I'm not yet tempted to join your ranks anytime soon. [Laughter]

For much of this century, you've seen our Nation through its major crises—two World Wars, a great depression, severe shortages, tragic assassinations, political scandals, embarrassments to our Government, and social upheavals changing the racial interrelationship of our country. You've helped to bring us through all of that, and you've helped to build the most powerful, free society in history, with both material power and also with spiritual power.

These are achievements of which all of you can be very proud, and I as President am deeply grateful to you for this wonderful achievement for all of us. Thank you very much.

But there are some things that trouble us about the future of our great Nation. And I cannot think of any group more qualified to discuss our Nation's future than you who have so positively shaped its past and its present.

My greatest responsibility, above everything else as President of the United States of America, is to protect the security of the United States. Excessive imports of foreign oil—listen very carefully—threaten the security of our country. We not only import about one-half of all the oil we use, but with that oil, we also import excessive inflation and unemployment.

Listen to this: Without including energy, the inflation rate would only have gone up this year about one-fourth of 1 percent—without energy. Energy prices, however, have forced up the consumer price index, because they have increased 60 percent this year.

You know that our country has had

severe problems with gasoline this summer. But throughout that difficult period of shortage, which bothered motorists, when tempers ran even higher than the gas tanks ran low, my top concern was to prepare for this winter.

The morning after my Sunday night address about the crisis of confidence in our country, I flew out to Kansas City, where I set forth the specifics of our energy plan for the Nation. And I said then, and I quote, "We must have adequate heating fuel to prevent suffering next winter." Today, I am pleased to tell you that we will have necessary fuel to see us through this winter. You need not doubt that any longer.

Our heating oil stocks will reach 240 million barrels in October. At this moment, we are 2 million barrels ahead of where we were last year at this time, and we are now producing 330,000 barrels every day more than we were producing this time a year ago.

Another of the actions that I pledged to you was better management of the supplies that we have. It won't be enough to have 240 million barrels of oil in storage somewhere if there is an emergency shortage where you live. Therefore, I've created a special heating oil management group to assure steady and predictable deliveries throughout this winter. The group will involve the Departments of Energy and Agriculture, Transportation—and even the Coast Guard and the Army Corps of Engineers, in case we have severe transportation problems because of excessive icing or excessive snow. And they'll work closely with the industry and with State and local governments. Special emphasis will be placed on coordination with Governors. The headquarters of this group will be in Boston, and the team will go into action on September 15.

With OPEC jacking up its prices by more than 60 percent just since last De-

cember, we know all too well that the price of heating oil has gone up all too much. As a nation, we simply must face up to the true cost of energy. And I cannot mislead you; there is no prospect of any reduction in energy prices anytime in the foreseeable future.

You can understand when it's time for this country to face hard realities, because you yourselves, in the past, led us to face hard realities and to overcome them. Given this hard reality of high prices, we're going to reduce the burden of these increased costs on those Americans, many of them the elderly, who are least able to bear them. We will reduce those burdens from the shoulders of those for whom you have deep concern.

Last week, one of the major oil companies, Texaco, announced that it would hold the line on home heating oil prices, that they would provide emergency supplies of heating oil to needy households, and that they would improve credit terms for wholesalers and for retail customers. I'm asking the other 27 major oil companies to act in a similarly responsible manner, to freeze prices and to give adequate credit to help us through this winter with heating oil.

I've launched a continuing major investigation to make sure that no oil companies profiteer from our energy problem. If one inescapable truth has emerged from the whole energy crisis, it is that all of us—oil executives, gas station owners, farmers, renters, homeowners, truckers, retirees, Members of the Congress, Governors, and Presidents—all of us share this problem together, and we must all pull together to beat this problem so it will not beat us all.

There is so much more that we can do if we are ever again to have an adequate energy security for our Nation, on which our own well-being depends. All of us

must save energy, stop wasting energy, to hold down the total amount we use and to minimize competition for available supplies and, therefore, hold down the price.

Tax credits are now available to every family in our country for insulating of homes. And we have seen through observation that the simple matter of spending a few hundred dollars on better insulation of homes will cut consumption of fuel by as much as 50 percent. And, obviously, everyone can set your own thermostats to either save energy or to waste energy. We must, however, in addition to this, give special help to the elderly and others who live on low incomes.

I'm today asking the Congress to provide \$1.6 billion this winter and \$2.4 billion next year and thereafter to ease the burden of rising energy costs on people who most need assistance. This financial help will be for everyone in our country who's the most needy. I know you'll appreciate that. The Congress must act, and you must help me induce the Congress to act.

The program has two basic propositions, and I'll be very brief.

First, a special program which will make cash assistance available to all low-income households. The average benefits nationwide will be about \$200, but, of course, there will be higher payments for parts of the country like New England, where the coldest weather prevails. And there will be a second crisis assistance program, that we've had in the last 2 years since I've been in office, that will be greatly expanded to help the States give needy households, in energy emergencies that are dangerous to health, extra help.

I'm asking the Congress to take \$400 million for the crisis assistance program this winter out of general revenues—that's

out of existing tax programs now—to prevent tragedies and to avoid delays.

The Congress must also act quickly on the windfall profits tax on the oil companies' unearned profits to pay for the special program for over 7 million needy households in our country.

In structuring this program, we've done several things to ensure that the elderly benefit as much as possible. For example, States will be required to take special steps, which Governor Grasso is already taking, to ensure help for the nearly 2 million elderly who are expected to participate in the special program this winter.

The price rise of heating oil is a perfect example of why this Nation must have a windfall profits tax now. Once we have it—and I predict that we will have it this year—then 50 percent of any increase in the price of oil will be recaptured for low-income assistance, for conservation, for mass transportation, and for developing alternative fuels to reduce our dependence on uncertain crude oil supplies from overseas.

I'll be working also with the Congress to explore every additional way possible to help Americans meet this energy challenge.

The simple truth is that this country is going through a hard transition—from energy so cheap that we didn't even have to think about it, to fuel so dear that it's hard to think about anything else.

Year after year, we have put off the tough decisions on energy. This summer, it became clear to many Americans, who were previously doubtful, that we no longer have a choice, that we have a real energy problem. This winter we must be prepared to face this truth together.

To summarize, we've built up our fuel stocks; we're preparing for emergency distribution of available fuel supplies; we have assistance for needy families; we

have an adequate, financial, encouraging program to insulate your homes; we are shifting from oil to more available fuels—natural gas in some instances up here. The most important thing we must do now is to ensure that the windfall profits tax passes, so that it can give us energy security. We can put the era of gas lines and precarious winters behind us.

Of all the groups in this country, you are the best equipped to teach America how to endure and how to prevail. You're the best trained troops we have for winning the energy war.

Look just for a moment, in closing, at the victories we've already won together. Before I became President, as I traveled around our country, the main concern expressed to me by elderly Americans was the fear that the social security system was in danger of bankruptcy, the Disability Insurance Trust Fund was to be depleted, bankrupt in 1979, and the Old Age and Survivors Insurance Trust Fund would be bankrupt by 1983.

With Nelson Cruikshank's¹ help and with your strong support in the Congress, we now have legislation which assures the soundness of the social security system, and we will keep the social security system secure. You can depend on that.

This is a fight we've won together. It was not easy. Members of the Congress who voted for this program have suffered politically, but it was the right thing to do; it was the courageous thing to do.

This is not the only victory we've won. We've won protection against unwarranted mandatory retirement when I signed last year the Age Discrimination in Employment Act. We have won better and more efficient Government services when I signed last year the Comprehensive Older Americans Act, a landmark

piece of legislation that helps every retired person in our country. And we've also won important victories in pension reform, housing for the elderly, rural clinics, mental health care, food stamps, and helping the elderly handicapped. This is a good record. We can be proud of it. And today I want to pledge that together we're going to add two more vital victories to that record in the field of health care.

The first victory which you and I are going to win together is to establish in this country a comprehensive national health insurance plan for which this country has been waiting all our lives. Ever since Harry Truman was President, we've been talking about it; now's the time to do it.

Under this health care program, the 24 million older Americans now receiving Medicare will, for the first time, have a limit on out-of-pocket expenses. After the very first day of hospitalization, senior citizens will be entitled to an unlimited number of fully subsidized hospital days.

There will also be doctor fees publicly set for physicians for both Medicare and Medicaid, for health services rendered. Senior citizens will not face doctors' bills beyond those covered by Medicare.

In addition, over 10 million poor Americans will be given health coverage for the first time. Pregnant mothers, newborn children will be covered. Catastrophic medical bills will be covered for all Americans. We are ready to enter a new era in the United States in health care. If you'll help me, we'll implement this program in the Congress.

And finally, I'm absolutely determined to get hospital cost containment passed through the Congress. The key votes are going to come in the next few days. I hope every one of you will help in every way possible. My proposal to control the sky-

¹ Counselor to the President on Aging.

rocketing increases in hospital costs, increases that fall so heavily on older Americans with fixed incomes, is a crucial part of the health program and the program to control inflation. The States represented here in New England already have such plans, and they're working well.

I'd like to remind you that in the year 2000, the Americans born in the first year of social security will turn 65. They will owe a great debt to you. It's not too much to ask the rest of us that we repay some of this debt now. You who have strengthened this country, changed our society, and have yourselves endured, know that we still live in the greatest and most free democracy in the world. Your will can be made our Nation's will if you make it known to your elected representatives.

I trust you to do that now, as you always have done in the past. I trust you to fight for a just distribution of the resources of this great country, from windfall profits to social security. And, above all, I trust you to help me prove that this land is big enough, rich enough, and humane enough for it to be both free and fair.

To summarize, we must carry forward our vision of a greater America. We must work together for a rebirth of the American spirit. We must restore confidence in ourselves, our neighbors, and in our country. We must revitalize basic human values, which do not change. We must regenerate a sense of unity among the different people in this country. And we must define new and exciting goals for America. Together, that's the kind of nation we will continue to build. Together, that's the kind of land we will leave our children.

Your courage and your commitment, your experience and your wisdom will help to see this dream of a greater America come true. As we have in the

past, our Nation will still depend on you.

God bless you. And now, I'd like to answer some questions.

QUESTIONS

NATIONAL HEALTH PLAN

Q. Mr. President.

THE PRESIDENT. Yes, sir.

Q. I'm Jim Peace from Cape Cod in Massachusetts. Your hospital cost containment bill is having a difficult time; we will help you get that through. However, why introduce piecemeal legislation that is inflationary, rather than the entire package as contained in the Kennedy bill?

THE PRESIDENT. For the last 20 or 30 years, the Congress has been assessing, with frequent proposals, how to get passed a comprehensive, nationwide health insurance program. We have assessed the possible means of implementing this nationwide insurance program in every possible way.

I've spent hours with Senator Kennedy, with Senator Long, with Senator Ribicoff, and others. There's no doubt in my mind that the proposal we put forward will not only be less costly but has enough support in the Congress finally to pass. Its ultimate results will be equal to at least the coverage described in any health insurance program. And it's focused upon a phased implementation, which will meet the most urgent needs that I've outlined this morning.

First, both proposals, mine and Senator Kennedy's, have a lot in common. Both will be first implemented in 1983. The difference, in my opinion, is that mine can pass. And as the propositions go through the Congress, I have no doubt that there'll be negotiations, decisions by subcommittees in the House and Senate, and that we'll eventually come out with a

plan that I support, that previous Presidents have advocated—none have been able to get through—and that the Congress and the House and Senate, including Senator Kennedy, will be proud to see implemented in our country.

We're working together. There are a few differences. Both plans are good. I believe mine can and will pass.

HEALTH INSURANCE

Q. Mr. President, my name is John J. Stevens of Amherst, New Hampshire. We've had reports that you had a meeting this morning with a number of insurance executives in this insurance city. Are we to understand that you assured them that any national health plan which you plan to propose to Congress will not interfere with their business? *[Laughter]*

THE PRESIDENT. I have not met with any insurance executives. I will meet with them after this meeting, and I will not give them that assurance.

Q. Thank you, Mr. President. *[Laughter]*

NATIONAL HEALTH PLAN

Q. Mr. President, I'm Delbert Smith. I'm from central New York, a little town named Eaton. Would it not be less expensive and more practical, less costly, to have a complete coverage, such as they have in some of the other nations, than to try to bolster up the present system, which I understand your present plan calls for?

THE PRESIDENT. Our plan is a complete one. It is phased to be implemented step by step. It's the kind of proposal that has already aroused substantial support from people who in the past have blocked the passage of any health legislation, as I said, since the time of President Truman.

The final plan, which we have presented to the public and to the Congress,

is nationwide. It is comprehensive, it is adequately all-inclusive, it's fiscally sound. And it has an excellent chance to pass though the Congress. I have no doubt that the judgment that I've made on it is the proper one for you, for me, and for the country.

NURSING HOME CARE; SCOPE OF COVERAGE

Q. I'm Patricia Barey from Windsor, Connecticut. And I would like to ask if the national insurance plan would cover elderly patients in nursing homes and, also, to ask, why is it so difficult now for the patients to obtain hospital coverage?

Thank you.

THE PRESIDENT. No, none of the comprehensive national health insurance plans include the long-term care in nursing homes, neither mine, Senator Kennedy's, nor any others, so far as I know. We all agreed that the best way to handle that is through a more comprehensive proposal dealing with different facets of financing, the licensing of nursing homes, and the Medicaid-Medicare extension to chronic care, including drug programs.

As far as the coverage of persons—that's a difficulty that you described—I believe that the program that we've put forward to the Congress will be all-inclusive for certain categories and, obviously, will include all Medicaid and Medicare patients in the future. There would be no exclusion at all.

Let me pause to ask Nelson Cruikshank if there's a special consideration that I need to describe.

MR. CRUIKSHANK. No, that's correct, Mr. President.

THE PRESIDENT. Nelson says that my answer's correct. I'm glad to hear it.

Q. Thank you, Mr. President.

THE PRESIDENT. He's my expert on the subject.

MEDICARE

Q. Mr. President, I'm Marcella Spigelmire, president of the Maryland Retired Teachers Association. I'm from Baltimore, Maryland. Having filed many Medicare forms for myself and my relatives, and always wishing afterward that I had the foresight to select a doctor who would accept the assignment and whose fees met the requirements of being not greater than reasonable and proper, I wonder if you have anything in your plan to alleviate the redtape and rigidity of the present requirements.

THE PRESIDENT. Yes. The whole plan is designed to minimize the redtape and rigidity, because now there are so many different, nonrelated facets of health care. Each person, almost, in our country, each small group of people in our country are in a separate category, and much of that paperwork is designed to identify or to define a person's right for coverage.

The reason that we put forward this comprehensive plan to the Congress is so that as it's phased in, each broad class of people would be completely covered. There would be a minimum amount of paperwork—I would hope no more than you experience with your social security, routine payments. And this is what we hope for, and I believe that we can achieve that.

Q. Thank you, Mr. President.

THE PRESIDENT. Thank you. The comprehensive nature will help to decrease the paperwork.

INFLATION RATE

Q. President Carter, my name is Thomas Canzillo from Monroe, Connecticut. The rate of inflation has been increasing in the last month or so. From all our economic indicators, do you expect the rate of inflation to go up or go down?

THE PRESIDENT. I expect the rate of inflation to go down the rest of this year. As I pointed out earlier, the 60-percent increase in fuel costs imposed on the rest of the world by OPEC is a prime cause of the rapid growth in the inflation rate this year.

Yesterday, I had my economic advisers give me a summary of what the inflation rate would be without energy. And as I said earlier, throughout this whole year the inflation rate would only have changed about one-fourth of 1 percent without energy. With energy included, the inflation rate has changed 4 or 5 percent, because energy has gone up at an annual rate of about 100 percent.

We do not anticipate—although I cannot control this—we do not anticipate any further increases by OPEC this year. So, the rate of increase, even in energy, is likely to level off. And that's why we're working so closely with Texaco and, hopefully, with other oil companies, to get them now to level off their price increases so that we can have a decrease in the inflation rate by the end of this year. I predict that that will happen.

NATIONAL HEALTH PLAN

Q. Mr. President, Bernard Hartspak, Campbell Hall, New York. We have come here from all over this great Nation to listen and also to be listened to. I was told to make my presentation short for lack of time. All one needs to do is look at the seniors in this room to see there is not much time. *[Laughter]* If you'll bear with me, I would like to make part of this presentation, and I'll leave the full text with you.

THE PRESIDENT. I don't agree with that last statement you made. It looks to me like they have a lot of time.

Q. A comprehensive national health plan must and should be put into operation with all due haste. Some of the reasons are: When a nation spends over a hundred billion dollars a year for medical expense—excuse me, I can't see too well with my age—[*laughter*]*—*we'll get to the question, relax—for medical expenses, still, the American people cannot afford medical attention without the fear of additional expense, is a national disgrace. When a President talks about fair and equal treatment for all, is it fair and equal when the President, Senator, Congressmen, diplomats, heads of state, heads of foreign states, members of their family receive medical treatment at the taxpayers' expense? It would be fair and equal treatment only when all people receive the same treatment.

When a nation serves the medical needs of welfare recipients, drug addicts, alcoholics, prisoners, at the taxpayers' expense, fair and equal treatment for all Americans will apply only when all people are included, when illness strikes.

Now, the question, because time is—[*laughter*]*—*relax. How much longer will the American people have to wait for a complete national health plan for all Americans?

Thank you very much.

THE PRESIDENT. Thank you. It depends as much on all of you assembled in this room as it does on me.

We have evolved and presented to the Congress, worked closely with the chairman of the Ways and Means Committee, Al Ullman, closely with the chairman of the Finance Committee in the Senate, Russell Long, and with Senator Kennedy and with Jim Corman and others, to propose a comprehensive, nationwide health insurance program. The Congress passing of that program will be dependent on how much they are convinced of your interest in it and the need of the country for it.

I'm convinced that your interest in it is acute and that you will work on it. And I'm convinced that the Nation needs it. And I'm determined to make sure that it comes into being. The implementing date of the health insurance program that we put forward and also, coincidentally, the one that Senator Kennedy put forward, is 1983. If the Congress acts this year or early next year, that's the earliest that a complicated program like this can be implemented.

So, your answer is—I agree with your basic concerns and your basic purposes. If we can get the Congress to act, this program will start to be implemented in 1983. And it will be comprehensive, all-inclusive, and adequate to meet your needs.

HOSPITAL COST CONTAINMENT

Q. President Jimmy, I'm Frank Pezzick from Nutley, New Jersey. I'm going to try to make my question shorter than the preceding speaker, because I'm a Jerseyite and all these other speakers have been New Englanders. [*Laughter*]

Every homemaker in this country knows that when she goes to the store, the price on a can of beans or the price on a steak is higher today than it was yesterday, and it'll be higher tomorrow than it was today, and so on. You and Governor Grasso have pointed out that the price of fuel is going up constantly. We know—and Senator Weicker's drug company can substantiate this—that the price of medicines goes up constantly.

Now, you say that you're going to contain hospital costs. Every delivery a hospital gets of food for its patients is up higher than it was the day before. Every jar of intravenous solution is up, constantly—

AUDIENCE MEMBERS. Question!

Q. The question—quiet, you listened to the other one, now you can listen to me. [Laughter]

THE PRESIDENT. But you promised to be briefer. Right?

Q. The question is, simply, what are you going to do to contain hospital costs in view of circumstances like I just mentioned?

THE PRESIDENT. Okay. Let me point out that our system of economy is based on the free enterprise system, where competition helps to control prices even in times of inflation. In the last few years, where hospital cost containment did not exist, hospital costs have gone up about twice the rate of inflation, because there is not adequate competition in hospital care.

Quite often, a person pays hospital insurance for years, if they are fortunate and are well. All of a sudden they feel badly. Their inclination is to go into the hospital, to stay a few days, if possible, to get a good physical examination, to get at least as much care as they need, and partially to recoup what hospital insurance premiums they've paid.

The hospital administrators quite often are very eager to keep the beds full, because the more beds are full, the more profits are made. It's more convenient for a doctor to treat a group of patients in the hospital than a group of patients outside the hospital. In many cases, the doctors are the ones that own the hospitals and derive a profit when the hospitals are full.

Quite often, patients can be treated much more cheaply with generic drugs and much more cheaply in their own homes and with out-patient care than they can incarcerated in a hospital. And what we're trying to do is to make sure that hospitals don't profit from the ab-

sence of competition that I've described for you, and that they do be given an adequate means to pass on the inflation rate that prevails in the rest of the society, but not to continue to have excessive charges above and beyond what the inflation rate would normally warrant. That's the reason for hospital cost containment.

In the States that have it, it has worked. The quality of hospital care has not gone down. The profits are still there, and the patients and the whole society profits.

This hospital cost containment proposal, if passed, would save the American people \$56 billion in the next few years; the Federal Government, \$22 billion; local and State governments, \$6 billion. And the hospital care would still be adequate; the profits for the hospitals would still be adequate. I think we need it; I'm going to fight for it and get it if we possibly can.

Q. A lot of the things you've said are wrong, but we'll talk about that some other time.

THE PRESIDENT. Thank you. This will have to be the last question.

NATIONAL HEALTH PLAN

Q. Mr. President, I'm Bonnie Berstein, director of senior services for West Hartford, Connecticut. When you spoke about your national health plan, you said that doctors' fees will be publicly set, that elderly will not face doctors' bills not covered by Medicare. Who will pick up that tab of the bills that are higher than those "publicly set"?

THE PRESIDENT. Well, we'll do several things in that. One, of course, is that the fees charged by the doctors will be publicly posted; and insurance companies

and the general public, the President's Advisory Committees and others, the Health, Education, and Welfare Department will monitor those fees.

If doctors charge different fees under the health care program than they do private patients, say, higher or more abusive, they would be revealed. And that doctor will either be prohibited from participating in the plan or castigated in public as someone who's trying to cheat his patients or her patients.

Let me say this in closing: I'm very proud to have a chance to come and be with you. In almost every forum of this kind we spend our time—mine in my opening speech, yours in asking questions, mine in answering questions—talking about the problems that we face, the differences that exist among us, the disappointments, the challenges, the debates, the controversial issues—that's part of our system, and I wouldn't want to change it.

But as President, I'd like to remind you of this: The problems that we face, compared to the blessings that we have, are very few and far between. God has given us in this great country uncounted, sometimes unremembered opportunities and blessings. We are free, we can be individuals, we can speak our mind, we can criticize the President, we can let our Congress know what we want and demand, we can shape our own government. We can sustain ethical and moral standards and commitments in a time of transient, fast-changing, technological progress. We can repair a nation when it's injured; we can unite if we choose when a nation's in danger. We've got ideals and commitments we can spread around the world.

So, I'd just like to remind you not to forget that our country, in spite of its problems—and they're here, they are manageable—in spite of its problems, it's

still the strongest and greatest nation on Earth. Militarily, economically, politically, morally, spiritually—we still live in the greatest nation on Earth. And with your help as free human beings, we can make it even greater in the future.

Thank you very much.

NOTE: The President spoke at 10:30 a.m. in the Hartford Civic Center assembly hall. In his opening remarks, he referred to J. Leonard Johnson, president of the American Association of Retired People, and Frank Hughes, president of the National Retired Teachers Association.

Following his appearance at the forum, the President met with insurance executives at the Sheraton-Hartford Hotel to discuss energy issues.

Low-Income Energy Assistance Program

*Statement Announcing Proposed Legislation.
September 12, 1979*

I am today announcing that my low-income energy assistance program is being sent to Congress. The program would provide \$1.6 billion in aid this winter, and \$2.4 billion per year thereafter.

This proposal will address a critical need—alleviating the impact of higher energy prices on those who are suffering most from higher energy prices. Our energy policy must be compassionate. Without a substantial program such as this one, our most needy households, including many of the elderly on meager fixed incomes, will face almost impossible pressures on household budgets which already go entirely for the necessities of life.

The proposal has two components: an energy crisis assistance program, which will provide \$400 million this year to the States to operate flexible programs to help

low-income households faced with health-threatening energy emergencies; and a special allowance program which will provide \$1.2 billion this winter and \$2.0 billion next year and thereafter, in cash assistance to all poor households. When fully implemented the special allowance program would be available to all households with incomes below 125 percent of the Federal poverty threshold. That threshold is currently \$7,160 for a family of four.

While revenues from the proposed windfall profits tax will be necessary to fund this program, I am asking the Congress to move immediately to make general revenues available for the \$400 million emergency program this winter. When the windfall tax is passed, its revenues will be used to reimburse the \$400 million spent from general revenues. With prompt congressional action on the windfall tax and on my low-income assistance program, and close cooperation between the Federal and State Governments, we can provide help to over 7 million needy households this winter—and avoid tragedies which might otherwise occur.

Steubenville, Ohio

Remarks and a Question-and-Answer Session at a Townhall Meeting. September 12, 1979

THE PRESIDENT. It's great to be here at Big Red.

Senator John Glenn, Congressman Doug Applegate, distinguished leaders of Ohio government, local officials, and my friends from Steubenville and the surrounding communities:

I've come as President today to say a few words to you at the beginning and then to spend what time we have to-

gether with your commenting to me and asking me questions about our Nation and our Government, our present and our great future.

I'm convinced that we live in the greatest nation on Earth.

And I'm convinced that the steel industry, being so crucial to our Nation, is strong now and will be increasingly strong and beneficial to our people in the future.

And I'm convinced that with good leadership in government and in the private sector of American life, that that partnership—free people, democratic government, free enterprise—can be successful in overcoming even the most difficult obstacles, answering the most difficult questions, resolving the most difficult problems.

ADMINISTRATION POLICIES

When I became President a little more than 2 years ago, the steel industry was in serious trouble. Profits were nonexistent. Losses on a nationwide basis were very high. Plants were closing down. People were being laid off. Excessive, unfair imports were taking away our markets. Only 78 percent of the capacity of our steel plants in this country was being utilized.

I established a task force. I was part of it, Bob Strauss was part of it, John Glenn was part of it, Doug Applegate was part of it. We had officials from your area and throughout the country, from the Congress, in all States that produce steel. And we tried to devise some comprehensive approach dealing with all the many problems of the steel industry.

It was a voluntary program. No steel executive, no steelworker was required to participate. But we approached each other in a spirit of mutual trust, without look-

ing for scapegoats, without condemning one another, without being fearful about the future, without having lost the spirit of America, and I think we've been remarkably successful.

We set up a trigger price mechanism to cut out illegal dumping of foreign steel. We appropriated \$14 million for modernization programs to make sure that obsolescent steel plants had a new incentive to modernize and to save jobs. We also introduced, for the first time, in a friendly way, the steel industry to the Environmental Protection Agency, so they could understand one another for a change and kind of work together to accommodate the law's requirements, but not to put handcuffs on the steel industry itself.

The 78-percent utilization rate of all our steel capacity has now grown to more than 90 percent. Those constant annual losses in 1977 changed in 1978 to \$1.3 billion in steel industry profits that can go to new hiring, distribution of profits to owners, and new improvements to keep our steel industry vital. In 1979 my understanding is that the profits will be even higher than they were last year.

We now have 465,000 steelworkers on the job. And early this summer, the steel industry as a whole had a \$1 billion payroll, the highest payroll the steel industry has ever seen in the history of our country. These kinds of achievements have been accomplished through cooperation and through using the tremendous advantages that God has given us in this country. It shows, I think, in a vivid way what we can do when we face a challenge together and with confidence in ourselves, in each other, in our Nation. It shows that there's room for jobs, there is room for profits, there's room for environmental quality, the quality of our lives, there's room for productivity, for community de-

velopment, there's room for cooperation between Government and citizens.

Now we've got another challenge, and I need you to help me with that. I believe that it's better for us instead of importing more foreign oil, to use more Ohio coal. And very briefly let me tell you why, in case you need convincing.

We import about 50 percent of all the oil we use. We import, along with that oil, inflation. We import unemployment. We will send overseas this year from our country about \$70 billion that we ought to keep here. We've got enough coal to last us 600 years, but in the past, in the last number of years, there has not been that dedication of industry, employees, and the Government working together. We've already made some progress. We're going to make some more.

The years ahead, I predict, will see a tremendous improvement in the utilization of American coal, including Ohio coal, and a restoration of the security of our country, because it's not good for us to have our Nation in danger because we are overly dependent on oil from an uncertain source and at an uncontrollable price. As you know, the OPEC oil prices have increased in the last few months, since December, 60 percent. That's an annual rate of inflation in energy of about 100 percent. This has got to stop, but I need your help with it.

I believe that by 1995, we can triple the amount of coal used in this country. We can honor, in the process, environmental laws. We could have an increasing sense of unity among Americans. We can enhance our Nation's security. We can have more jobs in our country, less unemployment, less inflation. Three-fourths of all the synthetic fuels that we anticipate producing in the coming years will be from coal. And the windfall profits tax, when it passes, it'll bring in about \$88

billion for energy purposes over the next 10 years; \$75 billion of that will be spent on coal.

This is the kind of vision that I have for the future, but it's going to require action by the Congress. And your Congressmen and your Senators support this, but are dealing with the question in a confident and courageous way. In the process, we have enhanced mine safety and the health of miners, and I believe there's a growing sense of cooperation between mineworkers and mineowners.

Our country is strong enough to withstand any challenge if our people are willing to do two things: make a common sacrifice, not losing our confidence, and work in a spirit of unity. The synthetic fuel process is going to take a good while, 8, 10 years. In the meantime, we need to save energy, stop wasting energy, use more coal, which you've already got. And I believe with that kind of program, we will prevail.

Now I would like to answer the questions that you've prepared for me. I have no idea what they are. I'll do the best I can in answering them.

And I am very glad to be with you. Thank you for coming.

Now, the first question.

QUESTIONS

ENERGY PRICES

Q. Mary Albritton, project director from the city nutrition program in Jefferson County. I would like to know what are you going to do about the utility bills for the seniors in the low-income in this area? We do not have any funds at this time for that purpose.

THE PRESIDENT. We're doing several things, the first one of which is to continue our crisis financing program that we've

had in the last 2 years since I've been in the White House to give low-income families some help with their energy bills if they were too high. In the last 2 years, working through the State governments, we've allocated \$250 million for that purpose. If the family's health was in danger, because they were going to get too cold and couldn't afford the bills, that's been helped. We intend to expand that this coming winter by a hundred and fifty more million dollars.

And in addition to that, we are asking for a special program, because energy costs have gone up so much—home heating oil, for instance, is likely to double in price. Propane is likely to double in price. Under the windfall profits tax, we'll have additional funds available to help those families that can't afford to pay for their rapidly increasing bills.

The most important thing for all families in our country is this: We've already approved a tax credit, up to \$300 per home, for you to insulate and to make your own homes more efficient.

I was in Baltimore just a few days ago—a few weeks ago, and they have winterized or weatherized or insulated 3,000 homes in that one city; next year, 5,000 homes. The average cost per home was only \$175. They'll save that much on their heating bill the first year, or if the house was pretty well insulated to start with, it might take 2 years. But if you do that, you have a direct tax credit when you pay your income tax to pay that back to you.

So, saving through winterizing your homes, help for low-income families to overcome a very high, uncontrollable energy bill, plus your need to save in every way you can what energy you consume, in the setting of your thermostats, the closing off of unused rooms in your

house, and that sort of thing, I believe, will help us get through the winter.

And, of course, we need to keep the lowest possible kinds of energy used. The EPA and the Jay Rockefeller Coal Commission report have identified 100 electric powerplants in our country that ought to shift and can shift from the burning of fuel oil over to coal. And that will be continued in the future as rapidly as we can.

Those three things, very briefly, are part of the steps that you can take and we can take to get us through a difficult winter.

In the second microphone.

FUEL SUPPLIES

Q. Scott Campbell from Steubenville. With the energy crisis so severe, why do we supply other products to other foreign countries so cheaply, when they are only holding the fuel while we are holding their food products and other type of products? Also, with the energy crisis so severe, why can't the EPA loosen some of their regulations so that we can move more coal through this area and get the steel production going a little bit more burning Ohio coal and not to raise the unemployment here? We'd get a few more people employed in this area.

THE PRESIDENT. Those are good, I think, three questions, and I'll try to answer them briefly.

First of all, I think it's to our advantage whenever we can sell American coal overseas to do it, and I hope to increase exports of American coal in the future.

In the past we've had good markets in Japan. Three or four years ago those markets were lost. Now we're trying to get them back and to get other markets for our coal. We've got enough to use and also to export. If there ever comes a time when we don't have enough for both

purposes, obviously we would meet our own needs first.

There's been some—you may be referring to the sale of a million barrels of home heating oil to Iran. Let me explain that to you.

Iran had an interruption of the production of their home heating oil because of sabotage or because one of their plants broke down. They asked us to let them have a million barrels, because, as was the case when I was a child growing up on the farm and didn't have electricity, they use kerosene or home heating oil for almost everything, for lamps and for heat, for cooking. So, we let them have a million barrels of home heating oil. They sell to us every day 750,000 barrels of crude oil. And I thought it was a good idea for humanitarian purposes and to make sure we keep that market for us open.

Last spring, when we had serious shortages of fuel oil, heating oil, gasoline, distillate for trucks, it was because they had a revolution in Iran and that supply was interrupted. Now they produce about 4 million barrels each day. We get about 20 percent of that.

The EPA standards—I think it's best for me to be frank with you—there are laws that bind the entire Nation on air pollution standards and water pollution standards. I don't think you would want to see those laws stricken down. Forty-nine of the States have submitted and have had approved an environmental program. One State in the Nation has not had an environmental program approved. That State happens to be Ohio.

It's much better for the enforcement of environmental laws, or any other law, when you can have the cooperation of the State government and let basic management of a program be done by local and State officials instead of by the Federal officials. But the law requires that until

the State gets an approved plan, the Federal Government has to be involved in it almost a hundred percent. We don't like this. I'll be eager to see Ohio have an approved plan very shortly, I hope, just like the other 49 States have already done.

We have interpreted in the EPA—it's an independent agency, I can't control it—but we've interpreted that law as best we can within the legal framework to permit the continued and increased use of Ohio coal.

I was in a plant in Kentucky recently that uses very high sulfur coal. It's a modern plant, meets all the standards, has no problem with EPA, because they've made the change to a more efficient use of the coal in the scrubbing in the smokestacks.

Now, we have had some problems recently, as you know, with Cleveland Electric, and they are now authorized to burn high-sulfur Ohio coal. Most of the plants in Ohio have shifted so that they are qualified to burn Ohio coal. Others will be qualified by October 19. We'll do all we can, within the bounds of the environmental standards, to let Ohio coal be used. I hate to see Ohio importing coal for your own electric power production, and I'm as eager as you are to obey the laws, which I'm sworn to uphold, to turn over the responsibility to the State and local officials to enforce the environmental laws and to see a maximum use of Ohio coal. I think my goal and yours in that respect are identical.

Thank you very much for that question.

ENERGY PROGRAMS

Q. Mr. President, my name is David Hawkins, and I'm from Mingo Junction, Ohio. And my question is, what steps or procedures do you hope to see implemented within the upcoming year to re-

duce unemployment due to the energy problems we are experiencing?

THE PRESIDENT. We've proposed to the Congress three things on energy. One is the passage of the windfall profits tax. This is a tax that will be levied on the unearned profits of the oil companies. Oil prices are going up. The oil companies are getting a higher price for their oil. The question is, who's going to get that money? We believe that enough should be left for the oil companies to increase their production of American oil and American natural gas. But we think that about half of that money ought to come to be used for synthetic fuels, for conservation, for solar energy, for the improvement of our rapid transit systems, or mass transit systems, and also to help families to overcome the difficulties of increased costs of energy. And it's imperative for the energy program for the windfall profits tax to pass.

Secondly, we are setting up a corporation, a security corporation that will have the authority to implement 80 new projects all over this country to produce synthetic fuels, to work on solar power, to do things concerning conservation, which will generate tremendous numbers of new jobs. And in the process of having energy produced in our own country and stopping the sending of \$70 billion, like this year, overseas, we'll generate more jobs for Americans, not only in synthetic fuels, solar power, the weatherization of homes, but also in the increased production of coal. And I think that this new energy program is a very effective way to deal with potential unemployment and to keep our country strong.

The other thing that has hurt us in the past has been the unnecessary delay in making decisions. We expect to institute in the Congress—and we got good news from one of the major committees this

morning—a board, a mobilization board that will cut through redtape. Now when you have a decision to make about building a new powerplant or a new oil refinery or a place to produce electricity or a pipeline, you have to wait 5 or 6 or 7 or, sometimes, 8 years to get a decision to either build it or don't build it. What we are trying to do is to get the Congress to shortcircuit that long delay and let the decision be made without delay. If it ought to be built, build it. If it ought not to be built, don't build it. But the thing is to make the decision and get moving.

Our country's basic security—I'm not exaggerating this—is in danger. So, we've got to have a stronger America, we've got to cut down our overdependence on foreign oil, and we've got to make sure at the same time that American jobs are created and American energy is used to give our country back its strength, its confidence and its unity and its prosperity and a good life. That's what we're trying to do, not only for energy but for jobs and also inflation at the same time.

It's a good program. I need you all to help me with it. Will you help me with it? *[Applause]* Thank you.

COAL SUPPLIES

Q. Mr. President, I'm a mineworker from Hyatt Point, Ohio, North American Coal Number 6, Local 1810. And my mine's been shut down since August 31—there's 900 people employed down there—and the reason, on account of our stockpiles are too big; they're not burning our coal.

And all your plans seem fine, you know, for the future, but us coal miners, we want to work now, not 10 years from now. And I'd like to suggest that you put a task force to solve the steelworkers' prob-

lems, put a task force together now to solve our problems, because we want to work. We're proud people down here.

Thank you.

THE PRESIDENT. Is this particular mine shut down because Cleveland Electric is ordinarily buying the coal from your mine?

Q. Our contract's with Cleveland.

THE PRESIDENT. That's right. Now, Cleveland Electric has promised us in writing that they would purchase the coal derived from your mine. We understand that the shutdown is likely only to last about 4 weeks. That may or may not be true. I'm not vouching for that. That's the information I got this morning. And we are very eager to remove every obstacle so that within the law, of course, on environmental quality, that Cleveland Electric, its two plants, and all the other plants can begin to use more and more Ohio coal.

We are going through a changing time, because for years these particular questions have not been addressed and the energy industry—oil, coal, natural gas, and others; coal miners, coal workers, powerplants, electric-generating plants—have not known what to expect next. We've never had an energy policy in this country. But I believe that after this year, after the Congress acts and after we work out a relationship with the State of Ohio and the power companies, that you won't have this off-again, on-again kind of production of coal.

I would like to see your mine working full-time, all the mineworkers employed, Cleveland Electric using your coal on a sustained, permanent basis, with a clear working-out of the problems that presently exist.

We're working on it. It can't be done instantaneously, but I guarantee it will

not take 10 years to do it if we all work together.

EMPLOYMENT IN THE COAL INDUSTRY

Q. Mr. President, Kathleen Jones from Bellmont, Ohio. Do you consider over 4,000 Ohio coal miners out of work a minimal effect, as the U.S. EPA has stated is their reason not to invoke Section 125 of the Clean Air Act?

THE PRESIDENT. You know, I don't want to see any Ohio coal miners or other employees out of work.

I noticed in the statistics concerning the Steubenville area that the unemployment rate has gone down in the last 12 months, and I'm very glad to see that. The unemployment rate in Ohio is fairly good. And I think the combined employment opportunities for both coal and steel have been greatly improved since I've been in the White House.

I don't claim to you that we have solved all the problems with coal, but we are working out the environmental problems in spite of the absence of an agreement with the State government of Ohio. I hope that'll be solved soon. I'm not criticizing anybody.

Secondly, as I said earlier, we'll have \$75 billion, about 3 or 4 billion dollars a year, once the windfall profits tax is passed, to take coal and use it for new things that we presently do not use it for, either finely pulverized coal to be burned as it is, coal to be refined so that it is very clean-burning, coal to be used in electric powerplants that presently use crude oil or oil, and other means.

I believe that by 1995, as I say, we will triple the use of coal, and that obviously has to come from Ohio as well as other places.

I'm very concerned about the unemployment rate among coal miners, but I

believe that they are getting in better shape now. And I will devote my full time working on this energy question with John Glenn, Doug, and others in Washington. I need you all to help me, though, to get this program through the Congress.

Let me add one other thing that you didn't ask me about, but it's important for you to understand. I really govern two countries, as far as energy is concerned. One is a producing nation on oil, and the other is a consuming nation on oil.

In the past, in Washington, whenever there was an argument about energy, the oil companies won. They had the best lobbyists; they were the most effective; they were well-organized; and nobody ever challenged them, until 2 years ago. And now there's an aroused interest on the part of the coal industry and other energy-producing areas, and also consumers.

We've made good progress. We've already cut our potential imports of foreign oil by 4 million barrels—got still a long way to go. But if we don't get the windfall profits tax passed on the oil companies, we won't have a synthetic fuels program; we won't have a conservation program; we will not have a program to help poor families overcome a high energy cost in their homes. We will not have an ability to change over into coal-burning plants instead of oil-burning plants. The whole thing depends on action by the Congress.

I predict to you that we will win this fight. But it's not a sure thing. And I hope that all of you realize that it's not the time for scapegoats or to blame me for what I've not done or what my predecessors have not done. Now's the time for us to marshal our efforts. And I believe that we can be just as successful in Ohio coal areas with new uses and presently known uses as we have been in steel—

perhaps even more. But it's going to require that same degree of cooperation.

I'll do the best I can, but I really need for all of you to help me with this challenge to the oil companies. They do not want to see the windfall profits tax passed. They want to keep all the money themselves. They have not earned the money. We need that money for other purposes, including coal.

Help me. We'll prevail. And I think that you will see inevitably the present unemployment rate in the coal mining area go down sharply.

NUCLEAR ENERGY

Q. Hi. I like your smile. I'm Peggy Wilt from Bratenahl, Ohio, and I have an energy-related question. But first I'd like to ask you another question. I believe in your commitment to the people of the United States and to the people of Ohio to hear them out. And on September 8 and 7, hundreds of telegrams were sent to you from the tiny village of Bratenahl, and I'm wondering if you're intending to respond to the people there.

My energy-related questions are, since it appears that uranium ore located in the United States will probably be depleted between 1985 and 1990, and since the Federal Government is still encouraging the building of nuclear powerplants, will not the United States become doubly dependent on foreign sources of energy? And also, would you support the creation of a nuclear ombudsman program?

Thank you.

THE PRESIDENT. I will reply to the telegrams.

We will not see our uranium supplies depleted anytime this century. We've got enough uranium to last us probably through the next century.

Until the Kemeny report is in to me—

and that'll be later on this month—concerning the causes of the incident that we had at the Three Mile Island plant in Pennsylvania, it will not be possible for us to make a policy decision on the use of nuclear power in the future.

We want to be sure that as nuclear power is an integral part of our energy production society now, that it will be in the future, but the design of plants, the training of personnel, the operation standards, the modification of existing plants will be adequate to reassure the people that they are safe.

I was in Connecticut earlier this morning. About 60 percent of all their electricity comes from nuclear powerplants; in Chicago, more than 50 percent. We can't close down those nuclear plants, but we need to make them safe.

I think that other nations will move much more aggressively and quickly toward the dependence on nuclear power than we will in order to escape from dependence on OPEC oil. Because we are so fortunate—we have geothermal supplies; we have natural gas supplies; we have enormous coal supplies; we have very good crude oil supplies in our country; we've got the highest developed scientific and technology base to move into new areas, like photoelectric cells and so forth, of any country on Earth; and we've got a free enterprise system and free people who can be innovative and show a lot of initiative on our own to deal with changing circumstances.

So, I would say that we are very likely to escape any sort of major disappointment or increasing dependence on the OPEC countries in the future. I think if we work together, the plan that I've laid out to the Congress will work and we will be successful. I don't have any doubt about that.

Q. What about the nuclear ombudsman program? Would you support something like that?

THE PRESIDENT. Yes. I think that at this moment the Kemeny Commission, which has got full authority from me, is looking into the entire nuclear question. At the end of that, I will assess their recommendations and then make a full report to the American people about what I will and will not do. The ombudsman idea is a good one. But let me reserve judgment on making that promise to you. There will be someone in the Government at a high and identified level who will be responsible for answering any questions asked about nuclear power or resolving any problems that exist for an American citizen concerning nuclear power, or receiving suggestions on how the use of nuclear power can be made more acceptable. Whether we call it a separate ombudsman, I can't say yet.

COAL AND ENVIRONMENTAL STANDARDS

Q. President Carter, I'm Sondra Downend from Orville, Ohio. I'm the wife of a small coal mine operator, and I'm the secretary and bookkeeper for our company. We spent 2 months without shipping coal, and I spent a lot of sleepless nights and sent you lots of letters. I got one back from the Department of Energy that spoke of Federal leases on Federal land and spoke of western coal. But my letter came from Ohio. And I wasn't interested in western coal, nor federally leased lands.

You talked about how slow Ohio was in presenting their clean air act. And I spoke with them because I was interested in next month what's going to happen to our mine, because we're afraid that we won't have any place to ship our coal. And in talking with them, he told me that they felt that the Federal law was too restrictive and they didn't have proof.

So, they wanted to take their time and not make the mistakes the Federal bureau had made and that they had made in the past, and go very slow and do their modeling and their monitoring and measuring. He told me of places that they have in the State of Ohio where they measure the air control. And they have measured the air quality from utilities and other industries, and they feel that Ohio can still burn the high-sulfur coal and still come within the numbers required by the Federal EPA.

And, I'd like to ask, then—the Ohio EPA that I talked to was so certain that their plan now meets everything the Federal would require of them, I would like to ask, why won't the Federal EPA approve Chapter 3745-18 of the Ohio Administrative Code and allow the utilities to burn the high-sulfur coal?

And this is something that is causing a great deal of concern to us, a lot of anxiety. We're trying to stay in business. We're trying to ship the coal. We lost our orders to Ohio Edison because of the high sulfur in our coal. We have two customers now. And in meeting with the Wash plant, they tell us that next month they don't know if they'll be able to take our coal or not because of the Clean Air Act.

THE PRESIDENT. Let me try to answer as best I can. [Representative] Doug Applegate is coming to Washington Friday morning at 10 o'clock to meet with my staff and some members from EPA and the Department of Energy. Doug, could you bring her with you to Washington?

Q. Thank you. I love ya.

THE PRESIDENT. I think the obviously sincere way that you've described the problem and asked the question would be very helpful to us in Washington.

Q. I'll do everything I can. [Laughter]

THE PRESIDENT. Secondly, let me point out to you that I'm not trying to criticize

the State of Ohio; I don't want anybody to get that impression. But, you know, with a given Federal law which the Congress is highly unlikely to change, it's much more advantageous for you and for your husband and for your coal mine to have a cooperation between the Federal and State Government, as we have in all the other 49 States, rather than to have a continued confrontation. And I believe that the best thing to do to alleviate problems and to make sure we've got a real local input when a decision is made is to have the Ohio environmental program approved and implemented. If there are some differences between the Federal requirements under the law and Ohio will just have to—

Q. Just work them out.

THE PRESIDENT. —they'll just have to work them out, or Ohio will have to amend it's proposal.

But it doesn't help anything for 2½ years to go by and for Ohio still to maintain, "We don't like the Federal law, therefore we're not going to comply." What it means is that there's no State input, and you're faced with well-meaning people from Washington who are trying to administer that law. In all the other States, we've got State people who understand your problems much better—who might know you personally—working alongside of the Federal administrators to ensure compliance.

So, I believe that if you will come to Washington and meet with Stu Eizenstat and others and also use your influence to encourage the State of Ohio and I'll encourage EPA to work together, we'll make a great stride forward.

That's one of the reasons, by the way, that I wanted to come to Steubenville. It's not an accident that I came here. I'm proud of what we've done in steel. I'm concerned about what we have not yet accomplished on coal, and you are a

highly motivated, very knowledgeable group about both these areas of American life. And I think your kind of question is very helpful to me as President. It'll be helpful to you and your coal mine in a personal way; I think it'll be helpful to the whole country, and I thank you for it.

COAL PRODUCTION

Q. Mr. President, my name is Bob Houston, and I'm a UMWA coal miner from Local Union 1810. Effective August 31, as Larry Bussey's told you, our mine was shut down. But in your energy message you have declared the moral equivalent of war in your energy policy, and coal was included in that policy.

However, in the State of Ohio, mines are being shut down because of the U.S. EPA standards. I have attended these EPA hearings; I've testified, as well as many other coal miners. And we have always stated that we thought that the answer, the solution to this problem was a compromise. But we seem—our words have never been heard, because our mine shut down and there are approximately 5,000 coal miners laid off in the State of Ohio. And what we would like to know is, when can we expect some concrete solutions to these sulfur dioxide problems, and to get 5,000 coal miners back to work and the energy program on the road to make us energy independent from foreign oil sources?

THE PRESIDENT. I don't think I need to repeat what I've already said about the proposal. But let me make one point more clear.

My proposing an energy policy to the Congress is just the first step. Until the Congress adopts it, we don't get the benefits from it. And the Congress has not yet passed a single line of legislation concerning oil because of the power in the past of the oil companies. I think now it's about

an even contest in the Congress, in Washington, between the oil companies' influence and the influence of the rest of the country. I'm not particularly trying to criticize the oil companies, but the fact is that the Congress has not yet acted on the energy proposal that I described Monday morning in Kansas City after my Sunday night address. As soon as the Congress acts, we'll have all the benefits that I described then for the increased use of coal.

In the meantime, we've got to depend on two things—conservation and shifting away from fuel oil use onto the use of coal. That will help a great deal. The President's Coal Commission had some good recommendations. One, which has already been approved by EPA, by the way, is to transform a hundred electric utility companies away from using oil to the use of coal. And every time in our whole Nation you start using more and more coal, you create more and more jobs for United Mine Workers, and I believe we make that progress. But this cannot be done instantaneously, because it's been too long in getting America aroused about energy.

I made that speech about the moral equivalent of war in April of 1977, and as you probably noticed, the news media mostly made fun of it—there was a lot of fun made of it—and said that it's too serious, we're just not going to get serious. It was really this summer, when the gas lines started developing in California and on the east coast, that the people got aroused. You, as a coal miner, have been aroused for a long time.

I think the settlement that was made between UMW and the coal operators is a very major step forward. I'm not trying to predict what's going to happen in the future. I'll knock on wood. But the shut-down and the uncertainty of delivery of coal has now been substantially alleviated,

and people who want to depend on coal permanently don't have to worry about frequent interruptions of production. I think it's a much more stable industry. That's been accomplished in the last 2 years.

We are making progress, got a long way to go, but I feel like you and I are partners in making that progress. I'll help you if you'll help me.

Q. You have my help, sir.

THE PRESIDENT. That's a deal.

RENEWABLE ENERGY SUPPLIES

Q. Hello, Mr. President. I'm Peter McGee from Steubenville, Ohio. I'm a social studies instructor at the Jefferson County Joint Vocational School, and I asked my students to submit to me some questions that they would ask you of energy. And I picked one from here to ask you.

This is from a student named David Ramsey. He would like to know, why isn't gasohol and other agricultural fuels being researched and used more extensively?

THE PRESIDENT. It is being researched, and it is being used more extensively than it was 3 months ago or 6 months ago or 12 months ago or 2 years ago. There's a great deal of interest in gasohol and other energy from so-called biomass, replenishable supplies.

Biomass is a resource in our country that's not yet been tapped, except to a very minor degree. It consists of growing things and what energy you can get from those products.

I'll give you one example. Georgia has about 65 percent of its area covered with trees. We produce in Georgia just with growing trees three times as much energy as we use, all put together. And when we harvest pine trees to make lumber and paper pulp, and so forth, we presently waste in some plots of timberland one-

half of all the parts of a tree that we don't use now. So, we've got a potential there to produce energy from growing plants.

One obvious example is gasohol, where you make ethanol from corn—you can use other products as well—mix it with gasoline, and make gasohol. There's a great deal of interest in it. We are encouraging that in every possible way with research and development.

The Iowa legislature, for instance, has passed a bill that encourages individual farmers to put in a gasohol plant on their farm. At first it would be too expensive to use sound, marketable grain for the production of ethanol. Good corn costs too much. But the waste corn, the corn that's been contaminated with crotalaria seeds or with weevils or that has rotted, and so forth, is very good for making ethanol. And in Iowa, in many communities, you can go there and buy gasohol.

We have no Federal tax on gasohol. The total amount of present supplement in a gallon of ethanol is about \$60 a barrel. It's good that we are interested in it. In other countries, like Brazil, they use, I think, cassava roots, which are grown very cheaply and which have a very high substance to them. And about 10 percent of all their fuel in automobiles is presently alcohol from those cassava roots, or from sugarcane byproducts. We are moving in that direction very rapidly.

Gasohol will be a major industry, in my opinion, in this Nation in the future.

ENERGY-EFFICIENT AUTOMOBILES

Q. My name is Bill Lane, and I'm from Wheeling, West Virginia. And, Mr. President, my question: Although the large, poor mileage automobiles are not selling very well right now, I think that when the gasoline becomes more available, I'm afraid that people are going to

start buying them again. I just wonder if you favor any heavy luxury tax to put on these cars.

THE PRESIDENT. No, I don't think it's going to be necessary. I don't believe that we will ever see a time in our Nation when gasoline is both plentiful and cheap. And the problem that we have now in our automobile production industry—with GM and Ford and Chrysler and American Motors—is that they have not shifted toward a more efficient automobile.

Chrysler today is in serious trouble. They could sell hundreds of thousands of small Chrysler automobiles if they had planned accordingly, but they've insisted on producing the large, so-called gas-guzzling automobiles. I don't think we'll ever go back to a time in the future when those large, inefficient automobiles are popular.

I had a meeting, within the last month, with Tom Murphy, who's the president—or chairman of the board of General Motors. In the past, they have fought the requirement of more efficient automobiles, that they would have to have 27½-miles-per-gallon average by 1985. He came to tell me that they're giving up that fight; they're going to meet that standard and then some. And this year, we'll have an average nationwide of 1-mile-per-gallon more efficiency just because the American public is more energy conscious and is shifting toward the smaller and more efficient automobiles.

What I would like to do is to see American producers of automobiles stay with the efficient cars. And I believe we can meet anybody in competition and therefore cut down the dependence that Americans presently have on imports.

I believe that's the avenue of the future. I don't believe that we will go back, in the American preference, for the large, gas-guzzling, inefficient automobiles. So,

I don't think we'll need any luxury tax on them. We've got standards now that they'll meet. I think the American industry, American free enterprise system, can meet this challenge and have new prosperity and keep our United Automobile Workers employed and also meet the needs of the American people.

There's a change taking place in our country, and if you will think back 2 or 3 years ago at your habits and what bothered you and what questions you asked political leaders and what you wrote Congress about and what you heard discussed in the evening news, now it's completely different. Our country has become aware of the fact that for the first time we have a limit on what God has given us and what we have a right to waste.

I believe that conservation is not an unpleasant chore for Americans, but is an exciting and enjoyable opportunity. It is a challenge, yes, but it tests American ingenuity and commitment on an individual basis. Everybody in here can help with conservation. If you will, in your own home, sit down with your children, your 6-year-old children, or your grandmother and say, "What can we do in our family to save energy in our driving habits, in our homes, in our jobs" and just make a list of the things you can do.

Every time you save energy, you save money. Every time you save energy, you cut down on the cost of the energy that you are using, because you have less competition for it and the price is going to be cheaper. And every time you save energy, you're doing a patriotic thing. And in a test like this, which took place in World War I, World War II, the Great Depression, there's a tendency for divided Americans to be unified. Families will be closer together; communities will be closer together; our Nation will be more united.

I have no doubt in my mind at all that we can meet any challenge with the ingenuity and the commitment and the courage and the freedom and the cooperation and the free enterprise system of our Nation.

And I would like to remind you in closing that our Nation is so great, it's so powerful, it's so strong. We're so blessed that we're still the strongest nation on Earth militarily—no one can challenge us there. We're the strongest nation on Earth economically. We're the strongest nation on Earth politically. We're the strongest nation on Earth morally, ethically, and we have the greatest freedom. And when we talk about problems—with the coal mine shutdown, serious; with the steel industry challenge, serious; with increased inflation, serious, yes—but we're the kind of people that can meet those serious challenges.

I just want us never to forget the blessings that God has given us in the greatest nation on Earth. Let's keep it that way. I will if you will.

Thank you.

NOTE: The President spoke at 3:05 p.m. in the Steubenville High School auditorium.

Following the townhall meeting, the President attended a reception for Democratic State representatives and officials of the State Democratic Party at the Fountain Restaurant in Steubenville.

Department of Energy

Nomination of George M. Fumich, Jr., To Be an Assistant Secretary. September 12, 1979

The President today announced his intention to nominate George M. Fumich, Jr., of Arlington, Va., to be Assistant Secretary of Energy for Fossil Energy. Fumich is the first person nominated for this position.

He is currently Program Director for Fossil Energy at the Energy Department.

Fumich was born December 8, 1917, in Calamady, Pa. He received an A.B. from West Virginia University and a J.D. from West Virginia University College of Law in 1948.

From 1948 to 1961, Fumich was an attorney for the Christopher Coal Co. in Osage, W. Va. From 1961 to 1963, he was Director of the Office of Minerals Exploration at the Department of the Interior.

From 1963 to 1975, Fumich was Associate Director, then Director, of the Office of Coal Research. He was on the senior staff in fossil energy at the Energy Research and Development Administration from 1975 until 1977, when ERDA was merged into the Department of Energy and he assumed his present position.

Department of Energy

Nomination of Ruth M. Davis To Be an Assistant Secretary. September 12, 1979

The President today announced his intention to nominate Ruth M. Davis, of Silver Spring, Md., to be Assistant Secretary of Energy for Resource Applications. She would replace George S. McIsaac, who has resigned.

Davis is Deputy Under Secretary of Defense for Research and Advanced Technology.

She was born October 19, 1928, in Sharpsville, Pa. She received an M.A. and Ph. D. from the University of Maryland.

Davis was a lecturer at the University of Maryland from 1955 to 1957, and at American University from 1957 to 1958. From 1958 to 1961, she was in research management at David Taylor Model Basin.

From 1961 to 1965, Davis was involved in research management at the Defense Department. From 1967 to 1970, she was director of the Lister Hill National Center for Biomedical Communications and Associate Director for Research and Development at the National Library of Medicine, National Institutes of Health. Since 1977 she has been Deputy Under Secretary of Defense.

Department of Energy

Nomination of John C. Sawhill To Be Deputy Secretary. September 12, 1979

The President today announced that he will nominate John C. Sawhill, of New York City, to be Deputy Secretary of Energy. He would replace John O'Leary, resigned.

Sawhill is president of New York University.

He was born June 12, 1936, in Cleveland, Ohio. He received an A.B. from Princeton University in 1958 and a Ph. D. from New York University in 1963.

Sawhill was with Merrill, Lynch, Pierce, Fenner & Smith in Washington from 1958 to 1960, and was associate dean of New York University School of Business Administration from 1960 to 1963. He was director of credit research and planning for Commercial Credit Corporation in Baltimore from 1963 to 1965.

From 1965 to 1968, Sawhill was senior associate with McKinsey & Company in Washington. He returned to Commercial Credit from 1968 to 1973 as senior vice president for planning.

In 1973 and 1974, Sawhill was Associate Director of the Office of Management and Budget for Natural Resources, Energy and Science. He was with the Federal Energy Administration in 1974

as Deputy Administrator, then Administrator. He has been president of New York University since 1975.

sistant Secretary, then as Principal Deputy Assistant Secretary for Program Analysis and Evaluation.

Department of Energy

Nomination of William Walker Lewis To Be an Assistant Secretary. September 12, 1979

The President today announced his intention to nominate William Walker Lewis, of Washington, D.C., to be Assistant Secretary of Energy for Policy and Evaluation. He would replace Alvin L. Alm, who is resigning.

Lewis is Principal Deputy Assistant Secretary of Defense for Program Analysis and Evaluation.

He was born March 29, 1942, in Roanoke, Va. He received a B.S. in physics from Virginia Polytechnic Institute in 1963 and a Ph. D. in theoretical physics from Oxford University in 1966.

From 1966 to 1969, Lewis was with the Office of the Assistant Secretary of Defense (Systems Analysis), where he served as Director of the NATO and General Purpose Force Analysis Division, and Director of the Strategic Concepts, Command and Control Division. From 1969 to 1971, he was associate provost for resource planning and a lecturer in public and international affairs at Princeton University.

From 1971 to 1973, Lewis was director of the office of analytical studies at the University of California at Berkeley. From 1973 to 1977, he was with the World Bank, serving as senior operations officer of the Industrial Development and Finance Division, Eastern Africa Region, and senior programming officer of the Programming and Budget Department.

In 1977 Lewis joined the Defense Department and served briefly as Deputy As-

Department of Energy

Nomination of Hazel Reid Rollins To Be Administrator of the Economic Regulatory Administration. September 12, 1979

The President today announced his intention to nominate Hazel Reid Rollins, of Washington, D.C., to be Administrator of the Economic Regulatory Administration, Department of Energy. She would replace David Bardin, who is resigning.

Rollins has been with the Washington accounting firm of Coopers & Lybrand since last May, as a firm principal for energy.

Prior to joining Coopers & Lybrand, she was Deputy Administrator of the Economic Regulatory Administration.

Rollins was born May 17, 1937, in Newport News, Va. She received a B.A. from Fisk University in 1959 and an LL.B. from Rutgers University Law School in 1966. After graduation from law school, she served as deputy attorney general for the State of New Jersey, as coordinator of the Community Action Workshop in Newark, as assistant director of the Essex County Legal Services Corporation, and as assistant prosecutor in Essex County. She also maintained a private law practice.

Rollins joined the Federal Government in 1972, serving at the Cost of Living Council as Director of the Self-Administered Industries Division, as deputy to the counselor to the Director, CLC, and as Director of the Public Services Division.

From 1974 to 1976, she was Director of the Office of Consumer Affairs/Special Impact in the Federal Energy Administra-

tion (FEA). She left that position to become General Counsel of the Community Services Administration, and returned to the FEA in 1977 as Assistant Administrator for Conservation and Environment.

The FEA was merged into the Department of Energy on October 1, 1977.

Department of Energy

Nomination of Edward Allan Frieman To Be Director of the Office of Energy Research.
September 12, 1979

The President today announced his intention to nominate Edward Allan Frieman, of Princeton, N.J., to be Director of the Office of Energy Research, Department of Energy. He would replace John M. Deutch, who has resigned.

Frieman is deputy director of the Princeton University Plasma Physics Laboratory and professor of astrophysical sciences at Princeton University.

He was born January 19, 1926, in New York City. He received a B.S. in engineering from Columbia University and an M.S. and Ph. D. in physics from the Polytechnic Institute of Brooklyn. During World War II, Frieman served with the U.S. Navy and participated in the Bikini A-bomb tests. After the war, he taught at the Polytechnic Institute of Brooklyn.

In 1952 Frieman joined Princeton University's controlled thermonuclear research project, now known as the Princeton University Plasma Physics Laboratory. In 1953 he was appointed the head of the laboratory's theoretical division. In 1964 he was awarded a National Science Foundation senior postdoctoral fellowship and assumed the position of associate director of the Plasma Physics Laboratory. In 1970 he received a John Simon Guggenheim Fellowship.

Frieman has served as a consultant to

a number of government agencies, and is the author of numerous articles in scientific journals, particularly in the areas of MHD theory, statistical mechanics, plasma transport theory, and plasma stability.

Embargo Regulations Under the Trading With the Enemy Act

Memorandum From the President.
September 12, 1979

*Memorandum for the Secretary of State,
the Secretary of Treasury*

Subject: Determination Extending the Exercise of Certain Authorities Under the Trading With the Enemy Act

Under Section 101(b) of Public Law 95-223 (91 Stat. 1625; 50 U.S.C. App. 5 note), and a previous Determination made by me on September 8, 1978 (43 *Fed. Reg.* 40449 (1978)), the exercise of certain authorities under the Trading With the Enemy Act is scheduled to terminate on September 14, 1979.

I hereby determine that the extension for one year of the exercise of those authorities with respect to the applicable countries is in the national interest of the United States.

Therefore, pursuant to the authority vested in me by Section 101(b) of Public Law 95-223, I extend for one year, until September 14, 1980, the exercise of those authorities with respect to those countries presently affected by: (1) the Foreign Assets Control Regulations, 31 CFR Part 500, (2) the Transaction Control Regulations, 31 CFR Part 505, (3) the Cuban Assets Control Regulations, 31 CFR Part 515, and (4) the Foreign Funds Control Regulations, 31 CFR Part 520.

The extension of the authorities with respect to the People's Republic of China

is in connection with implementation of the Agreement Concerning the Settlement of Claims entered into between the Government of the United States and the Government of the People's Republic of China on May 11, 1979.

This Determination shall be published in the **FEDERAL REGISTER**.

JIMMY CARTER

[Filed with the Office of the Federal Register, 12:16 p.m., September 12, 1979]

Embargo Regulations Under the Trading With the Enemy Act

Letter to the Speaker of the House and the President of the Senate. September 12, 1979

Dear Mr. Speaker: (Dear Mr. President:)

Today I issued a Determination that the extension for one year of the authorities currently exercised under Section 5(b) of the Trading With the Enemy Act, 50 U.S.C. App. 5(b), with respect to the countries indicated below, is in the national interest. This Determination was issued pursuant to Section 101(b) of Public Law 95-223, December 28, 1977, 91 Stat. 1625.

The Foreign Assets Control Regulations, 31 CFR Part 500, prohibit persons subject to the jurisdiction of the United States from engaging in unlicensed commercial or financial transactions with North Korea, Vietnam, Cambodia or nationals of these countries. The Regulations prohibit importation or dealing in merchandise of these countries or transactions in blocked assets of these countries or their nationals absent a license from the Office of Foreign Assets Control, Department of the Treasury.

In the case of the People's Republic of

China (PRC), Chinese assets have remained blocked under the Regulations but current commercial or financial transactions are authorized except for the control of strategic items.

On December 15, 1978, I announced that the United States and the PRC had agreed to recognize each other and to establish diplomatic relations as of January 1, 1979. As part of our resumption of normal relations, the United States and the Government of the PRC entered into an Agreement Concerning the Settlement of Claims, signed on May 11, 1979.

Under the Agreement, the Government of the PRC agreed to pay to the Government of the United States \$80.5 million in settlement of claims of United States nationals arising out of expropriation losses in China. The Government of the PRC will pay \$30 million of the total on October 1, 1979, and the remainder in five equal annual installments.

Under the Agreement, the United States will unblock Chinese blocked assets by October 1, 1979. Along with the general unblocking of Chinese assets, the United States will impose a twelve-month moratorium on the transfer of blocked Chinese assets to state custodians of abandoned property under state laws providing that abandoned or unclaimed property is to be transferred to their custody. The moratorium is designed to facilitate Chinese recovery of this class of assets.

The Transaction Control Regulations, 31 CFR Part 505, are Treasury regulations which prohibit U.S. persons from engaging in unlicensed sales of strategic goods located abroad to almost all Communist countries.

The Cuban Assets Control Regulations, 31 CFR Part 515, are parallel to the Foreign Assets Control Regulations in content. However, foreign subsidiaries of U.S. firms may engage in certain non-strategic

types of trade with Cuba under Treasury license.

The Foreign Funds Control Regulations, 31 CFR Part 520, continue to block the property of Czechoslovakia and the German Democratic Republic pending a claims settlement of private American property following World War II. The Regulations also continue to block such assets of Estonia, Latvia, and Lithuania as a reflection of the U.S. policy of nonrecognition of the forcible incorporation of those countries into the USSR.

I have determined that the authorities for these four regulatory programs should be extended because the results attendant upon the lapse of these authorities would be unacceptable in light of present U.S. foreign policy objectives. Their extension would be in the national interest of the United States for the following reasons.

(1) Current trade and financial embargoes against Cambodia, Cuba, North Korea, and Vietnam should continue until such time as the policies of those countries make it appropriate for us to modify our restrictions on trade and financial transactions with those countries.

(2) The Transaction Control Regulations are needed to support controls to which we have agreed with our allies with respect to the export of strategic goods to Communist countries.

(3) Freezing of Vietnamese and Cuban assets and controls over the remaining World War II assets of the German Democratic Republic and Czechoslovakia should continue until American claims against these countries are settled. Controls over the remaining World War II assets of the Baltic States should continue as a reflection of the U.S. policy of nonrecognition of the forcible incorporation of these countries into the USSR.

(4) To implement the US-PRC Claims/Assets Agreement, authority for

administration of blocked PRC assets should continue through the period of the extension of the authorities.

In light of these considerations, pursuant to Public Law 95-223, I have extended the exercise of these authorities for another year, until September 14, 1980.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Walter F. Mondale, President of the Senate.

United Nations Day, 1979

Proclamation 4684. September 13, 1979

*By the President of the United States
of America*

A Proclamation

Thirty-four years after its founding "to save succeeding generations of mankind from the scourge of war", the United Nations remains mankind's last best hope for building a world community based on justice, tolerance for diversity and respect for the rule of law.

The United Nations has no magic formula for solving the increasingly complex problems of our revolutionary age. Yet it remains the symbol, and the standard, of mankind's desire to turn away from ancient quarrels and live in a world in which all people can share in the fruits of prosperity and peace.

More than ever, the international community is challenged by problems of global dimension which can be solved only through world-wide cooperation and dialogue. The 100 new nations which have joined the United Nations since its

founding are a symbol of the increasingly complex and diverse world which the United Nations confronts today.

Protecting international peace and security is still the United Nation's greatest contribution and responsibility, but that political stability is only the precondition for fulfilling the larger aspirations of mankind. For all its imperfections, the United Nations remains the principal forum for the pivotal dialogue among the nations of the world on constructing a more stable, equitable, and productive economic order. It plays a leading role in the global management and allocation of vital natural resources. It offers an increasingly important channel for providing development assistance to many nations in the world. It offers a forum, and often a timely and effective mechanism for protecting basic human rights. The leadership of the United Nations in responding to the present refugee crisis, and the recent Geneva Meeting on that problem, represents one of the proudest examples of that world body's ability to harness world cooperation in the cause of human dignity.

The United States has historically been one of the United Nations' most active and dedicated supporters, and I have been proud to continue and expand on that support as President. Not a single day goes by when we in the United States do not call upon the United Nations, or one of its affiliates, to help deal with a problem of global dimensions. I join with many other Americans and citizens of all nations in expressing my sincere support for this unique world body on the thirty-fourth anniversary of its founding.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate Wednesday, October 24, 1979, as United Nations Day. I urge all Americans to use this day as an

opportunity to better acquaint themselves with the activities and accomplishments of the United Nations.

I have appointed O. Pendleton Thomas to serve as 1979 United States National Chairman for United Nations Day, and the United Nations Association of the U.S.A. to work with him in celebrating this very special day. And I invite all the American people, and people everywhere, to join me on this thirty-fourth anniversary of the United Nations, in strengthening our common resolve to increase its effectiveness in meeting the global challenges and aspirations that we all share.

IN WITNESS WHEREOF, I have hereunto set my hand this thirteenth day of September, in the year of our Lord nineteen hundred and seventy-nine, and of the Independence of the United States of America, the two hundred and fourth.

JIMMY CARTER

United States Ambassador to Ghana

*Nomination of Thomas W. M. Smith.
September 13, 1979*

The President today announced that he will nominate Thomas W. M. Smith, of Readfield, Maine, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Ghana. He would replace Robert P. Smith, who has transferred to another position.

Smith has been Director of the Office of West African Affairs at the State Department since 1975.

He was born April 18, 1930, in Boston, Mass. He received an A.B. from Harvard

College in 1951, a B.A. (1953) and M.A. (1956) from Cambridge University, and an M.A. from the University of Wisconsin in 1970. He served in the U.S. Marine Corps from 1953 to 1956.

Smith joined the Foreign Service in 1956 and was posted in Tunis, Paris, and Lagos. From 1968 to 1971, he was Chief of the Division of United Nations Economic Affairs, then an international economist at the State Department. In 1971-72 he attended the National War College.

From 1972 to 1975, Smith was economic and commercial officer in London.

Board for International Broadcasting

Nomination of Thomas H. Quinn To Be a Member. September 13, 1979

The President today announced that he will nominate Thomas H. Quinn for reappointment as a member of the Board for International Broadcasting.

Quinn, 41, has been a member of this Board since 1974. He is a general partner in the Minneapolis-Washington law firm of O'Connor & Hannan, specializing in the field of administrative practice with emphasis on financial institutions policy matters.

Chief of Protocol for the White House

Nomination of Abelardo Lopez Valdez for the Rank of Ambassador. September 13, 1979

The President today announced that he intends to nominate Abelardo Lopez Valdez for the rank of Ambassador while

serving as Chief of Protocol for the White House.

Valdez has served as Assistant Administrator of the Agency for International Development (AID) for Latin America and the Caribbean since 1977.

He was born August 31, 1942, in Floresville, Tex. He received a B.S. in civil engineering from Texas A&M College in 1965, a J.D. from Baylor Law School in 1970, and an LL.M. from Harvard Law School in 1974.

Valdez served in the U.S. Army as a lieutenant from 1965 to 1967, and served as military aide to President Johnson for that period. He was an attorney for the Federal Power Commission from 1970 to 1971 and for the Overseas Private Investment Corporation from 1971 to 1973. Valdez served as General Counsel of the Inter-American Foundation from 1973 to 1975. He was a partner in the Washington law firm of Purcell, Hansen & Valdez from 1975 to 1977. In 1977 he also was a member of the faculty of the John F. Kennedy Institute of Politics at Harvard University, where he taught a seminar on critical issues in U.S.-Latin American relations.

Secretary of the Navy

Nomination of Edward Hidalgo. September 13, 1979

The President today announced his intention to nominate Edward Hidalgo, of Washington, D.C., to be Secretary of the Navy. He would replace W. Graham Claytor, Jr.

Hidalgo has been Assistant Secretary of the Navy for Manpower and Logistics since 1977.

He was born October 12, 1912, in Mexico City, Mexico, and has been a U.S. citizen since early childhood. He received a B.A. from Holy Cross College in 1933 and a J.D. from Columbia Law School in 1936. In 1959 he received a degree in civil law from the University of Mexico. He served as a lieutenant in the U.S. Naval Reserve from 1942 to 1946.

Hidalgo served as a law clerk to the Second Circuit Court of Appeals in 1936 and 1937, and was an associate with the law firm of Wright, Gordon, Zachry & Parlin (Cahill, Gordon & Reindel) from 1937 to 1942. From 1942 to 1943, he was assigned to the State Department as a legal adviser to the Ambassador to the Emergency Advisory Committee for Political Defense in Montevideo.

From 1943 to 1945, he served as an air combat intelligence officer on the carrier *Enterprise*, and he was a member of the Eberstadt Committee, which reported to the Secretary of the Navy on unification of the military services in 1945. In 1945 and 1946, he served as Special Assistant to the Secretary of the Navy.

From 1946 to 1948, Hidalgo was a partner with the law firm of Curtis, Mallet-Prevost, Colt & Mosle, in charge of their Mexico City office. He was a founder in 1948 and a senior partner until 1965 in the Mexico City law firm of Hidalgo, Barrera, Siquieros & Torres Landa.

From 1965 to 1966, Hidalgo was a Special Assistant to the Secretary of the Navy, and from 1966 to 1972, he was a partner in the law firm of Cahill, Gordon & Reindel, in charge of their European office. In 1972 he served as Special Assistant for Economic Affairs to the Director of USIA, and from 1973 to 1976, he was General Counsel and Congressional Liaison of the Agency.

National Employ the Handicapped Week, 1979

Proclamation 4685. September 13, 1979

By the President of the United States of America

A Proclamation

The past decade has been marked by significant advances for handicapped people.

Such laws as the Rehabilitation Act of 1973 protect many handicapped individuals from discrimination in employment and services. Handicapped workers have made great progress in entering the job market, and those already in the labor force are moving up to better jobs. More of our Nation's buildings and public transportation systems are being made accessible. Many handicapped individuals have been moving out of institutions into homes, apartments, and community facilities which facilitate independent living. As handicapped individuals move into the mainstream of society, more and more of their fellow citizens are overcoming their prejudices and seeing handicapped individuals as people.

Yet much remains to be done. Many qualified handicapped people, including many disabled veterans, are unemployed or underemployed, and others are not promoted because of discriminatory attitudes rather than an inability to perform. Many buildings still have thoughtless architectural barriers that prevent handicapped persons from getting jobs and education. Public transportation is still not available to all handicapped individuals.

This country needs the creativity, skill and participation of all our citizens. To affirm our commitment to equality for the handicapped members of our society,

the Congress, by joint resolution of August 11, 1945, as amended (36 U.S.C. 155), has called for the designation of the first full week in October each year as National Employ the Handicapped Week.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate the week beginning on October 7, 1979, as National Employ the Handicapped Week. I urge all Governors, Mayors, other public officials, leaders in business and labor, and private citizens at all levels of responsibility to help remove all barriers which prevent handicapped individuals from obtaining productive employment and from participating fully in other aspects of American life.

IN WITNESS WHEREOF, I have hereunto set my hand this thirteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Welfare Reform Legislation

Statement on Action by the House Ways and Means Committee. September 13, 1979

I congratulate the members of the House Committee on Ways and Means for their favorable action today on welfare reform. I especially commend the leadership and diligence of Chairman Al Ullman and of Representative Jim Corman, chairman of the Public Assistance Subcommittee.

Our Nation can afford to help its most needy, and we can do so with a welfare

system that encourages work, while providing decent levels of assistance for those who cannot work. Our programs can and must be simpler, more efficient, and more equitable. This bill is not the entire or the final solution, but it does make important progress. Combined with the other half of my welfare reform package, which will expand work and training opportunities, Congress itself has a precious opportunity to make welfare reform a reality. We can help millions of people and do so in a fiscally responsible manner.

Welfare reform has been a decade-long legislative struggle, and this important action today is the most positive step in this area in recent years. I applaud the Ways and Means Committee, and urge the other key committees and the Congress as a whole to move promptly to complete action on welfare reform.

Congressional Hispanic Caucus

Remarks at the Annual Dinner. September 13, 1979

Mr. Speaker, Chairman Garcia, distinguished Members of Congress, members of my own administration—both those who speak Spanish and the few who don't—[laughter]:

It is a real pleasure for me as President of our country to be present at this Second Hispanic Caucus Dinner.

I have never known such a small caucus to have so many friends and so much power and so much influence. And the friends, power, and influence are all growing every day, and I'm thankful for it. I'm sure it's because the members of the Congressional Hispanic Caucus have hearts that are pure, and they certainly have a cause that is just.

Mrs. Roybal just told me that Ed ¹ is feeling very well. His message was one of great encouragement to us, and I am looking forward to continuing my work with him as soon as he is released from the hospital, perhaps tomorrow.

Tonight we are enjoying good food, good hospitality, good friendship, good company, and good plans for the future and good memories of the past. But as we gather together in a spirit of celebration and good fellowship, we must never forget that we are here because of something that's larger and much more important.

Everyone in this room is a part of three great struggles, struggles that have defined the history of our time. I'm talking about the struggle for human rights at home and abroad. I'm talking about the struggle for basic social and economic justice, and I'm talking about the struggle for a peaceful Earth.

The actions that I take as President of the United States of America are aimed at advancing, with you, these three great causes. The lives of many in this room have literally been dedicated to these causes. And in these battles, the members of the Congressional Hispanic Caucus have been, as you know, just where they belong, always in the frontlines of the struggle. I've been proud to stand with you for the last 2½ years, and I'm proud that we've stood together in a common cause.

Ed Roybal and his colleagues—Bob Garcia, Baltasar Corrada, and Kika de la Garza, and others who have joined the Spanish Caucus—have made their voices heard far beyond their own districts. They've fought for the rights of all Hispanic Americans, whether their background is Mexican or Cuban, Puerto

Rican, Central American, or South American. They've fought for jobs, for political participation, for better education, and for an end to prejudice, discrimination, and bigotry.

All Americans, not just those who happen to speak Spanish, have benefited from their efforts. And on behalf of all Americans, I thank them, and I thank you.

The road we travel together is long and it is hard, but we are moving. And we are going to keep on moving and keep on pushing until the magnificent ideals of this Nation are a reality for all who live within its borders.

Tonight, I want to report to you very briefly on the progress we have made together within this Government and within this Nation in the cause of liberty, of justice, and of peace.

This Nation was founded on a passionate commitment to basic human rights, but for too many years our Government, our Nation, has seemed to have lost touch with this basic source of strength. It's been said often, and said rightly, human rights begin at home. And I'm determined that the provisions of the United States Constitution and the laws of our land shall apply to all who live within the borders of our country, whether they are citizens or not.

Months ago I urged all the Governors of our country, and I have now signed an order to all of the heads of the departments and agencies in our own Government, directing them to see that undocumented aliens are treated fairly and humanely in every instance. And I'm directing Federal officials to give full cooperation to officials of other nations who seek their help in investigating any allegation of discrimination or deprivation of those basic human rights which we hold so dear.

We have not yet stamped out all the vestiges of bigotry and brutality in our

¹ Representative Edward R. Roybal of California.

country, but we must do so. These have been the goals of Leonel Castillo as Director of the Immigration and Naturalization Service. Leonel has made the INS more efficient and more responsive, so that suffering people, trying to obey the law, would not have to wait years for a simple answer to a basic question. He took on one of the toughest, most thankless jobs there is in the United States, and he did it well. And all of us ought to thank him for it.

I know that Leonel is disappointed at some things which have not yet been done in the not much more than 2 years that he has served so well, but I am very proud of his accomplishments.

For too long both the legislative and the executive branches of Government have ignored our immigration policies and the problems that were building up throughout our land. Undocumented aliens have feared that any solution attempted would be at their expense, and a great many other people have just found it easier not to think about this problem as long as it was others who suffered and not themselves.

Together in the last few months, we have tried to face up to these difficult problems and to seek real solutions. We are making some progress. We've not yet gone far enough. And we are consulting closely with the Mexican Government officials for the first time, and other countries who are involved. And I promise you that this effort which has been initiated so well by Leonel Castillo, by the Immigration and Naturalization Service, will not terminate with his departure. He will continue to help us, and the progress that he started will continue as well.

Some parts of our policy are very controversial—human rights at home also means justice, tempered with mercy.

Last week, I commuted the sentences of the last four Puerto Rican nationalists who attacked President Truman and wounded five Members of Congress more than 25 years ago. I did this for humane reasons.

AUDIENCE MEMBER. Why?

THE PRESIDENT. I'll tell you why. I did this for humane reasons and because I agreed with Congressmen Garcia and Corrada and with Franklin Lopez and others here tonight, that the time that they had served, more than 25 years, was long enough.

I'd like to make it clear that an important principle was involved. These nationalists were imprisoned for criminal conduct, not for their political views. Like other Americans, they're entitled to the freedom of speech guaranteed by the Constitution. And I can say to you that our country is strong enough so that we can honor the principle of freedom of speech, and we need not fear those who speak out with ideas with which we may disagree.

On the important issue of the future status of Puerto Rico, I will support whatever decision is made by the people of Puerto Rico because I believe—[*applause*—]because I feel that Puerto Ricans have enough judgment to make a decision about their own future for themselves, and I will honor their judgment.

We must look now to the present and its needs, and to a better future for all Puerto Rican citizens, whether they live on the island or whether they live here on the mainland. And we seek to fulfill human rights here at home, and we will continue to speak out for human rights abroad.

From the day that I took office, I have sought to place at the top of my agenda and to awaken the conscience of the world

and to bring that conscience about human rights to bear on the world's leaders. We have created an atmosphere that I believe has made significant progress on human rights throughout our hemisphere. Many prison doors have swung open, repression of the poor and the weak and the helpless has been eased in many countries. Democratic government or civilian government has been rescued and has replaced military governments and autocratic governments, where people had little voice.

The struggle for human rights is basic and so is the struggle for the economic and the social justice which permits human beings to enjoy those rights once they have been obtained with dignity. That struggle cannot be won unless the Government of this country, which we love, is peopled with men and women of courage, ability, sensitivity, and the knowledge of the special problems which many of you in this room know so well.

I will have two superb new leaders to help me in the near future. One of them is Abelardo Valdez, who is now administering our AID program and who will soon be the United States Chief of Protocol. The other is a fine man, one of the most competent men I know in government, who happened to have been born in Mexico City, has practiced law there for 19 years, who served our Nation well, and who will now be the Secretary of the Navy of the United States of America, Edward Hidalgo. I think Abelardo and Edward are here. Are they here? Stand up if you will, new Secretary of Navy. He was not only my first choice, he was first choice of the former Secretary of Navy, now the Deputy Secretary of Defense. And I am very proud of you, Edward, and what you've already done for our country.

As you know, in order to advise me on personnel and other important affairs, Esteban Torres, who came here with me tonight, has joined my White House staff. Ambassador Torres has distinguished himself both in government and also as a labor leader.

As United States Ambassador to UNESCO, his ability to make friends was demonstrated by his election to the UNESCO Executive Board. Our country is not always unanimously popular in the United Nations. But when Esteban ran for the Executive Board of UNESCO, out of 130 countries voting, he got 127 votes.

He's going to be giving me advice on many things, one of which is how to get votes. [*Laughter*]

Ambassador Torres is working closely with me, also, on the upcoming visit of President López Portillo of Mexico. And he will make sure that your voice is heard every day when policy is made within the White House. Assisting him will be Gilbert Colon.

All of those that I've named, and many others, are working very closely with our new Attorney General to root out any element of racism or discrimination in our system of criminal justice. And a special advisory committee is being set up, with Esteban's help and the help of the Attorney General, of Hispanic Americans to make sure that this goal, which has not been accomplished in the past, will be accomplished in the future.

We also know that accurate information about our country is a fundamental weapon in the struggle for social justice. In this connection, the 1980 census is a major opportunity and a personal challenge to me and to everyone in this room. If Hispanic Americans are to be full partners in all aspects of American life and to share in its full benefits, we must have an accurate count of how many Hispanic

Americans live in the United States of America.

I have for the first time directed the Census Bureau to hire bilingual census takers, to print questionnaires in Spanish, and to work with community groups and leaders who understand their own community, to encourage cooperation. It's important, because of the sensitivity of some people's lives who live here, that the confidentiality of individual census information will be protected. And I have directed, without equivocation, that this be done.

I cannot look at the individual information, your Congressman cannot look at it, and no other Government agency can look at this individual confidential information that will give us accurate information. An accurate count will mean better Government funding for areas that have a high population of Hispanic Americans and better political representation. And a much larger Congressional Hispanic Caucus will result from better counts of those who live in our country. That in turn will put much more muscle behind the efforts that all of you tonight in this room will espouse for the benefit of those in our country who speak Spanish.

With your help, we've increased funds for bilingual education already, in just a little over 2 years by 50 percent. And I've requested funds for a special program for bilingual vocational education. And I strongly support, by the way, the legislation which has already passed the Senate to give the Southwest Border Commission authority to award construction grants to ease severe overcrowding in schools in the Southwest, in heavily Hispanic areas.

Just as we carry on the struggle for human rights and social justice, we're struggling to build peace and security in

this hemisphere and throughout the world.

In the Western Hemisphere, among our American neighbors, we believe in peace. We believe in a policy of nonintervention. We respect the other American states as equals and as individuals. We work closely with our friends in political and diplomatic matters. We consult closely with them, because we know that their advice, their counsel, their cooperation is crucial to us to make the right decision on the policy and the motivations and the actions of our own Government that affect those who live in the Caribbean, in Central and South America.

We're promoting economic development and building stronger trade relationships. We are committed, along with the other free countries and free peoples of this hemisphere, to minimize the spread of totalitarian and atheistic Communist influence among the free people of this hemisphere.

I'm very proud that we are rebuilding the world's faith in all these and other American commitments.

Together, with a sense of wisdom and of fairness, we fought and we won a victory for peace and for human rights—that was not politically popular with the Panama Canal treaties. The Senate of the United States took courageous action, and you and I, as full partners, were able to do what was right, because we stood together. I believe that this will be recognized in history as an action that spared this half of the world of possible conflict between peoples that have always in the past been friends, but which would have shattered this friendly relationship forever.

The Congress still must take action on the Panama Canal treaties. And I plead

with all of you to use your influence for favorable consideration of the implementation legislation for the Panama Canal treaties, so that we will not be embarrassed by violating the word of honor of our Nation and mistreating the heroic and the generous and the good friends that we have who live in Panama and throughout the southern part of this hemisphere.

In the tragic wake of the recent Hurricane David, the American people responded immediately and with open hearts to the needs of the people of Dominica and the Dominican Republic. Governor Romero and the people of Puerto Rico have been especially helpful. And the people of Miami, under Mayor Ferre's leadership, also deserve our congratulations for their donations of food and medicines for the people of the Dominican Republic.

This month, here in Washington, I will meet with President López Portillo of Mexico, and I expect this meeting to further the balanced relationship that I seek with our near neighbor and our friend.

There are many issues of great importance to both nations that we can only manage—because they have been so long ignored—through continual, careful, and close consultation between the United States and Mexico. We'll be discussing energy and trade and border issues, as well as other matters on which we are now negotiating with the Mexican Government. These negotiations are now and will continue to be frank, fair, and mature. They are conducted within a framework of mutual respect and with a conviction that both nations will benefit from them. That's how it should be, and with your continued support, that's how it always will be.

Our relations with Mexico are among the most important that we have in the

entire world. And I will never let the inevitable problems and differences of opinion that may arise, deflect us from the mutual respect, friendship, cooperation, and sensitive attention to our proper duties which we share with President López Portillo and the Mexican people.

In closing let me say this: These are just a few items on a big agenda, but I know that we can do this together. Our goals are the same—to bring all Americans, no matter in which country we live, into full partnership in every aspect of our lives, with full justice, economic opportunity, and political participation. If that day is to come down, and come down to us soon, we must work together to bring it about. It will not come automatically. I cannot do it alone; no President could. Government cannot do it alone. You cannot do it alone. But together, if we have a common goal, mutual respect, courage, and respect for one another and for the principles that bind us together, we can make it happen.

To close my remarks I would like to use for a few seconds our Nation's second language.

Tenemos que trabajar juntos para garantizar la participación total en todos aspectos de la sociedad americana para todos miembros de la comunidad hispana, para el futuro de nuestros hijos, para el futuro de la comunidad hispana, y para el futuro de nuestra nación. Muchas gracias a todos. [We have to work together to guarantee the total participation in all aspects of the American society for all members of the Hispanic community, for the future of our children, for the future of the Hispanic community, and for the future of our Nation. Thank you very much.]

NOTE: The President spoke at 9:38 p.m. in the International Ballroom at the Washington Hilton Hotel.

Undocumented Aliens

Memorandum From the President.
September 13, 1979

*Memorandum for the Heads of Executive
Departments and Agencies*

*Subject: The Human Rights of Undocu-
mented Aliens*

Protection of the basic rights of all persons in our land is a vital part of our commitment to a just and humane society. This Administration's policy on human rights can only be effective if we assure the rights of all persons in the United States, whether or not they are citizens of this country.

I will continue to enforce vigorously this nation's immigration laws. Those found in violation will be dealt with as the law prescribes. But persons accused of being undocumented aliens must be treated fairly and humanely. No one in our country should be vulnerable to mistreatment or exploitation because he or she is afraid to secure protection of the law.

Since many of the problems in this area are under state and local jurisdiction, I sent letters to the Nation's Governors on May 4, asking for their concern, assistance and advice in dealing with these problems. In those letters, a copy of the text of which is attached, I also described some of the significant efforts the Federal Government has made in this area.

The work of each of your departments and agencies touches upon some aspects of the treatment of undocumented aliens in the United States. I will not dwell on all Government activities in this message but will mention some issues of particular importance.

A number of Federal, or Federally-assisted, social welfare and medical pro-

grams by law must exclude specifically persons who are not citizens or legal permanent residents of the United States. In such cases, I ask that the concerned agencies review their policies and practices in implementing these requirements to ensure that they are clear, equitable, adequately disseminated and understood and compassionately applied within the limits of the law, and that they are carried out with respect for the basic dignity and privacy of all persons concerned.

I urge you to give full cooperation to Consular and other officials of Mexico and other countries who, in the discharge of their duties in the United States, seek your help in investigating possible incidents of abuse involving their citizens. I also ask you to work closely with the Department of State and the working groups of the U.S.-Mexico Consultative Mechanism.

I urge you to continue to keep this Administration's commitments in mind as you develop and carry out your programs and I would particularly welcome your recommendations of possible remedies for additional problems in this area of which you may be aware.

JIMMY CARTER

NOTE: The text of the memorandum was released on September 14.

United Nations

*Nomination of U.S. Representatives and
Alternate Representatives to the 34th
Session of the General Assembly.*
September 14, 1979

The President today announced the nomination of four persons as Representatives and three persons as Alternate Representatives of the United States to the 34th Session of the United Nations Gen-

eral Assembly, to be held in New York beginning September 18. They are:

Representatives

DONALD F. MCHENRY, United States Representative-designate to the United Nations

BENJAMIN S. ROSENTHAL, U.S. Representative from New York

LARRY WINN, JR., U.S. Representative from Kansas

ESTHER L. COOPERSMITH, president of the United States-Egyptian Cultural Committee

Alternate Representatives

RICHARD W. PETREE, Alternate Representative of the United States for Special Political Affairs in the United Nations

WILLIAM L. DUNFEY, president of Dunfee Hotels of Hampton, N.H.

HOWARD T. ROSEN, a Newark, N.J., attorney.

President's Management Improvement Council

Executive Order 12157. September 14, 1979

By the authority vested in me as President by the Constitution of the United States of America, in accordance with the Federal Advisory Committee Act (5 U.S.C. App. I), and in order to improve the management effectiveness of Executive agencies, it is hereby ordered as follows:

1-1. *Establishment of the Council.*

1-101. There is hereby established the President's Management Improvement Council.

1-102. The Council shall be Cochaired by the Director of the Office of Management and Budget and the Director of the Office of Personnel Management. The Council's membership shall consist of representatives from Executive agencies and from the non-Federal sector; such as

business, industry, organized labor, foundations, universities, and State and local governments. The members shall be appointed by the President.

1-2. *Functions of the Council.*

1-201. The Council shall advise the President on significant and critical management problems and issues affecting Executive agencies and Government programs.

1-202. The Council shall work cooperatively with the Comptroller General, senior program management and administrative officials, and Inspectors General to provide advice and guidance on specific management improvement projects involving one or more Executive agencies.

1-203. Where feasible, the Council shall advise the Executive agencies in the development of management systems or management techniques to improve the effectiveness and responsiveness of Federal programs.

1-204. The Council shall advise the Executive agencies of solutions to critical management problems, as well as the constraints on management effectiveness.

1-205. In developing its recommendations, the Council shall utilize the experience of the public and private sectors. The Council shall also identify and facilitate the application to Federal programs of appropriate successful systems and techniques which have been used elsewhere in public and private sectors.

1-206. The Cochairman shall report to the President on the performance of the Council's functions.

1-3. *Administrative Provisions.*

1-301. The Director of the Office of Personnel Management shall, to the extent permitted by law, provide the Council with administrative and staff services, support and facilities as may be necessary

for the effective performance of its functions.

1-302. Each member of the Council, who is not otherwise a full-time employee of the Federal Government, shall receive no compensation from the United States by virtue of their service on the Council, but all members may receive the transportation and travel expenses, including per diem in lieu of subsistence, authorized by law (5 U.S.C. 5702 and 5703).

1-4. *General Provisions.*

1-401. Notwithstanding the provisions of any other Executive order, the functions of the President under the Federal Advisory Committee Act (5 U.S.C. App. I), except that of reporting annually to the Congress, shall be performed by the Director of the Office of Personnel Management in accordance with guidelines and procedures established by the Administrator of General Services.

1-402. The Council shall terminate on December 31, 1980, unless sooner extended.

JIMMY CARTER

President's Management Improvement Council

Memorandum From the President.
September 14, 1979

*Memorandum for the Heads of Executive
Departments and Agencies*

Subject: President's Management Improvement Council

One of the highest priorities of my Administration has been, and remains,

improving the management and performance of the Federal government. Together we have made some significant progress toward that end. Civil Service Reform, regulatory reform, cash management improvements, paperwork reduction, Federal grant reform, and our efforts to prevent fraud and waste are producing substantial improvements in the operations of the Federal government.

I recognize that you are already doing many things to improve management in your departments or agencies. Yet as I meet and talk with individual citizens and groups, I am constantly reminded that there continues to be widespread distrust of government, and widespread dissatisfaction with how well the Federal government does its job. I believe that there are further management improvements which need to be undertaken, and I seek your commitment to take a fresh look at management problems in your agency.

I would urge you to give special attention to the problems of delivery of service to the public. There continue to be many instances throughout government of slow response to client needs, backlogs of work, overly complicated procedures, and insensitivity or indifference in dealing with the public. In many cases improvements can be made in practical, down-to-earth ways by line managers and supervisors, if they have your strong backing to do so.

As part of this renewed commitment to Federal management, I have, by Executive Order, established the President's Management Improvement Council. This Council, co-chaired by the Directors of the Office of Management and Budget and the Office of Personnel Management, consists of representatives from Federal agencies and State and local government, executives from the private sector and labor organizations, and academic leaders. Its

purpose is to work with you in a renewed effort to bring all of our collective expertise, experience, and knowledge to bear to generate the highest level of performance in the Federal government.

I am convinced that there is much that we can learn—and must learn—from sources outside the Federal government to improve the efficiency of our operations and our delivery of public services. The Council brings us an added dimension to help identify and solve the difficult and persistent problems of managing complex government institutions. I have asked the Council to focus its attention especially on the more practical problems affecting the delivery of services to the public. In turn, I am asking you to view the Council as a resource to advise and assist you in addressing your critical management problems.

The Council will keep me informed of its activities and will bring significant problem areas to my attention. I urge you to seize the opportunity which the Council represents and renew your commitment to an efficient and responsive Federal government.

JIMMY CARTER

President's Management Improvement Council

Appointment of 19 Members and Designation of Cochairpersons. September 14, 1979

The President today announced the appointment of 19 persons as members of the President's Management Improvement Council. He also announced that Alan K. Campbell, Director of the Office of Personnel Management, and James T.

McIntyre, Jr., Director of the Office of Management and Budget, will be Co-chairpersons of the Council.

The President's Management Improvement Council consists of leading representatives of Federal, State, and local governments, private industry, labor organizations, and academic and professional organizations. The role of the Council will be to advise the President on management problems and issues in the Federal Government and to assist in efforts to improve Federal Government management and program performance.

The Council holds its first formal session at 11:30 a.m. today in the Federal Home Loan Bank Board building immediately following a brief introductory ceremony in the White House. At the session, the Council will consider management issues involving the General Services Administration, the Health Care Financing Administration, Federal debt collection, and reduction of Federal travel costs.

The persons appointed to the Council today are:

ROBERT P. BILLER, professor and dean of the School of Public Administration at the University of Southern California;

DOLPH BRISCOE, JR., former Governor of Texas, now chairman of the board of the First State Bank of Uvalde (Texas) and the Security State Bank in Pearsall, Tex.;

ALAN K. CAMPBELL, Director of the Office of Personnel Management;

HUGH A. CARTER, JR., Special Assistant to the President for Administration;

W. GRAHAM CLAYTOR, JR., Deputy Secretary of Defense;

JOSEPH E. CONNOR, chairman and senior partner of Price Waterhouse and Co., the New York accounting firm;

ALAN L. DEAN, vice president for administration of the United States Railway Association;

ROBERT GRAHAM, Governor of Florida;
 DOROTHY GREGG, corporate vice president of communications of Celanese Corp.;
 JOHN A. KOSKINEN, president of Victor Palmieri and Company, Inc., a Washington, D.C., asset management firm;
 JOHN A. McCART, executive director of the AFL-CIO's Public Employee Department in Washington, D.C.;
 JAMES T. MCINTYRE, JR., Director of the Office of Management and Budget;
 RUSSELL E. PALMER, managing director and chief executive officer of Touche Ross and Co., the New York City accounting firm;
 MARION O. SANDLER, vice chairman of the board of Golden West Financial Corp. and World Savings and Loan Association in Oakland, Calif.;
 GEORGE R. SCHRADER, city manager of Dallas, Tex.;
 ELMER B. STAAIS, Comptroller General of the United States;
 DOROTHY L. STARBUCK, chief benefits director of the Veterans Administration;
 WAYNE E. THOMPSON, senior vice president of Dayton Hudson Corp. and chairman and chief executive officer of Dayton Hudson Foundation in Minneapolis; and
 WILLIAM H. WYNN, international president of the United Foods and Commercial Workers International Union.

Day-to-day operations of the Council will be managed by a small staff headed by Charles Bingman, Executive Director.

National Diabetes Week, 1979

Proclamation 4686. September 14, 1979

By the President of the United States of America

A Proclamation

Diabetes mellitus affects the lives of 10 million Americans. Each year, 35,000 Americans die from this disease, and many times that number fall victim to heart at-

tack, stroke, kidney failure, blood vessel disease and blindness related to diabetes. Diabetes now costs the country more than \$6 billion annually in health care expenses, disability payments and lost wages.

A major national effort is underway among Federal agencies, State and local governments, academic institutions and voluntary health organizations to combat diabetes and its complications, which so often compromise the quality of life of its victims. There is optimism in the scientific community that research is leading to greater understanding and improved methods of treatment for diabetes and its complications. We must continue to focus attention on the needs of the many victims of diabetes in the United States if we are ever to reduce the impact of this disease as a source of human suffering in our Nation.

The Congress, by Joint Resolution enacted August 13, 1979 (Public Law 96-51), has authorized and requested the President to designate the week of October 8 through October 14, 1979, as National Diabetes Week.

NOW THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim the week of October 8 through October 14, 1979, as National Diabetes Week.

I call upon public and private agencies and organizations to recognize and observe it appropriately. I invite the Governors of the States, the Commonwealth of Puerto Rico and officials of other areas subject to the jurisdiction of the United States to issue similar proclamations.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the

Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register, 3:14 p.m., September 14, 1979]

Mobile, Alabama

Remarks Prior to an Inspection Tour of Areas Damaged by Hurricane Frederic. September 14, 1979

THE PRESIDENT. I would like to say, first of all, that the entire Nation is deeply concerned about the damage caused by the recent hurricane here in Alabama and also in Mississippi and Florida.

Because of extremely good cooperation between the Federal and State agencies and local volunteers and others, the evacuation that took place ahead of Hurricane Frederic, so far as I know, was the most massive evacuation in the history of our country. About 500,000 people were moved out of the area that was later damaged by the storm.

This was a very severe hurricane, equal in its damage potential to Hurricane Camille about 10 years ago. Early estimates, as a matter of fact, show that the property damage might exceed what occurred with Hurricane Camille.

Ten years ago, 250 people lost their lives, but because of the evacuation techniques and the quick action on the part of Governor James and the other Governors involved, we've had serious loss of life, but so far as I know, only nine people. This is too much, obviously, but it's much better than the 250 that could have occurred had this action not been taken.

The Federal agencies and the State agencies are now, have been, and will continue to work with the closest possible coordination. All Federal agencies are

working under the direction of John Macy, the head of FEMA. Our aid to this area has been approved by me—I think the quickest declaration of an emergency that I've ever had since I've been President—and we will continue this aid, not just for a few days or a few weeks but on a long and sustained basis, until the damage caused by this hurricane has been repaired.

This might take not only months but several years, but we will be here working with local and State officials to make sure that the damage is repaired as best we can and also that adequate aid is provided. With mobile homes, unemployment compensation, loans for homes and businesses, farmers, and as we repair this damage, we hope that working with local citizens and with officials at the State and local level as the damage is repaired that we can take much more effective steps to minimize any future damage than was taken 10 years ago.

I think it's accurate to say that the gulf shore region of our country is susceptible to fairly frequent, all too frequent storm damage, and I think in the design of buildings, in the orientation of transportation systems, and the organization of local volunteers, with building codes and otherwise, we can make sure that future storms have less damage to property and to our people than this one did.

My overwhelming sense here is one of concern, dedication to provide maximum service, but above all, my admiration, my appreciation, and thanks to Governor Fob James and others in this area who helped to minimize damage with their timely action and the unselfish volunteer work that has been so evident here in Alabama.

Governor, I thank you, and we are very eager to cooperate in every way we can.

GOVERNOR JAMES. Thank you, Mr. President.

We appreciate very much your being here and caring about what's going on down in Alabama. Thank you.

THE PRESIDENT. We will take a flight in the helicopter at low altitude to observe and to assess the damage. We'll have with us people who have already been through the area, and we'll probably be landing briefly in Mississippi. We'll be then going to Florida. And as a result of this trip, I hope that I can better coordinate the efforts of the Federal Government. And I also, of course, came down here to make sure that the people in this area know that the whole Nation cares and that the whole Nation is deeply grateful for the timely action and the unselfish work that has been done.

GOVERNOR FINCH. Mr. President, we're proud of you, proud of the speedy method that you've handled everything, not only here but the Easter floods that Governor James and Governor Graham and all of us, citizens and all, have faced in the last few months. I haven't seen anybody respond as expeditiously and certainly show your concern and love for your fellow Americans as you have. We all want to tell you we appreciate this. We're just grateful that you took these few hours to come to Alabama, Mississippi, and Florida to show us your real concern.

GOVERNOR GRAHAM. Mr. President, your observation, too, is when we rebuild them, we rebuild them to stay, is so very valid. Just in the design of the understructure of these beach dwellings makes a lot of difference.

THE PRESIDENT. Yes.

Perhaps the press has a couple of questions. I'd be glad to answer. I'll probably refer them to—

Q. [*Inaudible*]

THE PRESIDENT. Yes, we did. But we came in fairly high. And we will use the

helicopter primarily to examine from a lower height.

Q. Is there any possibility of airlifting food to the area—[*inaudible*]?

THE PRESIDENT. Yes. We'll bring in whatever food is necessary that needs to be brought in. And we are also beginning to assess the placement of mobile homes throughout the southeastern area, and they'll be moved in to provide places for people to live when they move out of the emergency shelters. I understand twenty or thirty thousand people are still in the emergency shelters in these three States.

Q. President Carter—[*inaudible*].

THE PRESIDENT. You mean gasoline? Do you have a shortage?

GOVERNOR GRAHAM. Yes.

GOVERNOR FINCH. We have agreed to bring it in, Mr. President.

THE PRESIDENT. Both Governors say that that's being taken care of satisfactorily. We will obviously help if they ask us to.

GOVERNOR FINCH. They have responded, and they have brought it in to you.

THE PRESIDENT. Very good.

Along with me, in addition to the head of our entire operation, is the manager, Vernon Weaver, of the Small Business Administration. In addition to loans for farmers, we also, of course, have loans available under new legislation for homeowners, 3-percent loans, up to \$55,000, and for businesses, loans at the interest rate of 5 percent. For people who have second homes, like vacation homes, then the interest rates would be about $7\frac{1}{8}$ percent. But those loans will be available, and we'll have people moving in here to take care of those needs immediately.

I might point out coincidentally that although Hurricane Camille took place 10 years ago, the Small Business Administration still has 22 people in this area tak-

ing care of the loans that were extended to people in Alabama and Mississippi back in those years.

Does anyone else have a question? If not, we'll go and take a look around.

I want to thank the Red Cross for the good work you all have done and the other volunteer workers. Thank you very much. Well, we're all in it together, and we're here to provide help with the taxpayers' money, and I just am glad to be partners with such a fine group as this.

Thank you very much, Fob.

NOTE: The President spoke at 11:17 a.m. at Bates Field.

Pascagoula, Mississippi

Remarks Following an Inspection Tour of Areas Damaged by Hurricane Frederic. September 14, 1979

THE PRESIDENT. I'd like to say one other thing just for the benefit of the people of Mississippi. I think that it is indeed a catastrophe here, about which the whole Nation is concerned, and I come on behalf of all the other people in the Nation, who feel that you have done admirably. Governor Cliff Finch and all of the officials here, the Members of Congress and others have prepared well, and had we not prepared, we could very well have several hundred people's lives having been lost in Mississippi.

And I believe that the degree of cooperation between the Federal Government and the local and State governments and also the people at large has been remarkable. It's difficult to induce people to leave their homes, even when you tell them there's a danger coming. And I think that the strong leadership that has been shown here has helped us to minimize the damage.

And the other thing that I'd like to say is that we will be here on a long-term basis, because the repair that's got to be done to the community structure is not going to be quickly resolved. And I hope that the people who are farmers will know that we've got assistance available for them; businesses, large and small, that have been shut down, we've got unemployment compensation, and we'll have extra people that have been here from the Labor Department to process those claims. And if anything should arise in the future that's a problem for you, or is delayed in being delivered, in delivery of services, if you'll let Bill Simpson know, or Jack Watson, or me directly in the White House, we'll take care of it without delay.

BYSTANDER. Mr. President, may I say, if I may: You've been concerned about unemployment. Here in this country, we're one of the largest employers in the Southeast United States; right here in the shipyard alone, 16,000 people, and they're not all from Mississippi. They come from other States in the Union. So, we make a real contribution to the total economy, and we need to get our people back to work as fast we can.

We have 40 other industries of national prominence. And with your help, that you just mentioned, it's just like a Godsend to us, and we want to thank you from the bottom of our hearts for what you're doing for us.

THE PRESIDENT. It's a very difficult thing for a President or for anyone who lives in Washington to forget about Pascagoula Shipyards with Senator Stennis present. [Laughter]

SENATOR STENNIS. We all work together.

BYSTANDER. We are proud of what you have done. Thank you for coming, sir.

GOVERNOR FINCH. One thing, Mr. President, we're going to set up a Gov-

ernor's office here on the coast where Defense and the State and local people will all be working together. So, my office will be here, and we'll be in touch with Jack, I know, somewhere along the line. But we want to, firsthand, move into the location like you have, to come here and see it. But we're going to set up our office here and use it, Senator, for the benefit of all the people here at Gulf Coast Marine Research Center, that is also funded by the Feds and State, thanks to our leadership in Washington.

THE PRESIDENT. Good luck to you.

NOTE: The President spoke at approximately 12:30 p.m. at the Ingalls Shipyard, a division of Litton Industries.

Pensacola Naval Air Station, Florida

*Remarks Following an Inspection Tour of
Areas Damaged by Hurricane Frederic.
September 14, 1979*

I would like to say just a word that I think is important, not only to you who are assembled here in Pensacola and in Florida and those who might hear my voice later on in Alabama and Mississippi but for the entire Nation.

Our hearts go out to those who have suffered so much in Hurricane Frederic, but I think that the most overwhelming sense that we have is one of gratitude that in spite of one of the most severe hurricanes which has ever hit our Nation, because of the close working cooperation between local and State and Federal officials and many volunteers and citizens who came forward, that the loss of life has been minimal. My reports have shown and my observations have also proven to me that this is perhaps even more a destructive hurricane than was Hurricane

Camille 10 years ago, when about 250 people lost their lives. But because we had a massive evacuation effort, when 500,000 people moved further inland, we have minimized, thank God, the loss of life.

The damage has been severe. I just flew in from Pascagoula, over Dauphin Island and down the gulf shore area. And hundreds and hundreds of places where homes formerly existed, there are no homes at all, and it's impossible even to tell where the building lots were located. Mobile has suffered very severe damage.

We have a fine organization already in place, with all the Federal agencies being administered from a single place and with the closest possible cooperation from Governors and other State officials, from mayors and county officials in every community involved.

The damage is extremely severe, and the Federal commitment to helping all of you and all those who were damaged repair what has been done and restore the quality of your lives is complete and it's permanent. The repair of this damage is going to take a long time. It can't be accomplished in a few weeks or even a few months. But we are dedicated to provide unemployment compensation for those who are not presently employed because of the loss of their jobs because of damage, low-interest loans for homes, low-interest loans to repair businesses, help for farmers who've lost their crops. And we'll try now to restore the vital services, transportation, electric power, telephones, working with the private organizations for power and telephones that are doing so well.

I'd like to point out that after a few days the intense concern and the unselfish attitude and the cooperative spirit might tend to fade away. I hope that you all won't let that happen. We're going to have to have a sustained effort of taking care of one another. Government can do

just a limited amount. The vast contribution of repair and human care must come from volunteers. This is the character of our Nation, and when we are tested as a country, we always respond successfully.

I hope that as we rebuild the areas of our gulf coast, which have in many cases been completely destroyed, that we'll be looking forward to the future with caution, building on our experiences. Camille was 10 years ago, and we don't know whether a year from now or 10 years from now we'll have another severe hurricane. As we do rebuild and repair, we ought to have in mind how we can minimize damage in the future.

I think the early warning that came to you was a tremendous achievement. We now have the ability to track hurricanes and to predict their course. Sometimes you may have to move from your home and the hurricane didn't strike. I hope that the next time the Governor asks you to move, you'll do it immediately, because I have seen many places that had people not responded, not knowing for sure that the hurricane would strike, they would have lost their lives. They've lost their homes.

The last thing I want to say is this: We ought not be discouraged. We are sensitive about your needs. We'll be available when we can to help you. And I would like to congratulate every Member of the Congress, every Governor, every State official, every local official, every Red Cross worker, every volunteer who has accommodated so far the intense need of many people and have minimized the damage which has come to us.

We have many things for which we can be thankful, and the saving of human life is one of the most important.

The country will not forget you, those people who were not severely injured in this storm. We'll be partners with you in

the days and weeks ahead. And I pray that this damage can be minimized and that your own lives might be restored very quickly to a normal state so that we can enjoy the privileges and the honor of living still in the greatest country on Earth.

I've appreciated the aid and the help and the reports that I've gotten from many officials. Those lined up behind me come from almost every community around here. Some are in charge of school systems; some, transportation systems; some, administering cleanup operations. And they've come to let me as President know, in some cases we are doing well, in some cases we need certain things. But together, as partners, we've done a good job so far, and I have no doubt that in the future we'll continue to do so.

Thank you very much. You have my admiration and my appreciation, my pledge of support, my congratulations. May God bless all of you.

Thank you very much.

NOTE: The President spoke at 1:35 p.m. at Forrest Sherman Field.

United States Ambassador to Chad

*Nomination of Donald R. Norland.
September 14, 1979*

The President today announced that he will nominate Donald R. Norland, of Grantham, N.H., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Chad. He would replace William G. Bradford, resigned.

Norland has been Ambassador to the Republic of Botswana, the Kingdom of Lesotho, and the Kingdom of Swaziland since 1976.

He was born June 14, 1924, in Laurens, Iowa. He received a B.A. (1948) and M.A. (1950) from the University of Minnesota. He served in the U.S. Navy from 1943 to 1946.

Norland was an instructor at Iowa State Teachers College from 1949 to 1951, and a teaching fellow at the University of Michigan in 1951-52. He entered the Foreign Service in 1952 and was posted in Rabat and Abidjan and served at the State Department.

From 1961 to 1963, Norland was political officer in Paris. In 1963-64 he was detailed to the Air Command and Staff College at Maxwell Air Force Base under the State-Defense Department exchange program. From 1964 to 1969, he was posted in The Hague as political officer, then counselor for political affairs.

Norland was a State Department fellow at Stanford University in 1969-70 and served as Deputy Chief of Mission in Conakry from 1970 to 1972. He was a political-military affairs officer at the State Department from 1972 to 1973, and a personnel officer from 1973 to 1975. From 1975 to 1976, he was Deputy Director for Management Operations in the Office of the Under Secretary for Management.

Laurent is senior vice president of McElvain-Reynolds Co., a Chicago mortgage banking firm, where he is in charge of the multifamily government-insured loan division.

He was born May 11, 1937, in Evanston, Ill. He received a B.A. from Fisk University in 1960.

Laurent was with Johnson Publications in Chicago from 1960 to 1961, and was a housing inspector with the Evanston Department of Health from 1962 to 1964. He entered the mortgage banking business in 1964 as a loan officer with Salk, Ward & Salk, Inc.

From 1969 to 1970, Laurent was assistant vice president of Percy Wilson Mortgage and Finance Corp. He joined McElvain-Reynolds Co. in 1970 as vice president, and has been senior vice president since 1972.

Laurent is former president of the Illinois Mortgage Bankers Association and a former lecturer at the Mortgage Bankers Association School of Financing. He served on the HUD Task Force on the Future Role of FHA. He was on the board of directors of the Chicago Committee on Urban Opportunity and was a panel member of the Community Revitalization Clinic, sponsored by the Illinois League of Savings and Loan Associations.

Government National Mortgage Association

*Nomination of Ronald P. Laurent To Be
President. September 14, 1979*

The President today announced that he will nominate Ronald P. Laurent, of Chicago, Ill., to be President of the Government National Mortgage Association. He would replace John Dalton, who has resigned.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

September 8

The President met at the White House with Zbigniew Brzezinski, Assistant to the President for National Security Affairs.

September 10

The President met at the White House with:

- Dr. Brzezinski;
- the Cabinet;
- James T. McIntyre, Jr., Director of the Office of Management and Budget;
- Secretary of Agriculture Bob Bergland and the Voluntary Agency Partners in the Combined Federal Campaign.

The President announced that he has designated Richard R. Rivers as Acting Special Representative for Trade Negotiations.

September 11

The President met at the White House with:

- Dr. Brzezinski;
- members of the Senate Energy Committee;
- Frank B. Moore, Assistant to the President for Congressional Liaison;
- Secretary of Energy Charles W. Duncan, Jr., and members of the New Coalition and the State and Local Energy Task Force.

The President participated in a briefing by administration officials on the strategic arms limitation treaty given for community leaders in the East Room at the White House.

The President announced the appointment of the following three persons to the American National Red Cross Board of Governors:

- PATRICIA ROBERTS HARRIS, Secretary of Health, Education, and Welfare;
- JOHN W. MACY, Director of the Federal Emergency Management Agency; and

ROBERT B. PIRIE, JR., Assistant Secretary of Defense for Manpower, Reserve Affairs and Logistics.

The President has signed an order designating three positions for membership on the Emergency Management Council. They are the Assistant to the President for National Security Affairs, the Assistant to the President for Domestic Affairs and Policy, and the Secretary to the Cabinet and Assistant to the President for Intergovernmental Affairs.

September 12

The President met at the White House with Dr. Brzezinski.

The President participated in a breakfast briefing by administration officials on the strategic arms limitation treaty given for a group of religious leaders in the State Dining Room at the White House.

September 12

The President met at the White House with:

- Dr. Brzezinski;
- a group of Senators to discuss energy;
- Mr. Moore;
- representatives of the Women's Sports Foundation, including Carol Mann, professional golfer; Janet Guthrie, race car driver; Lacey O'Neal, former Olympics track and field contender; and Donna E. de Varona, member of the President's Advisory Committee for Women and Olympic gold medal winner;
- Al Rubin and a delegation from the National Planning Council for the International Year of Disabled Persons;
- the heads of ABC, CBS, NBC networks and the presidents of their parent organizations, and Gerald M. Rafshoon, Assistant to the President for Communications, to discuss energy.

The President declared major disasters for Alabama, Florida, and Mississippi be-

cause of extensive public and private property damage caused by Hurricane Frederic.

The President attended a reception for members of the Conference of National Volunteer Organizations held in the East Room at the White House.

September 14

The President met at the White House with:

—Vice President Walter F. Mondale, Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Hamilton Jordan, Assistant to the President, Hedley W. Donovan, Senior Adviser to the President, and Dr. Brzezinski;

—John M. Craig, a participant in the Tampa, Fla., town meeting.

The President participated in a briefing on the administration's programs and policies, given for civic and community leaders from Florida in the East Room at the White House.

The White House announced that the President has signed two Presidential determinations under the Foreign Assistance Act of 1961. One states his determination that \$4.8 million should be appropriated to provide assistance to the victims of Hurricane David in the Caribbean. The other authorizes furnishing \$10 million to Yugoslavia from the fiscal year 1979 Economic Support Fund. These funds will be used for reconstruction following the earthquake there.

The President announced that he has appointed Hugh Carter, Jr., Special Assistant to the President for Administration, to be a member of the President's Commission on Executive Exchange. This Commission runs an executive interchange program between the Federal Government and private industry.

The President left the White House for a weekend stay at Camp David, Md.

The President declared a major disaster for the State of Maryland as a result of severe storms, tornadoes, and flooding on September 5 and 6, which caused extensive property damage.

**NOMINATIONS SUBMITTED
TO THE SENATE**

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted September 10, 1979

NEIL GOLDSCHMIDT, of Oregon, to be Secretary of Transportation, to which office he was appointed during the last recess of the Senate.

DONALD F. MCHENRY, of Illinois, to be the Representative of the United States of America to the United Nations with the rank and status of Ambassador Extraordinary and Plenipotentiary, and the Representative of the United States of America in the Security Council of the United Nations.

HORACE G. DAWSON, JR., of the District of Columbia, a Foreign Service information officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Botswana.

KENNETH M. CURTIS, of Maine, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Canada.

GEORGE B. ROBERTS, JR., of Pennsylvania, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Cooperative Republic of Guyana.

NANCY V. RAWLS, of Florida, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Ivory Coast.

RICHARD DAVID VINE, of California, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Switzerland.

RICHARD NOYES VIETS, of Vermont, a Foreign Service officer of Class two, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the United Republic of Tanzania.

just a limited amount. The vast contribution of repair and human care must come from volunteers. This is the character of our Nation, and when we are tested as a country, we always respond successfully.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, September 21, 1979

First Anniversary of the Camp David Agreements

*Statement by the President.
September 17, 1979*

One year ago today, on September 17, 1978, Prime Minister Begin of Israel, President Sadat of Egypt, and I returned from Camp David with an agreement establishing the Framework for Peace in the Middle East. We believed then that we had reached an historic turning point in the bitter history of that long-suffering region. One short year later, that belief has become a firm reality.

After 30 years of hostility and war, Israel is truly at peace with its largest Arab neighbor. The relations between them are improving daily. The provisions of the treaty of peace are being carried out precisely and on schedule.

This peace is no longer words on paper. It is now facts on the ground and faith in the hearts of millions of people. This remarkable change—from war to peace, from hostility to friendship—was clearly visible in the recent visit by President Sadat to Haifa, where he was received with genuine warmth and enthusiasm by the people and the leaders of Israel. Such events, which would have seemed amazing, even unthinkable, until

the very recent past, are now accepted almost as routine. That is itself a measure of how far we have traveled along the road to peace.

So it is worth remembering on this occasion what an extraordinary change in attitudes has taken place. The successes of Egypt and Israel so far in overcoming three decades of animosity give us renewed confidence in facing the difficult tasks which remain.

Our goal has always been the establishment of a comprehensive peace in which Israel could at last live in security and tranquillity with all its neighbors. The Camp David accords are a long step on that path. We do not underestimate the difficulties that lie ahead, but we knew from the outset that the road would be hard and rocky. And looking back today at the solid achievements of the past year, we are justified in keeping our eyes firmly on the goal of peace rather than in heeding the inevitable cries that say peace cannot be achieved.

The peace process outlined at Camp David 1 year ago is alive and well. The talks on full autonomy for the West Bank and Gaza are proceeding on schedule, in an atmosphere of good will and serious cooperation. I am confident those talks will succeed. Their progress is a tribute

to the vision and courage of President Sadat, Prime Minister Begin, and the people of their two great nations.

Over the coming months it will be our common task to continue demonstrating that peace does work and, by the evidence of our deeds, to convince other nations and leaders to join with us in this quest for lasting peace, security, and the opportunity for productive lives for all the people of the Middle East.

NOTE: On the same day, the White House announced that the President had received messages from Prime Minister Begin and President Sadat. As printed below, the messages follow the texts made available by the White House Press Office.

On this the first anniversary of the Camp David agreement signed in Washington on September 17th I vividly recall the wonderful hospitality which you and your gracious lady accorded to my wife, my colleagues and myself during those 13 days of the momentous conference. I remember well the sessions, the strong debates, the mutual convincing, the difficulties we all had to overcome, the weighing of every sentence and word and ultimately the joy of achieving the understanding which became the basis of an historic agreement. Out of it the treaty of peace between Egypt and Israel, certainly a turning point in the annals of the Middle East emerged and the positive concept of full autonomy for the Palestinian Arabs, inhabitants of Judea, Samaria and Gaza District was brought forth.

You, Mr. President did your utmost by your own hard work to make these agreements possible, allow me, therefore, on this memorable anniversary to thank you from the heart for the great assistance rendered to both Egypt and Israel in achieving a rapprochement between two countries which for thirty one years, were in a state of war, and which have now concluded peace, the first step towards a general and comprehensive settlement in the Middle East.

There are people who do not yet appreciate the value of this moral international achieve-

ment, but many millions of women and men of goodwill will rejoice together with us in this accomplishment. Their blessings are our joy and the source of satisfaction.

Accept, Mr. President, my deepest gratitude for all you have done with such great devotion in the service of peace.

Yours respectfully and sincerely,

MENACHEM BEGIN

This afternoon I have issued a presidential statement expressing my views on the first anniversary of the signature of the Camp David agreements. On this occasion I wish to express my deep feelings and thanks for your personal contribution to this historical event. I am confident that these agreements, which have been the first steps toward a comprehensive peace, will help bring a solution to the Palestinian question in all its aspects. The role of the U.S. as a full partner in the peace process will remain a key element in our mutual efforts to achieve a just and lasting peace in the Middle East.

Sincerely,

ANWAR EL-SADAT

Federal Council on the Aging

Nomination of Five Members. September 17, 1979

The President today announced that he will nominate five persons as members of the Federal Council on the Aging. They are:

AARON E. HENRY, president of the Mississippi State Conference of the NAACP and chairman of the National Black Caucus on the Aging;

CYRIL HILARY CARPENTER, president of the Minnesota Farmers Union;

JOHN B. MARTIN, legislative consultant to the American Association of Retired Persons and the National Retired Teachers Association and former Special Assistant for the Aging to President Nixon (reappointment);

MARY C. MULVEY, supervisor of adult education for the Providence (R.I.) public schools and a lecturer on preparing for retirement at the University of Rhode Island Extension Division; and

JEAN JONES PERDUE, medical director of the Office of Health Services of Metropolitan Dade County, Fla., and a specialist in internal medicine and cardiology since 1934.

Council on Wage and Price Stability

Message to the Congress Transmitting a Report. September 17, 1979

To the Congress of the United States:

In accordance with Section 5 of the Council on Wage and Price Stability Act, as amended, I hereby transmit to the Congress the eighteenth quarterly report of the Council on Wage and Price Stability. The report contains a description of the Council's activities during the first quarter of 1979 in monitoring both prices and wages in the private sector and various Federal government activities that may lead to higher costs and prices without creating commensurate benefits. It discusses Council reports, analyses, and filings before Federal regulatory agencies. It also describes the Council's activities of monitoring wages and prices as part of the anti-inflation program.

The Council on Wage and Price Stability will continue to play an important role in supplementing fiscal and monetary policies by calling public attention to wage and price developments or actions by the government that could be of concern to American consumers.

JIMMY CARTER

The White House,
September 17, 1979.

Railroad Retirement Board

Message to the Congress Transmitting a Report. September 17, 1979

To the Congress of the United States:

I hereby transmit the Annual Report to the Railroad Retirement Board for fiscal year 1978.

The report summarizes the Board's operations to assist the railroad sector during the year. Under the Railroad Retirement Act, 1,100,000 recipients were paid \$4 billion in retirement and survivor benefits, and under the Railroad Unemployment Insurance Act 175,000 beneficiaries were paid almost \$200 million in unemployment and sickness benefits.

I note with concern that the Board has advised me that the balance in the Railroad Retirement Account continues to decline as benefit payments exceed income for the eighth consecutive year.

The Board's most recent actuarial valuation indicates a serious and growing actuarial deficit which requires short term remedial action, a judgment also concurred in by the General Accounting Office. This Administration's budget for fiscal year 1980 includes even-handed legislative proposals to restore to solvency the railroad industry pension fund which will assure the interests of current and future railroad retirement beneficiaries. We also invite the view of railroad labor and management on our proposal to provide sound financing of the industry pension component by the railroad industry without added Federal subsidies.

The Board is currently preparing its 14th Triennial Actuarial Valuation of the industry pension, which should provide a more accurate, up-to-date analysis of the financial condition of the fund. The forthcoming actuarial valuation will project the

condition of the fund based on strict current law basis as well as under the normal requirements of the Employee Retirement Income Security Act (ERISA). Both estimates will use the economic assumptions in the most recent Social Security Trustee's Report. These additional perspectives will help assure that changes to restore the solvency of the industry pension are based on information under a variety of economic and legislative assumptions.

JIMMY CARTER

The White House,

September 17, 1979.

NOTE: The report is entitled "Railroad Retirement Board—1978 Annual Report for Fiscal Year Ending September 30" (Government Printing Office, 94 pages).

First Anniversary of the Camp David Agreements

*Remarks of the President, Vice President Muhammad Husni Mubarak of Egypt, and Foreign Minister Moshe Dayan of Israel Following Their Meeting.
September 17, 1979*

THE PRESIDENT. First of all, I'd like to introduce to the press some very famous gentlemen who are almost as well known in our country as am I: the Vice President of Egypt, Mr. Mubarak; the Foreign Minister of Israel, Moshe Dayan; the Defense Minister of Israel, Ezer Weizman; and General Ali, who is the Director of Defense of Egypt; and the two Ambassadors from Egypt and Israel.

As you know, this is the first anniversary of the signing of the Camp David accords. During that year we have seen realized, because of the courage and the conviction and the vision and the determination of President Sadat and Prime Minister

Begin, the hopes and dreams that were present among us a year ago. Although the Camp David accords is a document made of words, the peace progress that has been made in the last year has been in the hearts and minds of the people of Israel and Egypt.

It's obvious that both countries, both peoples, both leaders are determined that this process will be successful and that we will indeed have peace in the Mideast, based on a comprehensive settlement of the differences that have divided the Arabs and the Israelis for so many years. It's with a great sense of thanksgiving and confidence that I assess what has been done so far and what will be done in the future.

I'd like to introduce now Vice President Mubarak of Egypt, representing President Sadat. I talked to President Sadat and Prime Minister Begin this morning. They sent their best wishes to the American people and their thanks for the foundation that was laid a year ago for this comprehensive peace.

Mr. Vice President.

THE VICE PRESIDENT. Thank you. Mr. President, friends, this is a fine moment for those who are committed to the cause of peace.

A year ago today, the leaders of the three countries—the three great nations—signed the Framework for Peace in the Middle East. It was an historic step of tremendous significance, but it remains a first step. Much remains to be achieved in the months ahead. We are all committed to continue our efforts until we reach a comprehensive settlement that tackles all aspects of the problem. First and foremost, it must address itself to the heart and the core of the entire conflict—namely, the Palestinian question.

It's very significant that we are in Washington on the 17th of September to

follow up our efforts and build on what was achieved in Camp David.

In the months ahead we'll be working tirelessly together until we reach that goal for the good of world peace and security. This is an unwavering commitment which we share and are determined to honor. Thus, we should refrain from any rash act that would jeopardize the prospects of peace at this crucial stage. Acts of defiance and negativism should be avoided. The policy of confrontation and fait accompli is contrary to the spirit of Camp David.

Mr. President, under your leadership the American people are playing the role which is worthy of a great nation—the role of the peacemaker. This is a source of confidence and reassurance. Never before has there been so much promise and hope for the future. Never before has there been such awareness of the necessity for tackling the Palestinian question. Never before has there been such confidence in the United States as an honest and full partner in peace in the Middle East.

Much of the credit for all these positive developments goes to you, Mr. President. Through your determination and courage, we were able to overcome the most difficult problems, able to overcome the most difficult problems. With your vision and a deep sense of commitment, we were able to heal the wounds of the unhappy past and focus on the future. With your compassion and understanding, we were able to put the problem in the proper perspective.

We are also indebted to each and every American in the United States. No other nation showed so much interest in peace in the Middle East. No other nation has devoted so much effort and the energy to help friends build a great structure for peace. We count on your continued help and commitment.

I bring you greetings from President Sadat and the 41 million Egyptians. Let us now remain together until we reach our common goal. God willing, we shall reach it.

Thank you.

THE PRESIDENT. And now I'd like to introduce Foreign Minister Moshe Dayan, who played such a crucial role in the negotiations at Camp David and since that time, as we wage peace, not war, in the Middle East.

THE FOREIGN MINISTER. Mr. President, I want to thank you very much on behalf of the Israeli Government and the Israeli people on this splendid meeting here today and on the event for this meeting, on reaching peace with our neighbors in Egypt. Had it not been for you, we couldn't have done it, and we wouldn't be here today celebrating the anniversary of this day.

You said, Mr. President, that, of course, when you turn provisions written on paper into reality, you come against difficulties, which is true. And one of the problems that we have to face, we shall be trying to solve tomorrow and the day after. But allow me to say that, on the other hand, we did come surprisingly against pleasant, unexpected events during the implementation of the peace treaty. And I mention just one of them.

When we were sitting down here and in Camp David and working out the peace treaty, we were very worried about what we called the process of normalization, and we all looked forward with great anxiety about the day when an Egyptian Ambassador would have to come to Israel and an Israeli Ambassador would have to go to Egypt. But what happened in the meantime with the visits of President Sadat to Israel and the feeling that he was met with when he came to Israel, and the visits of Prime Minister Begin to Egypt,

and the visits of hundreds of Israelis and many Egyptians to both countries, not only with no incidents but with warm feeling, meeting the people of the other country. And anyone who was not in Haifa when President Sadat was there recently cannot imagine the spirit, the moving spirit of the joy of the Israelis, not only about the meeting but about what that meeting represented—the peace between the two countries.

I know, Mr. President, that for the last few months you did not deal that much with our problems like you used to do before, and I assume that you did have other business to attend to. But though I do hope that we shall reach an agreement with the current negotiation—and I want to remind my friends, Vice President Mubarak and General Ali, that the gap that we had between the two of us when we started the negotiation, believe me, it was wider than the gap that we have between us and the Palestinians when we talk now about autonomy. So, I am hopeful about that. Still, what I want to tell you, Mr. President, besides thanking you again, to remind you that you are a party in this business. And if somehow we shall come against major difficulties, we might ask you to extend your hand, your guiding hand, to be involved again in the process of peace so that we shall achieve it.

Thank you very much.

THE PRESIDENT. Let me say in closing that one of the most gratifying and somewhat surprising developments has been the burgeoning friendship and the growing respect and cooperation that has developed directly between President Sadat and Prime Minister Begin. This accurately mirrors, in my opinion, the genuine feeling that exists between the people of Egypt and the people of Israel.

Good progress is being made. But, Mr. Foreign Minister, as you suggested, in the future, if an apparently insurmountable obstacle should be confronted in the negotiating process, then I would be deeply committed to becoming personally involved again. In the meantime, however, Ambassador Bob Strauss, Secretary Vance, and others can adequately represent the United States in adding our good offices to the negotiating process.

We believe that a firm foundation now exists for major progress to be made between Egypt and Israel and, in the future, among others that will join the peace process who live in the Mideast.

Thank you all for the constructive work that's already taken place. God bless you in future endeavors, which I'm sure will be successful in bringing the peace that we all cherish and for which we all hope with all our hearts.

Thank you very much.

NOTE: The President spoke at 4:19 p.m. on the South Lawn of the White House.

National Forest Products Week, 1979

Proclamation 4687. September 18, 1979

*By the President of the United States
of America*

A Proclamation

Our Nation's forests are one of our greatest resources, covering nearly one-third of our land. The forests are "lands of many uses" providing wood for a multitude of products, protection of watersheds, forage for livestock, food and shelter for wildlife, wilderness areas, and a tremendous range of recreation oppor-

tunities for people of every age and income.

In these times of worldwide inflation and energy shortages, we can turn to our forests for relief. Forests offer numerous opportunities for low-cost vacations.

Forest products can have even greater inflation-fighting and energy-saving roles. I recently directed two Federal agencies to examine their forested lands to see what could be done to provide more timber so that the cost of housing could be reduced.

Discoveries from forest product research are being applied to help fight inflation and save energy. A new house developed by Forest Service scientists will allow us to build houses with 30 percent less structural lumber than is used now for similar structures. New processing techniques reduce the amount of energy needed to make paper and also allow manufacture of more paper from less wood.

In addition, America's forests make direct contributions to reducing our dependence on foreign sources of energy. This country once ran on the energy provided by burning wood, and we can obtain energy from that resource again. Every year, more and more Americans are turning to efficient wood-burning stoves and furnaces to help in their fight against rising energy costs.

Wise use of our Nation's forest products results in turn from wise and efficient management of the forests themselves. Planning carefully for all forest uses, minimizing waste, and replenishing harvested trees will sustain our forests and insure the continuity of this tremendous renewable asset.

In recognition of the value of forests for energy, wood products, and recreation, Congress has designated the third week of October as National Forest Prod-

ucts Week. It is important that we pause to reflect upon the value of our forests to our national well-being.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim the week of October 21 through October 27, 1979, as National Forest Products Week and ask all Americans to demonstrate their awareness of the value of forests through suitable activities.

IN WITNESS WHEREOF, I have hereunto set my hand this eighteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register, 2:29 p.m., September 18, 1979]

Veterans Day, 1979

Proclamation 4688. September 18, 1979

By the President of the United States of America

A Proclamation

No Americans have done more to win and protect the peace than the men and women of our Armed Forces, past and present.

Veterans Day affords each of us the opportunity to join our fellow citizens, in communities across the Nation, in honoring those whose love of country knew no bounds—those to whom patriotism was principle, not mere sentiment. Without the sacrifices which our brave veterans made so freely and so generously, our cherished freedom would long ago have vanished.

On this historic day, let us resolve anew to keep faith with those who have done so much to shape this Nation with their honor and valor. The flag under which they served is the emblem of our unity, our power, our purpose as a Nation. It has no other character than that which we give it from generation to generation.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby invite citizens everywhere to join with me in observing Veterans Day on Sunday, November 11, 1979. Let the past and present unite in prayer that America will ever seek the ways of peace, and, by her example at home and throughout the world, hasten the return of goodwill among men.

This is a particularly appropriate time to remember with respect and affection our sick and disabled veterans. I urge their families and friends to visit with them and reassure them of their country's enduring gratitude.

I call upon the press, radio and television and other media of public information to participate in this observance to help realize the full purpose and meaning of this important commemoration.

I ask that Federal, State and local government officials arrange for the display of the flag of the United States on this day, and encourage the public's involvement in appropriate ceremonies throughout our land.

IN WITNESS WHEREOF, I have hereunto set my hand this eighteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

Presidential Scholars

Executive Order 12158. September 18, 1979

AWARDS FOR SPECIAL CAPABILITY IN THE VISUAL AND PERFORMING ARTS AND IN CREATIVE WRITING

By the authority vested in me as President by the Constitution and statutes of the United States of America, Section 2 of Executive Order No. 11155 is hereby amended by adding thereto the following paragraph:

"(5) In addition to the Presidential Scholars provided for in paragraphs (3) and (4) above, the Commission may choose other Presidential Scholars not exceeding twenty in any one year. These Scholars shall be chosen at large, from the jurisdictions referred to in paragraph (3), on the basis of outstanding scholarship and demonstrated ability and accomplishment in the visual and performing arts or in creative writing."

The White House,
September 18, 1979.

[Filed with the Office of the Federal Register, 10:48 a.m., September 19, 1979]

Archbishop Iakovos of the Greek Orthodox Church in North and South America

*Remarks at a White House Reception
Honoring the Archbishop.
September 18, 1979*

THE PRESIDENT. Rosalynn and I are very delighted that not only the East Room but the entire White House is filled with admirers and friends and lovers of Archbishop Iakovos. We are very proud that

you are here. It's an honor for us to participate in honoring him.

I would like to say that we have Members of the Congress here; we have distinguished educators here, distinguished religious leaders from every faith. We also have people who've come as personal friends—those from the business community, from other elements of government, from all over the Nation—to listen to the beautiful music of the Metropolitan Singers and to take part in this celebration of one of the important anniversaries in the Greek Orthodox Church.

As all of you know, the Greek Orthodox Church has been the repository and the avenue through which the culture and the values of Hellenic society have been transmitted and enhanced from one generation to another, in the service of one another and in the service of Jesus Christ.

Our own Nation is a nation of immigrants. We've brought here some of the finest aspects of the lives and the customs, the achievements and the hopes and aspirations of people throughout the world. But our heritage from Greece is indeed extraordinary, because from that great country, the mother country of many in this room, we have derived the basis for American principles and government—liberty and democracy. And we thank all of you and your ancestors for that noble gift.

We could not have a better exemplification of the finest aspects of human life than His Eminence Archbishop Iakovos. His life is one which has been dedicated to the pursuit of the broadest possible realm of basic civil rights, basic human rights, not just in this country but throughout the world.

As you know, this is the 20th anniversary of his enthronement as a spiritual leader of North and South America. Although he only has 3 million communi-

cants who look to him with direct religious conviction, and a common, narrowly defined religious conviction, he has many millions of other Americans who look to him for spiritual inspiration and who admire his great contributions to our country and to the kingdom of Christ.

His small gestures have exemplified not only humaneness but also courage. In 1965, when it was not an easy thing to do, this great man walked shoulder to shoulder with Martin Luther King, Jr., holding the hand of a small black girl in Selma, Alabama. He didn't have to do it. His church did not demand it. Had he not been there, few would have noticed his absence. But he was there. And this simple act was not extraordinary in his life, because it's one of many similar acts that have exemplified his public and his private and his religious service. He has always sought justice for the poor.

He's also been a world leader in many organized religious efforts—twice president of the World Council of Churches. He's had the breadth of vision to transcend religious boundaries, which often are very difficult to cross. One of his major achievements has been that he was the first Archbishop in 350 years, 3½ centuries, to meet with the Pope, representing the Roman Catholic Church. And not only in this connection between Greek Orthodox and Roman Catholic Churches but among Protestant and other religious orders, this fine leader has helped to bridge a chasm that separates human beings.

He's been an adviser for many. He's been an adviser for me, and I thank God for it. Not too long ago I was at Camp David, considering our Nation, some of its problems, some possible solutions for it. I needed counsel on government, politics, energy, taxation, economics. But, above all, I needed counsel on our country's spirit—who we are, what we are, what we

should be. I asked him to come to Camp David and meet with me, and he graciously consented.

We talked about a vision of a greater America. We talked about the need for a rebirth of the American spirit. We talked about how we might, as Americans, revitalize the basic human values on which our country was founded and which are part of the ethics and the morals on which the church itself premises its service to human beings. We talked about the need for a new sense of unity, which he, throughout his own life of public service, has exemplified so well. And we talked about the definition of new and even higher goals for our country and for all Americans, who live here together. That could not possibly be a greater demand on a person's understanding and sensitivity and intellect and experience than to give a President counsel on these kinds of important things.

I'm a great personal admirer of his. And since I've been President, I have given two awards—one to Jonas Salk, who helped to eliminate the threat of polio from the world, and the other one to Martin Luther King, Jr. And I would like to announce to this group that I will present to Archbishop Iakovos the Presidential Medal of Freedom later on this year. This will give me a chance to invite some of you back for an additional ceremony. [Laughter] And it will also give the Nation a chance to be reminded of the remarkable achievements of this fine man, my friend and your friend.

And now I would like to ask our dear friend to say a few words here to his friends.

Thank you very much.

THE ARCHBISHOP. *Mr. President, Mrs. Carter, fellow clergymen, ladies and gentlemen:*

For a long time now I have pondered

my 20 years of service; I have examined and reexamined my record of service countless times. And yet I have never felt so inadequate. Who am I? What have I done to deserve recognition of such magnitude and spiritual significance? Even if I have achieved anything noteworthy, was it not my dutiful responsibility? Is it not Jesus, our Lord and Savior, who admonishes us to say, when we are thanked for something, "We are merely servants. We have done no more than our duty."

In His name, Mr. President, I have endeavored to offer some small services to my church, to the church of Christ in general, to education, and to my fellow man. And most especially, my heart and soul have been touched and moved to cry out for the oppressed and for those who have suffered and continue to suffer because of social injustice in the world. Indeed, I have walked hand in hand with a small black girl in Selma, next to the great Martin Luther King. But is it not true that marching forward is a solemn duty and obligation for me at all times and under all circumstances?

I have always considered myself to be a servant, and I pray to be a faithful one. It is a singular honor to be in the service of the Servant of Servants. He has taught me to serve and lead the way for all who wish to serve. I am conscious of my faults and my failures, which cause me considerable pain. But I am also conscious of an ongoing incentive within me to do better, for I carry a triple legacy—an American, a Hellenic, and the Christian legacy. I pray God may ever show me the wisdom to correct my faults and grant me the strength to ever glorify Him in deed and word.

I view this magnanimous and obliging gesture of yours, Mr. President, as a mandate, for through this event, you once again remind me of the unfinished task

which lies ahead: the reunion of all Christians into the one holy, catholic, and apostolic church that may serve and save the world; the restoration of the image of God in man by our renewed and concerted effort to reinstate respect for human dignity and justice; the spiritual reawakening of our society in the face of the ugly realities of today, which may lead us to the recapturing of the modern spiritual values of Christianity; the stirring of the human soul and thought, so that it may once again attain and grasp God's truth and love, through which peace in the world may be advanced. All of these sacred causes and many more place formidable demands upon me and upon all of us.

We who are privileged to share this great moment with you, Mr. President and Mrs. Carter, will ever treasure the beauty and meaningfulness of it. From the depths of my heart, I thank you, Mr. President, and your beloved wife, our First Lady, Rosalynn.

And on behalf of all of us, please accept, Mr. President, Mrs. Carter, our fervent prayer. May God, our Father, grant you your heart's desire and crown all your plans for our country and the world with triumphant success.

NOTE: The President spoke at 4:36 p.m. in the East Room at the White House.

Energy Legislation

**Statement by the White House Press Secretary on Congressional Actions.
September 19, 1979**

Last night and this morning, there have been two very encouraging actions on the Hill on energy.

The Senate Energy Committee has approved, by substantial bipartisan margins, amendments that give them now an energy mobilization bill that is very close

to the proposals the President sent up and which we are very happy with. The President asked that I convey publicly his appreciation to the leadership shown in that committee by the chairman, Senator Jackson, also to the leadership and hard work from Senator Johnston of Louisiana, and his appreciation for the bipartisan support for this legislation.

In addition, the Conference Committee on Rationing—although at my last check they had not quite finished their work; there were still some issues to be resolved—appears to be well on their way to a good and acceptable rationing bill. We expect that that progress will continue and that the result will be a good rationing bill.

NOTE: Press Secretary Jody Powell spoke at 2:45 p.m. at his regular daily briefing in the Briefing Room at the White House.

Environmental Protection Agency

Nomination of Inez Smith Reid To Be Inspector General. September 19, 1979

The President today announced that he will nominate Inez Smith Reid, of New York City, to be Inspector General of the Environmental Protection Agency.

Reid is Deputy General Counsel for Regulation Review at the Department of Health, Education, and Welfare.

She was born April 7, 1937, in New Orleans. She received a B.A. from Tufts University in 1959, an LL.B. from Yale University in 1962, an M.A. in political science from the University of California at Los Angeles in 1963, and a Ph. D. from Columbia University in 1968.

In 1963–64 Reid was a lecturer in criminal law at the École Nationale de Droit et d'Administration in Congo-Kin-

shasa. In 1964-65 she was an assistant professor of African studies and political science at the State University of New York at New Paltz. In 1965-66 she was a lecturer in political science at Hunter College in New York.

From 1966 to 1971, Reid was on the faculty at Brooklyn College, moving from instructor to associate professor of political science. She has been on the faculty of Barnard College, Columbia University, since 1971 and was on leave in 1972 and from 1976 to 1979.

From 1972 to 1976, she practiced law in New York City. From 1976 to 1977, she was general counsel of the New York State Executive Department, State Division for Youth. She has been Deputy General Counsel of HEW since 1977.

Peace Corps

Nomination of William G. Sykes To Be Deputy Director. September 19, 1979

The President today announced that he will nominate William G. Sykes, of Baltimore, Md., to be Deputy Director of the Peace Corps. He would replace Thomas Houser, resigned.

Sykes is deputy secretary of the Maryland Department of Human Resources.

He was born December 5, 1926, in Halifax, Va. He received a B.S. from Hampton Institute in 1956 and an M.S.W. from Howard University in 1962. He served in the U.S. Army from 1956 to 1957.

From 1957 to 1960, Sykes was a case-worker for the city of Baltimore, and from 1960 to 1961, he was a probation officer for the criminal division of the Supreme Bench of Baltimore. From 1961 to 1964, he was a school social worker for the Baltimore City Department of Education.

From 1964 to 1966, Sykes was project supervisor for the Baltimore Youth Services Project of the National Committee for Children and Youth. From 1966 to 1967, he was training director for the National Committee for Children and Youth. He was chief social worker for the Baltimore City Health Department in 1967 and 1968.

Sykes was with the Baltimore Model Cities Agency from 1968 to 1973, as health coordinator, acting director, and then director. From 1973 to 1975, he was assistant to the mayor of Baltimore and director of the mayor's Office of Human Resources. He has been deputy secretary of the Maryland Department of Human Resources since 1975.

Senior Executive Service

Memorandum From the President. September 19, 1979

Memorandum for the Heads of Departments and Agencies

Subject: The Selection and Development of the Senior Executive Service

The Senior Executive Service, the keystone of the Civil Service Reform Act, was inaugurated on July 13. The SES offers one of the most promising avenues for improving the management of the Federal government. I know that you share my satisfaction and pleasure that over 96 percent of those eligible to join the Senior Executive Service did so. It is essential that we take advantage of this demonstration of confidence in the Service and maintain the momentum which it has created.

I know that you will take a continuing interest in the SES and in the development of those who will join the Service in

the future. One of the most important ways of accomplishing this is by establishing a strong Executive Resources Board in your organization to oversee the administration of the Senior Executive Service. This Board will also direct executive development systems to identify and train candidates for future membership in the SES.

The people who serve on these Boards hold the key to the future of the SES. It is imperative that you impress upon the Chairperson and members of your Executive Resources Board the importance this Administration places upon executive selection and development.

The Office of Personnel Management has established criteria for executive selection and development programs. I believe these criteria provide the flexibility you need to devise a system which meets the specific characteristics and needs of your organization. Central to every program must be the identification and selection, in advance, of top performers who have executive potential and whose talents should be developed to enable them to take top-level responsibilities. This will involve both wide competition and a very careful selection for the executive development programs required by the Reform Act. I also want to make certain that women, the handicapped, and members of minority groups are given full consideration when selections are made.

We have the opportunity, now, to establish systems that will provide an effective, motivated, and exemplary corps of career executives to serve the needs of our Nation in the years to come. There are no more important actions we can take to provide long-term benefit to Government and more efficient delivery of services to the public.

JIMMY CARTER

National Meals on Wheels Week, 1979

Proclamation 4689. September 19, 1979

By the President of the United States of America

A Proclamation

This year marks the twenty-fifth anniversary of the Meals on Wheels programs which make nutritious food available to aged and ailing persons in their homes. Since 1954, thousands of volunteers in these programs have made it possible for many of the Nation's elderly to reside at home rather than in institutions and to live healthier, happier and more independent lives.

In recognition of the outstanding contributions of these volunteers, the Congress, by House Joint Resolution 367, has designated the week beginning September 16, 1979, as National Meals on Wheels Week.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim the week of September 16 through September 22, 1979, as National Meals on Wheels Week.

In accord with the congressional resolution, I invite the Governors of the several States, the chief officials of local governments and the people of the United States to observe this period with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this nineteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

[Filed with the Office of the Federal Register, 4:44 p.m., September 19, 1979]

National Day of Prayer, 1979

Proclamation 4690. September 19, 1979

*By the President of the United States
of America*

A Proclamation

The history of our country is a history of triumph over adversity. Time after time, we have overcome threats from within and without. Over the generations, wars, depressions, and internal differences and bigotry in various forms have struck at the foundations of our society. As we have met these challenges together, the bonds between us as Americans have grown stronger.

We endure and remain a land of hope because of the basic goodness and strength of our people and because the God of us all has shown us His favor.

The decisions we make today on arms, economics, social justice and global responsibilities echo into the future of the world. We accept our responsibilities and make our choices with all the will and determination at our command, but always in the full knowledge that we are finally in the hands of God. In the words of the prophet Zechariah, "Not by might, not by power but by my spirit saith the Lord of Hosts." (4:6)

Recognizing this, the Congress by joint resolution approved April 17, 1952 (36 U.S.C. 185; 66 Stat. 64) has called upon the President to set aside a suitable day each year as a National Day of Prayer.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby proclaim Wednesday, October 3, 1979, as a National Day of Prayer. I ask all Americans to join with me on that day to recommit ourselves to God, to each other and to the towering ideals of truth, justice, fairness, brotherhood, and love which our Nation has cherished and

protected. Let us pray for the will and wisdom to create a world in which all people can live with each other in peace. Let us pray that careful stewardship of today's opportunities will protect and enlarge the inheritance of liberty and security we give our children.

IN WITNESS WHEREOF, I have hereunto set my hand this nineteenth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

JIMMY CARTER

National School Lunch Week, 1979

Proclamation 4691. September 20, 1979

*By the President of the United States
of America*

A Proclamation

Active, growing youngsters need good food to do well in school. And since the eating habits established in childhood affect later tastes and practices, school meals also provide a unique opportunity to understand and enjoy good nutrition. The National School Lunch Program, established in 1946, now provides nourishing lunches to 26 million school children each school day. The United States Department of Agriculture sets nutritional standards to these meals but the quality and appeal of school lunches depend on another vital ingredient: people who care.

Therefore, I want to pay special tribute to the thousands of people—parents, teachers, principals, school food service workers, State and local officials—who make the school lunch program work in

94,000 schools across the country. They determine whether the cafeteria is a pleasant and welcoming place, whether the food served is actually eaten, whether children come to think of good nutrition as punishment or pleasure.

In recognition of the School Lunch Program's contribution to America's youth, the Congress, by a joint resolution of October 9, 1962 (76 Stat. 779; 36 U.S.C. 168), has designated the week beginning the second Sunday of October in each year as National School Lunch Week, and has requested the President to issue annually a proclamation calling for its appropriate observance.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby urge the people of the United States to observe the week of October 14, 1979, as National School Lunch Week and give special attention to activities that will promote good nutrition for America's youth.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of September, in the year of our Lord nineteen hundred seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Emergency Board To Investigate a Railway Labor Dispute

Remarks Announcing Establishment of the Board. September 20, 1979

I have an announcement to make about the Rock Island Railroad.

I'm today appointing an emergency board, under the Railway Labor Act, to intervene in the labor dispute that has

crippled the Rock Island Railroad since August 27.

This strike is having a severe, adverse economic effect on farmers throughout the Central United States. Processing mills for grain are already shutting down, and within 2 weeks the marketing of what promises to be a record grain crop could be genuinely threatened. If the grain does not begin to move on schedule with the harvest, not only would there be economic loss to the farmers and an employment loss in the grain-processing industry, but ultimately the consumers would be affected by higher food prices as well.

The purpose of this action is to get the trains rolling again in a matter of days and to start moving grain that has already been piling up in the large areas of the Midwest served by the Rock Island Railroad line.

Because the Rock Island is critically short of cash, it's probable that the railroad will not be able to restore service on its own, even with this action. To meet that difficulty, I'm asking the Interstate Commerce Commission to take the steps needed to permit other railroads to employ Rock Island employees and workers to maintain service.

I'm taking these strong actions, because we absolutely must mobilize all our transportation resources for the movement of grain during this period of record-breaking grain harvests and also record-breaking demands for grain exports. Not only our farmers but also the consumers of grain—both here within our own country and, indeed, throughout the world—simply must be protected.

I've acted because the normal process for settling labor disputes has broken down, primarily as a result of the likelihood that Rock Island will not be able to reorient its services because of financial difficulties. And we must restore this serv-

ice of financial support if a settlement is to be reached and carried out.

As an additional step, I directed the Secretaries of Transportation, Labor, and Agriculture to work closely with the State officials and also with the Chairman of the Interstate Commerce Commission in solving the inevitable day-to-day problems involving safety and operation of the railroad, in getting this Rock Island line rolling again across the grain belt.

We must now move quickly beyond this immediate problem and work to restore all our Nation's rail services to a high degree of efficiency and financial stability.

The current situation on the Rock Island is symptomatic of the problems that confront the entire United States rail industry. To prevent further problems such as those I've confronted with the Rock Island, I call upon the Congress to pass without delay the rail deregulation proposal to break the strangulation of outmoded, unnecessary economic regulations, which will help the industry to generate the revenues it needs and to maintain and to improve its services. Only by such fundamental action can we avoid further bankruptcies and further dislocations in our rail industry throughout the country.

Such a deregulation reform bill will be a victory for the hard-pressed rail industry, for the shipping and the consuming public, and for the taxpayers, who are increasingly having to subsidize the rail industry.

Now I'd like to ask Neil Goldschmidt and the other officials with me on the stage to answer questions from you. And I'm sure that the people in the Midwest will be well served by this action.

NOTE: The President spoke at 1:30 p.m. to reporters assembled in the Briefing Room at the White House.

Following the President's remarks, Secretary of Transportation Neil Goldschmidt and other administration officials held a news conference on the labor dispute.

Emergency Board To Investigate a Railway Labor Dispute

Executive Order 12159. September 20, 1979

CREATING AN EMERGENCY BOARD TO INVESTIGATE DISPUTES BETWEEN THE CHICAGO, ROCK ISLAND, PACIFIC RAILROAD & PEORIA TERMINAL COMPANY AND BROTHERHOOD OF RAILWAY, AIRLINE & STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES; AND THE UNITED TRANSPORTATION UNION

Disputes exist between the Chicago, Rock Island, Pacific Railroad & Peoria Terminal Company and certain of its employees represented by both the Brotherhood of Railway, Airline & Steamship Clerks, Freight Handlers, Express and Station Employees; and the United Transportation Union.

These disputes have not heretofore been adjusted under the provisions of the Railway Labor Act, as amended; and

These disputes in the judgment of the National Mediation Board threaten substantially to interrupt interstate commerce to a degree such as to deprive a section of the country of essential transportation service:

NOW, THEREFORE, by the authority vested in me by Section 10 of the Railway Labor Act, as amended (45 U.S.C. 160), it is hereby ordered as follows:

1-101. *Establishment of Board.* There is established a board of three members to be appointed by the President to investigate these disputes. No member of the board shall be pecuniarily or otherwise interested in any organization of railroad employees or any carrier.

1-102. *Report.* The board shall report its finding to the President with respect to these disputes within 30 days from the date of this Order.

1-103. *Maintaining Conditions.* As provided by Section 10 of the Railway Labor Act, as amended, from this date and for 30 days after the board has made its report to the President, no change, except by agreement, shall be made by the Chicago, Rock Island, Pacific Railroad & Peoria Terminal Company, or by its employees, in the conditions out of which these disputes arose.

JIMMY CARTER

Emergency Board To Investigate a Railway Labor Dispute

Appointment of the Membership.
September 20, 1979

The President today announced the appointment of the three members of the Emergency Board to investigate the Chicago, Rock Island, Pacific Railroad & Peoria Terminal Company labor dispute. They are:

James J. Reynolds, of Washington, D.C., to serve as Chairman of the Emergency Board. Reynolds was president of the American Institute of Merchant Shipping until his retirement in 1978. He served as Assistant Secretary of Labor and Under Secretary of Labor in the Kennedy-Johnson administrations. He has also served as a member of the National Labor Relations Board.

Ida Klaus, of New York City, an arbitrator and mediator with more than 40 years' experience in the labor relations field. She has served as special arbitrator under the U.S. Steel Agreement since 1975. She has also served as Solicitor for the National Labor Relations Board and,

from 1962 to 1975, as executive director of the Office of Labor Relations and Collective Bargaining of the New York City Board of Education.

Nicholas H. Zumas, of Washington, D.C., an attorney and arbitrator who has been in private practice since 1965. He is a member of the District of Columbia Board of Labor Relations. He has also served as counsel for the House Special Subcommittee on Education, Committee on Education and Labor, and assistant to the Under Secretary of Health, Education, and Welfare.

Department of State

*Nomination of Roberts Bishop Owen To Be
Legal Adviser.* September 20, 1979

The President today announced that he will nominate Roberts Bishop Owen, of Washington, D.C., to be Legal Adviser of the Department of State. He would replace Herbert J. Hansell, resigned. Owen is a partner in the law firm of Covington & Burling.

He was born February 11, 1926, in Boston, Mass. He received a B.A. in 1948 and an LL.B. in 1951 from Harvard University, and a C.L.S. from Cambridge University in 1952. He served in the U.S. Navy from 1943 to 1946. Owen has been with Covington & Burling since 1952.

President's Advisory Committee for Women

Appointment of Four Members.
September 20, 1979

The President today announced the appointment of four persons as members of

the President's Advisory Committee for Women. They are:

JACK T. CONWAY, senior vice president of United Way of America, former president of Common Cause and the Center for Community Change, and former executive director of the American Federation of State, County and Municipal Employees;

CHARLES GUERRIER, executive director of the Women's Law Fund in Cleveland, Ohio, and a member of the board of trustees of the Women's Resource and Policy Development Center in Columbus, Ohio;

NANCY A. HUMPHREYS, president of the National Association of Social Workers and an assistant professor at the Graduate School of Social Work at Rutgers University;

ESTELLE RAMEY, professor and director of graduate studies at the School of Medicine, Georgetown University, and a nationally known lecturer on women's health issues.

American Education Week, 1979

Proclamation 4692. September 20, 1979

By the President of the United States of America

A Proclamation

Our nation has come a long way toward realizing the Founders' dream of having an educated electorate, so that all our people might share fully in freedom, justice and opportunity. In this International Year of the Child, as we join with other nations to understand and meet the needs of children around the world, we are especially aware of the importance of education.

The theme of this year's American Education Week, "Teach All the Children", acknowledges both our goal and what must be done to accomplish it. The responsibility for educating our children lies not just with the schools, but with parents and communities as well.

Every American has a responsibility to

make sure that our children do not merely pass through school systems, but actually receive the education they need. To do that, we must find ways to reach every child—regardless of race, sex, religion, national origin or economic background, and responding to particular needs because of physical or mental handicaps or special talents. We must respect and nourish each child's unique potential.

Now, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate the week beginning November 11, 1979, as American Education Week.

I ask for the support of every American in helping to create challenging educational opportunities that will help develop the diverse abilities of children, and to help nurture in each a sense of excellence and respect for all mankind.

I urge individuals and groups to work with schools in their communities to ensure that they are able to "Teach All the Children" well.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of September, in the year of our Lord nineteen hundred and seventy-nine, and of the Independence of the United States of America the two hundred and fourth.

Panama Canal Treaties

White House Statement on Disapproval of Implementing Legislation by the House of Representatives. September 20, 1979

The President deeply regrets that the House of Representatives did not adopt the legislation proposed by the House-Senate conference to provide for the operation of the Panama Canal under the treaties that enter into force on Octo-

ber 1. We understand that the new conference will meet again soon, possibly as early as tomorrow.

The administration will make every effort to obtain the necessary legislation. The United States must have legislative authority by October 1 to exercise our rights to operate the canal. It is inconceivable that the Congress would allow the Panama Canal to be closed even for a short time.

The President is confident that the Government of Panama will respond to this development with the dignity and restraint which has characterized it during the long deliberations on the canal treaties and the implementing legislation in the Congress.

Regulatory Reform of the Telecommunications Industry

Message to the Congress. September 21, 1979

To the Congress of the United States:

I am today announcing my support for efforts in Congress to reform the regulation of telecommunications. Legislation is needed to eliminate needless regulatory controls, encourage competition and innovation, and keep telephone service affordable throughout the country.

Regulatory reform is one of my highest national priorities. Where the marketplace can work, we must get the government out of making marketplace decisions. Where regulation is needed, we must ensure it is well managed.

Last year the Administration and Congress worked together to deregulate airlines, introducing competition that already has saved over \$2.5 billion for passengers while increasing air travel and airline revenues. This year we have submitted to Congress far-reaching regula-

tory reform proposals affecting trucking, railroads, banking, drugs, and regulatory procedures.

The 45-year-old regulatory charter for telecommunications also needs revisions. This industry can provide more and better services while cutting many costs. It can help fight inflation and promote growth. We cannot afford to have this progress frustrated by unwarranted regulation. We must ensure that competitors fight through their salesmen in the marketplace rather than through their lawyers in government hearings.

Telecommunications is crucial to our society. This industry—which includes the telephone companies and the firms which provide satellite communications, computer links, and other specialized services—has more than one million employees and annual revenues of over \$50 billion. The availability of nationwide, high-quality communications is vital to the economy, national security, and the quality of our lives. Sophisticated new communications systems are providing better services, lower costs, and improved productivity in an economy that depends more and more on information transfers.

Telecommunications firms are regulated by the Federal Communications Commission under the Communications Act of 1934. That Act was designed at a time when technology made monopoly the logical structure for telecommunications. That system, assisted by the rural telephone loan program, has nearly achieved the national goal of universal service—96 percent of all households and nearly all businesses have telephone service.

Two critical changes have occurred since 1934. First, there have been extraordinary technological advances. In addition to the wired network, the telephone companies and new, competing firms are using satellites, lasers, microwaves, and

miniature computers to provide more and more systems and services for business and homes. The new technology makes it possible to hold meetings, transmit messages, do research, bank, shop and receive a widening variety of information and entertainment—all through electronics. In the process, the technology has invalidated the old assumption that all aspects of telecommunications service are natural monopolies. Second, FCC and court actions over the last decade opened portions of the industry to competition. Despite these far-reaching developments, the statutory framework has remained unchanged, and regulatory changes have come slowly.

Outmoded regulatory controls and slow procedures are harming new competitors, established telephone companies, and the users of telephone and other telecommunications services. Regulatory delays and uncertainties discourage firms from entering new markets and offering new services. In a dynamic industry, these delays can mean that the product or service offered is obsolete by the time the regulatory proceeding ends. Innovation is hobbled by uncertainty and by the need to respond to artificial regulatory conditions instead of real consumer demand.

Consumers are the final beneficiaries of competition, through lower prices and wider choices. The competition already allowed in the telecommunications industry is producing benefits. For example, the market for telephone sets and other terminal equipment recently was opened to competition. Consumers now can shop around for good prices, choose from a wide variety of products, and decide whether to buy or lease. Competition is also providing more choices among sophisticated, new services, such as those that combine data processing and transmission.

The choice is clear. Competition is a fact of life in this industry. It cannot and should not be rolled back, and we should not allow it to continue developing haphazardly. That approach means delay and uncertainty, and it poses a long-run danger to the health of our telecommunications system. Instead, we need both legislation and well-planned action at the FCC. The task is to create a structure that will give consumers the benefits of competition and deregulation wherever they make sense while keeping telephone service reliable and affordable.

The FCC under Chairman Charles Ferris is working hard on this effort, but the Act itself needs change. The House and Senate Communications Subcommittees are now working on legislation to meet this challenge. I urge Congress to press forward and enact a bill that incorporates the following basic principles:

- *Competition should be encouraged and fully competitive markets should be deregulated.* The bill should set a policy of encouraging competition wherever it is workable and of eliminating needless regulation. Deregulation makes sense for competitive markets, such as terminal equipment, and for small firms that cannot dominate markets. Many communications and equipment offerings should be deregulated now, and legislation is needed to avoid endless litigation over the FCC's authority to do so. Of course, some communications markets, such as the local exchange, may remain regulated monopolies indefinitely. The legislation should not, however, preclude competition in any market.

As the industry moves toward competition and deregulation, some continued controls will be needed because one firm dominates the telecommunications industry and others have local monopolies. Firms should be prevented from using

monopoly power and revenues in some markets to gain advantage over competitors in others. Any monopoly facilities used in providing competitive services should be available to all competitors at the same rates and terms. In addition, changes in companies' structures will be needed, such as mandating fully separate subsidiaries. Where such changes are made, the employment, pension, and union rights of the employees should be protected.

- *Restrictions based on out-of-date market divisions should be removed.* The line between telecommunications and data processing has become blurred; new equipment and services involve both. Existing controls based on this distinction have produced years of regulatory proceedings and are delaying the use of new technologies. In addition, the rules that divide some communications services between domestic and international companies are outmoded and need change. These problems should be solved through open competition by all, without extending the scope of regulation. To ensure fair competition, creation of fully separate subsidiaries, including separate accounts and marketing, will be needed, and some of the restrictions on international service will have to be removed gradually.

- *Universal availability of basic telephone service at affordable rates must be maintained.* Overall long-distance revenues currently contribute to keeping some local and toll rates affordable. This is done through complex accounting processes largely determined by the telephone industry. Because of the developments of the last decade, this system is in trouble. The industry is considering changing it in order to match the new competitors' rates, and that could mean significant rate increases in some rural areas.

These are important public policy decisions and should not be left solely to the industry. We need a new system, which would be administered openly by public officials. The legislation should provide for a charge on all long-distance services—including those of the new competitors—which use local exchanges. This "access charge" would cover the actual cost of using local facilities, provide support for local service, and finance protection for rural residents against large toll rate increases.

These provisions should be drawn to encourage the FCC, state regulators and the telephone companies to take long-term steps to support universal service. Such steps include prices based on actual use; low "lifeline" rates for basic service; and use of new technologies that can provide low-cost service over long distances.

In addition, the rural telephone companies and cooperatives should be encouraged to help extend to rural Americans the benefits of all the new communications technologies. As my policy statement on rural communications said last January, the current rules that restrict rural telephone companies from offering cable TV services should be removed.

- *Appropriate jurisdictional boundaries should be set.* The current boundary between Federal and state regulatory jurisdictions—the state line—is inconsistent with technological realities. The bill should set new, clear boundaries: service within local exchanges should be regulated by the states, while service between exchanges should be under Federal control.

- *The FCC should be given the authority to develop efficient means of assigning non-broadcast frequencies.* Many of the new telecommunications systems use radio frequencies, such as satellite

links, microwaves, and mobile radio. The FCC currently assigns many of these frequencies through "comparative hearings" which impose months or years of delay and waste FCC resources. Under the current system, once a frequency is assigned there is no incentive to use it efficiently. That is a problem because growing numbers of users, here and abroad, are crowding the limited space in the radio spectrum.

We need assignment systems that are fast, flexible, and that provide incentives to use the spectrum efficiently. The legislation should give the FCC authority to design new procedures which use marketplace forces, such as auctions, leasing, and re-sale. These procedures will help ensure that the spectrum is used sensibly, just as similar tools are employed for oil leases and other limited natural resources.

- *The antitrust laws should remain applicable as before.* It should be explicit that the legislation is neutral as to pending and any future litigation.

- *The technical quality of the telecommunications network should be protected.* The legislation should not impede cooperation between the carriers to plan and manage national systems. To provide for technical quality, national security, and emergency preparedness needs, the FCC should retain authority to set technical standards and ensure that facilities are capable of interconnection where appropriate.

- *Public participation in regulatory decision making should be encouraged.* Effective participation by the users of telecommunications services will help the FCC and state regulators make their difficult decisions. Such involvement should be encouraged through open proceedings and by providing funding for groups that

could not otherwise afford to participate and that represent an important interest that would not otherwise be heard.

I congratulate Chairman Lionel Van Deerlin of the House Communications Subcommittee and Chairmen Howard Cannon and Ernest Hollings of the Senate Commerce Committee and the Communications Subcommittee and their colleagues for the extensive and informative hearings they have held and the thoughtful bills they have introduced covering the issues I have outlined and other important communications matters. My Administration will continue to provide assistance on specific provisions. I urge Congress to move forward with this important effort.

JIMMY CARTER

The White House,
September 21, 1979.

Interstate Commerce Commission

Nomination of Reginald E. Gilliam, Jr., To Be a Member. September 21, 1979

The President today announced his intention to nominate Reginald E. Gilliam, Jr., to be a member of the Interstate Commerce Commission.

Gilliam is legislative assistant to Senator John Glenn.

He was born December 29, 1944, in New York City. He received an A.B. from Lincoln University in 1965 and a J.D. from Harvard Law School in 1968.

From 1968 to 1969, Gilliam was a staff attorney in Utica, N.Y. He was an assistant professor at the State University of New York in Albany, N.Y., from 1969 to 1972. From 1972 to 1975, he was assistant

dean of Williams College. He has been legislative assistant to Senator Glenn since 1975.

United States-Mexico Agreement on Natural Gas

Remarks Announcing the Framework for an Agreement. September 21, 1979

I'm pleased to announce that we have just reached an agreement with the Government of Mexico which will permit the purchase of Mexican natural gas by United States buyers.

This is a significant step toward providing a new source of energy supplies for our country. Just as important, the agreement is a breakthrough in building the relationship of equity and mutual respect which we seek with the government and the people of our great southern neighbor.

Under the terms of this agreement, the United States purchasers will be able to buy 300 million cubic feet of natural gas each day. This gas will be in excess of Mexico's national demand and will meet our own needs which are not covered by our present supplies. The price is a fair one for both countries.

This natural gas agreement represents an important first step toward a deeper and broader relationship, and it will be of great benefit both to the people of Mexico and to the people of our own country.

I've expressed to President López Portillo today my pleasure that we've reached an understanding with respect to natural gas sales and that we will have a chance to discuss more important issues—other important issues when we meet in Washington next week.

Thank you very much.

NOTE: The President spoke at 3:58 p.m. to reporters assembled in the Briefing Room at the White House.

United States-Mexico Agreement on Natural Gas

Joint Announcement. September 21, 1979

The Governments of Mexico and the United States of America have reached an understanding on a framework for the sale of 300 million cubic feet per day of natural gas by Petroleos Mexicanos, the Mexican State Oil Company, to U.S. purchasers.

Pursuant to the understanding reached, the Governments of the United States of America and the Mexican States have agreed to authorize and support as a matter of policy commercial transactions which are within the following framework:

—The initial volume of natural gas deliveries will be 300 million cubic feet per day, commencing as soon as contracts are signed, regulatory approvals obtained, and gas is available for delivery.

—The initial price will be \$3.625/million btu as of January 1, 1980. This initial price is subject to reconsideration prior to January 1, 1980, if the price for natural gas from comparable sources exceeds that amount prior to said date.

—The arrangement shall continue without limitation subject to the understanding that the gas to be supplied is surplus associated gas in excess of Mexican national demand, that the gas being purchased is to meet U.S. needs not covered from other sources, and that therefore the contractual provisions will provide that either nation, on the basis of its own determination of its national interest, taking into account its domestic supply and demand for natural gas, may cause the termination of the arrangement upon 180 days notice to the other nation.

—The initial price will be adjusted quarterly by the same percentage as the

change in world crude oil prices pursuant to a specific formula to be agreed upon by the contracting parties.

The way is now clear for the negotiation of commercial contracts between Petroleos Mexicanos and U.S. purchasers on terms which both governments regard as mutually beneficial. Such contracts will be subject to appropriate governmental approvals in each Country.

The two governments will review from time to time the terms of this arrangement as well as other energy issues of mutual interest.

Advisory Council on Historic Preservation

Appointment of Mrs. S. Henry Edmunds as a Member. September 21, 1979

The President today announced the appointment of Mrs. S. Henry Edmunds, of Charleston, S.C., as a member of the Advisory Council on Historic Preservation.

Edmunds is executive director of the Historic Charleston Foundation and recipient of the highest award of the National Trust for Historic Preservation for her work in preservation and restoration in Charleston.

Digest of Other White House Announcements

The following listing includes the President's public schedule and other items of general interest announced by the White House Press Office and not included elsewhere in this issue.

September 17

The President returned to the White House from Camp David, Md.

The President participated in a meeting of the Policy Review Committee at the White House and conducted a National Security Council review of the situation concerning Soviet troops in Cuba.

The President met at the White House with:

—Zbigniew Brzezinski, Assistant to the President for National Security Affairs;

—Vice President Walter F. Mondale;

—a group of Senators to discuss energy.

The President participated in a briefing by administration officials on the strategic arms limitation treaty given for community leaders in the East Room at the White House.

The President has declared a major disaster for the Virgin Islands of the United States as a result of Hurricane David and Tropical Storm Frederic during the period of August 29 through September 7, which caused extensive public and private property damage.

The President transmitted to the Congress the second annual report on the Status of Health Information and Health Promotion.

September 18

The President met at the White House with:

—Dr. Brzezinski;

—the Democratic congressional leadership;

—Frank B. Moore, Assistant to the President for Congressional Liaison.

September 19

The President met at the White House with:

—Vice President Mondale, Secretary of Agriculture Bob Berg-

land, Secretary of Commerce Juanita M. Kreps, Secretary of Health, Education, and Welfare Patricia R. Harris, Secretary of the Interior Cecil D. Andrus, Secretary of Transportation Neil Goldschmidt, James T. McIntyre, Jr., Director of the Office of Management and Budget, Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy, and Jack H. Watson, Jr., Assistant to the President for Intergovernmental Affairs, to discuss domestic policies;

- Dr. Brzezinski;
- Mr. Moore;
- Mrs. Carter, for lunch.

In a ceremony in the Oval Office, the President presented the Boy of the Year Award to Danny Rolett, 16, of Little Rock, Ark. Also attending the ceremony were representatives of the Boys Club, which sponsors the award.

September 20

The President met at the White House with:

- Dr. Brzezinski;
- a bipartisan group of Senators and Representatives to discuss the presence of Soviet troops in Cuba;
- Senator Pete V. Domenici of New Mexico;
- Mr. Moore;
- members of the United Democrats of Congress.

The President participated in a briefing by administration officials for leaders of the National Conference of State Legislatures held in Room 450 of the Old Executive Office Building.

The President transmitted to the Congress the 1978 Report to the President on Disease Control Programs and the Second

Annual Report on the Administration of the National Sickle Cell Anemia, Cooley's Anemia, Tay-Sachs, and Genetic Diseases Act.

The President announced the reappointment of Douglas Fraser, president of the United Auto Workers, and Lloyd McBride, president of the United Steelworkers, as members of the Advisory Committee for Trade Negotiations for 2-year terms.

September 21

The President met at the White House with:

- Dr. Brzezinski;
- Vice President Mondale, Secretary of State Cyrus R. Vance, Secretary of Defense Harold Brown, Hamilton Jordan, Assistant to the President, Hedley W. Donovan, Senior Adviser to the President, and Dr. Brzezinski;
- Mr. Moore;
- Charles L. Schultze, Chairman of the Council of Economic Advisers;
- Gov. Brendan Byrne of New Jersey, chairman, and members of the National Citizens' Coalition for the Windfall Profits Tax;
- a group of editors and broadcasters (transcript will be printed next week).

**NOMINATIONS SUBMITTED
TO THE SENATE**

The following list does not include promotions of members of the Uniformed Services, nominations to the Service Academies, or nominations of Foreign Service officers.

Submitted September 17, 1979

DONALD R. NORLAND, of New Hampshire, a Foreign Service officer of Class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Chad.

RONALD P. LAURENT, of Illinois, to be President, Government National Mortgage Association, vice John Howard Dalton, resigned.

NOMINATIONS—Continued

Submitted September 18, 1979

The following-named persons to be members of the Federal Council on the Aging for the terms indicated:

For terms expiring June 5, 1981

CYRIL HILARY CARPENTER, of Minnesota, vice Mrs. John William Devereux, term expired.

JOHN B. MARTIN, of Maryland (reappointment).

MARY CROWLEY MULVEY, of Rhode Island, vice Harry Holland, term expired.

JEAN JONES PERDUE, of Florida, vice Nat T. Winston, Jr., term expired.

For a term expiring June 5, 1982

AARON E. HENRY, of Mississippi, vice Frell M. Owl, term expired.

Submitted September 20, 1979

WILLIAM G. SYKES, of Maryland, to be Deputy Director of the Peace Corps, vice Thomas J. Houser.

INEZ SMITH REID, of New York, to be Inspector General, Environmental Protection Agency (new position).

ROBERTS BISHOP OWEN, of the District of Columbia, to be Legal Adviser of the Department of State.

Submitted September 21, 1979

ROBERT S. STRAUSS, of Texas, for the rank of Ambassador during the tenure of his service as Personal Representative of the President of the United States of America.

JAMES F. LEONARD, of New York, for the rank of Ambassador during the tenure of his service as Chief of the United States Mission to the Middle East Peace Negotiations.

CHECKLIST OF WHITE HOUSE PRESS RELEASES

The following listing contains releases of the White House Press Office which are not included in this issue.

Released September 17, 1979

News conference: on his review of the Department of Energy's preliminary report on oil industry supplies—by Stuart E. Eizenstat, Assistant to the President for Domestic Affairs and Policy

CHECKLIST—Continued

Released September 17—Continued

Advance text: remarks to the World Jewish Congress in New York City—by Zbigniew Brzezinski, Assistant to the President for National Security Affairs

Released September 20, 1979

News conference: on the Rock Island railway labor dispute—by Secretary of Transportation Neil Goldschmidt

Released September 21, 1979

News conference: on regulatory reform of the telecommunications industry—by Alfred E. Kahn, Advisor to the President on Inflation; Richard Neustadt, Assistant Director, Domestic Policy Staff; Dale Hatfield, Associate Administrator for Policy Analysis Development, National Telecommunications and Information Administration, Department of Commerce; and Mr. Eizenstat

News conference: on the United States-Mexico agreement on natural gas—by Warren M. Christopher, Deputy Secretary of State; Julius L. Katz, Assistant Secretary of State for Economic and Business Affairs; Leslie Goldman, Deputy Assistant Secretary of Energy for Policy and Evaluation; and Mr. Eizenstat

Fact sheet: United States-Mexico agreement on natural gas

ACTS APPROVED BY THE PRESIDENT

Approved September 19, 1979

H.J. Res. 367----- Public Law 96-65
A joint resolution to authorize and request the President to proclaim the week of September 16 through 22, 1979, as "National Meals on Wheels Week".

Approved September 21, 1979

H.R. 2774----- Public Law 96-66
An act to authorize appropriations for fiscal years 1980 and 1981 under the Arms Control and Disarmament Act, and for other purposes.

S. 109----- Public Law 96-67
An act to amend the International Development and Food Assistance Act of 1978 and the Foreign Assistance and Related Programs Appropriations Act, 1979, by striking out certain prohibitions relating to Uganda, and for other purposes.

PRESIDENTIAL DOCUMENTS

Week Ending Friday, September 28, 1979

Interview With the President

*Remarks and a Question-and-Answer Session
With Editors and Broadcasters.
September 21, 1979*

THE PRESIDENT. I'm very glad to have you here. I believe that since I've been in the White House this is the 48th group of editors from outside Washington who've come to meet with me and Dr. Brzezinski, Jody Powell, and others, depending upon the current event emphasis of that particular week. There obviously are a broad range of responsibilities that I have to face each day with a great deal of enthusiasm and enjoyment, sometimes with some degree of concern.

ADMINISTRATION POLICIES

This has not been a good week for us in the Congress. But I had a meeting last night with about 100 Members of the Congress—of the House—concerning key issues—the Panama Canal implementation legislation, which must be passed by the 1st of October; the debt limit, which must be changed and raised by the 1st of October; and also the second budget resolution, which also must be passed if the budget process is going to be successful. And now, of course, that must be done as well.

We've had good progress recently in the evolution of our overall energy policy, concerning rationing standby authority, concerning the windfall profits tax, concerning the security corporation to develop synthetic fuels, and concerning the production board, which is designed, as you know, to—the mobilization board, as it's called—which is designed, as you know, to expedite decisions to be made concerning energy projects. This is an extremely complicated subject, multifaceted, with broad-ranging responsibilities in the House and Senate. But I think we've had good success this year and, particularly, this last week.

There's a momentum building up in the House and Senate, and it's very gratifying to me. And I think this is derived directly from an increasing interest among the American people that I and the Congress must act on energy this year. The prime responsibility that I have as President is to guarantee the security of our country, and I see our Nation directly threatened in its security by an excessive dependence on imported oil.

The House and the Senate have many other items to consider—the Senate, obviously, involving itself with consideration of SALT. The Cuban-Russian troop item has been a matter of extra concern for us

the last 2 or 3 weeks, and the size of the defense budget is being negotiated with the Senators. This is just a range of subjects that we have in legislation.

In addition, as you know, it's important for me to have as good a working relationship as I possibly can with other interest groups around the country, particularly mayors, Governors, and others in positions of authority. And of course, we have a broad range of foreign policy issues that come before me literally every day.

I think the best thing that I can do at this moment is to answer your questions about any matter that might be of interest, and I'll try to answer them.

QUESTIONS

DULUTH-SUPERIOR GRAIN MILLERS STRIKE

Q. I want to ask you about the Duluth-Superior grain millers strike. I know before you started your trip down the Mississippi, you met with Governor Link and Governor Quie about the strike. A lot of people back in the Dakotas and Minnesota and northwestern Wisconsin are wondering, since you stepped into the Rock Island situation—and that was obviously a major part of grain transportation in the Midwest—wondering why similar action hasn't been taken in the Duluth-Superior strike.

Today the port director of Duluth is saying that if the strike is not settled here, maybe over the weekend or early next week, no more grain would move out of Duluth. And that's about 5 percent of the exports, and it's the third agricultural port in the country.

If you could, sir, could you characterize the differences in the situation between your intervention in the Rock Island situation and the stand you've taken as far as the grain millers in Duluth is concerned?

THE PRESIDENT. Well, there are some common features, one of the most notable of which is that I hope the both of them are rapidly settled. There are obviously some additional features, in that employers and employee negotiations are ongoing.

There are differences in law. The Federal laws relating to railways give the President special responsibility and authority to deal with the transportation interruption. And this is an act under which I have recently proposed a resolution of the issue to get the railroads moving again.

The Rock Island Railroad is on the verge of bankruptcy. And it's obvious to me that if a settlement even is reached between the owners and the employees, that the settlement is unlikely to be implemented because of an absence of funds, if I don't act.

In the Duluth elevator question, we have provided, under the law, maximum Federal assistance and participation. The Federal negotiator has been directly involved with an increasing degree of emphasis since I visited the St. Paul area, and we have seen spasmodic indications of progress. Some days we have very good reports that progress is being made, even tentative settlements having been reached; other days not.

It's inappropriate, according to the legal rulings that I have from the Attorney General and Labor Secretary and others, that the Taft-Hartley Act is legally applicable to the Duluth grain elevator strike. The security of our Nation has to be in danger. And it would be difficult to prove in court—and the burden of proof would be on us—that this one strike is, indeed, threatening the crippling of our Nation and its security state or is a danger to the health of the Nation.

But we're doing everything we can to resolve both issues. I have much more authority on the Rock Island Railroad than in the Duluth.

COAL SUPPLIES

Q. Mr. President, Glen Moyer from WOAI Radio in San Antonio, Texas. The conversion to coal is a well-known prophecy or directive of yours as a part of your national energy program.

The city of San Antonio, a couple of years ago, made that conversion and now owns and operates municipally—or owns a municipal electrical power-generating plant that is coal burned. The problem that we are facing is continuous rate increases being granted by the Interstate Commerce Commission to, particularly, the Burlington Northern Railroad. Since January their price increases have increased by 18 percent. In fact, just this morning the Commission upheld yet another rate increase that now raises the price more than \$19 a ton to get coal from Wyoming to San Antonio. The city has even looked at the possibility of importing from overseas, coal from Australia, at a more economical rate than we could use American coal.

I have somewhat of a two-part question, if I might. First of all, does your administration have any plans for getting involved or intervening in any way in that pricing situation? And if not, how then can the administration continue to urge the conversion to coal in order to limit our need for oil imports, which you, a few moments ago, said is in some ways a threat to our security?

THE PRESIDENT. We're doing all we can, through legislation and through administrative action, to encourage a shift from oil to coal. And of course, the com-

petitive price of the two fuels is one that is of great concern to me.

As you know, the Interstate Commerce Commission is an independent agency, and I have no authority over that agency in directing them to establish a particular rate for the hauling of coal. That's done in a judicial forum, where the customers and also the railroads have a right to present their cases. And I presume the ICC has made a reasonable judgment in it.

We also are pursuing the option for coal delivery using slurry lines. The railroads are fighting this proposal, and of course, you have the additional problem involving environmentalists, that it may be an excessive use of water if the origin point has a scarce supply of water. But this is something that we've put forward, we're trying to fight through the Congress, to give the appropriate agencies the right to require rights-of-way under railroads if the coal slurry pipeline needs to travel in that direction.

We will make every effort, through public statements and otherwise, to influence the ICC and the railroads to restrain their rate increases. I would presume that the railroads and the coal miners know that if coal should get to a price level, including transportation costs, that's non-competitive, that they would lose very important and very large customers.

I don't know the details of the San Antonio area, but I think it's worthy of my inquiry now that you've raised the question.

AGRICULTURE EXPORTS

Q. Mr. President, a number of congressional leaders from the Midwest have mentioned that it would be feasible for this country to use the agricultural products, primarily wheat, beef, corn, to other nations to establish more of a balance of

the last 2 or 3 weeks, and the size of the defense budget is being negotiated with the Senators. This is just a range of subjects that we have in legislation.

In addition, as you know, it's important for me to have as good a working relationship as I possibly can with other interest groups around the country, particularly mayors, Governors, and others in positions of authority. And of course, we have a broad range of foreign policy issues that come before me literally every day.

I think the best thing that I can do at this moment is to answer your questions about any matter that might be of interest, and I'll try to answer them.

QUESTIONS

DULUTH-SUPERIOR GRAIN MILLERS STRIKE

Q. I want to ask you about the Duluth-Superior grain millers strike. I know before you started your trip down the Mississippi, you met with Governor Link and Governor Quie about the strike. A lot of people back in the Dakotas and Minnesota and northwestern Wisconsin are wondering, since you stepped into the Rock Island situation—and that was obviously a major part of grain transportation in the Midwest—wondering why similar action hasn't been taken in the Duluth-Superior strike.

Today the port director of Duluth is saying that if the strike is not settled here, maybe over the weekend or early next week, no more grain would move out of Duluth. And that's about 5 percent of the exports, and it's the third agricultural port in the country.

If you could, sir, could you characterize the differences in the situation between your intervention in the Rock Island situation and the stand you've taken as far as the grain millers in Duluth is concerned?

THE PRESIDENT. Well, there are some common features, one of the most notable of which is that I hope the both of them are rapidly settled. There are obviously some additional features, in that employers and employee negotiations are ongoing.

There are differences in law. The Federal laws relating to railways give the President special responsibility and authority to deal with the transportation interruption. And this is an act under which I have recently proposed a resolution of the issue to get the railroads moving again.

The Rock Island Railroad is on the verge of bankruptcy. And it's obvious to me that if a settlement even is reached between the owners and the employees, that the settlement is unlikely to be implemented because of an absence of funds, if I don't act.

In the Duluth elevator question, we have provided, under the law, maximum Federal assistance and participation. The Federal negotiator has been directly involved with an increasing degree of emphasis since I visited the St. Paul area, and we have seen spasmodic indications of progress. Some days we have very good reports that progress is being made, even tentative settlements having been reached; other days not.

It's inappropriate, according to the legal rulings that I have from the Attorney General and Labor Secretary and others, that the Taft-Hartley Act is legally applicable to the Duluth grain elevator strike. The security of our Nation has to be in danger. And it would be difficult to prove in court—and the burden of proof would be on us—that this one strike is, indeed, threatening the crippling of our Nation and its security state or is a danger to the health of the Nation.

But we're doing everything we can to resolve both issues. I have much more authority on the Rock Island Railroad than in the Duluth.

COAL SUPPLIES

Q. Mr. President, Glen Moyer from WOAI Radio in San Antonio, Texas. The conversion to coal is a well-known property or directive of yours as a part of your national energy program.

The city of San Antonio, a couple of years ago, made that conversion and now owns and operates municipally—or owns a municipal electrical power-generating plant that is coal-burned. The problem that we are facing is continuous rate increases being granted by the Interstate Commerce Commission in particular, the Burlington Northern Railroad. Since January their price increases have increased by 11 percent. In fact, just this morning the Commission approved yet another rate increase that now raises the price more than \$1.5 a ton in gas coal from Wyoming to San Antonio. The city has even looked at the possibility of importing from overseas coal from Australia at a more economical rate than we could use American coal.

I have somewhat of a two-part question. If I might first of all, does your administration have any plans or getting involved in increasing in any way in that pricing situation and if not, how then can the administration continue to meet the transportation and energy needs that we need for oil, more than just a few moments ago, and a little ways a threat to our energy.

The President: We are going to do that through energy and through transportation and through a number of other things. We are going to do that.

petitive price of the two fuels is one that is of great concern to me.

As you know, the Interstate Commerce Commission is an independent agency, and I have no authority over that agency in directing them to establish a particular rate for the hauling of coal. That's done in a judicial forum, where the customers and also the railroads have a right to present their cases. And I presume the ICC has made a reasonable judgment in it.

We also are pursuing the option for coal delivery using slurry lines. The railroads are fighting this proposal, and of course, you have the additional problem involving environmentalists, that it may be an excessive use of water if the origin point has a scarce supply of water. But this is something that we've put forward, we're trying to push through the Congress, to give the appropriate agencies the right to require right-of-way under railroads if the coal slurry pipeline needs to travel in that direction.

We will make every effort, through public statements and otherwise, to influence the ICC and the railroads to restrain their rate increases. I would presume that the railroads and the coal users know that if that should go to a price war, involving transportation costs, that's a very important and very large business.

I don't know the details of the San Antonio area, but I think it's worthy of my mention now that you've raised the question.

WHEAT AND EXPORTS

Q. Mr. President, a number of congressional leaders from the Midwest have mentioned that it would be feasible for this country to use the agricultural products, primarily wheat, feed, corn, to other nations to establish more of a balance of

Reid,
er in
there's
is been
ith and

1711

trade, import-export, especially with Japan and China. What's your stand on that? Do you plan to go more to that?

THE PRESIDENT. We've already done that, and we are pushing that as hard as we possibly can.

One of the prime campaign issues when I ran for President in '75 and '76 was the repeated grain embargoes that had been implemented under former Secretary of Agriculture Butz and under both Nixon and Ford, and I pledged that this would not be done unless our own Nation's security was directly threatened. We have sustained this commitment and have massively increased agricultural exports.

Our exports this year in volume, not counting even price, will probably be 60-percent greater than any year's exports in history, before I became President. We have set new United States and even world records every year on the total volume of agricultural exports. And I would presume that 1980 would show an even faster rise in exports of American grain to foreign customers.

There's a fairly good crop of grain in China and some other areas of the world. There's a fairly short crop of grain in the Soviet Union. And of course, we will have a bumper crop of grain this year. So, we have really emphasized this ability.

I want to make two other quick points. The second thing that we've done is to set up, within the Agriculture Department, export promotion centers, I believe in six foreign cities, where grain is purchased at that point, to encourage additional customers of our grain that wouldn't ordinarily, maybe, turn to us for grain. It's a highly competitive area.

And the second thing we've done is to greatly increase the quantity of grain that can be stored on the farm. In the past, farm storage was minimal, and quite often the farmers had to sell their grain at the

most depressed price level—that is, during harvest season—and any fluctuations later in the grain market, the profits ordinarily went to the middlemen. We have now increased substantially the amount of farm-stored grain, which gives us a chance to let the farmers participate in any improvement in the price, but also to stabilize grain prices, so that you don't have the wild fluctuations that did exist in the previous two administrations before mine.

I think all of these efforts have been very fruitful. And we've got a good reserve supply of grain on hand, rapidly increasing exports, additional emphasis overseas to broaden the customer range that we presently enjoy, increased participation by the farmers in seasonable profits.

PROJECT SEAFARER

Q. Mr. President, Dave Rood, the Delta Reporter, Gladstone, Michigan. When you were campaigning for the Presidency 3 years ago, you made the commitment at that time that you would not put in Project Sanguine, Seafarer, ELF, the Extremely Low Frequency—

THE PRESIDENT. Seafarer.

Q. —Seafarer against the will of the people of the Upper Peninsula. Yet there still persists—ELF is still alive. What is your position on that now? Would you still reiterate what you said before?

THE PRESIDENT. Well, my commitment was not to proceed with Seafarer against the will of the people. We have greatly modified the Seafarer proposal in every possible way. We have brought Michigan officials in to the Defense Department, and we've had people go out to explain to them what modifications were taking place. We're looking for every alternative to what was considered a threat to the Michigan, and—I think primarily the

Michigan environment—and I will still be very reticent about violating the desires of the Michigan people.

Having departed almost completely from the Seafarer proposal, which was my pledge, if we can find a successful alternative to that—and I consider it to be necessary for the security of our country—then I would have to make that decision to defend our country. But we are still assessing it, still working with the people in Michigan and other States to try to find a reasonable alternative to any objectionable use of this very low frequency communications system.

STORAGE OF CHEMICAL WEAPONS

Q. Mr. President, I'm Rob Rule from KJQ Radio in Ogden, Utah. The Army is planning to move some 900 Wet Eye nerve gas bombs into Utah to be stored. These are bombs that were manufactured in the early fifties and obviously have never been used against an enemy. I have a two-part question. Number one, do you see any reason why these weapons and other weapons like them shouldn't be neutralized tomorrow? And number two, why does Utah have to be the storage ground for these terrible weapons and for so many nuclear waste piles, too?

THE PRESIDENT. We have successfully, I think, concluded a negotiation with the Soviets on the prohibition against radiological weapons—that is, using radioactivity. We've not yet been successful in working out an agreement with the Soviet Union to abolish chemical warfare weapons, but we are actively pursuing that.

I don't believe it would be good for our country unilaterally to take this action. If we did, there would be no possible means in the future to induce the Soviets to join in with us and remove the threat of chemical warfare from the

world. The major unresolved difficulty is how to verify compliance with such an agreement.

I cannot tell you the reasons why the Defense Department has concluded that Utah is a better place to store it. I think, as you know, we've got destructive weapons and caustic materials and potentially dangerous operations possibly existing in every State in the Union. And sometimes a particularly offensive weapon might be stored in Utah; sometimes it would be stored in Georgia. We manufacture at the Savannah River plant, just on the border between Georgia and South Carolina, substantial quantities of radioactive material. We have, as you know, in Tennessee, ever since 35 or 40 years ago, manufactured plutonium. We're doing the same thing in Ohio. And I think you can go down the gamut of States, and you'd find in almost every State there are some objectionable things taking place, to certain groups. One was just mentioned here in Michigan.

Q. Wouldn't we look very good to the world community, though, if we said, regardless of what the Soviets are going to do, that the United States makes a commitment never to use one of these weapons, regardless?

THE PRESIDENT. We would look very good to some people in the world if we unilaterally disarmed and prostrated ourselves and said to the Soviets, "Come in and walk over us." But I don't feel that that's an appropriate position for me as President to assume.

KU KLUX KLAN

Q. Mr. President, I'm Milton Reid, the Journal and Guide Newspaper in Norfolk, Virginia. Mr. President, there's a two-part question here. There has been a general rise of the Klan in the South and

in the Nation. More recently there's been an organizing of the Klan in the Navy.

THE PRESIDENT. In the Navy?

Q. In the Navy, in Norfolk, with the blessings of one admiral, who said that there was room in the Navy for the Klan as well as anybody else.

THE PRESIDENT. I've never heard that. I'll check on this right after this meeting. When was it?

Q. It was on Monday, Monday morning of this week that the admiral said this in Norfolk.

THE PRESIDENT. Well, what I consider—the Ku Klux Klan and everything it stands for is absolutely abhorrent to me and, I think, to our Nation. My assessment as a southerner is that the acceptability and the presence and the influence and the threat of the Ku Klux Klan is minimal. These are erratic people who have earned the contempt of the rest of the Nation and also of their immediate neighbors in every community in the South with which I am familiar.

There are certain rights of free speech, however, under our constitutional system that protects even obnoxious groups like the Klan in having a right to voice their views and even to march down a public street or, as you know, in the Chicago suburbs, to get the right under the court-ordered system to participate in a public park. We have to face that kind of thing in an absolutely free society.

But I think that the condemnation of our country concerning the Klan, which was anti-Semitic, anti-Catholic, anti-black, and shrouded in understandable secrecy, is pretty much a thing of the past as far as having any real import.

But I certainly would not approve of any sort of imprimatur of acceptability for the Klan in the armed services. And I'll check on this right after I adjourn this meeting.

PUBLIC OPINION POLLS

Q. Mr. President, maybe a philosophical question. I'm Charles Davis from Iowa Falls, Iowa. The press and politicians seem to pay a lot of attention to public opinion polls. Given the complexity of international-domestic politics, the economy, and everything else, is it reasonable to expect a President under these conditions to rate very high with the majority of the people in the public opinion polls?

THE PRESIDENT. My guess is, in this present political environment it is almost impossible. There are times of euphoria that sweep the Nation immediately after an election or after an inauguration day or maybe after a notable success, like the Camp David accords, when there's a surge of popularity for a President. But most of the decisions that have to be made by a President are inherently not popular ones; they're contentious.

There is not a single vote to be derived from the evolution of a national energy policy. It's down all the way, because the highly motivated consumers groups, for instance, or environmentalists, and so forth, can never be satisfied with any acceptable proposal that has a chance to be approved by the Congress, and the oil companies and all those who are from producing States can never be satisfied with a compromise that's acceptable to Congress and is able to be passed. And for the President to espouse a balanced program naturally arouses the condemnation, certainly the opposition, criticism at least, of those highly motivated opinion-shapers.

In addition, there are times when you have to take a stand that you know is unpopular. A case that comes to my mind as I sit here is the Panama Canal treaties. When we got to the conclusion of the Panama Canal negotiations, after 14 years of

negotiating, knowing that this is in the best interest of our country, there was a public opinion poll run, I think, by Gallup under the Foreign Affairs Institute—it was not a Government poll—that showed that only 8 percent of the American people favored a new Panama Canal treaty. But my predecessors, ever since President Johnson, all the knowledgeable people in the State Department—mine and the previous administrations—knew that we had to have a new Panama Canal treaty. And for me to espouse that and to work with a great deal of commitment to get two-thirds vote in the Senate was patently a losing political proposition.

Also, when you have uncontrollable things happen—I could control it; I could have avoided it. I didn't have to put forward an energy policy. When you have an uncontrollable situation like inflation—inflation has been with us for 10 years. It's fluctuated between about where it is now, which is about the same as it was in 1974, down to maybe 6½ or 7 percent. The President is naturally held to be responsible for the state of the economy. I think the fluctuations in the state of the economy are one thing which hurt President Ford just before the election in November of 1976.

But a President is responsible for the inconveniences or the disappointments or the concerns of the American people. And you're constantly involved in contention and debate. And as you know, the press—and without criticizing the press—is not going to emphasize the successes or the agreements or the cooperative attitudes or the achievements.

The first year I was in office, for instance, I put forward maybe 15 major programs in which I was personally involved. I guess at the end of the year, we had gotten 9½ or 10 of them passed, but the em-

phasis was on the ones we didn't get. And even those that we got passed, the emphasis was on—when a subcommittee would vote no, it would be a headline on the front page. If, the next day, the full committee voted yes and then the bill passed, there would be no notice of it.

Another thing is that you have achievements that are not recognized—and this is the last thing I'll say about this. When Kennedy was President, I think it's generally accepted that in all the domestic achievements that he had, a trade bill—where trade barriers were stricken down and an ethical standard for promoting trade was passed—was his major achievement. We passed one this year that is broader and, I think, superior in every way to the one that was passed in 1962 or 1963. In the *Washington Post*, which is a major focal point here for the promotion of news stories, there was not a single word when the Congress passed that bill.*

So, you know, it's hard to mold an approving public when you have those kinds of varied responsibilities to meet. I'm not saying this to deplore the situation, but to tell you that this is the way it is, particularly in an off year. Now, when we face an election year, it'll be time for the American people to make an assessment, an inventory of what has been done—and I think we've got a superb record—a projection of what we hope to accomplish in the future, and then, of course, your own character assessment, the reputation that you have for being steady in an emergency, the organizational structure or commitment of your supporters. Those things become much more important than the relatively transient public opinion polls.

*The President meant there was no separate news story. Passage of the trade bill was given two paragraphs on page 3 in the congressional digest for that day. [Printed in the transcript.]

The last point is this: Where I come from, which is southwest Georgia, if you ask these days, "How do you think the county school superintendent is doing?", if somebody says, "I think he's doing a fair job," that is a high approbation. But in most of the public opinion polls, for instance—there are, I think, I don't know, I won't name the public opinion polls—they've got excellent, good, fair, and poor. And excellent and good are considered positive; fair and poor are considered negative.

There are a lot of complications about public opinion polls. I look at them; I'm concerned about them. I would like to be highly popular in our country. I'd like to have a 75-percent favorable rating; that would be very nice. But I remember that a week after I was an announced candidate for President, Gallup ran a poll and listed 36 people—Ralph Nader, Julian Bond, and 34 others. My name was not on the list. But I became the President.

So, public opinion polls are interesting. I think they are a guide on how the public feels, but, I think, have relatively little significance about the outcome of an election that might be held next year.

SOVIET TROOPS IN CUBA

Q. Mr. President, I'm Dale McIlwain from the Washington Star. I wanted to know what steps you might have in mind to get the Russian brigade out of Cuba.

THE PRESIDENT. I think it's better for me not to talk at this moment about specifics on that.

Secretary Vance made a statement, which I later followed and basically repeated, that, I think, goes as far as I want to go as far as a President. I said this was a matter of great concern to us,

that the status quo was not acceptable, and that we would be working with the Soviet Union to change the situation in a manner that would be acceptable to us. If this effort should be unsuccessful, then I would have to take appropriate action. And I think to go into further detail than that would be inappropriate.

We are meeting with the Soviet Union, assessing our intelligence data, understanding clearly what is the status quo, and I'll have to make a judgment on what to do about it within the near future.

MS. BARIO. Thank you, Mr. President.

Q. Mr. President?

THE PRESIDENT. Yes, one more question.

COAL

Q. The lack of specific incentives to develop anthracite coal is of particular concern in my area. I'm from Wilkes-Barre, Pennsylvania, the Scranton area. We're sitting on a mountain of coal, and the production is now at 6 million tons, when it was at nearly a hundred million tons a year in the 1930's. The people in our area would like to know, are you prepared to support tax credits to encourage the use of anthracite coal? Are you prepared to support government stockpiling to create a market for anthracite coal?

THE PRESIDENT. I believe the answer to both those questions would be no. I don't have any plans to do either of the two. We are taking other action, however, to increase the use of coal, and I think anthracite, in some instances, would be affected. My guess is that by 1985, we'll have a substantial increase in the use of coal, perhaps even doubling the present use and maybe before the end of this century to triple what we are presently using in the way of coal.

There are some uses for coal which are not particularly related to the original characteristics of the coal. One is obviously the derivation of synthetic oil and gas from coal supplies. My own expectation would be that as we get the windfall profits tax passed and establish a security corporation and set up production plans, that we would want to have them disbursed so as to assess, in the broadest possible way, every energy resource that we have. Knowing of the enormous reserves of anthracite, a major emphasis will be on how to use anthracite in this process.

We expect over a 20-year period to spend about \$88 billion on the synthetic fuels program. I believe that 75 billion of that 88 billion is designed for use in synthetic fuels from coal. And so, I would say that in every way the increased use of coal for broad purposes to replace oil and natural gas, eventually, and the use of coal for new synthetic purposes would guarantee that all forms of coal would have a better opportunity to be used in the future.

Let me say in closing that I appreciate your presence and your questions. It gives me a good chance to know what is of interest to you. And I always enjoy these exchanges.

If you don't mind, I'd like to get a photograph with everyone here, and I'll stand right back—right back here?—and let you all come by and let me have a handshake and a photograph and send it to you.

NOTE: The interview began at 1:15 p.m. in the Cabinet Room at the White House. Patricia Y. Barrio is a Deputy Press Secretary.

The transcript of the interview was released on September 22.

United States Representative to the United Nations

Remarks at the Swearing In of Donald F. McHenry. September 23, 1979

THE PRESIDENT. One of the great challenges and opportunities of a President is to analyze the problems which confront our Nation and to try to choose the best possible partners to work with him in the resolution of those problems and in the meeting of those challenges.

The problems, of course, and the responsibilities are broad-ranging: how to make our cities better places in which to live, how to give economic justice and support and a new opportunity in life for the poor and those who have felt the burden of discrimination, how to provide for the health needs of our country, how to provide a sense of unity in a nation which struggles against the divisive elements of a modern-day world, how to have a strong defense, which is a prerequisite on a super power like ours, to maintain peace for ourselves and for our allies and friends and all nations.

I've chosen allies like that—Eleanor Holmes Norton and Pat Harris and Clifford Alexander and others, who've worked closely with me with a special sensitivity about the problems of those that have, in the past, been deprived. We've made some progress. We all still have a long way to go.

There's another commitment, and that is one to maintain the standards of a basic morality, to honor the ethics and the principles on which this Nation was founded, not only among the Americans who are blessed to live in this great country but as an example to other people as well—the principles of human worth, freedom; the preservation and the enhancement of basic

human rights; the spread of democracy in societies which have known the heel of totalitarian governments; the welcoming of refugees who, like our own ancestors, have found a better life in America; this bridging of gaps between our own Nation and other people, which have been long existent and where, in the past, very few attempts have been made to build those bridges.

In our Ambassador to the United Nations, we find that opportunity for me to form a partnership. And more than 2½ years ago, I formed a good partnership with a great American, who has served his country well and who will continue to serve it well in whatever role he chooses to play—my friend and the friend of the world, Andy Young. And I thank you, Andy.

I might say in passing that any claims or allegations that American Jewish leaders or anyone else urged me to ask Andy for his resignation are absolutely and totally false, and neither did anyone urge Andy to resign. He made his judgment on what was best for our country and him. And his role in the future, in my judgment, to help his Nation will be undiminished.

When Andy and I had a private discussion about his future, one of the questions that came up was about a successor. I wanted someone to carry on, in an undiminished way, the thrust of what has been achieved in the last 2½ years. There was an instant realization that such a successor was at hand—a man who is a foreign policy professional in the finest sense of the word; a man who has been at the United Nations, working in a very top position in the most sensitive areas of international life; a man whose moral character is unstained, who's proven his ability in times of strain and with the focus of public attention on him, as was the case recently in a New York airport; a man

who will take this position, I believe, with the highest degree of personal knowledge of the inner workings and the hidden mechanisms and the ultimate purposes and the challenges and the solutions of the United Nations than anyone who's ever served there.

And with the choice of Don McHenry, which has been almost unanimously, so far as I know, unanimously approved, four messages will go out in a very clear tone. One is that we are continuing to bridge the gap between the developed nations of the world, like our own, and the developing nations of the world, who search for friendship, understanding, and a better life for their people; secondly, to let the world know that we staunchly are committed as a nation and as a government to ending racism and apartheid in southern Africa and we will never yield on this point; third, that our commitment to human rights and basic human freedoms is an accurate commitment that expresses the will of 220 million Americans and that this will never cease so long as our country exists; and that we are a nation committed to peace, a strong nation committed to peace.

In the Middle East, we've made good progress. The sensitivities there are perhaps as complex as any which have ever confronted negotiators or diplomats. The progress that has been made in the last 13 or 14 months is far beyond anything that we had dreamed. We still have a long way to go. But we have a man in the United Nations who understands those sensitivities, and our Ambassador there will be able to contribute greatly to what I am able to accomplish—Secretary Vance, Ambassador Bob Strauss, and others—in bringing peace to that troubled region. I am indeed grateful that Don McHenry has accepted this position.

And now I would like to ask Andy Young to say just a brief word and to in-

troduce, at the close of his words, Judge Parker, who will administer the oath of office to Don McHenry. And then, if Don has no objections, I would like for him to respond to you.

Andy Young.

AMBASSADOR YOUNG. Thank you very much, Mr. President, Mr. Vice President, Mr. Secretary.

It really gives me great pleasure to be here to see, in some sense, the passing on of a baton. In a very real sense, I think, I ran my part of the race, and while I wasn't getting tired, my time was probably over. *[Laughter]* And I really and truly have no regrets. In fact, I'm quite proud to be able to pass on the baton of responsibility at the United Nations to Don McHenry.

Let me hasten to say that I didn't recommend Don for this job, not because I have any reservations about his competence or the fact that, as the President says, he does bring more knowledge of the United Nations and of our foreign policy to this job than perhaps any other person we've ever had in the position, but because I happen to know how rough the next General Assembly is going to be. And I really didn't feel free to wish that on a friend of mine. *[Laughter]*

But one thing about being Ambassador to the United Nations—and maybe this is also true for the first time in our Nation's history—never has the United Nations had the kind of commitment from the President of the United States and from the Secretary of State and the entire State Department that it has in this administration. And there has been a commitment to doing many of the things that are in the national interest of this great Nation through the multilateral diplomatic forum of the United Nations.

And there has been a tremendous amount of teamwork that has existed between the staff at the United Nations and

the Assistant Secretaries. In fact, even in passing on to Bob Strauss, the former Deputy Permanent Representative of the United Nations, Cy Vance suggested that there was a sense of continuity and inter-relationship between the United Nations and the rest of the decisionmaking apparatus of our foreign policy. And so, Don will move in as a very important part of what I feel to be a very great team.

And it's my pleasure at this time to ask Judge Parker if he will administer the oath of office to my good friend, Don McHenry.

[At this point, United States District Judge Barrington Parker administered the oath of office.]

AMBASSADOR MCHENRY. Mr. President, Mr. Vice President, Judge Parker, friends:

I am very proud of this moment. I feel in one sense as if I am continuing a journey for which I have prepared for a long time, and at the same time I am very conscious of that warning which Andy gave and of which I am well aware. We probably face the most difficult General Assembly that we've ever faced in the last 10 years or so.

I should say that I approach this opportunity and this responsibility with every intention of doing the best I can, with a very competent and dedicated staff and supported and working with the other members of the foreign policy team here in Washington.

I do not expect that in our time, the immediate time, that we will be able to magically come up with solutions to all of the problems which face us. Indeed, we will be lucky if we can come up with the solution to a very few. But I believe in the importance of diplomacy. I believe in the importance of trying very hard, with imagination and hard work, to resolve problems, to bring people to devote their

best efforts to the resolution of those problems.

The United Nations today is not the United Nations of 34 sessions ago, yet I believe it is a reflection of the world in which we live. And anyone who wishes to accomplish anything in that forum or, indeed, if we wish to resolve many of the foreign policy problems which face us, we have to live and deal with the United Nations of today and the world of today, and not the ideal which we may have set many years ago.

Yet, the ideal is important. And I look upon the Charter of the United Nations very much as I have always looked upon the Constitution of the United States: It is something that we work toward. And as long as, it seems to me, that there is a commitment toward the goal of those principles set down in the Charter or those principles set down in the Constitution, I am prepared to devote my best efforts to achieving those goals—frustrated sometimes, to be sure; angry sometimes, more than the press realizes, to be sure—[laughter]—but nevertheless trying as best I can to move ahead and always recognizing that no accomplishment in our lives is that of a single individual.

Many of you here have worked very long and very hard with me over the 19 or so years that I have been in Washington and working in foreign affairs. On some occasions, I cannot say that I enjoyed some of the things that I have done, but I hope that I have learned the full measure of the responsibilities which I will need in the days ahead.

I am heartened by an observation which, I think, Ambassador Young has made, but which I would like to make also. In the many years that I have observed American foreign policy, I know of no instance where we have gotten such strong support in the United Nations, in

our efforts to live in the world as it is today, than we have gotten from the President of the United States and the Secretary of State.

It has been with that support that we have been able, in the last 2½ years, to turn our image in the United Nations from one in which everyone knew what we were against, but very few people knew what we were for. We are no longer the abominable “no man.” [Laughter] We stand for and work for positive goals in the United Nations.

And I hope that the partnership which was formed 2½ years ago and which consisted, in many instances, of Andy Young on the outside and Don McHenry on the inside—I hope that that partnership will continue outside in a new place. But nevertheless, I look forward to the support which Ambassador Young and all of you can give us in this responsibility which we are about to undertake.

And so, may I conclude by thanking you, Mr. President, for the confidence which you have shown in me, and thanking you, the American people, for the confidence which you have shown, and reminding you that I can’t do it alone.

Thank you.

NOTE: The President spoke at 2:08 p.m. in the East Room at the White House.

Departments of Transportation and Housing and Urban Development

Remarks at the Swearing In of Neil Goldschmidt as Secretary of Transportation and Moon Landrieu as Secretary of Housing and Urban Development. September 24, 1979

THE PRESIDENT. This is really a happy day for me and for the country. Don’t you agree? [Applause]

I think if we searched the Nation over, which I did, it would be impossible to find two men who are more conversant with the crucial issues that face our country in the area of transportation and the development of better communities—men who've got experience, men who know how to work with others, men who have a respect for the concerns and problems and doubts and fears, but, at the same time, of the aspirations and hopes and dreams of the American people, in communities of all sizes, both urban and rural, throughout the country.

There is a need to break down the barriers which exist between government and people, but also to break down the barriers that exist among different levels of government. I think we've made a lot of progress in that respect, and Moon Landrieu and Neil Goldschmidt have been in the forefront of that effort.

The problems tend to multiply, and they interrelate one with another. It's almost impossible to solve the problems of housing and education, of health, of the spirit of America, as long as we don't have national policies that provide a framework for the resolution of problems and the discussion of issues, as it relates to energy or transportation.

In the last 2½ years, we have hammered out a basis on which these policies can now be firm and understood. We've not yet finished on energy. We'll make a major stride this year; we've been making excellent progress the last few days. We've not yet forged a comprehensive policy on transportation, but we are determined to do so. I think we've made a major stride in the evolution of an understandable urban policy, and we are now approaching the time of announcement of an equally comprehensive and effective rural policy.

I need, at my shoulder, leaders who can carry on this good work. And as you can well see, standing behind me, I've been successful in finding leaders of that kind.

Our country changes so rapidly. We are in a transition period now. I think when we look back on this from a historical perspective, we'll see that the emphasis on the elements that comprise a happy American's life are changing at this time.

We are facing, for the first time really, the realization that the resources that God gave us have limits and that we can't be wastrels in the future. To me, this is not a negative development. It's a basis on which we can be excited and innovative, preserve our individualism, but still work in a united fashion to have a better life, families closer, communities closer, a pride in taking individual steps to conserve and to save those precious things, which in itself is a patriotic contribution.

Neil Goldschmidt, as a mayor, has been in the forefront of the evolution of a practical demonstration of what transportation can mean to a city. He knows about crosstown transportation, but he also knows about crosscountry transportation of all kinds.

He's been on the job now, as you know, for several weeks, and he's begun to confront, in a successful way, problems that have been here for a long time, dealing with Rock Island Railroad, dealing with Westway, dealing with the allocation of resources for public transportation, highways, automobile efficiency, air pollution, airbags. The breadth of his responsibilities is awe-inspiring, and he's already begun to deal with those problems in a comprehensive and effective fashion.

I think Neil also knows how to interrelate the quality of life and participation of citizens in hammering out a successful answer to a complicated question. He's proven this.

Moon Landrieu has earned the admiration of every mayor and public official in our country with what he's done in New Orleans—a city of ancient history, a city of a wide range of ethnic groups, diverse points of view—with a desire to preserve the precious, but the need to resolve differences.

Moon has been in the forefront of some evolutionary changes that almost became revolutionary changes, and I have observed with admiration and have learned from him how he's dealt with the basic question of civil rights, human rights. When it wasn't easy in the South, Moon Landrieu stood firm and said there's no longer any place for discrimination or racism. And he did this in such a way that he marshaled the support of his entire community and won an overwhelming victory and, I think, had he wanted to, could have been mayor for a long time.

And he was successful in revitalizing an area that I hope will always retain its character, because it's one of America's fine possessions. And in the process, he let the people of New Orleans feel that the future was not dismal or discouraging, but exciting and promising.

So, for these reasons and for many others, I'm very grateful to have this opportunity to introduce to the Nation and to have join my Cabinet these two men.

And I see former mayors of New York here, who remember very well when New York City was in a dangerous condition and there needed to be some broad-based national support for New York's effort to save itself. And Moon Landrieu traveled the country to marshal the support of other people in Georgia and in Louisiana and in Kansas and in California to support New York City. He convinced me, along with Mayor Beame and others, that this should be done. And I made

that commitment as a candidate, and we've carried out that commitment.

And now I don't think anyone could deny that what Moon Landrieu espoused as a mayor of New Orleans, joining with his partner and partners throughout the country, including New York, that our great city of New York has a new life. I hope he'll do that with every city, ranging from New York City down to Plains, Georgia, and I have confidence that he will.

Now I'd like to ask Margaret Goldschmidt and Judge Steinbock to come forward to administer the oath to Neil Goldschmidt as Secretary of Transportation.

[At this point, Louisiana Supreme Court Justice Irving Steinbock administered the oath of office.]

And now I'd like to ask Moon and Verna and Judge Calogero to come forward for the oath. And Moon, it would be nice if your family joined you. I hope the photographers have a wide-angle lens. *[Laughter]* I might say that—well, I think I'll say that I'm not sure that Moon's family will grow this fast the next 5 years. *[Laughter]*

[At this point, Louisiana Supreme Court Justice Pascal Calogero administered the oath of office.]

I won't give them another introduction, but I'd like for Neil Goldschmidt and then for Moon to say a word to the group.

SECRETARY GOLDSCHMIDT. *Mr. President, Mr. Vice President, Mrs. Carter, friends:*

I cannot think of a nicer occasion than to come to the service of my country with a good friend like Moon Landrieu.

It is a wonderful feeling that among so many fine public servants who have been elected to high office, including many

who are mayors, and the staffs who have supported us and worked so hard—it's a pleasure to be here on all of their behalfs.

I did not travel a particularly long road to come here. My age, I think, is witness to that fact. But I come through a very, I guess, traditional route. I am a graduate of public education in the United States, a public education afforded by the taxpayers of my communities and the communities all over our land. To a Congress which has, for so long, appropriated the funds to make it possible for people like myself to go to school and to aspire to high office and to serve my country, you have my deep thanks. To my family, which has come with me today and to whom I owe so much, I guess they already understand how I feel.

I hope that the promise of these years can be fulfilled. And I have given the President my pledge, and I will give it to all of you—friends and those that I hope to meet as I travel and move about the United States on the President's behalf—that I will do everything in my power to make life in the United States a good one for all of those to whom I owe a best effort.

There has been much written about how difficult these times are. And for those of us who got our education not on the battlefields of Europe, but on the battlefields of Mississippi, those of us who got our understanding of higher education in the free speech movement in California, and for those of us who have had our beliefs challenged by Vietnam, everything in the future looks bright, looks hopeful, and looks possible.

And I look forward to working with everybody in this country who feels as I do—and I think that's just about everybody—that they wouldn't live anyplace on the Earth before they'd live in Amer-

ica, to keep building, to keep growing, and keep loving.

Thank you.

THE PRESIDENT. And now the Secretary of Housing and Urban Development.

SECRETARY LANDRIEU. *Thank you, Mr. President, Mrs. Carter, Mr. Vice President.*

Neil Goldschmidt has always had a great capacity for brevity and for expressing precisely what's on his mind. I've never had that particular talent. *[Laughter]*

Mr. President, first I want to thank you for giving me the opportunity to serve once again. It's a great privilege to be back in the Government and to be working with those who are laboring to rebuild urban America. And I couldn't be more honored myself than to be sworn in with a man such as Neil Goldschmidt, a man whom I admired from the first moment that I met him. He bristles with energy and intelligence and with commitment.

It always struck me as a marvelous thing that Neil Goldschmidt, as a young man far removed from the South, took time out from his duties to go into the freedom marches during the great civil rights crusades. We've been very, very warm friends, and I'm honored to be serving with you, Neil. As a matter of fact, he's probably the outstanding mayor in the country, unless you walked in the audience and shook hands with John Rousakis or with John Olivier from Sunset—*[laughter]*—or with the 50 or so other mayors who are out there.

Just one word about urban America. I read the other day on a plaque that Secretary Weaver had placed on the HUD building when it was dedicated, and this is what he said, and I think it's important to recollect this. He said, "Today we're engaged in rebuilding the urban areas of

the United States, a task so large that it amounts to recreating them, a task as ambitious as any nation has ever set for itself." That was said in 1966. It was only in 1965 that this child of a department was founded, and I think we can date from that moment the kind of formalization of our war against urban decay that this Nation undertook. And it occurred to me that that is only about 13 years ago or 14 years ago, not even one-half the life of an average home mortgage, and yet we've done much in that period of time, despite our impatience.

Each President, each Congress, each Secretary of this Department has added new tools to the urban workbox. We developed model cities and general revenue sharing, community development block grants, aid to mass transit, and, of course, under the leadership of President Carter, the most significant urban statement of all—the development of a national urban policy and the beginning of the formation of a partnership between those of us in public office and the private sector, and the recognition by him that we, the politicians, did not build America, but rather it was built by the private sector. And as our cities are rebuilt, it will be rebuilt by the private sector, but hopefully in an atmosphere created by the public sector, one of assistance and aid, one of encouragement, permitting the private enterprise system to do what it knows how to do best, to build and to move and to create.

So, Mr. President, I'm very, very honored to be with you in that movement, and I'm very pleased that I have the chance to serve with so many distinguished public officials who serve in your Cabinet.

In closing, I would like to thank the rather substantial number of people who

came up from New Orleans, very much like the Peanut Brigade, Mr. President, who followed you around the country. I've been fortunate in having some very dear and close friends. I also thank the many mayors and county execs and housing officials and others from the constituency groups who are here. I'll give you my best.

Thank you.

NOTE: The President spoke at 10:37 a.m. in the Rose Garden at the White House.

Meeting With Members of the Nicaraguan Junta

White House Statement. September 24, 1979

The President met today in the Cabinet Room with three members of the Nicaraguan Junta on their way to New York to lead the delegation of the Government of Nicaragua to the United Nations General Assembly. The discussion centered on ways to strengthen the basis for a co-operative relationship between the United States and Nicaragua based on mutual respect.

The Nicaraguan delegation included Junta members Daniel Ortega, Sergio Ramirez, and Alfonso Robelo, Minister of Foreign Affairs Miguel D'Escoto, and Ambassador-designate to the U.S. Rafael Solis. Present from the U.S. Government, in addition to the President, was the Vice President, Deputy Secretary of State Warren Christopher, National Security Adviser Zbigniew Brzezinski, Assistant Secretary of State for Inter-American Affairs Viron P. Vaky, U.S. Ambassador to Nicaragua Lawrence A. Pezzulo, Ambassador Henry Owen, and NSC staff member Robert Pastor.

United States Jaycees

Remarks at a Meeting With Members of the Executive Committee and State Presidents. September 24, 1979

That's the same kind of reception I get from the Washington press corps at my press conferences. *[Laughter]*

President Bechtol and distinguished leaders of the U.S. Jaycees:

It's an honor and a pleasure for me to welcome you here. I owe you a lot. Not only have you helped me in extremely difficult times, such as the passing of the Panama Canal treaty legislation last year, but you've been in the forefront of many other challenging issues, because you've got a lot of courage, you're well-organized, you're dynamic and aggressive, you're strong and patriotic, and as Jaycees you're united in serving your country. And I'm grateful to you for it.

Also, I would not be living in this house had I not, as a young, budding student of Georgia politics, gone to the State Jaycee conventions to see how the elections were conducted. *[Laughter]* Last election, in '76, when the going got tough, I remembered those days, and the memories came flooding back to me. And I was able, in those final, elbowing phases of the campaign for President, to win, because I remembered what I'd learned from you.

Tomorrow you'll get a briefing on the SALT treaties from Dr. Brzezinski and perhaps others, but today I want to talk to you about a challenge that's as serious as any that has faced our country. We've got a strong nation and a great nation, as you so well know and as you so well represent. And as you also know, down through history our country, when it's been challenged, has responded successfully. We have never failed to meet a difficult challenge or to overcome an obstacle

or to answer a question or to solve a problem, provided we could detect and understand the challenge to our country.

As I said many times on my trip down the river to small and large groups that assembled along the shoreline, in World War I, World War II, even the Great Depression, Americans could see the challenge to our country. And in understanding the challenge, we responded. We put aside differences. We developed a respect for our own governments. Families united, communities united, and in spite of adversity, America became a nation which could work together. Now we've got a challenge that's not so easy to see. It's just as important.

My prime responsibility as President, above all others, is to guarantee the security of my country, your country. And our security is threatened now, because we are overly dependent on imported oil. We import about one-half the total oil we use. We export about \$70 billion this year—American money—to pay for that oil, and along with the oil, we import inflation and unemployment and dependence on an uncertain supply at an uncontrollable price. The last 3 or 4 months, for instance, the inflation rate would have been almost exactly constant. It would not have changed a quarter of 1 percent had it not been for energy. But oil, because of OPEC decisions, is going up, this last 3 months, at an annual rate of inflation of 100 percent.

Our country has never had an energy policy. Decisions have always been made in the Congress primarily as the oil companies chose—and I don't criticize them because of it—because there never was a reason until recently for others, consumers, to rally and say something has got to be done to give our Nation a clear concept of where we go in the future on energy.

The basic thrust of what we're trying to do depends primarily upon conservation—the saving of energy, the elimination of waste. That's it, as far as the number one priority is concerned. It's something that every single American can do, every single American has to do. It's something that can bring our people together. It is not an onerous task. It need not cause us concern about the future. It's a challenge that can be met effectively and pleasantly. And the benefits accrue to each American who acts to save energy, and it's a patriotic gesture at the same time.

So, conservation is first. We've made some progress already; we've got a long way to go. We also need to turn toward replenishable supplies of energy, energy that can be restored every year or every minute. Solar energy, energy derived from growing plants—these kinds of things can become a major element in our life in the future. And we predict, if our programs are put into effect, that by the year 2000, 20 percent of all our energy will be derived directly from solar sources.

Georgia produces enough biomass, growing crops, growing trees, to produce three times as much energy as the total that we consume in our State. And we now waste about one-third or sometimes one-half of our total timber products, because of ill-advised harvesting techniques. We're trying to move on those areas.

We need to increase the amount of oil and gas produced in our country from conventional sources. And we are giving to the oil companies tremendous increased income under my own proposals that will let them have that amount of revenue which they require.

But the other sources that we need to tap—synthetic fuels, the increased use of coal, geothermal supplies, unconven-

tional gas, unconventional oil—not yet have we made adequate progress in these areas. But we've got now in the Congress—recently making very good progress because the people are finally aroused—an energy policy proposal that is adequate and which will restore to our country energy security.

Recently we had a vote in the Senate Energy Committee, 15 to 3, to set up an energy mobilization board, a board designed to cut through redtape and to expedite a decision on whether or not a particular energy-producing project would be built or would not be built. It's not designed to cut through State law or Federal law or to change Western water law. It's designed to cut through government redtape and delay and obfuscation and unnecessary regulations.

If a plant is well advised, if it's got a good site, and if it doesn't violate laws, it's acceptable on the basis of assessing its merits, it ought to be built. And if it's got a defect in it—the wrong place at the wrong time or the wrong concept—it ought not to be built. But the thing is, a decision ought to be made, yes or no. Now sometimes it takes 7 or 8 years just to get that exact same answer, either yes or no. But by the time the decision is made, the cost of the plant is tripled or quadrupled, the factors involved in financing the plant have changed, the people have been discouraged, and we've been deprived of a necessary element in our energy society.

We also are trying to set up an energy security corporation, not a Government agency, an extra-Government agency like the one designed to produce synthetic rubber during the Second World War or to put the communications satellite in orbit. This would be authorized to have 80 ongoing projects, at any one time, to

produce synthetic fuels. The Government would just provide a reservoir of guaranteed purchases at a guaranteed price so that the private enterprise system, without interference from the Government, could go ahead and begin the production of synthetic fuels, knowing that they would have a market when their product was finally produced.

And, of course, the basis for all this is the windfall profits tax, a well-balanced tax. The House has already passed it. The Senate is now considering what form it should take. We cannot afford to see this tax decimated or aborted or changed in nature.

This comprehensive approach will give us an energy package which will reward the private enterprise system, reduce government intrusion, give the oil companies and other energy companies a chance to increase production of available United States supplies, cut down on our torrent of foreign oil coming into this country, give us jobs in our Nation, instead of overseas, and give us energy security. That's a package that we need. That's a package that we're going to have, provided I can get some good partners who have the courage and the dedication and a patriotic motivation to fight with me.

My question to you is: Will you join me as partners in getting a comprehensive energy policy for our country that will guard our Nation's security and give us a greater America, even than the one we've already got, which is already the greatest nation on Earth? Will you do that for me? [*Applause*]

NOTE: The President spoke at 2:13 p.m. in the East Room at the White House. In his opening remarks, he referred to Terryl Bechtol, national president of the Jaycees.

United Nations

*Nomination of William J. vanden Heuvel To Be Deputy U.S. Representative.
September 24, 1979*

The President today announced his intention to nominate William J. vanden Heuvel, of New York City, to be Deputy Representative of the United States to the United Nations with the rank of Ambassador Extraordinary and Plenipotentiary. He would replace James F. Leonard, who has been appointed Chief of the U.S. Mission to the Middle East Peace Negotiations and Deputy to Ambassador Robert Strauss.

Vanden Heuvel has been Representative of the United States to the European Office of the United Nations since 1977.

He was born April 14, 1930, in Rochester, N.Y. He received a B.A. in 1950 from Cornell University and an LL.B. in 1952 from Cornell Law School.

From 1952 to 1957, vanden Heuvel was an associate in the law firm of Leisure, Newton and Irvin. In 1953 and 1954, he was executive assistant to Ambassador to Thailand William J. Donovan. In 1958 he served as special counsel to Gov. Averell Harriman.

From 1959 to 1961, vanden Heuvel was an associate in the law firm of Javits, Moore and Trubin. In 1963 and 1964, he was special assistant to Attorney General Robert F. Kennedy. He served as Acting Regional Administrator for the Office of Economic Opportunity in 1964 and 1965.

Vanden Heuvel was with the New York law firm of Stroock and Stroock and Lavan from 1965 to 1977. In 1967 he was vice president of the New York State Constitutional Convention. He served as chairman of the New York City Board of

Correction from 1970 to 1973, and as chairman of the New York City Commission on State-City Relations from 1971 to 1973.

1977 he has been foreign affairs coordination officer in the Bureau of Intelligence and Research.

United States Ambassador to Rwanda

*Nomination of Harry Roberts Melone.
September 24, 1979*

The President today announced that he will nominate Harry Roberts Melone, of Auburn, N.Y., to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of Rwanda. He would replace T. Frank Crigler, transferred.

Melone is foreign affairs coordination officer in the Bureau of Intelligence and Research at the State Department.

He was born June 30, 1928, in Auburn, N.Y. He received an A.B. from Dartmouth College in 1950.

Melone joined the Foreign Service in 1951 and was posted in Tabriz, Tehran, Yaounde, and at the State Department. He was Deputy Chief of Mission in Bangui from 1961 to 1963, and in Niamey from 1963 to 1964. From 1964 to 1966, he was international relations officer in the Bureau of African Affairs at the State Department.

From 1966 to 1968, Melone was adviser for African affairs at the U.S. Mission to the United Nations. He was counselor for political affairs in Conakry from 1968 to 1969, and international relations officer at the State Department from 1969 to 1970.

Melone attended the National War College in 1970-71. He was an international relations officer at the State Department from 1971 to 1973, and served as political officer in Paris from 1973 to 1977. Since

Environmental Protection Agency

*Nomination of Eckardt C. Beck To Be an
Assistant Administrator. September 24, 1979*

The President today announced that he will nominate Eckardt C. Beck, of Holmdel, N.J., to be an Assistant Administrator of the Environmental Protection Agency. He would replace Thomas Jorling, resigned.

Beck is Regional Administrator of EPA for New Jersey, New York, Puerto Rico, and the Virgin Islands.

He was born May 21, 1943, in Ocean-side, N.Y. He is a graduate of Emerson College in Boston, where he was an assistant graduate professor while working toward his masters in communications in 1968-69. He received an M.P.A. in 1972 from New York University, where he is currently a doctoral candidate.

From 1969 to 1972, Beck was air pollution control officer with the city of Stamford, Conn. From 1972 to 1973, he was director of air compliance for the State of Connecticut. From 1973 to 1975, he was deputy commissioner of the Connecticut Department of Environmental Protection. He also established and directed the Connecticut Energy Agency and served as the Governor's chief adviser on energy policy.

From 1975 to 1978, Beck was Deputy Assistant Administrator of EPA for Water Planning and Standards. He has been Regional Administrator for New Jersey, New York, Puerto Rico, and the Virgin Islands since 1978.

As a Regional Administrator of EPA, Beck has served as Chairman of the Federal Regional Council. He also serves as a commissioner of the Tri-State Regional Planning Commission and is involved in international environmental activities as working group chairman of the Water Management Committee and as U.S. delegate to the Environment Committee, Organization for Economic Cooperation and Development.

National Advisory Council on the Education of Disadvantaged Children

Appointment of Nine Members and Designation of Chairman. September 24, 1979

The President today announced the appointment of nine persons as members of the National Advisory Council on the Education of Disadvantaged Children. They are:

FRED L. BANKS, JR., of Jackson, Miss., an attorney and member of the Mississippi House of Representatives who serves as associate counsel for the Mississippi NAACP Legal Defense and Educational Fund and as a consulting attorney to the Mississippi Association of Educators;

DON DAVIES, chairman of the Department of Systems Development and Adaptation and director of the Institute for Responsive Education at Boston University's School of Education;

CONSTANCE E. GOMES, a public education specialist and legislative advocate with Rhode Island Legal Services, where she acts as a liaison with low-income community groups concerned with public education;

JOHNNY L. JONES, superintendent of schools for Dade County (Florida) public schools;

ROBERT H. KOFF, professor of education and psychology and dean of the College of Education at Roosevelt University in Chicago;

JOSEPH P. McELLIOTT, director of the Division of Education of the California Catholic Conference, chairman of the California Executive Council for Nonpublic Schools, and a commissioner of the California Equal Education Opportunities Commission;

M. HAYES MIZELL, associate director of the Southeastern Public Education Program of the American Friends Service Committee (designated Chairman of this Council);

RACHEL B. TOMPKINS, director of Citizens' Council for Ohio Schools, an organization concerned with desegregation, finance, exclusion, and citizen participation in schools;

ELUID HECTOR ZAMORANO, a counselor and foreign student adviser at Richland College, Dallas County (Texas) Community College District, an expert on bilingual education, and a consultant to the U.S. Office of Education's Migrant Division.

President's Export Council

Appointment of Robert B. Washington, Jr., as a Member. September 24, 1979

The President today announced the appointment of Robert B. Washington, Jr., of Washington, D.C., as a member of the President's Export Council.

Washington, 36, is a partner in the Washington law firm of Danzansky, Dickey, Tydings, Quint & Gordon. He serves on the board of directors of the Metropolitan Washington Board of Trade and is chairman for legislative affairs of the Legislative/Fiscal Bureau of the Board of Trade.

National Advisory Council on Economic Opportunity

Appointment of Ruby Duncan as a Member. September 24, 1979

The President today announced the appointment of Ruby Duncan, of North

Las Vegas, Nev., as a member of the National Advisory Council on Economic Opportunity.

Duncan is president of the Clark County (Nevada) Welfare and Economic Rights Organization and executive director of Operation Life, Inc., a self-help community project.

Department of Education Legislation

*Statement on Senate Approval of the
Conference Report. September 24, 1979*

The Senate's approval of the conference report on the department of education bill is a major step toward improved government efficiency. Placing Federal education programs in a separate department will allow us to manage these programs in a more effective, commonsense manner. It will cut redtape, reduce manpower levels, and save tax dollars. It will also mean better service—at less bureaucratic cost—for the State and local institutions which provide education in our country.

I would like to thank Senator Ribicoff for his excellent leadership in bringing this reorganization to final Senate passage.

Country Music Month, October 1979

*Message of the President.
September 24, 1979*

Every year at this time the harvest season is celebrated throughout the hills and valleys of rural America, where country music has its roots. Country music chronicles the richness and fullness of American

life, the hopes and dreams, joys and sorrows of those who have raised a great Nation from a bountiful land.

Because it expresses the simple human emotions we all share, country music is in tune with our everyday experiences, whether we live on a farm or in the city. This authentic American art form has grown to be one of the most popular styles of music in our Nation today.

It is fitting, therefore, that October be designated as "Country Music Month." I commend the Country Music Association for its contribution to this annual observance, and I invite all Americans to join me in saluting the talented performers who have given us so many hours of listening pleasure through country music.

JIMMY CARTER

Financial Reform Legislation

*Statement on the Senate Banking Committee's
Approval of the Legislation.
September 24, 1979*

I am deeply gratified by the Senate Banking Committee's approval of my financial institutions deregulation legislation.

For the past decade, the Federal Government has imposed a ceiling on the interest rates that savers can receive on their deposits in banks and savings institutions. Those ceilings have cost the American people billions of dollars in lost interest annually, and they have become increasingly unfair to the small saver. Especially during a period of high inflation, it is simply unacceptable for the Government to force the small saver with a passbook account at a commercial bank to accept a 5¼ percent yield when large

and sophisticated savers may receive more than 11 percent.

I would like to thank Chairman Proxmire for his leadership on this bill, and I will continue to work closely with the Congress to assure final action on this important legislation.

International Trade Functions

*Message to the Congress Transmitting
Reorganization Plan No. 3 of 1979.
September 25, 1979*

To the Congress of the United States:

I transmit herewith Reorganization Plan No. 3 of 1979, to consolidate trade functions of the United States Government. I am acting under the authority vested in me by the Reorganization Act of 1977, chapter 9 of title 5 of the United States Code, and pursuant to section 1109 of the Trade Agreements Act of 1979, which directs that I transmit to the Congress a proposal to restructure the international trade functions of the Executive branch.

The goal of this reorganization is to improve the capacity of the Government to strengthen the export performance of United States industry and to assure fair international trade practices, taking into account the interests of all elements of our economy.

Recent developments, which have raised concern about the vitality of our international trade performance, have focused much attention on the way our trade machinery is organized. These developments include our negative trade balance, increasing dependence upon foreign oil, and international pressures on the dollar. New challenges, such as implementation of the Multilateral Trade

Negotiations (MTN) agreements and trade with non-market economies, will further test our Government trade organization.

We must be prepared to apply domestically the MTN codes on procurement, subsidies, standards, and customs valuation. We also must monitor major implementation measures abroad, reporting back to American business on important developments and, where necessary, raising questions internationally about foreign implementation. MTN will work—will open new markets for U.S. labor, farmers, and business—only if we have adequate procedures for aggressively monitoring and enforcing it. We intend to meet our obligations, and we expect others to do the same.

The trade machinery we now have cannot do this job effectively. Although the Special Trade Representative (STR) takes the lead role in administering the trade agreements program, many issues are handled elsewhere and no agency has across-the-board leadership in trade. Aside from the Trade Representative and the Export-Import Bank, trade is not the primary concern of any Executive branch agency where trade functions are located. The current arrangements lack a central authority capable of planning a coherent trade strategy and assuring its vigorous implementation.

This reorganization is designed to correct such deficiencies and to prepare us for strong enforcement of the MTN codes. It aims to improve our export promotion activities so that United States exporters can take full advantage of trade opportunities in foreign markets. It provides for the timely and efficient administration of our unfair trade laws. It also establishes an efficient mechanism for shaping an effective, comprehensive United States trade policy.

To achieve these objectives, I propose to place policy coordination and negotiation—those international trade functions that most require comprehensiveness, influence, and Government-wide perspective—in the Executive Office of the President. I propose to place operational and implementation responsibilities, which are staff-intensive, in line departments that have the requisite resources and knowledge of the major sectors of our economy to handle them. I have concluded that building our trade structure on STR and Commerce, respectively, best satisfies these considerations.

I propose to enhance STR, to be renamed the Office of the United States Trade Representative, by centralizing in it international trade policy development, coordination and negotiation functions. The Commerce Department will become the focus of non-agricultural operational trade responsibilities by adding to its existing duties those for commercial representation abroad, antidumping and countervailing duty cases, the non-agricultural aspects of MTN implementation, national security investigations, and embargoes.

THE UNITED STATES TRADE REPRESENTATIVE

The Trade Representative, with the advice of the Trade Policy Committee, will be responsible for developing and coordinating our international trade and direct investment policy, including the following areas:

Import remedies. The Trade Representative will exercise policy oversight of the application of import remedies, analyze long-term trends in import remedy cases and recommend any necessary legislative changes. For antidumping and countervailing duty matters, such

coordination, to the extent legally permissible, will be directed toward the establishment of new precedents, negotiation of assurances, and coordination with other trade matters, rather than case-by-case fact finding and determinations.

East-West trade policy. The Trade Representative will have lead responsibility for East-West trade negotiations and will coordinate East-West trade policy. The Trade Policy Committee will assume the responsibilities of the East-West Foreign Trade Board.

International investment policy. The Trade Representative will have the policy lead, regarding issues of direct foreign investment in the United States, direct investment by Americans abroad, operations of multinational enterprises, and multilateral agreements on international investment, insofar as such issues relate to international trade.

International commodity policy. The Trade Representative will assume responsibility for commodity negotiations and also will coordinate commodity policy.

Energy trade. While the Departments of Energy and State will continue to share responsibility for international energy issues, the Trade Representative will coordinate energy trade matters. The Department of Energy will become a member of the TPC.

Export-expansion policy. To ensure a vigorous and coordinated Government-wide export expansion effort, policy oversight of our export expansion activities will be the responsibility of the Trade Representative.

The Trade Representative will have the lead role in bilateral and multilateral trade, commodity, and direct investment negotiations. The Trade Representative will represent the United States in General Agreement on Tariffs and Trade (GATT) matters. Since the GATT will

be the principal international forum for implementing and interpreting the MTN agreements and since GATT meetings, including committee and working group meetings, occur almost continuously, the Trade Representative will have a limited number of permanent staff in Geneva. In some cases, it may be necessary to assign a small number of USTR staff abroad to assist in oversight of MTN enforcement. In this event, appropriate positions will be authorized. In recognition of the responsibility of the Secretary of State regarding our foreign policy, the activities of overseas personnel of the Trade Representative and the Commerce Department will be fully coordinated with other elements of our diplomatic missions.

In addition to his role with regard to GATT matters, the Trade Representative will have the lead responsibility for trade and commodity matters considered in the Organization for Economic Cooperation and Development (OECD) and the United Nations Conference on Trade and Development (UNCTAD) when such matters are the primary issues under negotiation. Because of the Secretary of State's foreign policy responsibilities, and the responsibilities of the Director of the International Development Cooperation Agency as the President's principal advisor on development, the Trade Representative will exercise his OECD and UNCTAD responsibilities in close cooperation with these officials.

To ensure that all trade negotiations are handled consistently and that our negotiating leverage is employed to the maximum, the Trade Representative will manage the negotiation of particular issues. Where appropriate, the Trade Representative may delegate responsibility for negotiations to other agencies with expertise on the issues under consideration. He will coordinate the operational as-

pects of negotiations through a Trade Negotiating Committee, chaired by the Trade Representative and including the Departments of Commerce, State, Treasury, Agriculture and Labor.

The Trade Representative will be concerned not only with ongoing negotiations and coordination of specific, immediate issues, but also—very importantly—with the development of long-term United States trade strategies and policies. He will oversee implementation of the MTN agreements, and will advise the President on the effects of other Government policies (e.g., antitrust, taxation) on U.S. trade. In order to participate more fully in oversight of international investment and export financing activities, the Trade Representative will become a member of the National Advisory Council on International Monetary and Financial Policies and the Boards of the Export-Import Bank and the Overseas Private Investment Corporation.

In performing these functions, the Trade Representative will act as the principal trade spokesman of the President. To assure that our trade policies take into account the broadest range of perspectives, the Trade Representative will consult with the Trade Policy Committee, whose mandate and membership will be expanded. The Trade Representative will, as appropriate, invite agencies such as the Export-Import Bank and the Overseas Private Investment Corporation to participate in TPC meetings in addition to the permanent TPC members. When different departmental views on trade matters exist within the TPC as will be the case from time to time in this complex policy area, I will expect the Trade Representative to resolve policy disagreements in his best judgment, subject to appeal to the President.

THE DEPARTMENT OF COMMERCE

The Department of Commerce, under this proposal, will become the focal point of operational responsibilities in the non-agricultural trade area. My reorganization plan will transfer to the Commerce Department important responsibilities for administration of countervailing and antidumping matters, foreign commercial representation, and MTN implementation support. Consolidating these trade functions in the Department of Commerce builds upon an agency with extensive trade experience. The Department will retain its operational responsibilities in such areas as export controls, East-West trade, trade adjustment assistance to firms and communities, trade policy analysis, and monitoring foreign compliance with trade agreements. The Department will be substantially reorganized to consolidate and reshape its trade functions under an Under Secretary for International Trade.

With this reorganization, trade functions will be strengthened within the Department of Commerce, and such related efforts in the Department as improvement of industrial innovation and productivity, encouraging local and regional economic development, and sectoral analysis, will be closely linked to an aggressive trade program. Fostering the international competitiveness of American industry will become the principal mission of the Department of Commerce.

IMPORT REMEDIES

I propose to transfer to the Department of Commerce responsibility for administration of the countervailing duty and antidumping statutes. This function will be performed efficiently and effectively in an organizational setting where

trade is the primary mission. This activity will be directed by a new Assistant Secretary for Trade Administration, subject to Senate confirmation. Although the plan permits its provisions to take effect as late as October 1, 1980, I intend to make this transfer effective by January 1, 1980, so that it will occur as the new MTN codes take effect. Commerce will continue its supportive role in the staffing of other unfair trade practice issues, such as cases arising under section 301 of the Trade Act of 1974.

COMMERCIAL REPRESENTATION

This reorganization plan will transfer to the Department of Commerce responsibility for commercial representation abroad. This transfer would place both domestic and overseas export promotion activities under a single organization, directed by an Assistant Secretary for Export Development, charged with aggressively expanding U.S. export opportunities. Placing this Foreign Commercial Service in the Commerce Department will allow commercial officers to concentrate on the promotion of U.S. exports as their principal activity.

Initially, the transfer of commercial representation from State to Commerce will involve all full-time overseas trade promotion and commercial positions (approximately 162), responsibility for this function in the countries (approximately 60) to which these individuals are assigned, and the associated foreign national employees in those countries. Over time, the Department of Commerce undoubtedly will review the deployment of commercial officers in light of changing trade circumstances and propose extensions or alterations of coverage of the Foreign Commercial Service.

MTN IMPLEMENTATION

I am dedicated to the aggressive implementation of the Multilateral Trade Agreements. The United States must seize the opportunities and enforce the obligations created by these agreements. Under this proposal, the Department of Commerce will assign high priority to this task. The Department of Commerce will be responsible for the day-to-day implementation of non-agricultural aspects of the MTN agreements. Management of this function will be a principal assignment of an Assistant Secretary for Trade Policy and Programs. Implementation activities will include:

- monitoring agreements and targeting problems for consultation and negotiation;
- operating a Trade Complaint Center where the private sector can receive advice as to the recourse and remedies available;
- aiding in the settlement of disputes, including staffing of formal complaint cases;
- identifying problem areas for consideration by the Trade Representative and the Trade Policy Committee;
- educational and promotion programs regarding the provisions of the agreements and the processes for dealing with problems that arise;
- providing American business with basic information on foreign laws, regulations and procedures;
- consultations with private sector advisory committees; and
- general analytical support.

These responsibilities will be handled by a unit built around the staff from Commerce that provided essential analytical support to STR throughout the MTN negotiation process. Building implementa-

tion of MTN around this core group will assure that the government's institutional memory and expertise on MTN is most effectively devoted to the challenge ahead. When American business needs information or encounters problems in the MTN area, it can turn to the Department of Commerce for knowledgeable assistance.

Matching the increased importance of trade in the Department's mission will be a much strengthened trade organization within the Department. By creating a number of new senior level positions in the Department, we will ensure that trade policy implementation receives the kind of day-to-day top management attention that it both demands and requires.

With its new responsibilities and resources, the Department of Commerce will become a key participant in the formulation of our trade policies. Much of the analysis in support of trade policy formulation will be conducted by the Department of Commerce, which will be close to the operational aspects of the problems that raise policy issues.

To succeed in global competition, we must have a better understanding of the problems and prospects of U.S. industry, particularly in relation to the growing strength of industries abroad. This is the key reason why we will upgrade sectoral analysis capabilities throughout the Department of Commerce, including the creation of a new Bureau of Industrial Analysis. Commerce, with its ability to link trade to policies affecting industry, is uniquely suited to serve as the principal technical expert within the Government on special industry sector problems requiring international consultation, as well as to provide industry-specific information on how tax, regulatory and other Government policies affect the international competitiveness of the U.S. industries.

Commerce will also expand its traditional trade policy focus on industrial issues to deal with the international trade and investment problems of our growing services sector. Under the proposal, there will be comprehensive service industry representation in our industry advisory process, as well as a continuing effort to bring services under international discipline. I expect the Commerce Department to play a major role in developing new service sector initiatives for consideration within the Government.

After an investigation lasting over a year, I have found that this reorganization is necessary to carry out the policy set forth in section 901(a) of title 5 of the United States Code. As described above, this reorganization will increase significantly our ability to implement the MTN agreements efficiently and effectively and will improve greatly the services of the government with regard to export development. These improvements will be achieved with no increase in personnel or expenditures, except for an annual expense of about \$300,000 for the salaries and clerical support of the three additional senior Commerce Department officials and a non-recurring expense of approximately \$600,000 in connection with the transfers of functions provided in the plan. I find that the reorganization made by this plan makes necessary the provisions for the appointment and pay of a Deputy Secretary, an Under Secretary for International Trade, and two additional Assistant Secretaries of the Department of Commerce, and additional members of the Boards of Directors of the Export-Import Bank and the Overseas Private Investment Corporation.

It is indeed appropriate that this proposal follows so soon after the overwhelming approval by the Congress of the Trade Agreements Act of 1979, for it will

sharpen and unify trade policy direction, improve the efficiency of trade law enforcement, and enable us to negotiate abroad from a position of strength. The extensive discussions between Administration officials and the Congress on this plan have been a model of the kind of cooperation that can exist between the two branches. I look forward to our further cooperation in successfully implementing both this reorganization proposal and the MTN agreements.

JIMMY CARTER

The White House,
September 25, 1979.

REORGANIZATION PLAN NO. 3 OF 1979

Prepared by the President and transmitted to the Senate and the House of Representatives in Congress assembled, September 25, 1979, pursuant to the provisions of chapter 9 of title 5 of the United States Code.

REORGANIZATION OF FUNCTIONS RELATING TO INTERNATIONAL TRADE

SECTION 1. *Office of the United States Trade Representative*

(a) The Office of the Special Representative for Trade Negotiations is redesignated the Office of the United States Trade Representative.

(b) (1) The Special Representative for Trade Negotiations is redesignated the United States Trade Representative (hereinafter referred to as the "Trade Representative"). The Trade Representative shall have primary responsibility, with the advice of the interagency organization established under section 242 of the Trade Expansion Act of 1962 (19 U.S.C. 1872) (hereinafter referred to as the "Committee"), for developing, and for coordinating the implementation of, United States international trade policy,

including commodity matters and, to the extent they are related to international trade policy, direct investment matters. The Trade Representative shall serve as the principal advisor to the President on international trade policy and shall advise the President on the impact of other policies of the United States Government on international trade.

(2) The Trade Representative shall have lead responsibility for the conduct of international trade negotiations, including commodity and direct investment negotiations in which the United States participates.

(3) To the extent necessary to assure the coordination of international trade policy, and consistent with any other law, the Trade Representative, with the advice of the Committee, shall issue policy guidance to departments and agencies on basic issues of policy and interpretation arising in the exercise of the following international trade functions. Such guidance shall determine the policy of the United States with respect to international trade issues arising in the exercise of such functions:

(A) matters concerning the General Agreement on Tariffs and Trade, including implementation of the trade agreements set forth in section 2(c) of the Trade Agreements Act of 1979; United States Government positions on trade and commodity matters dealt with by the Organization for Economic Cooperation and Development, the United Nations Conference on Trade and Development, and other multilateral organizations; and the assertion and protection of the rights of the United States under bilateral and multilateral international trade and commodity agreements;

(B) expansion of exports from the United States;

(C) policy research on international

trade, commodity, and direct investment matters;

(D) to the extent permitted by law, overall United States policy with regard to unfair trade practices, including enforcement of countervailing duties and antidumping functions under section 303 and title VII of the Tariff Act of 1930:

(E) bilateral trade and commodity issues, including East-West trade matters; and

(F) international trade issues involving energy.

(4) All functions of the Trade Representative shall be conducted under the direction of the President.

(c) The Deputy Special Representatives for Trade Negotiations are redesignated Deputy United States Trade Representatives.

SECTION 2. *Department of Commerce*

(a) The Secretary of Commerce (hereinafter referred to as the "Secretary") shall have, in addition to any other functions assigned by law, general operational responsibility for major nonagricultural international trade functions of the United States Government, including export development, commercial representation abroad, the administration of the antidumping and countervailing duty laws, export controls, trade adjustment assistance to firms and communities, research and analysis, and monitoring compliance with international trade agreements to which the United States is a party.

(b)(1) There shall be in the Department of Commerce (hereinafter referred to as the "Department") a Deputy Secretary appointed by the President, by and with the advice and consent of the Senate. The Deputy Secretary shall receive compensation at the rate payable for Level II of the Executive Schedule, and shall perform such duties and exercise such powers

as the Secretary may from time to time prescribe.

(2) The position of Under Secretary of Commerce established under section 1 of the Act of June 5, 1939 (ch. 180, 53 Stat. 808; 15 U.S.C. 1502) is abolished.

(c) There shall be in the Department an Under Secretary for International Trade appointed by the President, by and with the advice and consent of the Senate. The Under Secretary for International Trade shall receive compensation at the rate payable for Level III of the Executive Schedule, and shall perform such duties and exercise such powers as the Secretary may from time to time prescribe.

(d) There shall be in the Department two additional Assistant Secretaries appointed by the President, by and with the advice and consent of the Senate. Each such Assistant Secretary shall receive compensation at the rate payable for Level IV of the Executive Schedule, and shall perform such duties and exercise such powers as the Secretary may from time to time prescribe.

SECTION 3. Export-Import Bank of the United States

The Trade Representative and the Secretary shall serve, *ex officio* and without vote, as additional members of the Board of Directors of the Export-Import Bank of the United States.

SECTION 4. Overseas Private Investment Corporation

(a) The Trade representative shall serve, *ex officio*, as an additional voting member of the Board of Directors of the Overseas Private Investment Corporation. The Trade Representative shall be the Vice Chair of such Board.

(b) There shall be an additional member of the Board of Directors of the Overseas Private Investment Corporation who shall be appointed by the President of the United States, by and with the advice and

consent of the Senate, and who shall not be an official or employee of the Government of the United States. Such Director shall be appointed for a term of no more than three years.

SECTION 5. Transfer of Functions

(a) (1) There are transferred to the Secretary all functions of the Secretary of the Treasury, the General Counsel of the Department of the Treasury, or the Department of the Treasury pursuant to the following:

(A) section 305(b) of the Trade Agreements Act of 1979 (19 U.S.C. 2515 (b)), to be exercised in consultation with the Secretary of the Treasury;

(B) section 232 of the Trade Expansion Act of 1962 (19 U.S.C. 1862);

(C) section 303 and title VII (including section 771(1)) of the Tariff Act of 1930 (19 U.S.C. 1303, 1671 *et seq.*), except that the Customs Service of the Department of the Treasury shall accept such deposits, bonds, or other security as deemed appropriate by the Secretary, shall assess and collect such duties as may be directed by the Secretary, and shall furnish such of its important records or copies thereof as may be requested by the Secretary incident to the functions transferred by this subparagraph;

(D) sections 514, 515, and 516 of the Tariff Act of 1930 (19 U.S.C. 1514, 1515, and 1516) insofar as they relate to any protest, petition, or notice of desire to contest described in section 1002(b) (1) of the Trade Agreements Act of 1979;

(E) with respect to the functions transferred by subparagraph (C) of this paragraph, section 318 of the Tariff Act of 1930 (19 U.S.C. 1318), to be exercised in consultation with the Secretary of the Treasury;

(F) with respect to the functions transferred by subparagraph (C) of this paragraph, section 502(b) of the Tariff Act of

1930 (19 U.S.C. 1502(b)), and, insofar as it provides authority to issue regulations and disseminate information, to be exercised in consultation with the Secretary of the Treasury to the extent that the Secretary of the Treasury has responsibility under subparagraph (C), section 502(a) of such Act (19 U.S.C. 1502(a));

(G) with respect to the functions transferred by subparagraph (C) of this paragraph, section 617 of the Tariff Act of 1930 (19 U.S.C. 1617); and

(H) section 2632(e) of title 28 of the United States Code, insofar as it relates to actions taken by the Secretary reviewable under section 516A of the Tariff Act of 1930 (19 U.S.C. 1516(a)).

(2) The Secretary shall consult with the Trade Representative regularly in exercising the functions transferred by subparagraph (C) of paragraph (1) of this subsection, and shall consult with the Trade Representative regarding any substantive regulation proposed to be issued to enforce such functions.

(b)(1) There are transferred to the Secretary all trade promotion and commercial functions of the Secretary of State or the Department of State that are—

(A) performed in full-time overseas trade promotion and commercial positions; or

(B) performed in such countries as the President may from time to time prescribe.

(2) To carry out the functions transferred by paragraph (1) of this subsection, the President, to the extent he deems it necessary, may authorize the Secretary to utilize Foreign Service personnel authorities and to exercise the functions vested in the Secretary of State by the Foreign Service Act of 1946 (22 U.S.C. 801 *et seq.*) and by any other laws with respect to personnel performing such functions.

(c) There are transferred to the President all functions of the East-West Foreign Trade Board under section 411(c) of the Trade Act of 1974 (19 U.S.C. 2441(c)).

(d) Appropriations available to the Department of State for Fiscal Year 1980 for representation of the United States concerning matters arising under the General Agreement on Tariffs and Trade and trade and commodity matters dealt with under the auspices of the United Nations Conference on Trade and Development are transferred to the Trade Representative.

(e) There are transferred to the inter-agency organization established under section 242 of the Trade Expansion Act of 1962 (19 U.S.C. 1872) all functions of the East-West Foreign Trade Board under section 411 (a) and (b) of the Trade Act of 1974 (19 U.S.C. 2441 (a) and (b)).

SECTION 6. *Abolition*

The East-West Foreign Trade Board established under section 411 of the Trade Act of 1974 (19 U.S.C. 2441) is abolished.

SECTION 7. *Responsibility of the Secretary of State*

Nothing in this reorganization plan is intended to derogate from the responsibility of the Secretary of State for advising the President on foreign policy matters, including the foreign policy aspects of international trade and trade-related matters.

SECTION 8. *Incidental transfers: interim officers*

(a) So much of the personnel, property, records, and unexpended balances of appropriations, allocations, and other funds employed, used, held, available or to be made available in connection with the functions transferred under this reorganization plan as the Director of the

Office of Management and Budget shall determine shall be transferred to the appropriate agency, organization, or component at such time or times as such Director shall provide, except that no such unexpended balances transferred shall be used for purposes other than those for which the appropriation originally was made. The Director of the Office of Management and Budget shall provide for terminating the affairs of any agency abolished herein and for such further measures and dispositions as such Director deems necessary to effectuate the purposes of the reorganization plan.

(b) Pending the assumption of office by the initial officers provided for in section 2 of this reorganization plan, the functions of each such office may be performed, for up to a total of 60 days, by such individuals as the President may designate. Any individual so designated shall be compensated at the rate provided herein for such position.

SECTION 9. *Effective date*

The provisions of this reorganization plan shall take effect October 1, 1980, or at such earlier time or times as the President shall specify, but not sooner than the earliest time allowable under section 906 of title 5 of the United States Code.

The Cyprus Conflict

Letter to the Speaker of the House and the Chairman of the Senate Foreign Relations Committee. September 25, 1979

To Speaker Tip O'Neill (To Chairman Frank Church)

In accordance with the provisions of Public Law 95-384, I am submitting the following report on progress made dur-

ing the past 60 days toward the conclusion of a negotiated solution of the Cyprus problem.

In my last Cyprus report to the Congress, dated July 25, I noted that UN Secretary General Waldheim and his staff were seeking to bring the two parties back to the conference table. Unfortunately, the recess in the intercommunal talks continues, largely because the two sides still have major differences both with regard to their approach to this negotiation and to the content of a final settlement of the Cyprus problem.

The UN Secretary General, through his staff, is continuing to consult informally with the parties. He has had some success in creating a foundation on which the talks might resume. We are giving strong and continued support to this effort. We have frequently discussed the situation on Cyprus in a frank manner with all parties, reminding them that negotiation is preferable to stalemate, and that their broad interests would be served by a return to the conference table. Other interested third parties have made similar points to them.

Despite the difficulties, we continue to believe that a way can be found to end the present impasse and to permit the two sides to commence a serious negotiation of the Cyprus problem.

This Administration will continue to strive for progress in that direction. In pursuit of this goal, we shall remain in close touch with the United Nations, the parties to the Cyprus dispute, and our close European allies.

Sincerely,

JIMMY CARTER

NOTE: This is the text of identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Frank Church, chairman of the Senate Foreign Relations Committee.

August Consumer Price Index

White House Statement. September 25, 1979

Once again, the increased cost of energy was the major factor in an unacceptably high inflation rate during the month of August, and once again, this fact underscores the importance of following through on the President's energy and anti-inflation programs. In fact, the cost of energy and the cost of buying and financing a home were exclusively responsible for pushing the Consumer Price Index into a double-digit annual rate.

We were, of course, gratified that grocery prices remained stable during the month. And outside of food and the troublesome areas of energy and housing, other consumer prices rose at a much lower, though still too high, annual rate of 8.5 percent.

For the second time in 6 years, our Nation is suffering severely from both higher inflation and higher unemployment because of a sudden and massive increase in world oil prices. The need to reduce our dependence on foreign oil is driven home each time the CPI comes out.

We simply cannot allow the huge increases in the prices of energy and housing to set off double-digit inflation in wages and other prices. To prevent that from happening, we need restraint on two fronts:

1. continuing to pursue a tight Federal budget as the President has proposed, and
2. observing the President's voluntary wage-price standards, which, skeptics to the contrary, have been keeping double-digit inflation at bay, outside of energy and housing.

New York City, New York

Remarks at the Annual Convention of the American Public Transit Association. September 25, 1979

Senator Moynihan, Governor Hugh Carey, Mayor Ed Koch, Secretary of Transportation Neil Goldschmidt, Members of Congress from this State and from others, Lieutenant Governor Mario Cuomo, Chairman Harold Fisher, my good friend and partners with me in a great future for mass transit, rapid transit, public transportation, public transit:

We're all in it together, and we're going to prevail.

Thank you. I'm glad to be with you. I'm particularly glad to be back in New York—this great city which has, among so many other superlatives, the title of the “mass transit capital of the world.” With 45 percent of all the riders of public transportation in our Nation, it's obvious that I should come here, first of all, and say that there is absolutely no way that New York would lose Federal funds for public transportation because of any technicality or lack of adequate preparation between the Federal Government and New York, and no one need worry about that.

And I'm glad to be in the same room with so many people, from all over this Nation, who agree with me that public transit is one of the keys to the future of the United States of America.

We can no longer afford to think of public transportation as something that we might some day get around to developing adequately for the people who look to me and you for public leadership, once all the superhighways and cloverleafs have been completed. We must address the problems of public transportation

now, and we will address those problems together.

This has always been a problem and a challenge. But this Nation is now in the throes of an energy crisis, a crisis of dangerous overdependence on foreign oil—a challenge and overdependence which directly threatens the security of our very Nation, a crisis that affects every single person who lives in this country. In a few blunt words, that is why public transit is important to all citizens of this country, regardless of where they might live.

In cities and small towns, among suburbanites and rural dwellers, subway riders and pickup truck drivers—we all have an interest in public transit—even though some may not ever ride in a public transportation vehicle—because we all have an interest in solving the problem of energy. And we will solve that problem. The subways, the buses, and the trolleys of America will help to carry America to a time of energy security.

In my first energy speech to America, I told the American people bluntly that the era of cheap and abundant energy and wasteful consumption was gone. I was warned that this would not be good politics. Nobody likes bad news. And when I made that evening address to the American people, I said in that talk that it would undoubtedly cost me 15 percent in the public polls. That was the underestimation—[laughter]—of my first year.

I called the energy crisis the moral equivalent of war, a statement that was ignored by some and ridiculed by others. But I was determined then and I'm determined now to level with the American people. It has not been easy to get that message across, but today, 2½ years after that speech, millions of Americans now know from hard experience and careful analysis that I was not exaggerating.

Not too long ago the United States

was a net exporting country for oil. By 1973, when the OPEC nations' oil embargo hit with a massive increase in prices, we were importing about one-third of all the oil we used, sometimes at less than \$2 a barrel. But we failed to come to grips with the underlying problem that OPEC began to exploit. We were given fair warning; we did not listen. Instead, through a complicated system of price controls, we tried to insulate ourselves from the realities of a global economic change.

This policy, or absence of a policy, did not work. In fact, it encouraged our illusions about cheap energy and actually made our dependence worse, so that this year we are importing about one-half all the oil we use. And because OPEC has taken advantage of this industrial world's thirst for oil at any price, OPEC has continued to jack up the prices. The dollars have flowed out even faster than oil has flowed in. In 1973, for instance, we were paying in American dollars, for foreign oil, \$7 billion. Next year we will pay \$70 billion—a tenfold increase.

When those billions of dollars flow out of our country, American jobs flow out with them. And when those millions of barrels of foreign oil flow in, we import inflation. Without the astronomical rise in energy costs, in fact, the inflation rate would be at least one-third lower than it is now. The last 3 months, the inflation rate would have increased only one-fourth of 1 percent, if you don't count energy. But energy has been increasing in price at an average of 100 percent per year.

Our economic well-being is at stake and so is our political freedom of action. We are vulnerable to interruptions in oil supply at any time from very uncertain sources, and we are mandated to pay whatever prices are asked. And the competition for oil supplies tends to weaken

our political alliances, because we and our friends are in competition to buy the same scarce and expensive barrel of oil.

The production of oil by the OPEC nations is highly unlikely to increase. The trend is probably going to be downward because of several reasons. Some OPEC nations are now producing more oil than they would like to produce for their own benefit and for the benefit of their people. Other OPEC nations have recently begun to reduce oil exports because their supplies are running out. And others, as you well know, tend to use oil as a political weapon, attempting, unsuccessfully so far, to blackmail or to attempt blackmail by the threat of withholding their oil from the world market.

So, dependence on foreign oil threatens our economy, and it also threatens our security. It threatens our very future. Therefore, we must stop and then reverse this growth in imported oil. And public transit can help us do that.

Thirty-five years ago, at the close of the Second World War, this country could claim some of the finest public transit systems on Earth. Those transit systems were more than just a way to get people from one place to another. They helped to structure a compact and efficient pattern of land development where people lived, where people worked, and this contributed to a sense of community, of unity, of sharing, of interrelationships, a feeling that brought neighbors together in a common sense of place. Our transit systems were a vital connecting link that helped to form our own way of life.

But in the years after World War II, we let that connecting link begin to erode. Because we did not recognize its worth, we valued it too little; because we did not measure its contribution to our lives, we ignored it too much; and because we

could not imagine its absence, we hardly noticed its decline in quality.

As we turned our attention to the construction of a vast network of superhighways, we began to operate on a set of unspoken, unacknowledged, untenable assumptions. We assumed, for instance, that the United States was afloat on a sea of 20-cent-a-gallon gasoline. We assumed that bigger always meant better and that nothing could be better than a long, chrome-plated convertible with a gas-guzzling V-8 engine under the hood. We assumed that urban sprawl was a law of nature, not a logical outcome of transportation and development policies. We assumed that the only respectable way to get a 160-pound human from point A to point B was to wrap him in 2 tons of metal with an engine powerful enough to drive an army tank.

So, we began to lose our public transportation systems. One by one, city by city, the systems fell prey to decay and to neglect.

Now we know that was a mistake. Now we recognize the value of mass transit, and now, as the battle for American energy security is joined, we stand committed to the rediscovery and the revitalization of America's public transportation systems. You and I together have embarked on that rediscovery. We have begun that revitalization. Federal support for public transportation now stands at the highest point in history.

I proposed, and the Congress passed, the most far-reaching surface transportation bill in our history, giving it a higher priority than it has ever had before.

Under our comprehensive urban policy, which many of you helped to evolve—the Nation's first, by the way—cities and towns are now working along with private enterprise and with the Federal Government to make transit an integral part of

urban development and urban redevelopment. There's a good example just a few blocks from here at the Grand Central Terminal, where a \$10 million Federal grant will help tie in several forms of public transit with a new mall, a new hotel, and a surrounding area of shops and offices.

During the fuel shortage this summer, which shook our Nation up, we kept the trains running and the buses fueled and rolling. And we will keep them rolling in the future if we have additional energy shortages. America's public transportation systems will continue to have the fuel that they need.

When I was looking for a new Secretary of Transportation, some of you came forward and made suggestions which I took. I looked all over America for a person who could come to Washington as a strong advocate of public transit and who understood very clearly the role that public transportation must play in the life of a community. I found that person in Neil Goldschmidt, who worked as a leader in our Nation's transportation problems, working with other mayors and local and State officials all over this country, and whose commitment to mass transit produced extraordinary results in Portland during his term as mayor.

And since he's been there, he's made some very wise decisions, one of which I'm pleased to announce today. And that is that the new administrator of our urban mass transit program will be Ted Lutz, who's one of you. And he was chosen, as a matter of fact, the Rail Man of the Year. And I'm very proud of him, because he's got practical experience on how to coordinate government programs with local needs, how to cut through redtape, how to get to the heart of a program and a problem and to find a resolution and an answer.

We've made a strong start, but I'm here today, after 2½ years in office, to tell you that we've got a long way to go, a lot more to do, much more.

Our Nation's investment in public transit during the 1970's came to a total of \$15 billion, and now we must take a quantum jump. With the energy proposals that I have presented to the Congress, the Nation, our Nation, will invest \$50 billion in public transportation during the decade of the 1980's. We need it, and we will have it. Our goal during that time is to add 15 million passengers per day to the buses, the streetcars, and the trolleys and subways of our cities and our communities.

We will double the production of buses, the only form of mass transit in 97 percent of America's cities. We will step up the modernization and the refurbishment of existing rapid transit systems. For example, New York: Its subway system is the senior citizen of underground rail travel. The IRT is 75 years old this year. It has survived, and we are proud of our senior citizens. But when Ed Koch and Harold Fisher and I get through with it, with the tools we are fighting to get from the Congress, it's not going to look a day over sweet 16. *[Laughter]* And we will also speed up the construction of new rail lines already approved or underway in other major American cities.

We'll build subways and elevated trains, trolleys, people-movers, commuter trains. We'll repair track beds, modernize stations, improve signaling and control stations, replace aging railcars, expand the size of fleets, extend lines into new areas and encourage new technologies. In short, we will reclaim and we will revitalize America's transit systems.

Over the long term—and this is very important—the energy savings will be massive. Those savings will result not only

from getting folks out of cars and onto buses and trains but also from the patterns of development that the public transit system can encourage.

Public transit means good living for people in downtown areas and more efficient housing development patterns, which in turn means less waste of energy for fuel and also for heating and cooling. And better mass transit will give us an insurance policy against the lack of mobility in the future. If gasoline crunches come—and I think they will surely come—better mass transit will help us attack a whole range of critical, interrelated problems, not just energy but also inflation, unemployment, the health of our environment, and the vitality of our cities.

Public transit means cleaner air. Public transit means less noise. Public transit means stronger, more livable cities. It means more mobility and more opportunity for everybody, and especially those who need it most—the poor, the aged, the young, the handicapped, minorities.

And public transit means jobs, a lot of jobs. The energy mass transit initiative that I've proposed to the Congress will put Americans to work. I'm not talking about a few hundred jobs for bureaucrats in Washington, along with administrators, but I'm talking about an average of at least 40,000 jobs a year, at all levels of skills, throughout the 1980's.

Clearly, public transportation is a critical part of the overall assault that I've directed against this Nation's energy dilemma. And just as clearly, our transit investments cannot do the job alone. Those investments must be a part of a comprehensive program. And that's exactly what I've proposed—a program that develops alternative forms of energy, especially those plentiful ones that are ours to control, such as coal, and the most plentiful source of all, the Sun; a program

that lets vital energy projects be built without endless redtape and confusion and delay and also without compromising our commitment to a clean environment and a good quality of life; a program that offers some help for the poor among us, on whom the most cruel blows of skyrocketing costs inevitably fall. And public transit can encourage people to do the most important thing of all—stop wasting energy.

Conservation must become a part of our lives, and this need not be an onerous part or an unpleasant part of our lives. It can be an exciting and enjoyable thing to stop wasting what God has given us. It can bind families together. It can make us look around and see how we and our neighbors can have a more productive and more enjoyable life. And at the same time, we can contribute greatly to the health and well-being of our country. It's a patriotic gesture.

This program, along with our transit initiative, can take us to our energy goal of energy security. But for all this program to succeed, the Congress absolutely must approve the one major element, which Chairman Fisher has already named—the windfall profits tax.

A train needs an engine. A bus needs an engine. A pickup truck needs an engine. And the windfall profits tax will be the engine of American energy security. Through it, we will use the unavoidable rises in oil prices as a lever, as kind of a crowbar, to pry ourselves loose from the dilemma that our overreliance of oil got us into in the first place.

Right now lobbyists are swarming all over Capitol Hill, working to devastate the windfall profits tax. In fact, their proposed amendments would put a total of well over \$100 billion in the pockets of the oil companies. And what would they do with this money? Would they develop

renewable energy sources? Would they push for a national energy conservation program? Would they winterize homes? Would they help poor people pay their fuel bills? Would they devote \$13 billion to public transportation? Of course not, of course not.

These crucial steps are not their business, but they're the public's business. They're the Nation's business. And the Nation needs these funds to make our energy future secure.

I have traveled the length and the breadth of this country, fighting for a tough, permanent, fair windfall profits tax, and I will continue to fight for it. I do not intend to lose this fight, and if you will help me, we will not lose.

And finally, I would like to say this: I deeply appreciate the support that the American Public Transit Association has given me in this fight so far. Today I call upon you collectively, as an association and as individuals, to redouble your support as the crucial votes in the Senate, and then the Senate and House, on windfall profits draw near. With your help, we can gain this tax and drive our program forward.

Cutting our reliance on foreign oil will curb inflation, strengthen the dollar, stimulate new jobs, give Americans a better life. Public transportation is part of this chain of support—saving energy, adding jobs, and improving the overall quality of life in our Nation's history—one of the most important challenges that we have faced in our Nation's history.

We're about to enter a new decade, carrying with us the lessons of the past, the good lessons and the bad lessons, and the hopes and the dreams and aspirations of all Americans.

The choices ahead are difficult, and we cannot avoid making them, but Americans have never looked for an easy way out when we were faced with a challenge

that threatened our country. I believe in the decency and in the courage of the American people. I believe that we have the material and the moral and the spiritual strength to meet any challenge.

Together, in the years ahead, we can seize control again of our own destiny, and we can make sure that America will remain what America is today—the greatest nation on Earth.

Thank you very much.

NOTE: The President spoke at 3:55 p.m. in the Grand Ballroom at the New York Hilton Hotel. In his opening remarks, he referred to Harold Fisher, chairman of the New York Metropolitan Transit Authority and chairman of the American Public Transit Association.

Urban Mass Transportation Administration

Nomination of Theodore C. Lutz To Be Administrator. September 25, 1979

The President today announced his intention to nominate Theodore C. Lutz as Administrator of the Urban Mass Transportation Administration, Department of Transportation.

From November 1976 to May 1979, Mr. Lutz served as general manager of the Washington Metropolitan Area Transit Authority (METRO) in Washington, D.C. From 1973 to 1976, he served as Deputy Under Secretary of the Department of Transportation. From 1968 to 1973, Mr. Lutz was a budget examiner in the Office of Management and Budget.

He was born September 24, 1945, in Philadelphia, Pa. He received a B.A. degree from Carleton College in 1967 and an MPA degree from Syracuse University, Maxwell Graduate School of Citizenship and Public Affairs in 1968.

NOTE: The announcement was released at New York City, N.Y.

New York City, New York

Remarks at a Reception for Community Leaders. September 25, 1979

That's one of the best speeches I've ever heard Ed Koch make. Thank you very much. [Laughter]

Senator Pat Moynihan and Governor Hugh Carey, Governor Brendan Byrne, distinguished Members of the Congress, public officials representing New York City and New York State, and my friends:

I'm very glad to be back with you again.

The first time I came to New York, after I announced that I was a candidate for President, I told my wife when I got back home that it was a city that had lost its spirit. There was a sense of despair among many, but a sense of dedication and resolution and courage and a sense of unity that was a core of the strength that would tide New York City over a time of crisis.

I formed a partnership with New York City in my mind. And I've never headed toward this great place without a sense of warmth and friendship and pleasant anticipation, and I have never been disappointed. And I thank you for that.

I think in the last 2½ or 3 years, we've come a long way. We still have a long way to go. The Congress has responded well to superb leadership.

And one day when I was in the Cabinet Room with Tip O'Neill and was, in a way, bragging about what we had done for New York City, he said, "Mr. President, I don't want to take anything away from you. You're a great man and a gentle person and a beautiful man. But," he said, "the Congress passed the bill establishing Federal credits for New York City loans because they had confidence in Ed Koch." And I said, "Well, that's the—[applause]—"

But it's obvious that the entire New York delegation and Mayor [Governor] Hugh Carey and many friends throughout the Congress worked hard to make it possible for New York to get itself back on the side of strength and confidence in the future—and tangible accomplishments already. There can be no retreat from this course that we've set out together, because we still have a long way to go.

In public transit—I just spoke to the national convention of those who are intensely interested as professionals in public transit—we've made a lot of progress. I think the next 4 years, compared to the previous 4 years, will show at least a 50-percent increase in the allocation of Federal funds for public transit in your city. And we'll have continued improvements in other areas of life as well.

I've not been in office long—sometimes it seems like a long time—but just since I was inaugurated, we've had a 33-percent increase in the amount of Federal funds coming in aid of all kinds to New York City—a \$700 million increase, net. However, this has not been confined to any special thing. It's been broad-gauged in its effect, and it has had to find a ready reception here and an eagerness among people to look forward to the future with confidence.

In education, in transportation, in housing, in recreation, in health, we're working with a close spirit of common purpose. On occasion there have been some instances of inadequate communication, recently between the Department of Transportation and Governor Carey. But that's a transient thing, and there's no problem in working that out.

And as I told those interested in public transportation, New York will not lose any Federal funds because we or the city or the State have failed to meet the tech-

nicalities of the law. We will make sure you get your money.

And these are also not cosmetic changes. I think that following the 1976 July Fourth great ships parade and then followed by another great event, the Democratic convention of 1976, I could see a new spirit in the city—[*laughter*]
—that I think will be mirrored again next summer, when the Democratic convention comes back here.

And I would like to say in closing that we have proposals in the Congress now that will add a great deal more in opportunity for your city and your State to make even greater progress in the years to come.

Welfare reform has cleared the House Ways and Means Committee, and Pat Moynihan is working hard to get it through the Senate Finance Committee. Our proposal under the windfall profits tax will mean a tremendous increase in help for poor families to deal with the inordinately rising costs of energy, to give a better mass transit system, and to make our Nation energy-secure in the future.

We have an opportunity, I think, to be sure that there is a continued sense of common responsibility for your city and for your State. Every one of you in this room is a constituent of mine, and your well-being and the quality of life among those who look to you for leadership I consider to be my direct responsibility. I was not elected President to tell New York City to drop dead, and I will obviously never do so.

The political and the financial health of the greatest city on Earth is a sure sign of the political and the financial health of the greatest nation on Earth. And this Nation is my responsibility. And what you do here will have a direct effect on the quality of life throughout the whole Nation.

I want to recognize Mayor Abe Reame,¹ who I understand is here. Stand up, Abe. Abe's always too modest to stand up. Thank you very much, Abe. [*Laughter*]

Let me say this in closing: As this button says, I love New York.

Thank you very much.

NOTE: The President spoke at 4:55 p.m. in the Trianon Room at the New York Hilton Hotel. The reception was hosted by Mayor Edward I. Koch of New York City.

New York City, New York

Question-and-Answer Session at a Town Meeting With Residents of the Borough of Queens. September 25, 1979

THE PRESIDENT. *Senator Pat Moynihan, Mayor Ed Koch, Lieutenant Governor Mario Cuomo, President Don Manes, President Saul Cohen, and my friends from Queens and from New York City:*

I am very glad to be back with you.

First of all, I want to thank the Queens Symphony Orchestra for a tremendous reception.

I was going to make an opening statement or speech. I've decided that since so many people are here, and I know you have a lot of questions, that I will not do so. So, if you will not be timid with your questions, I will not be timid with my answers. Let's get on with the question-and-answer period.

PRESIDENT'S JOGGING HABITS

Q. Mr. President, this is a great honor. My name is Nicholas Gray. I live in Manhattan, and I own a store there called Gray's Papaya. [*Laughter*] We're famous for our better filet mignon frankfurters.

¹ Abraham D. Beame, former mayor of New York City.

THE PRESIDENT. My name is Jimmy Carter. I'm President of the United States. [Laughter]

Q. I am a fan of yours, and I was told to tell you this.

THE PRESIDENT. I know. Great.

Q. Mr. President, welcome to New York City.

THE PRESIDENT. And I grow peanuts, you know, so eat peanut butter. [Laughter]

Q. Welcome to New York City, Mr. President. You look great. There are many millions here who stand firmly behind you and who look forward to your reelection.

My question is friendly and personal. I wonder if you'd take a couple of minutes to tell us about your jogging habits and how you are feeling in general since your race in Maryland last week? [Laughter]

THE PRESIDENT. I'd like to answer all the questions, including this one. Thank you, Mr. Gray, for your welcome.

I've been running in college. I've been running for the State Senate, and then for Governor, and then for President—[laughter]—still have running on my mind.

I run about 3 or 4 miles a day on the average—sometimes as much as 12 miles, sometimes as little as 2 miles, and enjoy it very much. My wife runs from 2 to 5 miles with me each day. It helps me to be by myself, enjoy a conversation with my wife, and I look forward to it very much. And I stay in good shape, ready for running in the future.

Q. Thank you, Mr. President. You look great.

THE PRESIDENT. Thank you.

PRESIDENT'S 1976 CAMPAIGN PROMISES

Q. Good evening, Mr. President. My name is Stewart Weinberg. I'm 22 years old, from Bayside, Queens, and I'd

sure like to thank you for making me feel almost as if I'm in touch with my Government. I think it's great. I really do.

THE PRESIDENT. Thank you.

Q. I want you to know that in 1976 I worked very hard for your election campaign. [Laughter] Just cool it people, just cool it. I worked very hard, and I'd like you to take that into consideration when I ask you this question. [Laughter]

Consider your 1976 election campaign promises, and consider how those ideas and programs have progressed. Consider that the American dollar has been plummeting. Consider the rise in inflation, the oil crisis, the gas lines, the tremendous cost of home heating oil. Consider the tumultuous nature of your ever-changing Cabinet. Consider how we have added more destruction to our ecosystem with nuclear energy and oil spills. Consider that we really don't have a comprehensive national energy or health program. And consider that I am a college-educated young man who has been unemployed for 3 months, and I'm very unhappy about that.

Evaluating what I've pointed out, please explain why I should support you for your reelection. What makes you think your first term merits a reelection? I want to know if I should work for you a second time, and why.

THE PRESIDENT. Thank you, Mr. Weinberg.

I've now been President for a little more than 2½ years. We've had some notable achievements and we've had some disappointments. I think in trying to go down the list of things that you described—and I'll confine myself to that and not talk about the good things, okay?—to be fair to you.

Employment—when I was elected President and inaugurated, the unemployment rate was 8 percent. Now it's 6

percent. We've had a net increase in jobs in this country of 8 million, a net increase in jobs. This record has mirrored itself in New York City, where the unemployment rate has dropped about 2 percent.

I would like for every college graduate, like you, and also for every person in our country who hasn't had the advantages of college, to have a job. It's not possible to give a job to everyone. I think we've made reasonable progress.

On inflation—we've had inflation with us for about 10 years, 11 years. It's been as high as 12 or 13 percent in 1973 and '74, when OPEC raised their prices. It's up to that level now because OPEC has raised their prices.

In the last 3 months, for instance, the inflation rate, not counting energy, has gone up one-fourth of 1 percent. In that same time, because of action taken by OPEC, over which I have no control, the inflation rate in energy is going up 100 percent per year. And obviously, when that's mixed in with the other costs, the inflation rate is high; it's too high. I wish I could get it down.

You point out that we have no energy policy. We are hammering out a comprehensive, excellent energy policy which I believe and predict flatly will be on the law books by the time this year is over.

We have not ever had before any semblance of an energy policy. And in spite of my efforts for the last 2½ years, the Congress has yet not passed one word relating to oil.

In the past, the oil lobbies have permeated the influence on the Hill in Washington, because consumers had no strong voice. And I have to admit, at that time that oil prices were relatively low. Now it's just about an even thing. But I still predict to you that we will add on to a very good legislative program last year, a complete energy policy this year. It's long

overdue, but there's only so much that you can do in 2½ years.

The second thing I'd like to say is that so far we've already saved, because of actions taken within the last 12 months, about 4 million barrels of imported oil that we will not have to import by 1990. My additional proposals, which will pass this year, will save an additional 4½ million barrels of oil.

I know how serious the problem is. I don't know how you reacted in April of '77 when I went to the people on evening television and said this is the moral equivalent of war. Very few citizens, perhaps even including you, rallied to my side and said, "I agree with you, Mr. President. We will fight for an energy policy." But I fought for it, and a lot of people in this country thought it was a ridiculous thing to say. And now we are seeing that we have a serious energy problem that really endangers the security of our Nation.

You mentioned the Cabinet changes. I went 30 months and did not make a single change in my Cabinet. And then I decided that that level of the Cabinet had done some extraordinary things. They had initiated good programs—like Jim Schlesinger, for instance, and put through a major part of the energy program and also set up a Department of Energy, and his time had expired. He wanted to step down.

So, I've now got Charlie Duncan in there—highly qualified, administrator, manager—who can take over an existing department and make sure it functions smoothly.

I've appointed a man as head of HUD, Housing and Urban Development, Moon Landrieu, an accomplished mayor, a mayor of New Orleans. And those of you who keep up with the history of New York City know that just a few years ago, not too long ago, when New York City

was on the verge of bankruptcy and despair, there was one mayor in this country who left his city and traveled all over the Nation with 11 other mayors to tell everybody in Georgia, in Washington, in Oregon, in Iowa, "We have got to save New York City." You know who that was? Moon Landrieu, who's now the Secretary of HUD.

And we've got another good man named Neil Goldschmidt, who's taken over now the Transportation Department, an experienced man.

I have no apology for keeping my original Cabinet 30 months, and I have absolutely no apology for making a change when I see fit. It's a prerogative and a responsibility of a President to have his own Cabinet.

I'll say one more thing. This is a long answer, but I think it covers a lot of questions that might have been asked later.

You mentioned national health insurance. I am for national health insurance. We have not had legislation passed through the Congress to improve our health system in any degree for the last 30 years. We need to have it passed. President Truman called for a comprehensive, nationwide health insurance program; we don't have it. Senator Kennedy has been in Congress now for 16 years. His major premise, his major goal has been to establish a comprehensive, national health insurance policy for our country. He's the chairman of the Health Committee in the Senate. He has never gotten a comprehensive national health bill out of his subcommittee. It is not easy.

But I'm determined to get a national health insurance program for our country, and I believe that I now have enough support in the Congress to do it before this term is over. So, we are making some progress, we're making some progress.

Q. I would just like to say one thing.

THE PRESIDENT. Yes.

Q. That is, you might just get me to work for you a second time.

THE PRESIDENT. That's a deal. Thank you.

UNEMPLOYMENT AND INFLATION

Q. Mr. President, my name is Barbara Miles, and I'm glad to hear you say you want the hard questions, because I have one for you.

THE PRESIDENT. Great.

Q. I represent a new coalition of religious and community organizations called the Crusade for Work. And I think you can infer from the name what our major interest is.

I think you also will realize that unemployment is dehumanizing and life-threatening, and I'm very glad to hear you say that you've been able to bring the unemployment rate down by 2 percent. But I want to dwell on that a little bit, because we're very disturbed now by your new monetary policies, as articulated by G. William Miller and by Paul Volcker, because those policies, as I understand them, threaten to raise the unemployment rate back up to 8 percent again, while there's no evidence as far as I can ascertain that you will be successful in curbing inflation. So, in view of the risk and the painfulness of this process, then why are you willing to take such a large gamble?

THE PRESIDENT. I have the same feeling you do about unemployment. This is very important.

[At this point, there was an interruption from the audience.]

THE PRESIDENT. Now, it's okay. It's okay. It's all right. It's a free country.

[The interruption continued.]

THE PRESIDENT. If you all can hear me, I'll go ahead with my answer. [Applause]

Miss Miles, I'm as concerned as you are about the high rate of inflation. But one of the things that we have to remember is that inflation at a high level and unemployment at a high level are directly related. And one of the reasons that we have the prospect of higher unemployment in the future is because we have not been able to control the inflation rate. Most of the cause of that has been because of uncontrollable OPEC prices. But there has to be some dealing with inflation and its root causes.

Every poor person, whether employed or not, is robbed much more severely by inflation even than those who are more wealthy and more able to accommodate their basic needs and may have to do away with some of the luxuries because inflation strikes their family.

We are trying to maintain employment levels high, to target programs. We now have two programs before the Congress: one that would provide additional aid to a locality, perhaps where you live, if the unemployment rate gets above 6½ percent. There's another triggering device, separate program, that would give jobs, above and beyond the ones we have now, on a nationwide basis, if the unemployment rate gets above 6½ percent. That's a kind of an insurance policy for the future. But in the meantime, I'm determined that we will not waste money.

I have been able, since I've been in office, to cut the Federal deficit more than 50 percent. I think this is important. We've increased services. For instance, since I've been in office, we've increased the amount of money given to education, primarily for the poor, by 60 percent. We've never had that increase before. We've given aid to New York City, \$700 million increase, since I've been in office. We've still cut the budget deficit down by 60 percent. At the end of next year, we'll

have 20,000 fewer Federal employees, doing a much better job, I think, of administering what we've got.

So, there has to be a combination of restraint on inflation, and it has to be consistent, at the same time more narrowly focusing job opportunities on those who need them most. And I gather from what you say that you represent those who are poor, perhaps minority groups, perhaps even the young, who are most heavily afflicted by unemployment.

We are not ignoring them, and we've made some progress. We still have a long way to go. I will not ever use inflation as a means to wring out our economy and make the poor or the unemployed suffer.

LEADERSHIP QUALITIES

Q. Mr. President, I appreciate the opportunity to ask you this question. My name is Elizabeth Howie. I'm a social studies teacher in Jamaica, Queens, Dominican Commercial High School.

My question is, I believe both you and Senator Kennedy are in essential agreement on most of the basic issues confronting our country today. Many believe the nomination and election will be decided on the question of leadership. And in view of our apparent, as you call it, crisis of confidence, how do you intend to lead, how do you define leadership, how do you intend to inspire us?

THE PRESIDENT. Okay. First of all, I want to say that neither Senator Kennedy nor I are announced candidates. We will have—[laughter]—I will have plans to announce later on this fall. I think on October 13, there will be a preliminary political skirmish between myself and Senator Kennedy in Florida, and we look forward with great anticipation to that encounter. I have no way to know how it's going to come out.

On the subject of leadership, I think the records have to be examined. Let me just not refer to him, because he can speak for himself. But I've never been afraid, since I've been in office, to tackle a difficult issue, even if I knew it was going to cost me votes. I'll give you just two or three quick examples.

I think this is one example of leadership: In the Panama Canal treaties, this had been negotiated for 14 years, and when we ran a public opinion poll—I didn't run it, Gallup Poll did it independently of me—only 8 percent of the American people were in favor of it. But I felt that it was in the interest of our country to go ahead and consummate the treaty and to have it ratified, which has now been done. I could have ignored it.

When I made my speech to the Nation in April of 1977 on the evening television, I said that when I go to the country with an energy policy the consumers are going to be dissatisfied, the producers are going to be dissatisfied, there is no way to win politically—I'll probably lose 15 percent in the public opinion polls. I grossly underestimated my loss in the public opinion polls, but I think this needed to be done.

And I won't go down the list of things. We have had a country at peace. We've not had a single person wounded or killed in combat since I've been in office. That's a sign. In addition, we've had some crises where it required a steady hand and a careful and deliberative decision to be made. I don't think I panic in a crisis.

I'm willing to fight for what I believe in. I was willing to challenge the Republican incumbents in 1975 and 1976 and prevailed. I'm an incumbent President. I think that my record has got to be examined very closely, what we've achieved and what we haven't achieved.

We've made good progress in finally getting a SALT treaty. It must be ratified.

It's in the best interest of our country to control nuclear weapons. There has been a 7-year effort to get the treaty completed, unsuccessfully; I was fortunate enough to get it done. I've already mentioned some of the things that we've done on unemployment.

The Mideast is an area where the hearts and the minds and the souls of Americans went out to an area tortured by constant war, not just the last 30 or so years when four wars have been fought and thousands of people have been killed, but literally for hundreds of years. And I think it required some degree of leadership, against the advice of all my diplomats, against the advice of all my political advisers—"Do not go to Camp David," "Do not go to the Far East—to the Mideast, because you are doomed to failure." But I had confidence in Prime Minister Begin and President Sadat, and we made some progress.

That's the kind of thing that I've tried to do. But we've had some disappointments. And I will have to face the music for those disappointments and try to point out to the American people what might be accomplished in the next 4 years if my announcement later on this fall is as a candidate.

Q. I wish you luck. Thank you, Mr. President.

THE PRESIDENT. Thank you.

ISRAELI SECURITY AND DEFENSE

Q. Good evening, Mr. President.

THE PRESIDENT. Good evening.

Q. My name is Zahava Teitelbaum, and I'm a housewife and I work for a program for new immigrants. I just came back last week from a trip to Jerusalem, the beautiful and divided capital of the Israeli Government.

My question is, I know the United States would never tolerate terrorist at-

tacks from Cuba, and I wanted to know why the President opposes Israel's right to defend itself on its northern borders against the PLO terrorist incursions into Israel.

THE PRESIDENT. I don't. I think any nation has a right to defend itself; obviously, including Israel. Let me recapitulate just for a moment what has happened.

Two years ago, I met with Prime Minister Rabin and then with Prime Minister Begin and also with President Sadat and others. There was a conviction in their minds that never in their lifetime would they have direct communication with one another and no chance to negotiate a peace treaty between them.

A year ago, almost exactly, we went to Camp David and came down with the Camp David accords, which set out not only a basis for peace between Israel and Egypt but also a basis for a comprehensive peace settlement for the entire Middle East, including all of Israel's neighbors.

Six months ago, we concluded the Mideast peace treaty. And a lot of people say, you know, "What have you done lately?" Well, the fact is that now we are looking to President Sadat and Prime Minister Begin to negotiate directly. They have developed a very good respect for one another. And it was a thrilling thing for me to see Sadat sail into the Haifa Harbor recently in an Egyptian yacht, escorted by American and Israeli warships and American and Israeli airplanes, and see him received so well in Haifa.

A basis of the Camp David accords was the right of Israel to defend itself, a right of Israel to be secure. And along with that was a commitment made by President Sadat and myself and Prime Minister Begin that the Palestinian question in all its aspects would be resolved, that the Palestinian people have a right to a voice

in the determination of their own future. But, at the same time, Sadat agreed on behalf of many Arabs that Israel would have a right to defend itself. And I have never questioned Israel's right to defend herself against terrorism from the north or against her neighbors from the east or from the south.

The second thing I'd like to say is that we give Israel—as a good investment for our own security, because we derive great benefits from Israel being strong and free and at peace—great aid, the most aid we give any other nation on Earth, because we believe in Israel having the ability to defend itself. In addition to that, as a result of the Camp David accords and the Mideast peace treaty, I advocated to the Congress, and the Congress agreed to increase that aid by \$3 billion. And we're now working out with Defense Minister Weizman, who was in Washington in my office last week, how to spend that money to give Israel the means by which they can defend themselves.

But this Government and this President will never abandon Israel. We will always support Israel, and we will always make sure that Israel has the means by which to defend themselves.

I want to say one more thing, and then I'll close this answer. Israel's got one sure friend, and that's the United States of America. And I look with great concern and disgust at a growing clamor around the world, even making the ridiculous charge that Zionism is the same as racism. That's an outrage and a disgrace to human beings.

And I'm not asking you—Miss Teitelbaum, right?—I'm not asking you to give me your support or to approve everything I do. But let me say this: It's important for Israel, for a President like me, to have your support in carrying out the agreements made at Camp David and with the

treaty. I need your help and I need your support.

God knows that politics is secondary to me when it comes to the defense and the strengthening and the peace and the security of Israel. But I think that our Government, which has already done so much—working with Sadat and Begin and others to make this major move toward peace—really needs the unity and the support and the understanding of making further progress. Condemnations and criticisms during these transient times, I don't believe help Israel. I don't want you to approve everything I do, but I need your support and your prayers that my future efforts, along with those of the Israelis and Egyptians, will be as successful as they have been in the last 12 months.

NUCLEAR POWERPLANT SAFETY

Q. Mr. President, my name is Barbara Glick. I live in Forest Hills, and I just graduated from York College as of June and, at the moment, am an aspiring, unemployed journalist. And my question centers around a concern that a lot of New Yorkers feel is quite relevant to them.

It has been reported that if a nuclear accident were to occur at Indian Point, depending on the direction of the wind, radiation could spread over a 30-mile radius, causing thousands of deaths, tens of thousands of eventual deaths resulting from cancer, with hundreds of thousands becoming ill.

My questions are these: What requirements are you going to enact, as President, to see that the Three Mile Island syndrome doesn't occur at populous plants such as Indian Point? And B, can you force these plants to come up with adequate emergency plans concerning

proper evacuation procedures, which are lacking at the present time?

THE PRESIDENT. Are you referring to the plant in Virginia, where we had the little incident today?

Q. No. I was referring to Indian Point.

THE PRESIDENT. Indian Point, okay. We have—by the way, there was an incident today in Virginia, and I've gotten a report from it just a few minutes ago. I don't know the name of the plant. But it is under control, and they are shutting it down. And I understand there are no—there's no danger to it.

Now, we will have a report from the Kemeny Commission on the Three Mile Island accident, I think, within the next month. Until that time, the Nuclear Regulatory Commission is acting with extreme caution, waiting for Kemeny and his committee and the NRC and others to decide what was the cause of that accident, whether it was a design failure or an installation failure or an absence of training or improper operating techniques.

When that report is made, I will examine it very thoroughly to see what can be done to ensure in the future that nuclear powerplants are safe. If they aren't, then I would certainly not approve them. There is no guarantee, obviously, of what the Kemeny report will advocate.

We now have in this country about 13 percent of all our energy coming from nuclear powerplants—in Connecticut, I think, 60 percent; in Chicago, maybe 50 percent. And to require those plants to shut down would be ill-advised, and I am not going to do it. But we will do what we can in the future to enhance the security of the plants that might be operating in years to come.

Q. What about as far as evacuation procedures regarding Indian Point? There are none.

THE PRESIDENT. I think that will probably be part of the Kemeny report. And on that basis, we will do what we can.

As you know, the States have a right to decide whether or not a nuclear powerplant can be located within its borders. Some of the States have forbidden, through referenda and through action by the State legislatures, the installation of nuclear powerplants in their State. There is one plant in Georgia that was built while I was Governor. And we have taken action to encourage States to evolve evacuation plans.

And I think that what you have asked and what the people of New York decide is a very important consideration. For the Federal Government to mandate, however, that the nuclear powerplants in New York should be shut down under present circumstances, I think, is an unwarranted encroachment on the local prerogatives. And I would not favor that, and neither would the Congress do it.

Q. Thank you very much.

THE PRESIDENT. Thank you.

Q. And by the way, I love you.

THE PRESIDENT. Thank you.

SOVIET TROOPS IN CUBA

Q. Mr. Carter, my name is Fred Feingold. I'm from Hollis Hills, here in Queens, and I'm a sales representative. I was going to ask you a question about inflation, but that subject has been gone over a bit. I then was going to ask you a question about national health care, but that question, I think, was pretty well done. *[Laughter]* I was then going to speak about Israel, and that question—*[laughter]*—was covered. Therefore, to avoid repetitious questions, I'm going to ask you about the Russian troops in Cuba.

In the event that all diplomacy fails, we do everything we can diplomatically—

which I'm sure you're doing now—do you foresee another Russian missile crisis if nothing works and the troops just stay there?

THE PRESIDENT. First of all, let me say that this is not the same thing as the 1962 missile crisis. At that time, the Soviets had within Cuba missiles, that could reach our own Nation, that had nuclear warheads. There was a direct threat to our country, and millions of people could have been killed from those launching pads. Our country was threatened with an offensive attack.

The present brigade of Soviet troops in Cuba is not a threat to the security of our country. There are about 2,500 troops there. They do have 40 tanks and a few field pieces; they have no offensive weapons that can reach our shores. They have no capability for a seaborne invasion; they have no capability for an airborne invasion. So, it's not a threat to our security.

The thing that concerns us, however—, and this is a serious matter, and the status quo is not acceptable to us—is that it's a combat unit. The Soviets deny it has combat status. But it is a combat unit located in a country in this hemisphere, in a country that is totally dependent on the Soviet Union.

Cuba, in effect, is a puppet of the Soviet Union, and they act completely in accordance with Soviet foreign policy. A hundred percent of all their weapons are given to them by the Soviet Union. The Soviet Union gives Cuba about \$8 million every day to sustain it economically. They pay five times the world price, for instance, for all Cuba's sugar. They provide them with all their oil. And in response to that or in trade for that, Cuba acts, in effect, as a Soviet surrogate in many nations around the world.

In 1975, as you know, they moved thousands of troops into Angola. Since

I've been President, they've moved thousands of troops into Ethiopia. They have troops in many other countries in Africa. So, because of the combination of Soviet support and Cuba acting as a Soviet puppet, this does create a great concern for us. There is, however, no threat to our Nation's security.

We are now trying, through diplomacy, to get the Soviets to eliminate the combat nature of this unit, and I don't know yet whether we will succeed. If we do not succeed, we will take appropriate action to change the status quo.

Q. Thank you, Mr. President.

PRESIDENT'S REELECTION CAMPAIGN

Q. My name is Anthony Cerami. I'm a senior in St. John's University in New York.

THE PRESIDENT. What was your name?

Q. Anthony Cerami. I was a 1976 Carter supporter. Off the record of your administration, I totally expect to support you again in 1980 if you decide to run. I think you've made some tough, sometimes unpopular decisions for the good and the great and long-range good for the American people.

THE PRESIDENT. Thank you very much, Anthony.

Q. My question is—

THE PRESIDENT. I was hoping you wouldn't ask a question. [*Laughter*]

Q. —if you run again, do you intend to emulate your 1976 strategy of running in every Presidential primary? Because there has been talk that if you lose—in some of the newspapers—that if you lose some of the early Northeastern primaries, you will drop out. Will you run in every primary? Because there's a lot of people out here who want to support you.

THE PRESIDENT. I have never backed down in the face of adversity. I won some

primaries and lost some primaries in 1976. And if I become a candidate later on this year, I would intend to run in every primary.

Q. Thank you very much. Good luck.

THE PRESIDENT. Thank you.

UNEMPLOYMENT IN THE CONSTRUCTION INDUSTRY

Q. Good evening, Mr. President. Welcome to the Borough of Queens. My name is Noel Casey. I am a resident of Woodside, Queens. I'm an active member of the Carpenters Union, Local 608.

I would like to know what your administration is going to do about the high unemployment in the construction industry in New York City, in projects such as the South Bronx, Westway, Battery Park, and the convention center. Now that we're going to have the 1980 Democratic convention in New York, we don't even have a convention center. That's my question, Mr. President.

THE PRESIDENT. I see. Well, Mr. Casey, it's hard to answer your question specifically, but in the construction industry, we have seen employment increase about 25 percent in the last 2½ years. I don't claim credit for all of that, but I think we have had a massive program for public works, for local public works, and as you know, we've had an average of more than 1.8 million homes built each year since I've been in office.

What we would do in the future is hard now to ascertain. We have a broad range of things that can be done. If we see the unemployment rate begin to go up dramatically in the construction industry or others, I'm not predicting that we'll do any of these things, but we could obviously repeat the great success we had in 1977 with local public works programs.

The first 2 years I was in office, we reduced taxes about \$28 billion, which did stimulate the economy to some degree. We have the focused countercyclical bills for jobs under the Government, CETA jobs and otherwise, which provide several hundred thousand jobs in communities that are most highly impacted because of unemployment.

But I think so far we've got a fairly good record. We'll monitor it very closely and decide in the future what to act on, but I would guess that our future actions would be based on the successes that we've had in 1977 with that stimulus program. That's the best answer I can give.

Q. Last year you came to the South Bronx.

THE PRESIDENT. Yes.

Q. And you promised Federal money for the South Bronx, and yet today the South Bronx is still the same way.

THE PRESIDENT. I didn't promise to rebuild the South Bronx in 6 months. I promised to work with the local and State officials and start the rejuvenation of South Bronx.
